"I Can Make You a Master Writer and a Convincing Speaker!"

—GRENVILLE KLEISER, Famous Speech Specialist

There is not a walk in life in which mastery of the English language will not bring a rapid advancement, a larger income and wider influence, and make the road to success smoother and surer.

Whatever your business or occupation, you need a command of the English language to be successful. Whether you are a teacher, a student, a doctor, a lawyer, a merchant, a salesman, a clergyman, or a clerk, a command of English will bring you to the front and [illegible] of it will [illegible] your

INDIAN HISTORY Dr. B. A. Saletore. Rs. 5.

ANCIENT INDIAN [illegible] English in every EAST Vol. I by [illegible] will help you, as no [illegible] to reach the goal of your [illegible] success.

ANCIENT [illegible]

Here is the way to gain a new command of English in a few weeks. Grenville Kleiser, the great expert of international fame in teaching English, has discovered a new method of mastering this language. His Correspondence Course enables you to become a master of English by the easiest system of study and in the shortest time possible. It teaches you by post in your spare moments at home, how to—

Enlarge Your Vocabulary by Thousands of Expressive Words;

Use the Right Word in the Right Place;

Correct all Errors of Grammar and Idiom;

Develop Greater Load-Carrying Power;

Write Correctly Letters, Essays, Advertisements, Articles, Stories, Speeches, Petitions, Memorials, Etc.;

Become an Engaging Conversationalist and Be Popular in Society;

Increase Your Power of Persuasion;

Earn More Money, Get Better Position and Achieve Greater Success.

Enthusiastic endorsements of this remarkable Course have been written by eminent masters of English. All lines of business, all trades, all professions, arts and sciences are represented among Mr. Kleiser's students who number more than 100,000 all over the world.

Send for Free Confidential Information.

There is absolutely no certainty—no guesswork—about Mr. Kleiser's methods. He has had years of experience in some of the leading educational institutions, and is generally recognized as the foremost teacher of English by post. His Course is his life-work. In it he has put the ripe fruits of his vast experience. It is for every student, teacher, lawyer, judge, banker, manager, clerk, physician, journalist, salesman, politician, preacher,—in fact, for all ambitious men and women who would use the English Language for "all they are worth" in business and social life."

For full information send us the coupon above. Will you do it TO-DAY?

RAJMOHAN'S WIFE

By

BANKIM CHANDRA CHATTERJEE

THIS maiden Novel by the great Novelist was published serially in the "Indian Field" in 1864 in English. Then it disappeared from the public eye. Indeed some authorities have stated that it was not finished.

It has at last been rediscovered and is ready for the admirers of Bankim and the readers of fiction. It will show how great was the master in his craft even in a foreign language.

BEAUTIFULLY PRINTED AND BOUND.

PRICE RE. 1/8/- ONLY.

Postage -/6/- (Annas Six) only.

"CONFIDENCES"

"But you cannot deny she has a lovely complexion."

"Yes, but she pretends she uses nothing, and yet I have seen on her dressing table a beautiful pot with a silver lid, which I am sure must have come from Oatine."

"Yes, now I remember she presented me with one last year."

"I must begin and collect my coupons and get one for myself."

Save your Oatine coupons and get the solid silver lid. Eight small coupons or four large and Re. 1 for small lid. Eight large coupons or sixteen small and Re. 1-8 for large lid. These lids are heavy silver, hall-marked, and do not bear the name of Oatine. They are valuable and attractive ornaments on any dressing table.

OATINE CREAM—for regular nightly massage.
OATINE SNOW—the daylight vanishing cream.
OATINE SOAP—for Beauties, Brides and Babies.

OPEN LETTER TO PARENTS

Dear Sir or Madam,—When your children first arrived they brought with them a wonderful lot of sunshine.

Later, you became proud of the intelligence they displayed, but, still later, you became anxious as to what would become of them in the future. Perhaps you were anxious when you visualised them as grown men and women.

Even with plenty of money it is not always easy to select the right career, and a parent is sometimes inclined to ask advice of some relative, and in ninety-nine cases out of a hundred that relative knows nothing at all about the possibilities of employment.

Why not let me relieve you of some of your anxieties? In fact, why not let me be their Father?

We do not profess to act as an employment agency, but the nature of our business compels us to keep an eye upon the class of men and women that are wanted and who wants them.

There are some people who manufacture an article, and put it on the market to sell. We do not do that, we work in exactly the opposite direction. We find out what employers want and we train our students to fill those jobs. We have to be experts in the matter of employment, progress and prosperity.

If you have any anxieties at all as to what your sons or daughters should be, write to me, or, better still, let them write to me personally—Fatherly Advice Department—and tell me their likes and dislikes, and I will give sound practical advice as to the possibilities of a vocation and how to succeed in it.

Yours sincerely,

J. H. Bennett

THE NEW PELMANISM

Enlarged Course of Famous System of Scientific Mind-Training Now Ready.

Write For Free Book, "The Science of Success," To-day.

THE Greatest system of scientific Mind-Training the world has ever seen comes before the people of this country now in a new and greatly improved form.

Pelmanism has become the New Pelmanism—a modern Course for the modern mind, a Course which deals with the problems of today with methods adopted to the needs of today.

Formerly there were only 12 Little Grey Books—"each of them," says the Baroness Orczy. "a small gold mine which goes to enrich the brain."

Today there are 15, and they deal with such subjects as :—

- —Driving out the Inferiority Complex
- —How to Achieve your Purpose in life
- —Concentration and Mental Control
- —The Remedy for Mind-Wandering
- —The Science of Self-Realisation
- —The Qualities of the Money Brain
- —Self-Expression and Personality
- —How to Become Popular
- —Good Judgment in Business
- —How to Handle Facts Scientifically
- —Your Sub-Conscious Life
- —How to Create Original Ideas
- —Imagination and Originality
- —How to Organize Your Mental Life
- —Pelmanism in Action

and, of course many others.

The New Pelman Course embraces all the latest discoveries in Practical Psychology. No pains have been spared to make it the finest Course that can be taken up by any man or woman who wishes to achieve success (with the money-rewards of success) in any Business, Trade or Profession as well as in Social or Public life.

Vandyk

SIR HERBERT BARKER
who advises every reader who wants to succeed to "Take-up Pelmanism."

SUCCESSFUL ACTION

PELMANISM strengthens and develops all the valuable qualities of your brain. It gives you a wonderful all-round increase in power and capacity. It develops and strengthens your :

—INITIATIVE	—WILL-POWER
—JUDGMENT	—ENTERPRISE
—CONCENTRATION	—OBSERVATION
—SELF-CONFIDENCE	—COURAGE
—ORGANISING POWER	—DECISION
—MEMORY	—DRIVING FORCE
—PRESENCE OF MIND	—BUSINESS ACUMEN

and many important qualities. It teaches you the secret of successful action and gives you Personality.

PRAISED BY THE GREAT

GREAT men praise Pelmanism and recommend it to their friends. "I know of no other method, to compare with it," writes Sir Herbert Barker, "The system brightens our outlook on the glorious possibilities of life ; strengthens and quickens our memory and understanding ; gives coherence and clarity to our thoughts, and enhances, unbelievably, our capacity for intellectual enjoyment and usefulness. Benefit beyond computation can be secured by all who will follow the directions given in the Course."

WHAT "TRUTH" SAYS OF THE NEW PELMANISM.

FOR upwards of 50 years "Truth" has enjoyed a world-wide reputation for fearless and independent criticism. Unapprehensive of consequences, it has been the courageous exposer of knavery and the persistent advocate of every movement which it has felt to be for the public welfare. "Truth" has now made a special investigation into the merits of the New Pelmanism and has issued a report, a copy of which can be obtained on application. Here are a few extracts :—

* * *

"THE Pelman Institute has for many years studied the principles underlying the achievement of success, and acquired a systematic and formulated knowledge of the way in which those principles work. It has, in fact, placed success on a scientific basis."

* * *

"THE Pelman Institute must be unique in the richness of its resources and this undoubtedly explains its outstanding pre-eminence. In its own field of applied psychology to every day needs it certainly need never fear a rival."

* * *

A FULL description of the New Pelmanism is given in a book entitled "The Science of Success." To obtain a copy of this book, together with a copy of "Truth's" Report, cut out the following coupon and post it today.

POST THIS COUPON TO-DAY

THE

WORLD'S FAMOUS PICTURES

2 VOLUMES, 300 PICTURES IN FULL COLOUR & PHOTOGRAVURE

In the Two volumes of the World's Famous Pictures you have presented, in a compact and handy size the most marvellous collection of large size reproductions of the World's greatest Art Treasures. The specimens shown have been taken from the Art Galleries, and Museums and Private Collections from all over the world and combined, form the largest and widest range of Masterpieces ever brought together at one time.

The collection has been chosen by Sir Charles J. Holmes, Director of the National Gallery, London, and Sir Martin Conway, the famous English Art Critic. You will never tire of admiring these wonderful treasures.

VISIT ALL THE PICTURE GALLERIES OF THE WORLD

Take a trip to the World's Galleries. You need not stir from your easy chair. With these two volumes at your side you can enjoy the beauty of every master.

They are all reproduced here. Velasquez, Rembrandt, Rubens, Titian, Raphael, Michelangelo, da Vinci, Whistler, Millais, Leighton. The whole world has been searched for the best works of them all. You will study at your leisure.

300 of the Greatest Pictures in the World

You will see them all in full colour and Photogravure. They are the most faithful reproductions that modern printing art can give you. Nothing finer can possibly be reproduced. Each individual one is really worth framing by itself, as for an example, Roussel's "Reading Girl" which is universally conceded to be the finest nude ever painted.

Write for illustrated Booklet Free

By filling up the Coupon at the right, and posting to us you will receive, by return mail, a free prospectus describing the World's Famous Pictures, one full size coloured specimen reproduction, and also details showing how you may obtain the two volumes by payment of small monthly instalments of Rs. 5.

EMINENT AMERICANS

WHOM INDIA SHOULD KNOW

PRICE PER COPY Rs. 3. PER V. P. P. Rs. 3-9.

For Modern Review Subscribers: Rs. 2-8, post free; Per V.P.P. Rs. 2-10.

The Servant of India says:

The average reader always thinks of America as the land of the Almighty Dollar, as the land where Carnegies and Rockfellers flourish. Dr. Sunderland, in the volume under review, supplies us with interesting pen pictures of fourteen eminent American men and women whose active and successful idealism has been their chief title to glory. The sketches of Abraham Lincoln, of Emerson and of Thomas Paine in particular are fine specimens of Dr. Sunderland's style and literary craft. India is on the road to freedom and social reconstruction and so the study and contemplation of the labours and achievements of workers in the field—even when these workers have lived and thrived in other countries—is bound to be stimulating. We heartily recommend this book to the reader and trust that Dr. Sunderland or somebody else will write on the same lines a book dealing with the lives of 'Eminent Indians'.

The Leader says:

Babu Ramanand Chatterjee, editor of *The Modern Review*, deserves the thanks of the Indian public for bringing out this publication which is meant to be read by Indians. Indeed, the full title of the book is *Eminent Americans whom India should know.*

.....If America today is rushing headlong in an inordinate pursuit of wealth and luxury and is steeped in gross materialism, she has produced great men, leaders of thought, eminent scientists, men of letters, and great philanthropists; if India's greatest shame today is her political subjection, and if some social evils continue to receive the sanction of usage, she is now in dead earnest to bring about her political emancipation, and is making rapid strides towards social reform and improvement in all the departments of life.

Eminent Americans will enable Indians to know something of some of America's best minds..... The book embodies the penportraits of fourteen distinguished Americans drawn by one of their own countrymen, well-known in India—Dr. J. T. Sunderland. The learned doctor's reaction to India's political struggle is well known, and he is a very sympathetic and discerning student of Indian life and thought. This character-sketches are vivid portrayals of the life and activities of Lincoln and others....

Let somebody in India write a similar book, entitled 'Eminent Indians.' Why not let Babu Ramanand Chatterjee address himself to this task, for which he is eminently fitted.

The Christian Leader writes:

Dr. Sunderland's selections of Americans for his miniature Hall of Fame, and his comments on the men and women selected, are just what we should expect. He has singled out for description and sympathetic interpretation men and women of prophetic power and pioneering spirit, Lincoln, Emerson, Garrison, Lowell, Paine, O. W. Holmes, Channing, Whittier, Lucy Stone, Julia Ward Howe, Horace Greeley, C. A. Eliot, Charles F. Dole, and of the living, Alice Stone Blackwell. Would that we might be understood and judged as a people by such courageous and devoted servants of justice, truth and peace!

The stories of these heralds of a larger faith provide Dr. Sunderland with occasion and material for the service he has for so long been eager to render to the cause of friendship between Indian and American Liberals.

Also highly praised by—THE HINDU, BOMBAY CHRONICLE, SIND OBSERVER, HINDUSTHAN TIMES, GUARDIAN INDIAN MESSENGER, FORWARD, THE HINDUSTHAN REVIEW, THE UNION MAGAZINE, THE TRIBUNE, THE INDIAN REVIEW, UNITY, THE TWENTIETH CENTURY OF ALLAHABAD, ADVANCE INDIA OF MADRAS, UNITED INDIA AND THE INDIAN STATES, THE SEARCHLIGHT AND MANY OTHERS.

THE MODERN REVIEW

JANUARY 1936

Vol. LIX., No. 1 Whole No. 349

CHARLES DARWIN

By J. T. SUNDERLAND

It seems to be unquestionable that the modern doctrine of Evolution is the most important contribution made to science since Sir Isaac Newton. It is also more and more recognized that its importance is not confined to science (physical science), but that its influence, direct or indirect, is being felt, and felt in increasingly fruitful ways, throughout the whole realm of modern thought.

Evolution as understood today is not due to Darwin alone; other scientific investigators have made invaluable contributions to its elucidation since his day; but all scientific authorities agree that Darwin's name is the greatest and most important connected with it.

Darwin died in 1882. For forty years before his death he had lived the quietest of lives, so far as external events were concerned, in the outskirts of a very small and almost unknown country village in Kent, England. The place was some miles off the railroad, so that, although his death occurred on Wednesday, the news, destined to carry sorrow to all parts of the civilized world, was not heard in London until noon of Thursday. There in a spacious, comfortable, rather old-fashioned brick house, made picturesque with wild vines and ivy, and shaded with great old trees, lived and worked with steady persistence and perseverance, but with nothing external to distinguish him from the ordinary country gentleman, the man whose books went forth to revolutionize the thought of mankind.

Back of his house were fine and rather large grounds. Adjoining his house was a conservatory, and near by hot-houses, where he conducted those experiments on flowers, climbing plants, and other forms of vegetable and animal life. which have shed such light on many departments of natural history.

Mr. Darwin located himself in this quiet place, partly because his health was delicate and could be best guarded in a spot like this, and partly because he had laid out for himself a life work, and was wise enough to know that in such a place, where there would be no interruptions of society and few external diversions, he could accomplish the greatest amount of labour. Here, in a delightful home, surrounded by his family, esteemed by his neighbours, loved by all the children of the district, for whom he always had a smile and a kind word, rising at the early hour of six o'clock, taking his walks in field or lane or wood regularly at seven, twelve and four, and spending usually about twelve hours a day at his work in conservatory or garden or study, he performed those patient and careful experiments and accumulated that wealth of facts, which make his books such marvels. This is the spot, which although the dust of the world-renowned scientist lies in Westminster Abbey among the great, will for centuries be visited by pligrims from all lands as a scared place.

Mr. Darwin was born in Shrewsbury, and lived to the age of 73 years. His father was a physician, interested in science, and a member of the Royal Society. His grand-father, also a physician and member of the Royal Society, had risen to some eminence as a botanist, and as a writer of books, one of which, the

Prabasi Press, Calcutta

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Zoonomia, or Laws of Organic Life, plainly foreshadowed the theory of development which his illustrious grandson afterwards gave to the world.

The ancestors on the mother's side also were persons of some note, being members of the celebrated Wedgewood family. Thus, whatever influence there may be in heredity, Charles Darwin had the full benefit of it. With such an ancestry we are not surprised at his rich mental endowments, nor do we wonder that from his childhood the bent of his mind should have been in the direction of science.

His early education was received in the grammar school of his native town. At 16 he was sent to the University of Edinburgh, Scotland, where he remained two years, then went to Cambridge, England, where he studied four years, taking his degree of Bachelor of Arts at the age of 22. It is known that while at Cambridge he was specially interested in Botany and that at Edinburgh he gave particular attention to Marine Zoology.

Very soon after his graduation an event occurred which proved to be of prime importance in his career and in the history of modern science. I refer to his going on a voyage of scientific research around the world. About the time he was finishing his Cambridge studies, His Majesty's exploring ship "Beagle," returned from a four years' survey of the coasts of Patagonia and Terra Del Fuego. Soon another voyage, more extended and of longer duration, was to be undertaken. Captain Fitz Roy of the "Beagle" advertised for a naturalist to accompany him. Young Darwin applied for the place, and through the influence of friends who knew his scientific attainments and great promise, obtained it. Accordingly in the November following his graduation, while yet less than 23 years of age, he set out for a tour and cruise or original observation and study on many of the waters of the world, and also in such important lands as Brazil, Patagonia, Chili, Peru, the Galapagos and Society Islands, New Zealand, Australia, Mauritius, St. Helena, and the Cape Verde Island. On this voyage he was gone almost five years, gathering and bringing back with him extensive botanical, zoological, and geological collections, and an immense store of scientific information.

To start out upon his career as a scientist with five years of such travel, observation and experience, was simply invaluable. It gave him an important advantage to begin with over nearly or quite every other scientific investigator of the age. Without this preparatory experience, and wide survey of the physical phenomena of the earth, it seems likely that he never could have reached a clear conception of that magnificent generalization known as Evolution (at first largely called Darwinism) by which the scientific thinking of the world has been so radically changed; or, if he had reached it, at least he could not have brought to its support such a remarkable array of facts from all provinces of nature and all parts of the world as he did bring to its support. Indeed it was while he was at the Galapagos Islands, as he tells us, prosecuting his researches in connection with that memorable voyage in the ship Beagle, that the great thought of development by natural selection, or by survial of the fittest which is the vital principle of the whole development theory, first took shape in his mind. Immediately he saw that the thought was one of almost unparalleled scientific importance, if it proved to be true. He determined almost from the first, therefore, to devote his life to the investigation and elucidation of his great conception.

Accordingly, soon after his return from his years abroad, having married, he bought the country place which I have already described and set out upon the prosecution of his long and arduous life work here.

The first ten years in this quiet home he devoted mainly to the laborious task of publishing the scientific results of his voyage, giving to the world in that connection no less than five works of importance, coming under the general heads of Geology, Zoology, and Natural History.

It was not until the year 1859, when he was fifty years old, that he issued his greatest and epoch-making book, *The Origin of Species by means of Natural Selection; or the preservation of Favoured Races in the Struggle for Life.* And even then, though he had been at work upon the book fifteen years, he was compelled to publish it earlier than he intended, to prevent the ground which he had covered from being pre-empted by another, namely, Mr. Alfred Russell Wallace, who had prepared a paper on the same subject and sent it to Mr. Darwin to read as the one scientist in England most likely to understand and appreciate what he had written.

The conception of Evolution was not original with Darwin. The general idea of nature as a "development," or of the world as having grown or "evolved" by slow degrees from the simple to the complex, from the homogeneous to the heterogeneous, until from a primitive condition of water, or air, or fire,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

or unorganized matter, or matter and force, it had at last unfolded or transformed itself into what we now see, this idea in a more or less vague form had been in the world from as far back almost as human history extends. There are many traces of it in ancient Hindu and Buddhist writings. Some of the earliest of the Greek philosophers entertained the conception, speculated much concerning it, and even made it the basis of their philosophical systems. A number of eminent German thinkers of the eighteenth century and the early part of the nineteenth, Immanuel Kant perhaps being foremost among them, took up the thought and gave it strong support. Goethe advocated it in his conversations with literary men and in more than one of his writings. The naturalists Lamarck, Oken, and St. Hillaire approached in their theories very near to Darwin's view. What is worthy of note, Darwin's own grandfather had written in support of the development theory. Moreover a striking book of anonymous authorship entitled *Vestiges of Creation* appeared in England in the year 1844 (after several of Darwin's earlier books had been given to the world, and only fifteen years before his *Origin of Species*) and made a great stir by advocating with much skill and ingenuity the doctrine of creation by law, genetic continuity, progressive development.

However, all this was only preparatory. All that had been written before Darwin's *Origin of Species* had only ploughed ground, or at best sown seed. It had set men thinking in the direction of the development theory; but all the thought that resulted, up to the time of Darwin's great book, was vague and inconclusive. One thing was wanting to give the theory solidity and a scientific foundation. That wanting thing Darwin brought to it. It was, as already stated, the thought of natural selection. Darwin came before the world not simply urging that species had originated from natural causes, but setting forth the manner in which and the means by which he believed them to have originated, and at the same time spreading before the scientific world an astounding array of carefully observed, and fully described, facts in support of what he urged. From that moment the foremost, the all-overshadowing, question in the scientific world became, and became inevitably, Is Darwin right? Does natural selection or the theory of the survival of the fittest in the struggle for life, wholly or in large part account for the origin of species in the vegatable and animal world? At once it became clear to all thinking men that his theory was revolutionary, not only throughout the whole realm of science, but also in social, political, ethical, and theological thought.

The immense increase of fame that came to Mr. Darwin did not for a moment take him off his feet. The tremendous scientific and theological controversy that arose over his teachings did not draw him aside from the straight line of quiet work that he had laid out for himself and pursued steadily for so many years.

He followed up his volume on the *Origin of Species* at longer or shorter intervals with some ten other works, namely:

The Various Contrivances by which Orchids are Fertilized by Insects, 1862.
The Movements and Habits of Climbing Plants, 1865.
The Variation of Plants and Animals under Domestication, 1867.
The Descent of Man, and Descent in Relation to Sex, 1871.
The Expression of Emotions in Man and Animals, 1872.
Insectiverous Plants, 1875.
The Effects of Cross and Self Fertilization in the Vegetable Kingdom, 1876.
The Different Forms of Flowers and Plants of the Same Species, 1877.
The Power of Movement in Plants, 1881.
The Formation of Vegetable Mould through the Action of Worms, with Observations on Their Habits, 1882.

All of these works were in the same general line with the *Origin of Species*. Each gave the record of the writer's careful, patient, exhaustive examination of some department or province of nature, with a view to finding out what light it had to throw upon the great central thought of development through natural and regular causes. Each work revealed the master. Any one of the number would have made the fame of an ordinary scientific writer.

Having now glanced over Mr. Darwin's life and work, we are ready for a brief inquiry regarding his influence, first in physical science, and then in other realms, particularly those of ethics and religion.

Darwin was not distinctly a geologist; only during the early years of his scientific career did he give extended attention to geological study. Yet the science of Geology was profoundly affected by his investigations. His work on Coral Reefs is regarded as one of the most important monographs in the whole history of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

geological science. His chapter on the "Imperfection of the Geological Record" in the *Origin of Species* startled geologists as if it had been a clap of thunder. His two chapters in the same work on "Geographical Distribution" threw a flood of light on the whole realm of geological inquiry. It was soon perceived that if his theory of organic development is true, and if the life of the world has been from the beginning continuous, it affects profoundly the whole geological story. This is the reason why geological science has had to be reconceived and re-written since Darwin came on the scene.

The two sciences, however, which have felt the influence of Darwin's thought most, both directly and indirectly, are Botany and Zoology. These were the sciences in immediate connection with which his main work was done, and to which his theory first of all applied. When he began his investigations, all organic species, whether animal or vegetable, were supposed to be fixed and unchangeable; and every distinct form of life, past or present, was believed to be a special creation. With such a theory in the minds of scientists, both Botany and Zoology were full of discords and confusion. Thousands of facts were pressing on the attention of careful observers, which could find no explanation under such a theory. But with Darwin came a change. His theory of descent (to use the words of Professor Romanes) was the influence that "created organization out of confusion, brought the dry bones to life, and made all the previous dissociated facts of science stand up, as an exceeding great army."

If Darwin made it important to re-write or lay aside all works on geology written before his day, still more imperative did he make it to recast all textbooks and all treatises on Botany and Zoology. Biological science in its whole range, both vegetable and animal, has been created anew by his thought.

But not with physical science in any of its departments can we stop. He is the most superficial of observers who does not recognize that Darwin's influence has extended, and very powerfully, far beyond the limits of the physical realm, into those of society, mind, morals, and religion.

Not that Darwin himself pushed his investigations much into these realms, or in his writings traced the bearing of his thought far beyond the physical or at most the lower forms of the mental, as the intelligence of animals. Yet occasionally he went further, as in certain chapters of his *Descent of Man*, and his interesting paper published a year or two before his death on the mental development of one of his children. But however closely he himself may have kept in his investigation and writing to organized physical life, his theory is one that necessarily goes out and affects the whole realm of man's life, mental, social, moral, and spiritual.

"Darwinism" is only partially identical with Evolution, but it is its backbone; and Evolution is the thought that throws more light than any other upon man's whole past, present and future.

We are finding that not only geological history, and the history of all forms of life on the earth below man, but also that the history of man himself must be re-written in the light of evolution.

We are finding that all our educational theories and methods must be re-cast in the light of the same. The psychologists and educators of the world are now at work on this great task.

We are discovering that our theories and methods of government are right only to the degree that they take heed of the principle of evolution.

We are learning that all progress, if it is to be real and permanent, must be based on evolution, not on revolution. Revolution has been too much the method of the past; evolution must be the method of the future.

For this radical change that is coming into all departments of our thinking, we are indebted of course to many men. No one mind is capable of working out the whole evolutionary philosophy. But Darwin furnished the key. Here was his greatness. He pointed out the path along which others are pressing with such important results to civilization.

Into the work of social reform Darwin cast two fruitful seeds. First, all men who would be reformers, all who would dry up the streams of vice and evil in society and do good to their fellow men, he set to the work of observing, to the work of looking for facts, gathering statistics, studying conditions and environments as never before; thus they began to get a basis of accurate knowledge to found their reforms upon, such as no past age had known. And secondly, he was largely instrumental in casting the great and fruitful thought of prevention into the mind of reformers, teaching them that the way to get rid of ignorance and vice and to elevate the race is to begin with generations as soon as they are born and before they are born; it is to take care of heredity, and of the physical conditions, mental associations and environments of children from their very earliest

moments, and thus harness whole groups of intangible but mighty forces which the past has largely overlooked into our service to help us in our reformatory work.

What shall we say regarding the influence of Darwin upon morals? There has been grave and widespread fear that here the effects of his thought would prove disastrous. Has time justified the fear? I think I may answer that the tendency of Evolution has proved to be not at all the destruction of morals, or the weakening of the ethical foundation of society. Rather does Darwin's thought when carried to its legitimate conclusion seem to reveal the fact, more clearly than it was ever revealed before, that the order of the universe is a moral order, and that justice and right and truth are builded into the very nature of things.

Evolution says man's reason came into being responsive to the call of a rational universe. Because there was something to be known and understood ever pressing upon him, he learned to know and think. In the same way man's sense of beauty has been developed in him in response to his environment. Because he was in a world constructed on principles of beauty, his mind got the beauty-faculty, that is, grew to apprehend and enjoy beauty. Similarly Evolution teaches that men's ideas of right and justice have come into being because these things are realities. Right and justice are in the universe, and therefore they have come to be in him. Man is moral because the universe is moral. Thus we see that Evolution rightly understood cannot result in any permanent disturbance of morals, but must lead to a firmer foundation than much of the ethics of the past has known, a foundation in nature itself, in the very constitution of the universe.

What has been the influence on Christianity of Darwin's scientific investigations?

From the first it was seen that if the development theory came to be generally accepted it must produce a profound change in the theological thought of Christendom. The Bible story of creation could no longer be regarded as historic; the period of man's existence on the earth must be extended to many times six thousand years, and that of the existence of the earth to a period vastly longer still. There could have been no literal Adam and Eve. Instead of the first human beings having been created perfect and having "fallen", dragging down all their descendents with them, the human family began its career very low down, and has slowly, through the experience and struggle of ages, climbed to its present condition, and its face is still forward and upward. In other words, ours is a rising, not a fallen world.

Since Mr. Darwin's scientific theory was thus seen to be subversive of much that was regarded as vital in the prevailing theology of Christendom, it was not strange that it stirred up a great theological controversy.

Of course, he had also to fight a hard battle with the scientists. He was a scientific innovator, a scientific heretic. He proposed a scientific theory which was new, and which ran counter to the view of practically every scientist living. In offering to the world his thought of the *Origin of Species* he was stepping forth into the arena as a solitary champion of a theory which must fall unless he could defend it successfully against the attacks and the criticisms of the whole scientific world.

However, this battle with the scientists, severe as it was, had the advantage of being concerned principally with facts and reasoning, and only to a limited extent with prejudices. This was why it was possible to bring it to an end within a reasonable time.

The theological battle was different. It had to do largely with prejudices and fears. Religious men held beliefs which in many cases they were unwilling even to have investigated, beliefs which they regarded as having something sacred about them, and therefore which were not to be tried by the tests of "mere human reason" and "profane science".

Only persons who are now far past middle life can remember how intense and often bitter this battle with theology was. An incident or two will illustrate it.

A story is preserved regarding the then somewhat eminent Dean Burgon, a splendidly honest and outspoken old dogmatist of the English Church, who having to preach a sermon on an important occasion when many scientific men were present, concluded his discourse by vigorously denouncing the new scientific theory of Darwin, and saying with biting sarcasm to the scientists before him,

> "Gentlemen, leave me my ancestors in the Garden of Eden, and look for your own (not mine) in the Zoological Gardens."

A story quite as interesting comes to us regarding Professor Huxley and an English Bishop.

We are told that at an annual meeting of the British Association for the Advancement of Science, in those days when Darwin and Darwinism were so cordially hated, a Bishop of the English Church closed a sarcastic speech against the new doctrine by turning to Huxley, its leading advocate in the body at that time,

Thus we see that Evolution rightly understood cannot result in any permanent disturbance of morals, but must lead to a firmer foundation than much of the ethics of the past has known, a foundation in nature itself, in the very constitution of the universe.

What has been the influence on Christianity of Darwin's scientific investigations?

From the first it was seen that if the development theory came to be generally accepted it must produce a profound change in the theological thought of Christendom. The Bible story of creation could no longer be regarded as historic; the period of man's existence on the earth must be extended to many times six thousand years, and that of the existence of the earth to a period vastly longer still. There could have been no literal Adam and Eve. Instead of the first human beings having been created perfect and having "fallen", dragging down all their descendents with them, the human family began its career very low down, and has slowly, through the experience and struggle of ages, climbed to its present condition, and its face is still forward and upward. In other words, ours is a rising, not a fallen world.

Since Mr. Darwin's scientific theory was thus seen to be subversive of much that was regarded as vital in the prevailing theology of Christendom, it was not strange that it stirred up a great theological controversy.

Of course, he had also to fight a hard battle with the scientists. He was a scientific innovator, a scientific heretic. He proposed a scientific theory which was new, and which ran counter to the view of practically every scientist living. In offering to the world his thought of the *Origin of Species* he was stepping forth into the arena as a solitary champion of a theory which must fall unless he could defend it successfully against the attacks and the criticisms of the whole scientific world.

However, this battle with the scientists, severe as it was, had the advantage of being concerned principally with facts and reasoning, and only to a limited extent with prejudices. This was why it was possible to bring it to an end within a reasonable time.

The theological battle was different. It had to do largely with prejudices and fears. Religious men held beliefs which in many cases they were unwilling even to have investigated, beliefs which they regarded as having something sacred about them, and therefore which were not to be tried by the tests of "mere human reason" and "profane science".

Only persons who are now far past middle life can remember how intense and often bitter this battle with theology was. An incident or two will illustrate it.

A story is preserved regarding the then somewhat eminent Dean Burgon, a splendidly honest and outspoken old dogmatist of the English Church, who having to preach a sermon on an important occasion when many scientific men were present, concluded his discourse by vigorously denouncing the new scientific theory of Darwin, and saying with biting sarcasm to the scientists before him,

> "Gentlemen, leave me my ancestors in the Garden of Eden, and look for your own (not mine) in the Zoological Gardens."

A story quite as interesting comes to us regarding Professor Huxley and an English Bishop.

We are told that at an annual meeting of the British Association for the Advancement of Science, in those days when Darwin and Darwinism were so cordially hated, a Bishop of the English Church closed a sarcastic speech against the new doctrine by turning to Huxley, its leading advocate in the body at that time,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and saying in the presence of a large audience with the most cutting accents,

> "Is the learned gentleman really willing to have it go forth to the world that he believes himself to be descended from a monkey?"

Professor Huxley rose, and in his quiet way, but with terrible effect, replied,

> "It seems to be that the learned bishop hardly appreciates our position and duty as men of science. We are not here to inquire what we would prefer, but what is true. The progress of science has been from the beginning a conflict with old prejudices. The origin of man is not a question of likes and dislikes to be settled by consulting the feelings, but it is a question of evidence to be settled by strict scientific investigation. But, as the learned bishop is curious to know my state of feeling on the subject, I have no hesitation in saying that, were it a matter of choice with me, which clearly it is not, whether I should be descended from a respectable monkey or from a bishop of the English Church who can put his brains to no better use than to ridicule science and misrepresent its cultivators, I would certainly choose the monkey."

Such a retort as this could not have come from Darwin, who never under any circumstances allowed himself to be drawn into personalities or sarcasm. But it well illustrates how intense was the conflict between the theologians and the scientists, and how strongly the former intrenched themselves behind mere vulgar prejudices; as it also illustrates the magnificent fighting qualities of Huxley, who, though not so influential in quiet ways as Darwin, was, more than any other, the leader in open fight through all the hard campaign.

And now how strange it seems to call to mind the fact that when the author of the theory over which all this conflict raged, died, in the year 1882, within less than half a generation from the time when the noise of the battle was loudest, the Church of England, the church of the very bishop who had uttered the taunt which I have mentioned, actually threw open the doors of Westminster Abbey, her most sacred burial place, and craved the honour of interring the author of the Darwinian theory among her most illustrious dead. How strikingly the story illustrates the widening of men's thought, and the triumph of charity over prejudice and of knowledge over bigotry at least in that little corner of the world which we call England.

It is important clearly to understand that the controversy which arose between the Church and the theory of Evolution put forth by Darwin, was theological, not religious. Evolution did not disturb religion. What it disturbed was the Genesis stories of the Creation and the Fall, and whatever system or systems of Christian theological dogma men had built upon those legends. But those legends and those systems of theology had no necessary connection with religion. All religion outside of Christendom is independent of them; and it is coming to be more and more clearly seen that even Christianity as taught by Jesus bears no necessary relation to them.

When Darwin's thought first came before the world many declared it to be atheistic.

But it is now recognized by thinking men generally that this charge is without foundation. Of course, men may be atheists and disciples of Darwin, as men may be atheists and opponents of Darwin. But, certainly there is nothing necessarily atheistic in Darwin's teachings. This is seen to be so, first, from the fact that he himself was not an atheist, as near the end of his life he explicitly declared; second, from the fact that many of the most eminent supporters of the Darwinian theory are believers in God; and third, from the fact that the theory deals with method and not at all with cause; and, so far as we can see, God may as easily work by law as by cataclysm, may as fittingly create the world and man by gradual and orderly development as by sudden fiats and arbitrary special acts. Indeed to many devout minds the theory of evolution, so far from tending to banish God from the universe, seems to fill the universe full of a Divine Presence as the older theory never did.

Under the touch of the evolutionary philosophy, as many of the profoundest thinkers of our day are coming to interpret that philosophy, the old-time absentce Deity, dwelling in a far off heaven, and making himself known to men only in occasional miraculous manifestations, becomes transformed into an Infinite and Eternal Power that impels all things, an Infinite and Eternal Intelligence that guides all things, an Infinite and Eternal Life that kindles all finite life, an Infinite and Eternal Goodness, Justice and Love that holds the world in its arms, and comes to manifestation in all our human justice, goodness, and love.

Saint Paul never dreamed of Mr. Darwin or his theory. But was it not exactly the God of modern Evolution that he unconsciously portrayed, when he wrote: "In him (God) we live and move and have our being"?

Some have imagined that Darwin's thought of Evolution is inimical to man's spiritual life, specially to prayer and worship. But others answer: Rather, when deeply understood, does it not bring God nearer than he ever was before, and with a clearer voice does it not say to every human soul

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"Speak to him, thou, for He hears:
And spirit with spirit may meet:
Nearer is He than breathing,
And closer than hands and feet."

Some have supposed that Evolution is hostile to man's great hope of immortality. But here, too, I think it is coming widely to be felt that the fear is without warrant. If in some respects the evolution theory seems to bear against the probability of a future life for man, in other respects it is believed to support it. To many minds a future life seems to be implied by Evolution,—seems to be logically necessary to complete the theory of Evolution itself. Why should human progress stop with the grave? Man does not seem to attain the full possibility of his nature in this world. The most complete earthly life is conscious of powers unused, of faculties only partly developed, or hopes and plans unrealized. Have we not in this fact a promise, or at least an intimation, written in man's own soul, that this life is only a beginning, an infant school, where man is prepared for something greater beyond?

To sum up the whole matter of the religious influence of Darwin, I may say: "I think the prevailing verdict among the most influential religious thinkers of the West is, that instead of the doctrine of Evolution proving an injury to religion, as many at first feared, its effect has rather been to make religion reasonable and intelligible, to bring it into the natural order, and therefore to make it seem more real, more valuable and more attractive. Evolution seems to show that religion is an essential part of man's higher life; that the religious instinct or the religious faculty in man is somehing as normal and as necessary as his reasoning faculty: that man is as much made to aspire toward what is above him, to cherish ideals, to care for the spiritual side of life, and to worship, as he is to think or to breathe: and that what men ought to do, therefore, is not to neglect or ignore their religious nature, but train and develop it in ways that are sane, intelligent and uplifting."

I close with a word or two regarding Darwin the man.

Few nobler or more attractive characters are to be found in modern history, than the great scientist whose life and work we have been studying. He was as modest as a girl, but in his search for truth he was as courageous as a knight. He was singularly unselfish. He had in his nature no egotism and no jealousy. Young scientists, and scientists who were as yet unknown, had no truer friend.

As a worker he was persevering and patient as few men have ever been. This accounts for the fact that his work was so enormous in quantity as well as so superior in quality.

If he had any one trait of character that outshone all others, it was perhaps his candour and his absolute truthfulness. He never exaggerated. He never overestimated the value of his own writings or investigations. Nobody has ever pointed out the objections to his scientific theories more fully, more conscientiously or more ably then did he himself.

Well may the whole world, well may the whole world of religion as well as the world of science, sit down at the feet of Charles Darwin to learn unselfishness, candour, sincerity, honesty, and honour.

They laid him, when he died, in Westminster Abbey, beside that greatest of all English Scientists up to his own age, Sir Isaac Newton. Were they not right in the spot they chose for him? Must we not believe that a thousand years from now, it will be said, Newton and Darwin, those two, whose ashes sleep side by side in England's most splendid mausoleum, were the two British men who in the time preceding the close of the Nineteenth Century did most for the world's science, and perhaps also for the World's religion?

THE MIND OF A JUDGE

By JAWAHARLAL NEHRU

THE days when I practised at the Bar as a lawyer seem distant and far-off, and I find it a little difficult now to recapture the thoughts and moods that must have possessed me then. And yet it was only sixteen years ago that I walked out of the web of the law in more ways than one. Sometimes I look back on those days, for in prison one grows retrospective and, as the present is dull and monotonous and full of unhappiness, the past stands out, vivid and inviting. There was little that was inviting in that legal past of mine and at no time have I felt the urge to revert to it. But still my mind played with the ifs and possibilities of that past—a foolish but an entertaining pastime when inaction is thrust on one—and I wondered how life would have treated me if I had stuck to my original profession. That was not an unlikely contingency, though it seems odd enough now; a slight twist in the thread of life might have changed my whole future. I suppose I would have done tolerably well at the Bar and I would have had a much more peaceful, a duller, and physically a more comfortable existence than I have so far had. Perhaps I might even have developed into a highly respectable and solemn-looking judge with wig and gown, as quite a number of my old friends and colleagues have done.

How would I have felt as a judge, I have wondered? How does a judge feel or think? This second question used to occupy my mind to some extent even when I was in practice conducting or watching criminal cases, lost in wonder at the speed and apparent unconcern with which the judge sent men to the scaffold or long terms of imprisonment. That question, in a more presonal form, has always faced me when I have stood in the prisoner's dock and awaited sentence, or attended a friend's trial for political offences. That question is almost always with me in prison, surrounded as I am with hundreds or thousands of persons whom judges have sent there. (I am not concerned for the moment with political offenders; I am only referring to the ordinary prisoners). The judge had considered the evil deed that was done and he had meted out justice and punishment as he had been told to do by the penal code. Sometimes he had added a sermon of his own, probably to justify particularly heavy sentence. He had not given a thought to th upbringing, environment, education (or want o it) of the prisoner before him. He had paid n heed to the psychological background that le to the deed, or to the mental conflict that ha raged within that dumb, frightened creatu who stands in the dock. He had no notion tha perhaps society, of which he considers himsel a pillar and an ornament might be partly res ponsible for the crime that he is judging.

He is, let us presume, a conscientious judg and he weighs the evidence carefully befor pronouncing sentence. He may even give th benefit of the doubt to the accused, though ou judges are not given to doubting very muc But, almost invariably, the prisoner and h belong to different worlds with very little i common between them and incapable of unde standing each other. There may sometimes b an intellectual appreciation of the other's ou look and background, though that is rare enoug but there is no emotional awareness of it, an without the latter there can never be true under standing of another person.

Sentence follows, and these sentences ar remarkable. As the realization comes that crim is not decreasing, and may even be increasing the sentences become more savage in the hop that this may frighten the evil-doer. The judg and the power behind the judge have not grasped the fact that crime may be due to speci reasons, which might be investigated, and th some of these may be capable of control; an further that in any event a harsh penal cod does not improve the social morals of a grou or a harsh sentence those of an individual wh has lapsed from grace. The only remedy the know, both for political and non-politic offences is punishment and an attempt to ter rorize the offender by what are called deterren sentences. The usual political sentence now fo a speech or a song or a poem which offends th Government is two years rigorous imprisonmen (in the Frontier Province it is three years), an a lavish use of this being made from day t day; but even this seems trivial when compare with the cases of large numbers of those people who are kept confined for four or five years or more, indefinitely, without conviction o sentence.

Political cases, however, depend greatly o

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the moods of Government and a changing situation, and do not help us in considering the ordinary administration of the criminal law. To some extent the two overlap and affect each other, for instance, many agrarian and labour cases in courts are often definitely political in origin. It is also well known that many people, who are considered politically undesirable by the police, are proceeded against under the bad livelihood or similar sections of the code and clapped in prison as bad characters with no special offence being brought up against them. Ignoring such cases and considering what might be called the unadulterated crimes, two facts stand out: both the numbers of convictions and the length of sentences are growing. Every year the various provincial prison reports complain of the increasing number of prisoners and the necessity of additional accommodation. The peak years, when the civil disobedience movement sent its scores of thousands to prison, become the normal years even without this special influx of politicals. Occasionally the difficulty is overcome by discharging a few thousand short timers before their time, but the strain continues.

The Central Prisons are full of 'lifers', prisoners sentenced for life, and others sentenced to long terms. Most of these 'lifers' come in huge bunches in dacoity cases and probably a fair proportion are guilty, though I am inclined to think that many innocent persons are involved also, as the evidence is entirely one of identification. It is obvious that the growing number of dacoities are due to the increasing unemployment and poverty of the masses as well as the lower middle classes. Most of the other criminal offences involving property are also due to this terrible prospect of want and starvation that faces the vast majority of our people.

Do our judges ever realize this or give thought to the despair that the sight of a starving wife or children might produce even in a normal human being? Is a man to sit helplessly by and see his dear ones sicken and die for want of the simplest human necessities? He slips and offends against the law, and the law and the judge then see to it that he can never again become a normal person with a socially beneficial job of work. They help to produce the criminal type, so-called, and then are surprised to find that such types exist and multiply.

The major offences lead to a life sentence or ten years or so. But the petty offences and the way they are treated by judges are even more instructive. The vast majority of these are buried in court files and get no publicity; only rarely do the papers mention such a case. Three such cases, taken almost at random from recent issues of newspapers, are given below:

Rahman was an old offender with 12 previous convictions, the first of which dating back to 1913. The present offence was one of theft of clothes valued at a few rupees. Rahman pleaded guilty and requested the court to send him to a reformatory or some such place from where he could emerge thoroughly reformed. The judge, who was the Judicial Commissioner in Sind, refused this request and sentenced him to seven years, adding: "If this seven-year sentence of hard labour does not reform you, God alone must come to your aid." (Karachi: May 23, 1935).

Badri, who had four previous convictions, was sentenced to two years' rigorous imprisonment under Sections 411/75 I. P. C. for having dishonestly received a stolen *chaddar* (cloth sheet). (Lucknow: July 3, 1935).

Ghulam Mohammad, an old offender, was sentenced to three years' rigorous imprisonment for stealing one rupee by picking the pocket of a man. (Sialkot: July 15, 1935).

These and similar sentences may be perfectly correct from the point of view of the Indian Penal Code but it does seem to me astonishing that any judge should imagine that by inflicting such sentences he is reforming the offender. Evidently the Judicial Commissioner in Sind had himself some doubts about the efficacy of his treatment for he hinted that God might be given a chance on the next occasion.

There they sit, these judges, in their courts, and a procession of unfortunates passes before them—some go to the scaffold, some to be whipped, some to imprisonment, to which may be added solitary confinement. They are doing their duty according to their abstract ideas of justice and punishment; they must consider themselves as the protectors of society from anti-social criminal elements. Do their thoughts ever go beyond these set ideas and take human shape considering the miserable offender as a human being with parents, wife, children, friends? They punish the individual but at the same time they punish a group also, for the ripples of suffering spread out and go far. Those who have to die at least die swiftly, the agony is brief. But the agony is long for those who enter prison.

> "Behind the door, within the wall
> Locked, they sit the numbered ones . . . ."

Two years, three years, seven years stolen from life's brief span—each year of twelve months, each month of thirty days, each day of twenty-four hours—how terribly long it all seems to the prisoner, how wearily time passes!

All this is very sad and deplorable no doubt, but what is the poor judge to do? Is he to wallow in a sea of sentimentality and give up sentencing offenders against the laws? If he is so soft and sensitive he is not much good as a judge and will have to give place to another. No, no one expects the judge to embrace every offender and invite him to dinner, but a human element in a trial and sentence would certainly improve matters. The judges are too impersonal, distant, and too little aware of the consequences of the sentences they award. If their awareness could be increased, as well as a sense of fellow-feeling with the prisoner, it would be a great gain. This can only come when the two belong to more or less the same class. A financier who has embezzled vast sums of public money will have every sympathy from the judge, not so the poor wretch who has picked up a rupee or stolen a sheet to satisfy an ungent need. For the judge and the average offender to belong to the same class means a fundamental change in social structure, as indeed every great reform does. But even apart from and in anticipation of that, something could certainly be done.

It was Bernard Shaw, I think, who suggested that every judge and magistrate, as well as every prison official, should spend a period in prison, living like ordinary prisoners. Only then would they be justified in sentencing people to imprisonment, or to governing them there. The suggestion is an excellent one although it may be difficult to give effect to it. I ventured to suggest it once to the Home Member and the Inspector-General of Prisons of the U. P. Government for their personal adoption, but they did not seem to favour it. At least one well-known prison official, however, has adopted it. This was Thomas Mott Osborne of the famous Sing Sing prison in New York. He trained himself by undergoing a term of voluntary imprisonment and, as a result of this, he introduced later on many remarkable improvements in the social rehabilitation and education of the prisoners.

Such a term of voluntary imprisonment will do a world of good to the bodies and souls of our judges, magistrates and prison officials. It will also give them a greater insight into prison life. But obviously no such voluntary effort can ever approach the real thing. The sting of imprisonment will be absent as well as the peculiarly helpless and broken feeling before the armed and walled power of the State, which a prisoner experiences. Nor will the voluntary prisoner ever have to face bad treatment from the staff. The essence of prison is a psychological background of having been cast off from society like a diseased limb. That will necessarily be absent. But with all these drawbacks the experience will be worthwhile and will help in making the administration of the criminal law more human and beneficial. The great invasions of our prisons by middle-class people during the non-co-operation and civil disobedience movements had indirectly a marked effect. As the prison-goers did not become judges or prison officials the direct effect was little. But a knowledge of prison conditions and a sympathy for the prisoner's lot became wide-spread, and public opinion and the crusading efforts of some Congressmen bore substantial results.

I do not know whether I am over soft but I do not think I err on the musky and sentimental side. Other people and even many of my close colleagues have considered me rather hard. Mr. C. R. Dass once referred to me at a meeting of the All-India Congress Committee as being 'cold-blooded'. Perhaps it all depends on the standard of comparison as well as on the fact that some display their emotions more than others. However that may be, I do hate the idea of punishment and especially 'deterrent' punishment and all the suffering, deliberately caused, that it involves. Perhaps it cannot be done away with completely in this present-day world of ours, but it can certainly be minimized, toned down and almost humanized.

At one time I was strongly opposed to the death penalty and, in theory, my opposition still continues. But I have come to realize that there are many things far worse than death, and if the choice had to be made, and I was given it, I would probably accept a death sentence rather than one of imprisonment for life. But I would not like to be hung; I would prefer being shot or guillotined or even electrocuted; most of all other methods I would like to be given, as Socrates was of old, the cup of poison which would send me to sleep from which there was no awaking. This last method seems to me to be far the most civilized and humane. But in India we favour hangings, and last year the official mind showed us the texture of which it was made by organizing public hangings in Karachi or somewhere else in Sind. This was meant to terrify would-be evil-doers. It turned out to be a huge *mela* where thousands gathered to witness the ghastly spectacle. I suppose the mentality behind such public exhibitions bears a family resemblance to that which prompted the *autos da fe* of the Spanish Inquisition.

A friend of mine who became a High Court Judge had a 'crisis of conscience' when he had first to sentence a man to death. The idea seemed hateful to him. He overcame his

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

repugnance, however, (he had to or else he would not have long continued in his job) and I suppose he soon got used to sending people to the scaffold without turning a hair. He was an exception and I doubt if many others in his position have ever had such scruples. It is probably easier to sentence a man to death than to see the sentence carried out. And yet even sensitive people get used to this painful sight. A young English member of the Indian Civil Service had to attend hangings in the local gaol. At his first hanging, he told me, he was thoroughly sick and felt bad all day. But very soon the sight had no unusual effect on him whatever and he used to go straight from the execution to his breakfast table and have a hearty meal.

I have never seen a death sentence being carried out. In most of the gaols where I have lived as a prisoner executions did not take place, but on three or four occasions there were hangings in my gaol. These took place in a special enclosure, cut off from the rest of the prison, but the whole gaol population knew of it, perhaps because the unlocking of the various barracks and cells took place at a later hour on those mornings. I experienced a peculiar feeling on those days, an ominous stillness and a tendency for people to talk in low voices. It is possible that all this was the product of my own imagination.

And yet with all my repugnance for executions, I feel that some method of eliminating utterly undesirable human beings will have to be adopted and used with discretion. The real objection to the infliction of capital punishment as well as other punishments is of course not so much the resultant suffering of the person punished, as the brutalization of the community that authorizes such punishment, and more particularly of the individuals who carry it out. This is especially noticeable in the case of whipping, which is widely prevalent in India. The official defence for the punishment of whipping is that it is meant for horrible crimes, like rape with violence. In practice it has a much wider range and in 1932 (as was stated in the British House of Commons) five hundred civil disobedience prisoners were whipped. This was the official figure. unofficial jail beatings not being included. These political prisoners were whipped either for purely political offences or for breaches of gaol discipline. No violence or crime was involved. It has now been laid down officially that in serious cases of hunger-strikes in gaol whipping may be resorted to. We thus have it that in the opinion of the British Government in India a hunger-strike or breaches of gaol discipline stand on the same level as rape with violence.

Whipping is usually administered in prisons by some low caste prisoner. No prisoner likes the job but he has little choice in the matter. The higher caste prisoners would in any event refuse to whip, and even the warders are reluctant to do so. A case came to my notice once when a warder was asked to whip. He refused absolutely and was punished for this contumacy. It is interesting to compare the sensitiveness to whipping of the prisoners and warders with that of our judges and prison officials who order it, and our Government which authorizes and defends it.

I was reading the other day about the film censorship in Britain. It was stated that one of the grounds for censorship was the avoidance of cruelty scenes. In animal films no kill was to be shown. Films "showing pain or suffering on the part of an animal, whether such pain is caused by accident or intention" are not allowed as these are supposed to have a bad effect on spectators, especially children, and "undermine moral character."

We also in India have our film censorships and an active Society for the Prevention of Cruelty to Animals. Unfortunately human beings are not included in the category of animals and so they cannot benefit by the activities of the Society. And our film censorship justifies itself by banning films dealing ing with "Quetta Earthquake Topical" or "National Congress Scenes" or "Departure of Mahatma Gandhi for the Round Table Conference" and similar dangerous topics.

Sentences of death and whipping impress us and pain us, but, after all, they affect only a very small number of the scores of thousands who are sentenced by our courts. The vast majority of these go to prison, mostly for long periods over which their punishment is spread out. It is a continuing torture, a never-ceasing pain, till mind itself grows dull and the body is blunted to sensation. The criminal type develops, the ugly fruit of our gaols and our criminal law, and there is no fitting him in then with the social machine outside. He is the square peg everywhere, with no roots, no home, suspicious of every body, being suspected everywhere, till at last he comes back to his only true resting-place, the prison, and takes up again the tin or iron bowl which is his faithful companion there. Do our judges ever trouble to think of cause and effect, of the inevitable consequences of an act or decision? Do they realize that their courts and the prisons are the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri,

principal factories for the production and stamping of the criminal type?

In prison one comes to realize more than anywhere else the basic nature of the State; it is the force, the compulsion, the violence of the governing group. "Government", George Washington is reported to have said, "is not reason, it is not eloquence—it is force! Like fire, it is a dangerous servant and a fearful master." It is true that civilization has been built up on co-operation and forbearance and mutual collaboration in a thousand ways. But when a crisis comes and the State is afraid of some danger then the superstructure goes or, at any rate, is subordinated to the primary function of the State—self-protection by force and violence. The army, the police, the prison come into greater prominence then, and of the three the prison is perhaps the nakedest form of a State in miniature.

Must the State always be based on force and violence, or will the day come when this element of compulsion is reduced to a minimum and almost fades away? That day, if it ever-comes, is still far off. Meanwhile, the violence of the governing group produces the violence of other groups that seek to oust it. It is a vicious circle, violence breeding violence, and on ethical grounds there is little to choose between the two violences. It always seems curious to me how the governing group in a State, basing itself on an extremity of violence, objects on moral or ethical grounds to the force or violence of others. On practical grounds of self-protection they have reason to object but why drag in morality and ethics? State violence is preferable to private violence in many ways, for one major violence is far better than numerous petty private violences. State violence is also likely to be a more or less ordered violence and thus preferable to the disorderly violence of private groups and individuals, for even in violence order is better than disorder, except that this makes the State more efficient in its violence and powers of compulsion. But when a State goes off the rails completely and begins to indulge in disorderly violence, then indeed it is a terrible thing, and no private or individual effort can compete with it in horror and brutality.

"You must live in a chaos if you would give birth to a dancing star" says Nietzsche. Must it be so? Is there no other way? The old difficulty of the humanist is ever cropping up, his disgust at force and violence and cruelty and yet his inability to overcome these by merely standing by and looking on. That is the recurring theme of Ernst Toller's plays:

> "The sword, as ever, is a shift of fools
> To hide their folly."

> "By force, the smoky torch of violence,
> We shall not find the way."

Yet force and violence reign triumphant today everywhere. Only in our country has a noble effort been made to combat them by means other than those of force. The inspiration of that effort, and of the leader who lifted us out of our petty selves by his matchless purity of outlook, still remains, though the ultimate outcome be shrouded in darkness.

But these are big questions beyond the power even of judges. We may not prehaps be able to find an answer to them in our time, or finding an answer, be unable to impress it on wayward humanity. Meanwhile, the smaller questions and problems pursue us and we cannot ignore them. We come back to the job of the judge and the prison governor and we can say this, at least, with certainty: that the deliberate infliction of punishment or torture of the mind or body is not the way to reform any one, that though this may break or twist the victim it will not mend him, that it is much more likely to brutalize and deform him who inflicts it. For the inevitable effect of cruelty and torture is to degrade both the sufferer and the person who causes the suffering.

CONVERSION IN HINDUISM

By NIRMAL KUMAR BOSE

If we travel among the wild tribes who inhabit the hills and valleys of the Central Provinces of India or Chota Nagpur, we are at once struck by the fact that these tribes are slowly being converted to Hinduism. We generally believe that Hinduism is not a proselytizing religion; but on closer examination, this does not seem to be strictly true. It is true that Hinduism does not favour conversion in the same manner as Islam or Christianity does; but it is nevertheless a fact that Hinduism does favour conversion, although the process of conversion is somewhat different from that of some other religions.

The Juangs are a poor and illiterate tribe who inhabit certain portions of the States of Dhenkanal, Keonjhar and Pal Lahara in Orissa. These people are not served by Hindu priests. They have their own language and religious cutoms, but no priestly class to take charge of those religious functions. The Juangs are very poor. They cannot, therefore, afford to have priests who would only perform religious ceremonies and live upon the bounty of others. Any married man in Juang society is therefore allowed to perform the tribal ceremonies.

The Club-house of a Juang village, Pal Lahara.

Now, these Juangs formerly lived by hunting and the collection of wild roots and berries, as well as by a poor form of cultivation on the hill-sides. When Hindu farmers began to settle among the Juangs in the valleys, they were gradually forced to take refuge in the higher hills or in the comparatively inhospitable jungles. But these hills and jungles failed to yield sufficient sustenance to the Juangs, for the manner of extracting food from the earth which they knew, was very inefficient. Under these circumstances, the Juangs were forced to enter into co-operation with their Hindu neighbours. They began to specialize in one or other occupation, and thereby derived some food out of the sale of their products to the Hindus. In this way, the Juangs round about the town of Dhenkanal have taken up the occupation of supplying fuel; while those in the neighbourhood of Pal Lahara town have likewise specialized in basket-making. They thus succeed in maintaining themselves; although their standard of living is very low, even according to the average standard of living in rural India. From being free men who roamed about the jungles and derived their sustenance from the earth, either through hunting, cultivation or the collection of wild fruits, they have been forced into submission to their Hindu neighbours, and have partly changed their occupation, so that it might fit in with the life of their conquerors.

The process of economic co-operation with the Hindus has not been without its psychological effects, too. It is possible that the first generation of Juangs, who were forced into submission by the Hindus, fought against this encroachment upon their liberty. But the second and the third generations were born in submission; and, from childhood they looked upon the Hindus as a clever and powerful people who got more food out of the soil by their labours than they themselves could ever do, and who also were in possession of an army of policemen at the headquarters of the State to protect their

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

newly-acquired lands. They began to imitate the manners and customs of the Hindus, perhaps with the unconscious belief that they also might become powerful in the same way. The Juangs of Pal Lahara have accordingly started the worship of Hindu deities like Lakshmi, Rushi, etc., but they do so with the rituals of their own tribe.

Mani, the Juang headman

Another Juang.

Some of the Kol tribes of Chota Nagpur have gone one step ahead of these Juangs. In the months of May-June, the Mundas of Morabadi in Ranchi observe a festival which is known by the name of Manda Parab. During the Manda festival, a Brahmin priest officiates for the Mundas, and the deity Siva is also worshipped by him on the occasion. But this priest has no other connection with the social rites and ceremonies of the Mundas of Morabadi. These Mundas have given up the practice of eating beef and drinking wine, as they are considered unworthy of a Hindu; but their marriage rites are still performed in the old tribal way.

From this it is not a long way to the full adoption by the hill-tribes of the entire social and religious ceremonies sanctioned by Brahmin priests. The Bhuiyas of Orissa are a tribe allied to the Juangs. But a section of these Bhuiyas have grown prosperous by the adoption of Hindu culture, and have succeeded in engaging the services of Brahmin priests who officiate for them in social ceremonies.

It is in this way that a large number of illiterate tribes, who inhabit the hills and fastnesses of India, have been gradually converted to Hinduism. Hinduism has meant for them the addition of some Brahminical social ceremonies on the top of their own tribal ones, the deletion of such practices from their tribal culture as come into sharp conflict with Hindu moral ideas, and, lastly, the employment of Brahmin priests; and the process started, in most cases, with the economic subjugation of the tribe by the Hindus. As a matter of fact, it was the economic superiority of the Hindus which created a bias in favour of Hindu culture in the mind of the defeated tribes.

The process of conversion described above is somewhat different from the methods practised by Muslim or Christian missionaries. Unlike a Muslim or a Christian convert, a convert to Hinduism is not expected to give up his old religion or social culture completely. In fact, they stick to it, only they put on an additional cloak of Brahminical practices. Hindu religious ideas are also not necessarily imposed upon them. They are left free to follow their

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

own religious ideas; only those ideas are now given a deeper meaning. They are now explained as all leading to the supreme knowledge preached by Vedanta, or the supreme love preached by Vaishnavism. In Hinduism all roads are said to lead to the highest goal of *mukti* or emancipation. This catholicity has made Hinduism not the monarchy of a single system of ideas; but a confederation of more or less autonomous systems of ideas, which only agree with respect to the ultimate objects of human life. In rituals and ceremonies, they offer an endless variety. They approach one another more and more closely as the ultimate goal of human love and supreme knowledge is neared.

This is the method of conversion which has been employed by the Hindus for ages past to convert other tribes to Hinduism. The act of conversion had always an important economic aspect behind it. There was not only an elaboration and specialization of occupations among the Hindus themselves; but an important contribution to this act of specialization was also made by the converted tribes. These tribes chose one or other occupation in Hindu society, and it was the policy of the Hindus to grant them monopoly in that occupation.

This is a very important point to remember, and cannot be stressed too much. The duty of the king, that is the State, under Hindu rule, was to maintain the organization of *Varnas*. The king saw to it that each caste or tribe enjoyed its monopoly in security, and also did not turn that monopoly to the disadvantage of the rest of society. This was done by the control of prices, which was a special function of the king (*Manu Samhita*, VIII, 410, 418). It is, however, not known how far the king actually succeeded in this matter of price-regulation. In any case, the State was supposed to be in charge of these matters, just as it was also the business of the State to see that each caste performed its assigned duties with regularity.

A Juang homestead, with an old woman wearing a leaf-apron.

Mani worshipping the Sun and Lakshmi with fowl in front of the Club-house.

It is thus clear how each tribe converted to Hinduism enjoyed a considerable amount of economic security as well as a large measure of autonomy with respect to tribal rites and customs. The different tribes who came within

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

this system of Four *Varnas* were not all accorded the same social status. Hindu society was not free from class-distinctions, as some would like to imagine. There were different classes with different social and religious privileges. In spite of this inequality, and in spite of the fact that most of the converted and conquered tribes were turned into Sudras, and sometimes into untouchable Sudras, there was comparatively little discontent and very few rebellions. This was not so because there was no feeling of inequality, but because each tribe, even when socially low, enjoyed a considerable measure of economic security and cultural autonomy. And these two privileges took the edge off their discontent.

It is here necessary to draw a distinction between the Shuddhi movement which is going on in Northern India at the present moment with the method of conversion described above. Shuddhi is a movement by which the Hindus want to gain more numbers on their side, so that they may have things in their own favour within democratic institutions. Shuddhi conversion has, however, not got the redeeming feature of the method of absorption into the *Varna*-system, which assured certain economic advantages to the converts. The Hindus have merely replaced their old system of conversion by a Hindu edition of the Islamic method without being able to turn it into an equalizing force which it is in Islam, and less so in Christianity. The high castes are, as a matter of fact, refusing to accept the Shuddhi converts as their own equals; and the general body of Hindus have the power neither to assure equality of social status, nor to grant economic security to anyone under the present political circumstances.

The moral is quite plain. Unless the Hindus have political power, they cannot even restore the old method of conversion; much less improve upon it by securing equality of social status. And that power cannot come to them by political trickery in the council under the British administrators. The only way of securing stable political power seems to be not by begging; and in that campaign Shuddhi does not seem to hold any very important place.

MAHATMA GANDHI ON NUDISM

By Mr. CLOTHES

"Man who knows no good unmixed and pure,
Oft finds a poison where he sought a cure."
—Crabbe, *The Library*.

The twentieth century is remarkable for the large leisure made available to man by science, which he has begun to utilize for some armchair thinking. New ideas are coming into existence: when analysed, they turn out to be old lamps made new. For, what is there new under the sun? These ideas are developing into movements of social departure, deriving most of their inspiration and momentum from the zeal of converts.

One of the most striking cut-aways from social tradition, that has come into prominence after the 1914-1918 catastrophe, is Nudism. The revival of Nudism confirms the progress of human society in a cycle; it shows how social changes which seem revolutionary when viewed from the contemporary perspective, are only stages in the evolution of human society.

At the dawn of the world, in wild woods, untramelled by the tradition of clothes, naked ran the noble savage. "With native honour clad, in naked majesty, God-like erect, Adam and Eve walked hand-in-hand." Then came the temptation, and leaf, and bark and clothes. Some regard this as the beginning of the fall from the simplicity of nudity to the crudity of cloth-complexity. But others hail it, and rightly so, as the march of progress. The climax was reached between the Elizabethan and the Victorian periods, "when an ounce of man (and woman!) carried a ton of clothing." Then began the catabasis. There was the reaction of the pendulum, and the human, submerged in a sea of clothing, began to emerge gradually therefrom. "The skirts went up, the bodices came down and the gowns began to be low-necked and backless" as a contemporary writer put it. Sun-bathing Societies and Swimming Baths got up to the stage of minimum of clothing. And Nudism was but the next step in the cycle of human change.

A glance at the recent crop of illustrated books on the Nude Cult reveals how Nudism is claiming the minds of many and the loyalty of some. The Press now-a-days often records the increasing activity of the votaries of the Nude Cult and of the Nude Societies in the West. Even India, the citadel of tradition and orthodoxy, is feeling the change: for, according to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

recent newspaper report, some residents of Karachi have begun the practice of the new cult.

In the morning of life, in the season of generous emotions, the youth of the world are apt to be attracted by the glitter and glamour of the novel and the new. The novelty of Nudism strengthened by the plausible arguments in its favour makes them think that, after all, to go nude is good for health and morals. Being tossed and buffeted on the stormy seas of dark doubts, I recently wrote to Mahatma Gandhi a letter setting forth the case for Nudism and requesting the light of his views.

To quote from my letter to Gandhiji:

"'Clothing is unnatural and unhealthy. It is one of the artificial conditions which civilized man has created for himself to his own harm. Exposure of the skin to light and air is one of the natural conditions of health. Essential vitamins are manufactured in the body by the aid of sunlight. By covering the skin man loses the normal reactions to changes of temperature and renders himself more subject to colds and diseases. The more clothing one wears, the more one's body loses its natural reactions and the more one feels cold.' Animals of the forest and the birds of the air have no clothing and that is why there is practically no disease among them. If these animals are bound by clothing, then, I have no doubt, even they will suffer from disease as fashion-fettered man.

"Moreover, 'clothing encourages prudery by habitually hiding the body.' It suggests that some parts of the body, the Temple of God, are not fit for exhibition. Clothing provokes curiosity and man becomes more sexual because of clothing. Familiarity breeds contempt: and the hiding tendencies of clothing are responsible for the greater part of the lust in the world. 'A healthy human body, hardy and bronzed everywhere, and not just in patches, should be beautiful and strong and a pleasure to the eye. Generally, the people who are shocked by the nude are of two types: (1) those that dislike the unusual, because it puts them to the trouble of re-adjusting their mental habits; and (2) those who project their own evil thoughts into the world around them.'

"Dress is the source of wasted time and money. Instead of thinking of advancing themselves, men and women devote whole hours to thinking about their dresses. Again, clothing is the most expensive item of expenditure in the budget of every man and woman. At such a time as this, when every pie counts, and when millions are going to their beds without one full square meal, it is a tragedy to waste money on clothing, which amount could be better utilised for the feeding of starving humanity.

"Not being in a position to purchase and maintain clean clothing, the poor of the world, constrained by the tyranny of cold custom, are forced to clothe themselves in the dirtiest rags, full of disease. Not only do they become ill on account of their dirty clothing, but they spread the infection of their disease wherever they go.

"Again, it should be remembered that clothing is one of the greatest deceivers in the world. Instead of being God-made men, we are slowly becoming tailor-made men, such honourable exceptions as yourself excepted. The thinnest and sickliest individual can, with the help of clothing, look as well as the most robust of men. If clothing is abolished, men and women, instead of relying on clothing to make themselves presentable, will come to rely more and more on exercise, diet and other health principles to render themselves fit to move in society.

"Nudism has got even religious sanctions behind it. Hinduism advocates it in the Avadhuta and Jainism supports the Digambara cult.

"From every standpoint, then, the abolition of clothing seems desirable. It will be morally elevating, economically sound and hygienically uplifting. Nudism will improve the morals, the health and the capital of human society."

And the Mahatma's convincing answer is:

"You were quite right in writing to me at length on Nudism. I have no hesition in agreeing with you in theory. But theories are not always capable of being reduced to practice. Not even in exact Mathematics, like Geometry, are theories capable of always being reduced to practice. The imaginary right-angle of Geometry will not build houses, but the nearly perfect right-angle which masons and carpenters use is responsible for many marvellous things. In the Western world as well as in India, Nudism in practice is not permissible. I am convinced that it would be a great error to act as though all men and women were pure-minded. I hold it, therefore, to be dangerous."

Let us listen to the Mahatma!

A SINGER OF THE GODS

By JAMES H. COUSINS, D.Litt.

No real poetry lives on a preliminary tom-tom, though a good deal of spurious poetry enjoys a single birthday by means of that device. Yeats tom-tommed the village to MacMillan's verandah to hear an Indian singer twenty years ago—but Rabindranath Tagore had only to lift up his voice and the need of an announcer passed. The use of the famous foreword to *Gitanjali* was in drawing attention to something that by inherent unusualness or apparent remoteness was likely to pass unnoticed, to the deprivation of those who did not notice.

Readers of *The Modern Review* have already (at least those of them who do not constitutionally shrink from matter printed in lines that threaten poetry) touched in the December number the passionately aspiring lyrical utterance of that all-round genius Maud MacCarthy. A foreword is therefore out of date. She has slipped in before John the Baptist could lift up his voice in the wilderness. But I think I may even now serve the purpose—no, not of pointing an unnecessary finger at obvious earnestness, authority, vision, beauty, lofty imagination, but of saying something about certain phases of her affirmations of what I must call seership, that the singer herself would find it difficult to say; even as I myself (who have been composing verse on and off for forty-three years), have not yet found it possible to tell the truth regarding my own experiences as a creative artist. Who knows but in the telling (by permission, of course) of something of the secret of another singer, I may get the courage to tell my own!

It was in Maud MacCarthy's London home a quarter of a century ago that I got one of those flaming glimpses into the reality behind creative art that shrivel up critical abstractions and melt the substantiality of intellectual foundations. While she sang, and played on a *tambura* (this was shortly after her first visit to India) I became vividly aware of an extra presence in the room, a Being that in some then inexplicable way was both the creation and the creator of the music. I know all the questions that such a statement can arouse: I went through them all myself, having been born with Gemini rising and a double crown, and the consequent capacity, frequently a nuisance, of being able to see even more than two sides of a matter. But I must leave it at that for the present. I had had somewhat similar experiences during ten previous years of psychical research in Ireland. I had observed mediums in the company of Yeats, and had got to know some of the living things that moved behind the vast little poems of AE. In Maud MacCarthy I recognized another of the small but profoundly significant band of artists who are not merely expressors of fluctuant moods and notions, but evokers of living Powers—artists who do not create merely casual images of distorted reality, but whose emotional nature, intuition, imagination, thought and skill are in some way—as yet imperfectly understood—the material out of which the Powers of Life can fabricate images and project impulses that are as near as may be, in human limitation, expressions of Their reality.

Maud MacCarthy belongs to the group of spiritual poets from whose songs one could now produce a superb anthology, a record of direct inspiration and experience that would be found to have elements common to the affirmations of the religions of all time, but coloured and varied by individual endowment. I have sometimes indulged in speculation as to whether, supposing science and the modern spirit totally expurgated the world's scriptures, the utterances of the spiritual poets (Mirabai, Kabir, Tagore, Blake, Yeats, AE, and others) might not constitute the new scriptures of humanity, free from intellectual dogma, emotional zealotry, and the claims to a false universality and finality that are the special danger of religious organization. Indeed, during my first lecture-tour in the United States of America in 1929 I found occasion to make a public test of the interpretable value of poetry in a lecture on "Poetry as Scripture," and surprised myself as much as my audience by the richness of significance that certain poems disclosed when approached without the deadening inhibition that poetry is merely a decorative way of saying little or nothing.

Maud MacCarthy's "Poems of the Winter Solstice," printed in the December number of *The Modern Review*, give some indication of the spiritual value of poetry; that is, of the

Digitized by Arya Samaj Foundation Chennai and eGangotri

revelatory and interpretative element in poetry which comes to the poet so full of super-sensual experience that precise speech fails it; and it has to find expression in symbol and metaphor. Which reminds me that some ten years ago I spent two hours each Sunday afternoon from October to March under the great banyan tree at Adyar, Madras, discussing *Gitanjali* with an international group of students of things that matter. A critical mind queried if my exposition was not merely "reading in." Rabindranath himself came to Madras, and I put the question before him, and asked him if I was wrong in seeking to bring out what appeared to me to be the suggestions involved in his obviously symbolical language. He smiled and said: "I cannot very well blame you for doing to me what I do to Shelley with my own students."

Those "Poems of the Winter Solstice" are not, however, merely symbolic, metaphoric. Maud MacCarthy writes: "I tried to put down simply and without exaggeration, just what happened. Such happenings are natural at the time of the Winter Solstice. You only have to 'tune in.' The Festival is for everyone. There was a messenger, and I could smell the roses, see the golden clouds, feel the pressure of hands upon my couch, the brush of the holy garment upon my hair. Only, alas! I could not see the face. But the Kingly One I saw. I wrote down exactly what I saw. The tight folds, the swift movement, the pointed end of the cloak—the beautiful majesty of that visitor. And so with all the rest. Does not the devotee know of the flame which rises out of the heart?—of the sacred *hamsa* who appears to him in *samadhi* and takes him away into the far far spaces? —of those who are 'poor men from the far-off mountain,' their powers and their gifts? The festivals of the sun are among nature's halting places in the pilgrimage of life. There the weary traveller is rested and refreshed. My little poems were and are merely records; as nearly as possible literal records. Of all such experiences, a faithful description m be poetry."

The ancient solstitial rites were n merely dramatizations of seasonal change They expressed the psychological parallels the history of the human psyche. Th Christian variant, Christmas, was anthrop morphosed by the Latin mind into the ce bration of an actual child-birth in which t vastness of the Cosmic Life was not symboliz but incarnated,—thus robbing the event of t sublime rationality of natural interpretati and surrounding it with the elaborate physic superstition that arises when the transie local and personal are made a substitute f the eternal, universal and super-personal. T objective unoriental mind turned into the cel bration of the childhood of divinity a trad tion that was an annual recognition of t divine re-birth in man. It was also a recogn tion of the divinity of motherhood: and I a inclined to think that the true Christmas sto (in any religion) can only be told by a mothe Anna Bonus Kingsford told it interpretativel in lyrical prose two generations ago, in certai chapters of her priceless *Clothed with th Sun*. Maud MacCarthy re-lives it in "Poem of the Winter Solstice."

The "Poems of the Winter Solstice" tel of events in London, at Christmas, 1934. Her is a poem which was made just after her visi to India, in 1909. Maud MacCarthy ha lived at the heart of this land. No sacerdota reredos stands in the poetess' way whe she chants her vision in the terminology o Vedic India. She may be denied admission t the physical shrine of Mahadeva. But n mediæval restriction can deny her the prima right of building her own shrine in the purifie imagination, and inviting the Deity to ente Here, in the most drastic sense of the phras "the readiness is all." And those who rea "A Young Woman Thinks on Mahadev" wit opened eyes, will find in it the "readiness that turns the vernacular of earth into th symbolical language of heaven.

A YOUNG WOMAN THINKS ON MAHADEV

By MAUD MacCARTHY

Shiva!
Why dost Thou melt my heart with Thy beauty?
Thou hast melted it a thousand thousand times,
And yet it is not merged in Thee.
Thou art like a playful child,
And I, some waxen doll—
Melting me a little, freezing me a little,
And mocking at my transformations.
Ah Shiva!
Why dost Thou melt my heart with Thy beauty?

Here where Thou sittest, wrapt in aeonian musings*.
Thou art the very God of Love—Thou fire of ice—because Thou art His Master! †
These are his shafts, piercing my heart from Thee,
Burning and shattering me.

* * * * * *

They say the white breasts of the Himalay
Burn forever on Thy pyre, O Lord!
Nay, Mahadev! Not these alone, but worlds
In ecstasies of love expire to Thee.

They say Thou ridest all unseen, unheard,
And beggarly, on white bulls, among men,
But yet for aye in fixed contemplations
On Kailas th' unreachable art hid.
Oh these are tales—soft tales for fearful minds,
Powerless to sink in Thine infinitudes;
Beholding not the lotus-blooms that rise
At ev'ry space Thou touchest in their wilderness.

Lo! On trackless ways,
To some vague Kailas,
Dusty with years and births, Time wanders on!
Thy white bull asks him on his way, for food,
And Thou, all-immanent, entreatest too.
But Time heeds not, nor sees Thy beggar-form,
For he hath set his face away from Thee;
He will not rein his rambling steps to find
That Thou art here, O Kailas and O Shiv!
Within! Before! Behind!

* * * * * *

I see the vast unfathomable oceans
As dewdrops in Thy wild hair lightly falling;*
And here and in the thundering stars I see
Thy skeleton—the caverns and the rocks
That hold the worlds in uttermost abysms
Of living dark.
And lo! In moveless grip,
Between Thy smallest joints
The hills of space are rivetted, O Shiv!
And through Thy flesh the veins of myriad rivers
Flow with unending succour to the plains
Of earth and all earth's sisters, far and near,
Feeding upon their breasts all needful things.
O'er Thy might, tempering Thy majesty—
Luring and winning, snaring all life for Thee—
The veil of Parvati, Thy Motherhood, is spread.
Rainbow-edged with golden sunsets;
Bordered deep in poets' visions;
Odorous of magic scents, Star-Queen!
Azure-floating through Thy tempests is Her veil, Great Deliv'rer!
And beneath it that dread Form
Which no creature's gaze hath seen—
Mysterious! Feminine! Divine!

* * * * * *

Isha! I look upon my dazzling flesh,
I watch its blue veins, spread like a fairy tree;
The strong impetuous limbs, throbbing at rest,
All instinct with the life that's fleet and free.
I see the Mother, tracing on my breasts
The curved lines which baffle artistry,
And o'er the whole enchantment—
Marvel on marvel linking—
The gentle flush of love's own witchery!
Why dost Thou make it, Lord, and all its sister—
And brother-forms, divine surpassingly?
Yet crawl behind, with Anguish and Despair,
And crown Thy handiwork with agony?—

---

* Shiva is pictured as eternally meditating in the Himalayas, or in the highest regions of the soul.

† Shiva is called "conqueror of love." The story runs that the God of Love once tried to shoot at Him, but was shrivelled to ashes by the fire from His third eye.

* Shiva's long, beautiful hair is represented as having caught the primeval oceans as they fell out of space onto the worlds. Part dripped down to earth; part, to the souls in purgatory; and part, to the Gods in heaven.

Why dost Thou set upon their lovely brows
The signet-marks of Thine own fashioning,
And rain upon their hands, upturned to Thee,
Bright jewels from Thy robes of brighter glory?
Why greet them in Thy light'ning messengers—
And kiss them inly through Thy dove-like
wooings—
Yet shatter them at last,
And all their beauty blast,
In trackless caves of death,
Livid and gory?

* * * * * *

Ever I sit with Thee upon my corpse*—
Corpse of my flesh, corpse of my thinkings,
too—
Watching the furrowed tracks where tears of
blood
Have kissed their way to peace upon its cheeks.
Into the pollutions of *avidya,*
Gnawing with Thee, burning and pure, I go;
Crackling with fiery ruth these dearest selves,
And licking up their innermost foul juices.

Oh give Thy draughts of fire, most cooling
drinks,
Now to the passionate soul athirst for Thee!
Why must it wait, why in imaginings
Alone receive Thy chastening flames, O Shiv?
What are its lives, *Shambhu,* unless Thou
takest them?
What are its loves, O God, unless Thou
breakest them?
What are its words, calling Thee now " Great
Lord,"
Unless they are Thy very words indeed—Thy
Voice
Calling unto itself, and laughing loud in song?

* * * * * *

How camest Thou so sudden and so strange
About the corners of my being now,
Like a flame upstarting, Thou fiery Liberator?
Why hast Thou laid me low again?—
Why hast Thou burned within me till I cried
Thee " Mercy "—
And left me weeping lone, with molten heart of
pain
Upon Thine earthy bosom, clasping brokenly its
beauty?
Ah Shiv! Ah Parvati!
I do not want this loveliness—I want the soul
of Thee!

* * * * * *

As restless sands the worlds are hid
Beneath Thy fiery sea;
And coral-tinctured in its ambient rays
The crested waves of space
Roll onward to their bourne upon Thy shores.
Ocean Thou art, and ocean's moon as well,
And sun, the Lord of many moons—
All! All!
Oh Wonder! And oh Terror! Lord, art Thou!

Lone One! I stand upon the brink of Thee,
As on a baseless rock, fixed in nothingness;
The worlds are melted from me and life's ends
Are vanished at Thy naming, O my God!
A terror and a madness holds my brain,
And faint and dim mine eyes;
Yet must they strain unto Thy dancing pace,*
Till, God of Gods! In death they see Thy face.

* * * * * *

Oh Sea of Consummations! Changeless Tide!
Blending a myriad purposes in Thine.
Weary am I of seeking a satiety,
Lord, make Thy purpose mine!

I would not ask one pain of yearning less,
If so, Ishvar, my heart should tire of Thee;
But wait in sun and dust and lowliness
Beyond the farthest threshold of Thy courts
Seeing the crystal Image of Thy glory
Outside the shrines men build who will not see.

E'en now in fond despair I thought Thee lost,
When lo! Thy very arms, all suddenly,
Have folded me again upon Thy breast;
And, through the deep destruction of my grief
Thou hast arisen, radiant, dauntless, Lover—
Most wonderful! Most pure! Most ravishing!
Most eloquent in silent poesy!
And every facet of my self is shocked
With thrills of light'ning gladness, nameless
bliss;
For lo! Thy Sun is rolling mightily
Upon the blackness of my spirit's night
And turning all its drapery of sorrow
To bridal robes, delight!

* * * * * *

Shiva! I raised this pen and voice to make
Some symbol of the love that is in me—
Some garland, lying near Thy lotus Feet,
To mind Thee of this life that groans for Thee.
But I have left them—
Lord! There is no way
Of praise and song that fitly praiseth Thee—
No way of life, of death, of sacrifice
That yields Thee fruit, out of Eternity.
Lo! Thy vast Self we name, but do not know,
And in the naming break the mystic spell!
Oh Shiva! If the silence is Thy hymn
Teach us to sing it well!

* Shiva is Lord of the funeral pyre, the burning-ground. He is Destroyer and Regenerator.

* The *lila* or dance of Shiva is His Universe.

CLASSICAL INDIAN DANCING AND ITS SCULPTURAL REPRESENTATION IN THE CHIDAMBARAM TEMPLE

By B. V. NARAYANASWAMY NAIDU, M.A., Ph.D., B.Com., Bar-at-Law.

The revival of the classical dance holds an important place in the present Indian Renaissance. The accredited authority on this great art, which attained a very high degree of perfection in ancient India, but which now is almost completely forgotten, is Bharata. Bharata Muni's monumental work, *Natya Sastra* is a sealed book to those who do not have a knowledge of classical Sanskrit.

Garudaphutaka

The *Natya Sastra* is an encyclopædic treatise on Drama, Music, Aesthetics, Rhetoric, Grammar and Dancing. This masterpiece of Dramaturgy is divided into thirty-six chapters. The fourth chapter deals with the 108 fundamental poses of Bharata Natyam. These poses are sculptured on the walls flanking the passages in the massive gateways of the famous temple of Sri Nataraja (the Lord of Dancers) at Chidambaram. The 108 Karanas (Dance poses) are located in niches cut out of blocks of granite and arranged one over the other so as to form pillars projecting from the walls of the *gopurams*.

MALARIOLOGY AND ITS STUDY TOUR IN JAVA AND MALAYA

By A. K. ADHIKARI, M.B., F.R.S.T.M. & H. (Lond.)

History of Malaria

As far back as the sixth century B. C. the Indian physician Susruta attributed malaria to the bites of gnats. Herodotus records that Egyptian fishermen slept under fishing nets folded again and again until their meshes were small enough to keep the mosquitoes off. From his remarks it also appears that the disease was prevalent amongst the Greeks and in Asia Minor in the sixth century B.C. Hippocrates, the founder of modern western medicine, described various types of malaria about twenty-four centuries ago. Evidence exists that in Rome epidemics of malaria in periodic cycles were experienced long before the fourth century B.C. In 214-146 B.C. the two great agriculturists Cato and Varro of the Republican era of Rome considered land lying in a marshy region so unhealthy that it was impossible to live in and cultivate, specially in summer. Varro spoke of swampy ground where "certain minute animals are bred invisible to the eye and borne by the air reach the inside of the body by the mouth and nose and cause diseases which are difficult to get rid of." Although the history of malaria in South America is not traceable as far back as in Asia, Egypt, Greece and Italy, the intermittent fever was not unknown to the medicine men of the Incas. The town of Isabella founded by Columbus in a marshy region in Hispaniola in 1494 had to be abandoned owing to this fever. Peruvian Bark called by the Indians "quina quina" or bark of barks and used by them as anti-malarial remedy, was known to Spanish missionaries as early as 1600. The generic name of cinchona was incorrectly given to this bark after Anna, Countess of Chinchon, the first wife of the Viceroy of Peru, although the second wife was cured with this drug. Since

1640 this medicine was known in Spain and thereafter its use became familiar to other parts of Europe. Not much progress was made until 1900 when Ross discovered transmission of malarial plasmodia through Anopheles.

International Course in Malariology

After the post-war European Pandemic of 1923, which was greatly aggravated by the diminished finances of countries, caused by the great war, the Health Section of the League of Nations sought advice as to how malaria was to be dealt with effectively. In order to find out a cheap and effective means to combat malaria a Commission was appointed headed by Col. S. P. James of London and Prof. Marchoux of Paris and asked to study malaria conditions in England, Holland and Denmark. Since then the Malaria Commission has made notable achievements and justified its worth in more than one way. In 1929 from 23rd August to 28th December the Commission made a study tour in India and its valuable report was published in 1930. During the course of its study tour the Commission felt need for an International Institute for the East for higher study of malariology on the same basis and on the same standard as the one in Rome. The first International course was held in Singapore in May and June 1934, and the second course was held this year from April 23rd to June 30th. The writer of this note was a delegate to this course this year and was kindly awarded a Fellowship to study the Field courses in Java and Malaya.

Syllabus of the Second Course

Clinical, 18 hrs. (Prof. Hawes and Dr. Haridas).
Haematology, Protozoology and Pathology, 15 hrs. (Dr. Cowan).
Microscopy and Entomology, 69 hrs. (Prof. Gater).
Protozoology and Immunology, 19 hrs. (Prof. Moshkovski).
Epidemiology, 12 hrs. (Prof. Swellengrebel and Dr. Russell).
Synthetic drugs in treatment and prophylaxis, 3 hrs. (Dr. Field).
Control—Lectures and Field demonstrations in Singapore and Jahore, 56 hrs. (Prof. Swell., Dr. Scharff and Mr. Edwards).
Statistical analysis of Data, 2 hrs. (Mr. Cooke).
Physical properties of larvicidal oils, 2 hrs. (Dr. Demeney).
Control by Biological and naturalistic measures, 2 hrs. (Prof. Williamson).
Species Sanitation—"carrying and noncarrying" anopheles, 1 hr. (Prof. Swell.).
Malaria in India and Ceylon, 3 hrs. (Dr. Russell).
Malaria in Holland, 1 hr. (Prof. Swell.).
Malaria in Russia, 1 hr. (Prof. Moshkovski).
Malaria in Netherland Indies, 4 hrs. (Prof. Swell.).
Malaria in Philippine Islands, 4 hrs. (Dr. Russell).
Malaria in South Africa, 2 hrs. (Prof. Swell.).
Malaria in Kedah State, 2 hrs. (Dr. Wallace).
Work of Malaria Commission, 2 hrs. (Prof. Swell.).
Discussion of other malarial problems.
Field study in Java—21 days (Dr. Soesilo).
Field study in Malaya—21 days (Drs. Barrowman, Watson, Wallace and Scharff and Prof. Williamson).

Study Tour in Java

The East Indies are a large group of islands lying along the equator and between Asia and Australia. Except North Borneo, nearly the whole of the East Indies belongs to the Netherlands. Just as the Indian Government has grown gradually out of the East India Company, so the present administration

Tjilatjap Plain Anti-malarial
Drain Dyke and Mangrove Forest

of the Dutch East Indies has grown out of the Dutch East India Company, founded in 1602. The largest islands are Borneo and Sumatra but the most important is Java. It is one of the most thickly populated countries of the world as will be evident from the following figures :

	Area.	Population.
Netherland Indies ..	682,424 sq. miles	60,700,000
Java (only) ..	48,503 „ „	39,700,000
Compare—		
New York State ..	47,654 „ „	12,500,000
England.. ..	50,851 „ „	37,200,000

The Native Javanese are Muhammadans but very greatly under the influence of ancient Hindu culture. The staple food grains are rice and maize, but the crops grown for export are sugar-cane, coffee, rubber, cocoanut, cinchona and tobacco. The climate is equatorial, which is hot and wet with rainfall nearly all the year round. Comparatively dry season is experienced for 4 to 5 months from June. When the cold winter breeze of Australia blows over the island, the temperature becomes equable.

Malaria in Java is hyperendemic in many regions and is due to *A. sundaicus* (*ludlowi*) breeding in coastal fish ponds, *A. aconitus* in fallow rice fields of the littoral zone, and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

A. maculatus in seepage streams and ravines of mountainous regions. Extermination of *sundaicus* is effected by sanitation of fish ponds, *aconitus* by control of irrigation water of cultivation and *maculatus* by shading besides subsoils, open drains etc.

(*a*) *Maroenda Village* (5 miles from Batavia) has amongst children and as well as in adult 100.0 p.c. spleen rate. Fish ponds of this village have not been sanitated. They are full of *chlorophyceae, spirogyra, chaetomorpha*, etc., and teeming with *A. sundaicus*.

(*b*) *Luarbatang Village* which had splenic Index 90.0 p.c. previously has now 25.0 per cent only (5-6-35). Here the sanitation of the Luarbatang fish ponds of the Batavia littoral was started in 1928. Reduction of spleen rates from 90.0 to 25.0 per cent in five years is exclusively due to cleaning up of fish ponds.

(*c*) *Tjilatjap*—Here *A. sundaicus* not only bred in village fish ponds but the coastal rice fields and swamps with brakish water were also infested with *A. sundaicus*. This area was sanitated at a very high cost by filling in of fish ponds, swamps, raising rice-fields, sluicing outfalls to prevent sea-water entering, etc. Modern sanitation of fish ponds was not known when this work was undertaken. Splenic Index has dropped down from 80.0 to nil. This town was in 1917 surveyed by Prof. Swellengrebel. In 1925 fish industry was taken up in right earnest by the local folks who bunded up the mangrove forest to cut off tidal flood and dug a number of fish ponds. Subsequent to this a bad epidemic swept the country in 1926 when sanitation was undertaken at once in all seriousness.

(*d*) *Tjihea plain*—In 1890 this plain was quite dry and unsuitable for cultivation. With a view to ameliorate the unfavourable agricultural conditions, Government undertook an extensive irrigation work which was completed in 1904. Planting of rice soon started—more than one crop was raised every year. Although the soil conditions improved at the commencement the basin-shaped plain with its heavy and impermeable soil without any drainage whatsoever, soon took the appearance of a huge swamp. *A. aconitus* soon established itself and the neighbouring Kampongs (villages) grew hyperendemic. Due to severe sickness inhabitants fled to healthier districts—more people left the plain, more rice fields lay fallow, etc., thus creating a vicious circle, so that when the plain was investigated in 1919 spleen rates ranged between 80.0 and 100.0 p.c.—sanitation was soon undertaken—it consisted of:

(1) Installation of drainage system.
(2) Regular cleaning of primary, secondary and tertiary irrigation ditches.
(3) Simultaneous planting of rice, only once a year in wet season.
(4) Draining of the fields after the harvest.

The above measures were attended with astonishing success—the central Kampong Tjirandjanggirang which had a splenic Index 88.0 in 1919 dropped down to 2.0 in 1935 (19-6-35). One school at Seladjamnbe in a similar plain, Tjiandjoer, lying in an unsanitated rice-field area was examined for comparison—45 children were palpeted on 19-6-35 with 93.0 p.c. spleen rate.

(*e*) *Tjitalahab Tea Estate* (Sookaboemi).

A. maculatus breeding streams have been shaded with marigold flower of American origin. Its botanic name is *Thitonia Difersifolia*. Seeds have bee brought from the Tea estate to grow the plant her During the process of shade-growing the breedin ground is Paris-greened and not oiled.

(*f*) *Fresh water Fish Ponds at Bandoeng.*

Although *A. sundaicus* connected with fresh wat fish ponds as in mid-Sumatra is not a problem in Jav perhaps to safeguard against the possibilities of fres water *sundaicus* settling in inland fish ponds whic grow Tawes (*Puntius javanicus*) and Gold-fis (*Cyprinus Carpio L.*), the Fishery Department ha sanitated the fresh water fish ponds with symbiosi of Punctius and Panchax. Tawes are voraciou feeders—they keep the ponds clear of algal vegeta tion when Panchax panchax feed on the larvae i present. The growing of Gold-fish is not affected as they feed on green leaves, etc., thrown from out side.

(*g*) *Sanitation of Marine Fish Ponds.*

The Javanese fish-breeding in sea-water ponds i supposed to be of Chinese origin. The marine fis ponds when unsanitated grow *enteromorpha* (*chloro phyceae*), alga (*spirogyra*), *rag-alga* (*chaetomorpha*) etc., abundantly—which really form the food for th milk fish (bandeng) *Chanos-Chanos* and also fo *A. sundaicus* (*ludlowi*). The bandeng breeders wer of opinion that to obtain large and tasty fish on must feed them with *enteromorpha* and therefor they always used to oppose cleaning up of fish pond However, sanitation of these fish ponds means remova of all floating vegetation and substituting this foo with something less harmful.

Fish Pond.

1. Nearly all the fish ponds in the neighbourhood of Batavia are rectangular.
2. They are always very shallow. 2 ft. to 4 ft. deep and of varying sizes.
3. They have marginal ditches which are deeper than the mid-portions.
4. They are supplied periodically with sea-water by a canal leading to the sea with a sluice gate at the end.
5. Series of ponds are situated on the banks of the secondary canals.
6. Each fish pond is connected with a canal and has double bamboo screens at the junctions to prevent the fish running out.
7. Generally once in a month ponds are drained out in low tide and re-filled with sea-water in high tide in a few days.
8. When the pond-water is drained out fish take shelter in the marginal ditches.
9. Central portion is thus made surface dry and is exposed to sun.
10. When the sun dries up the floating algae it stimulates the growth of another species of alga called bottom alga or blue alga (*cyanophyceae*).
11. Bandeng fish feeds on this blue alga (its early stages are called cream of mud). When full grown the cream of mud floats to the surface as blue algal masses which are too thick and close for anopheline larvæ to either feed on or hide in against Panchax's attack.

It is interesting to note that the *Pasoeroean* system of fish pond sanitation is working surprisingly well.

(*h*) Owing to the slump expensive sanitation work was stopped in 1933. There is, however, nowadays a tendency in the Netherlands Indies to use less expensive measures—and nature's help is now appealed to.

Total Budget	1933	1934	1935
1. Netherland Indies	f 397,490,890	f 326,884,598	f 317,830,011
2. " Dept. of Education and religion	f 48,918,000	f 35,785,700	f 33,374,900
3. " Health Service	f 13,642,950	f 12,080,606	f 11,969,255

i.e., nearly one twenty-sixth of the total budget is spent for Health service work.

(*i*) *Cinchona plantation at Tjinjiroean* (Bandoeng).

Out of eleven species of Cinchona only *Cinchona ledgeriana* and *Cinchona succirubra* are now cultivated. *C. ledgeriana* which contains about 14.0 per cent of quinine is a delicate plant requiring very careful nursing, whereas *C. succirubra*, the quinine extent of which is only 2.07, needs very little attention. Being fairly strong it can stand all weather and insect-invasion. It has strong roots and it grows very well. When young the *ledgeriana* is grafted on to the *succirubra* and the result of the operation is encouraging. The graft grows quite well and it contains as much as 12.0 to 14.0 percentage of quinine.

The bark containing quinine is beaten out of a felled Cinchona plant. It is then dried, powdered and packed in bags to be sent to the manufacturer. Although there are several different plantations in Java—the manufacturer is only one. The manufacturer's contract of monopoly with the Dutch Government is a complex matter and of long standing. The manufacture of Quinine was shown—it consists of the following process:

(*a*) brown coloured powder of the bark is finely ground;
(*b*) it is then boiled with acid sulphuric and benezol for extraction of Quinine;
(*c*) the extracted coffee coloured liquid—containing Liquid acid Quinine is allowed to cool for 48 hours;
(*d*) when cold Quinine crystallizes;
(*e*) brown Quinine crystals are separated out and by process of repeated filtration they are purified into white Quinine sulphate.

Study Tour in Malaya

The Malaya Peninsula can be divided into three groups (1) Straits Settlements (2) Federated Malaya States (3) Unfederated Malaya States.

Straits Settlements	F.M.S.	Unfederated Malaya States
Penang	Perak	Kedah
Wellesley Province	Selangor	Kelantan
Dindings	Negri Sembilan	Tregganu
Malacca	Pahang	Johore
Singapore		

Its climate is equatorical, *i.e.*, it is equable, hot, moist and without extremes either of heat or cold. The rainfall is large and is evenly distributed throughout the year. The average rainfall of a year may be 150 inches, although it varies quite widely between 100 and 200 inches.

The natives—the Malays are Muhammadans, but much of the trade, consequently of the wealth of the country is in the hands of Chinamen. Besides the urban areas and industrial centres, the country generally is very sparsely populated with small colonies of Malays confined to the banks of the great rivers. People are shy and prefer to live in jungles cut off from all civilization and human intercourse. It is a rice-eating country, but unlike Java and India one finds rice cultivation sparsely distributed. Their rice is supplied them by Siam and Burma. The agricultural produce of the country is rubber, cocoanut, coffee and pineapple.

Malaya has a backbone of high mountains, with several parallel ranges on either side. The western side is more developed than the eastern, for it is there that a vast quantity of tin ore is found in the valleys. Malaya produces more than one-third of world's supply of tin and more than half the world's supply of rubber and the tin and the rubber have made the country very rich. Large portions of the country are either under reserved forest or yet unexplored.

Malaya has a problem of three mosquitoes, very much like Java. Instead of *aconitus* here *umbrosus* plays the same role between *sundaicus* and *maculatus*. These three vector species of anopheles have a definite choice of breeding ground. If one walks across the country from the sea-shore to the hill, he meets *sundaicus* as soon as he leaves behind the low lying shore with thick virgin forest flooded daily with tidal sea-water. With the rise of country *umbrosus* makes its appearance where *sundaicus* stops. Further one goes into the inland of Malaya the mountain ravines and streams will be found breeding *maculatus* but not *umbrosus*. This is why "species sanitation" is always possible. Of course there are instances where in half a mile circle one finds all the three dangerous species, as in Jugra.

A. sundaicus—its control is effected by cutting off admittance of sea water by automatic flap gates and screw shutters. Next important items of control are cleaning and trimming of breeding grounds. *Sundaicus* leaves the field as soon as salinity and vegetation are removed.

A. umbrosus appears to have a distinct preference for, though in no way restricts itself, to, peaty water. Its control consists in removal of all shade from the water and exposing it to direct sunlight. This really means that the entire breeding surface must be clean weeded so as to expose every tiny pool of water or the water all be defined in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

channels and these channels then kept open to sun-light by clean weeding.

A. maculatus breeds in sun-lit spring water or moving water of the inland. Its control is therefore carried out by burying all water underground in subsoil pipes, by maintaining all water under dense shade, by confining it to concrete-surface channel, by drowning or stranding of the larvae, by sluicing or by application of oil or Paris-green.

(*a*) *Singapore.*

The island has an area of 217 square miles with a population of 514,500.

Malays	Europeans	Chinese	Eurasians	Indians	Others
67,050	7,611	383,617	7,051	40,991	8,180

It has a total of 74½ miles of subsoil, 41¼ miles of concrete and 20 miles of *Kucha* drains (up to the end of 1932). The sum available for anti-malaria work in 1933 was $60,000 (approx. Rs. 93,750) of which labour cost $33,399, materials and incidental charges $2,926 and oil $7,125.

The larvicidal oil (malaria mixture) used in the Straits Settlements contains Kerosine oil—4 gallons, solar oil—16 gallons and fuel oil—20 gallons. Brushing of oil is slowly getting preference as it reduces the oil expenditure. Spraying of oil may be the better of the two but where economy is the pressing question brushing is an acceptable method.

While at Singapore besides attendance to daily field survey some interesting demonstration were held as follows:

(1) Five subsoiled ravines of Sir Malcolm Watson's —below the *Mount Feber.*

(2) Subsoils and inverts in *Lazarus Island.* Drainage is not in ideal condition.

(3) *Sundaicus* breeding ground in recently reclaimed area full of fissures and crab holes—subsoil pipes etc.—at *Civil Aerodrome.*

(4) Improvement scheme at *Grove Estate*—such as disposal of water by electric pump and etc. Splenic Index of Chinese Leather Tanning village—8.0%—spleen rate is always below 10.0% although *sundaicus* breeding all around.

(5) Subsoiled and boulder filled ravines—Drains open and underground,—municipal water reservoirs, etc.—at *Gunong Pulai* Johore Estate.

(6) Rural malaria control measures at *Bukit Timeh*—utilization of subsoil water for washing, bathing etc.

(7) Demonstration of oil mixture preparation and oil spraying with knapsack at *Oil Island.* (Asiatic Petroleum Coy's.)

(8) Anti-malaria drainage at *Naval Base,* (in 1933 *sundaicus* bred in fissures and crab holes lying on a reclaimed area and caused an outbreak).

(9) Subsoils and inverts at *Swiss & Turf clubs.* Utilization of subsoil water for swimming bath. Some faulty drains constructed by engineers shown.

(10) Subsoiled ravines in the *Cold Storage Dairy Farm.* Subsoiled water is used for bathing cattle, running Power house etc.

(11) Four miles of subsoils to drain two square miles of ravineous land at *Bukit Synume* in Johore Estate. The subsoiling has been overdone. Demonstration of clearing subsoil pipes of roots with rods and screws.

(*b*) *Klang.*

The following places were visited to study "species sanitation" of *A. sundaicus, A. umbrosus* and *A. maculatus.*

(1) Olahlimpit Rubber Estate is purely a *umbrosus* country. *A. umbrosus* breeds in slowly moving or peaty stagnant water shaded with shrubs. Drains overgrown with vegetation and choked with rotten dry leaves are suitable spots where *umbrosus* is almost always found. Here chemical larvicides are not used as the breeding grounds are kept well trimmed and exposed to sunshine.

(2) Kucha wells of Kampongs which are numerous in number in Kuala Langate breed *A. umbrosus.* When covered with algal vegetation they are real source of danger. Wells are inspected frequently and maintained clean.

(3) In the District of Jugra the Road side drains when covered with low marginal vegetations breed *umbrosus.* The far side of the drain is cleaned by the District Board but the near side is almost always left to fate. The reason for this differential treatment is frequent trimming of nearside makes the Road narrower and consequently weaker. If the weedy edge of the Road side drain is beaten by the sun—no *umbrosus* breeds—otherwise it is watched carefully.

(4) Long abandoned Jugra Town referred to in Sir Malcolm Watson's book was next visited—control of this town was then considered impossible within reasonable means. This is the place where three vector species *A. sundaicus, A. umbrosus, A. maculatus* played the havoc together. Much lamentable ruins of the old town were seen buried in the deep forests.

(5) Carey Island covers 30,000 acres. Nearly three-fourths of this are under rubber and cocoanut plantations belonging to the Jugra Land and Carey Ltd. It has a recruited population of 5,000. Its principal vector species are *A. sundaicus* and *A. umbrosus.* The parts of this Island which are still under aboriginal reserve containing a few Kampongs of Sakai are hyperendemic and sources of occasional danger to the protected labour population. Along with other minor anti-malarial measures the water table of the Estate is maintained at a low level by deep drains, bunds and tide gates.

As no attempt is made to exterminate non-malaria carrying mosquitoes all the European bungalows are mosquito screened to offer the officials and their families undisturbed rest.

(6) Haron Rubber Estate. One phenomenal spot shown where within one foot of radius *A. umbrosus* and *A. maculatus* were found breeding. Here the hill foot seepage stream joins the peaty drain overgrown with low jungle.

(7) Seafield Estate. This is one of the Estates that can boast of the great achievement of anti-larval measures carried out by Sir Malcolm Watson in his early days of reputation. The ravines were originally herring boned and oiled. In 1911 they were subsoiled, which worked well till 1924. In 1925 here and there seepages sprang up indicating choking of the pipe lines. It was therefore re-done in 1926

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

which is now working satisfactorily. Here waters of all descriptions have either been buried in pipes or defined in concrete inverts. Bottom of the ravine appears like a smooth trough covered with thick growth of grass which is undoubtedly a great gift to that country.

(8) Ebar Rubber Estate—is purely a *maculatus* country—seepage drains in the Estate are maintained clean weeded—and regularly oiled.

(*c*) *Kuala Lumpur*—After visiting the different branches of the Institute of Medical Research, Kuala Lumpur, with Dr. A. Neave Kingsbury, the Director of the Institute, went to the Malaria Research Laboratory where Dr. Field was carrying out researches on the efficacy of synthetic drugs on different species of parasites. The day was profitably spent in studying treatment-charts, parasite-enumeration, etc.

(*d*) Penang—It is an Island of 108 square miles and a population of 182,613 (June, 1933).

Malays	Europeans	Eurasians	Chinese	Indians	Others
40,897	1,251	2,102	113,913	22,616	1,834

Malaria in Penang was soon felt to be one of the most difficult problems of the time when the Government had to make a liberal financial provision for undertaking anti-malaria work. A sum of $50,000 was first granted for anti-mosquito work in 1924 and the vote was repeated in 1925, rising to $75,000 in 1926 until 1932. The anti-mosquito vote for 1933 and 1934 stands at $60,000 every year. In 1926 on the appointment of a Chief Sanitary Inspector, the funds which had up till this time been controlled by the Public Works Department, were assigned to the Health Branch, who were subsequently responsible for all temporary and permanent anti-malarial works.

Works are generally carried out under the legal provisions of Ordinance No. 174 (Destruction of mosquitoes). This Ordinance endows the Sanitary Authority with adequate means of enforcement of all such anti-mosquito measures as may be necessary for the betterment of Public Health. In 1933 a sum of $3,119 was recovered from the private owners on whose land anti-malaria measures were carried out.

In the Penang Botanical Garden a fast rocky stream is weekly Paris-greened. It seems oil is more suitable for the stream than Paris-green. Use of oil is prohibited as stream adds beauty to the garden. Weekly spraying of oil would have certainly destroyed the marginal ferns and spotted the clean rocks. Frequent examination and weekly Paris-greening have maintained the stream larva free.

Some hill foot drains which are now oiled are waiting to be permanently dealt with at the earliest opportunity. Almost all the perennial springs, within half a mile of habitation have been buried in subsoils.

Here the choice between subsoil and concrete open drains is generally based on the following principles:

Penang Subsoil hill foot Stream opens on a concrete bed

(*a*) If habitation is fairly thick along the seepage line, the drain is open and not a subsoil. The house drains or its sides are led into the invert drain.

(*b*) Where a ravine or a foot hill is contour-subsoiled—the water before being drained out into open outfall is conducted sometimes into swimming tank, well, cistern or under a washing platform for the use of neighbouring population. This system of drainage popularizes the anti-malarial scheme and ensures closer co-operation.

(*c*) Sometimes the seepage is collected into an underground cistern and there from it is supplied to the near houses through galvanized metal pipes. If on analysis the water is considered drinkable—and if the demand for good water is felt a small periodical subscription is charged on each house owner who taps the cistern.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

In laying subsoil pipes—

(*a*) hard burned clay pipes of different calibres are preferred to unglazed porous clay pipes or re-inforced cement pipes, as clay pipes are cheaper and more durable (if hard burned).

(*b*) if a larger volume of seepage is to be dealt with instead of using pipes of bigger diameter, double or treble lines of 8 inches pipes are used. It is sound and economical, as they stand the surface weight well, they are much cheaper in price, and the carriage of pipes to work site is less costly.

(*c*) junction pipes such as Y,T,L etc., are made at the site as required and not purchased.

(*d*) the trench when dug and accurately graded is left open for observation for sometime.

(*e*) if the bottom of the trench is made up of soft and sticky clay, a layer of gravel, brickbats or cinders is spread.

(*f*) pipes are laid mouth to mouth in close apposition with a broad collar over each joint to prevent against root trouble and earth or rubbish entering the lumen of the pipes.

When concrete-inverts are correctly constructed, breeding does not generally occur. Then again the open drain, if connected with house drains discharging sullage, can never breed *A. maculatus*. In laying inverts, one should always bear in mind the grade, the size of shoulder, weep holes, gap between two pieces etc.

Some suitable small ravines with perennial flow sometime stone filled.

Some of the ravines near the Penang hill and Ayer Itam are flushed periodically by automatic sluices. Drainage and control of water at Penang the demonstration of which were given by Dr. Scharff, are all of permanent nature. If a perfunctory view of the anti-malarial scheme of this place be taken, it may seem expensive, but one can easily see that the permanent work of this nature is always cheaper in the long run.

Control by biological methods as described somewhere in the early part of this note was demonstrated by Prof. Williamson outside the municipal area. Biological control is cheaper but needs primarily very careful study of the fauna, flora and soil of the breeding ground and subsequent supervision by experts.

Amongst various biological and naturalistic control methods employed by Prof. Williamson the following may be mentioned as their application in this country is worth trial.

1. Introduction of larvicidal fishes, wate boatmen and large active water bugs in cle weeded ponds.

2. Increasing organic matter of the wat by packing streams or pools tightly with a green herbage near at hand.

3. Intensive agriculture requires freque manuring of cultivable land. Organic impur ties of this nature are inimical to the grow of some anopheline larvae. Direct and indire influence of cattle and pigs, which both cont minate and fertilize the soil and attra mosquitoes away from man is important in th connection.

4. Conversion of running streams b cross bunds at intervals into a series of pool It changes moving water to still water, alt its Hydrogen concentration and stimulat the growth of different varities of flora an fauna which perhaps are not congenial to th particular species of anopheles aimed at f extermination.

5. Periodical flushing of streams reduc the larval density very greatly both above an below the sluice by stranding the larvae abov and flushing them below.

6. Continuous agitation of the wat surface is unfavourable to the growth of larva of most mosquitoes. Conversion of a strea into a series of waterfalls produces thi unfavourable condition.

(*e*) *Malaria Scheme of F. M. S. Railway Gemas.*

Visit to Railway Health Officer's office a Kuala Lumpur and malaria control at Gema and Batudua (Gang hut No. 121) was not part of the Field study arranged under auspic of the League. This part of the study to was made to study the organization and th nature of the anti-malaria work carried out b the Federated Malaya States Railways.

The F. M. S. Railways are the propert of the F. M. S. Government. The main lin follows the West Coast of the Peninsula fro Singapore in the South to Prai (for Penang in the North, passing through Gemas. A Gemas 137 miles north of Singapore a lin branches to the East side of the Peninsula an terminates at Tumpat where it connects th Royal State Railways of Siam. The Railwa is of metre gauge and its total milage includin main and branch lines amounts to 1067 miles.

Gemas is an important junction and District Headquarters of the Railways. It i like most part of the mountaneous mid-Malay a ravinous and forest clad country. Th neighbouring area of this station is gettin slowly cleaned up. There is a history behin

each time the jungle was felled to clear the country since the opening up of the Railway. The Railway engineers felled the forest with the best of their motives to eliminate fever sickness, not knowing of course that admittance of sun-light could ever be directly or indirectly harmful to the Settlement. Fever incidence commenced to increase every year, as felling of forest in the neighbourhood was carried on. Dr. A. R. Wellington who was then the Health Officer of the section was asked to make a report on malaria at Gemas and its prevention. History repeated itself—it was demonstrated that so long the forest was virgin, the seepage pools and the streams which looked quite normal to this country were under the cover of thick jungles, and never bred the dangerous mosquitoes known as *A. maculatus*. Introduction of sun-light subsequent to destruction of virgin forests welcomed *A. maculatus*, the most dangerous anopheles of Malaya. The engineers' honest attempt of converting Gemas into healthy station worked otherwise—the station became unhabitable. Dr. Wellington through the authority of administrative head got the order passed that in future no felling and clearing should be done without reference to the Health Department. This became the starting point of the anti-malaria scheme at Gemas. The seepages in ravines already opened up were buried in subsoil pipes, drains were cemented, seepages were collected in concrete inverts, streams were oiled etc. Three years from 1925 to 1927 the scheme worked very well. Incidence of malaria dropped down almost to nil.

Control of Gemas is now carried out by the Government Health officer of Tampin. Just outside the Railway boundary the town of Gemas has grown up very well with the development of Gemas junction and increase of Railway population. There is a Government dispensary where both Railway and public populace are attended to. So control and treatments are both in the hand of the Government Health officer. The Senior Health Inspector who supervises the anti-malaria work of the Railway is responsible to the concerned Health officer of the Railways. If the Railway Health Inspector finds anything wrong in control, he draws his Health Officer's attention at once, who then communicates it to the Government Health Officer.

The Government, the State Railways, and the Rubber Plantations are working against malaria in close co-operation. As in some places the Government Health Officer is found doing anti-malaria work in the Railway premises, the Senior Health Inspector of the Railways is also known to have carried out some anti-malaria work on behalf of the Government. The question whether control should be carried out by the Government or the Railway in any particular case depends upon the importance of the station and convenience of the two parties concerned. The Rubber Estates, when the entire Estate or a portion of the Estate is controlled by either of the two former parties, accept debit for the cost of such control.

The medical man in charge of a dispensary or a hospital is supplied with a printed card for the report of malarial fever and in the event of his getting fresh infection of malaria he fills it and posts it at once. At the earliest opportunity investigation is arranged on receipt of the information. It is authoritatively reported that the expenditure of oil has been brought down to half by introduction of brushing system. Brushes are locally made by the malaria coolies of cocoanut fibres, narrow strips of plank from packing case and a piece of dry stick.

Here entomological portion of the anti-malaria work is carried out by the Government Entomologist, at the Research Institute, Kuala Lumpur. The Senior Inspector is unfortunately a Sanitary Inspector only, whose basic qualification is not sound enough for microscopical work, but it does not matter very much as the facilities exist for the quick identification of larvae at the Institute.

In the F. M. S. Railways unlike in Indian Railways, the permanent way gang is formed of recruited coolies. When the susceptible Tamil coolies of the permanent ways living in gang huts are left unprotected in hyperendemic region as the 'immuned' local coolies are done in India, they suffer so severely that on several occasions maintenance of the permanent way has been rendered extremely difficult. With introducution of control of gang huts, these difficulties have been greatly obviated. The Gang hut No. 121 which was visited is protected by anti-larval measures. *A. maculatus* is the vector species, which breeds in drains in Railway cuttings,—kacha wells, streams etc. After the breeding grounds are clean-weeded brushing of oil is the only active measure undertaken by the malaria department. Supply of drinking water to the Permanent Way Gang is made in numbered drums, by shunting water-trains when suitable water is not available locally.

PRESENT TREND OF BRITISH FOREIGN POLICY

By Dr. TARAKNATH DAS

The recent British election has placed the Tories firmly in power at least for the coming five years. This has great international significance. There is every reason to believe that British foreign policy under the leadership of Premier Baldwin will play a very important part in world politics. To be sure, it is not possible for any one to make a prophecy on the exact developments of foreign relations of any nation, yet it is possible to discern the outstanding trends of foreign policy; and in this article I shall try to point out the trend of British foreign policy and as it may affect the world at large.

Although British Tories were never whole-heartedly in favour of the League of Nations and its policy of applying sanctions, yet the present British Government has adopted the policy of utilizing the League and applying sanctions against a nation, judged to be an aggressor, for two definite reasons: (a) First, British internal politics demanded that the Tories should make the issue of supporting the League of Nations as one of the principal issues of British Foreign Policy. A short time before the last election, in a private national vote, about twelve millions of British voters indicated that they were in favour of the League of Nations and for applying sanctions—including *Military* sanctions—against the treaty-breaking and *aggressor* nation. The Tories decided to steal the thunder of the Labourites and Liberals on the League of Nations issue and appropriated it as their own programme for the election. By doing so, the Tories championed *their real programme of increase of armaments—naval, air and land*—on the ground that if Britain were to support the League of Nations' policy of applying sanctions, then she should have larger navy, air-force and land armaments. (b) Secondly, the Tories decided that by using the League of Nations as the so-called instrument of collective peace, British statesmen will be able to use this world diplomatic machinery in isolating that nation which may oppose British interests. The British have used the League of Nations' machinery against Italy effectively to the extent of possibly starving the Italian people to submission to British dictation, regarding the growing Anglo-Italian rivalry in the Mediterranean, Africa and the regions of the Red Sea. The British have decided to keep control over the League machinery, so that it may be used against such powers as may threaten British interests—such as Germany, Japan and possibly Russia.

The immediate effect of this policy of using the League of Nations to isolate a nation, opposing British interests, is to adopt a policy which will force or induce the great Powers outside the League to follow British foreign policy as reflected through the League. This leads to the necessity of inducing the United States, Germany and Japan to follow a policy of supporting sanctions against Italy. Britain is at the present time less concerned about Germany and Japan supporting the sanctions of the League, because these two nations do not have enough of raw materials (such as oil) in their control to effectively oppose British policy of virtual embargo on raw materials. Should the United States refuse to follow the British policy of applying sanctions dictated by the League of Nations, then effectiveness of the League of Nations as an instrument of isolating a rival of Britain in world politics is much reduced. Therefore, the British authorities (official and non-official propagandists) are intent upon leading the United States to support the League of Nations. In this respect British statesmen have become signally successful as the present administration in Washington is following British direction on the pretext of promoting world peace by applying sanctions against an aggressor nation. *It is generally recognized that some of the Washington politicians and diplomats are induced by British statesmen to believe that if the United States follows the League of Nations by virtually applying sanctions against Italy, then in case of future necessity, the British Government would use its influence in utilizing the League machinery to apply sanctions against Japan to help the United States, provided the latter decide to follow a definite policy of curbing Japanese expansion in China.* Therefore, securing American co-operation in every possible way, without a formal Anglo-American Alliance, is the most important plank of British foreign policy. It is generally regarded that the U. S. State Department is pro-British and will help

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

British diplomacy whenever it is possible. However, there are American statesmen who feel that American foreign policy must not be the tail-end of British diplomacy; and American public opinion is not entirely in favour of virtual Anglo-American Alliance, because they realize that such a policy may lead to a war in Europe and Asia in which the United States might be involved.

Re-assertion of Britain as the dominating factor in Europe, through a vast programme of re-armament, and also by playing great powers against one another, is the next important trend in British foreign policy. I shall try to illustrate this point by mentioning recent happenings of international importance. (*a*) After the World War, British authorities supported Italy, so long as there was Franco-Italian rivalry in the Mediterranean and Africa; but just as soon as M. Laval and Signor Mussolini decided to come to an all-round understanding and signed a friendly pact, the British Foreign Office decided to take steps to break up this Franco-Italian understanding, because a Franco-Italian combination would interfere with British supremacy in the Mediterranean. The first step taken by the British was to threaten France with retaliation. The British, in violation of the Stressa Agreement, by which it was decided that Britain, France and Italy would follow a common policy regarding Germany, signed a naval pact with Germany, by which the latter secured British consent to build up a navy which would be able to challenge French or Russian navy. After that the British intimated to the French that they must choose between the British and the Italians as their future allies and friends. The British made it clear that if the French wished to secure British support against Germany, then they must stand by Britain against Italy's programme in Ethiopia. The French did not dare to antagonize the British and had to agree with British programme. (*b*) The British are manipulating the Germans with the threat of isolating Germany completely, through the action of the League of Nations and active support of France and Russia, unless the Germans follow a policy which would be acceptable to British statesmen. It seems that German statesmen are anxious to support British foreign policy, with the expectation that Britain would not support Russia or France against Germany. (*c*) British statesmen are in a position to bring pressure upon Soviet Russia, by encouraging Japan and Germany in their anti-Soviet activities. (*d*) To be sure, Britain is opposed to Japanese expansion and yet she is playing Japan against the United States as we as Russia, by extending indirect support t Japan's aspirations, provided the latter does n interfere with British imperial interests i the Far East. Whenever American-Japane tension grows, on account of naval issues o Chinese questions, Britain tries to play the pa of a mediator and secures support from bot quarters to maintain her supremacy in certai parts of Asia. Growing Sino-Japanese tensio serve British interests; because the Chinese an Japanese seek British support in their policie Japanese-Russian rivalry helps Great Britai because such a situation prevents both Japa and Russia from making a common cause again Britain in Asia.

Regarding Britain's positive policy, is certain that British naval, air and lan armaments will be augmented to such an exte that no single power will dare to attack he interests in any part of the world; and becaus of this great strength, other nations would see British support in international politics. A things stand today, Britain will try to maintai her supremacy in the Mediterranean at an cost, with French and Italian co-operation i that is possible, and even in spite of their opposition, if that be the case. If France and Italy oppose Britain in the Mediterranean, the Britain would use the weapon of Germany against France. Britain will change positio of her naval base from Malta to Alexandria, s that her naval power will be more secure fro Italian attacks and it will tighten her contro over Egypt.

If Britain succeeds in securing Franco-Italian co-operation or French co-operation i the Mediterranean (after the settlement o Italo-Ethiopian conflict), then she will decid to encourage other powers to take steps to cur either Soviet Russia or Germany which may b regarded by British statesmen as a serious menace to British interests. It is quite possible that British Tories would first support Germany Poland and Japan to take actions which wil weaken Soviet Russia. When that is accomplished, they will try to curb Germany and Japan through the aid of the League of Nations and specially France and her allies against Germany and the United States against Japan.

Eventually Japan and Great Britain would come to grips on commercial, economic and political issues concerning China and Eastern Asia. But it seems that the British are willing to give Japan plenty of rope so that she will entangle herself in such a fashion that it will lead to her strangulation. British statesmen are not actively opposing Japan in her

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

expansionist policy in Manchuria and North China, because they have more urgent problems in Europe and the Mediterranean region to solve now. *The control of the Mediterranean is the first requisite for maintaining British control over India and Egypt; and control over India is the foundation of British supremacy in Eastern Asia and the Pacific. Even the formidable Singapore naval base, without the support of India and Australia, would be powerless to cope with the growing power of Japan.* Furthermore, Japanese expansionist policy in China (especially her recent North China adventure) would transform China, Russia and the United States into determined foes of Japan. If Japan refuses to curb her ambitions in Asia, and continues to challenge British supremacy in Eastern Asia, then Britain, after setting her European house in order, will use the League of Nations, the United States, China, as well as Soviet Russia and the tremendous power of India against Japan. In such an eventuality Japan will be faced with the combined Anglo-American fleet, Russian land power and air forces, Chinese forces supported by Indian forces which might march through South China or Tibet towards Japanese-controlled North China. *In a future Anglo-Japanese conflict, India will play the part of a deciding factor, as was the case in the World War.*

Eventual conflict between Japan and Great Britain supported by the United States, Russia, China and other powers is not inevitable. This may be avoided, if British Tories and Japanese statesmen agree to come to an understanding and revive the old Anglo-Japanese Alliance. In fact, British Tories will be forced to come to an understanding with Japan, on Japan's terms, if British be faced with a powerful hostile combination of powers in Europe and effective revolts in Egypt and Asia and she (Britain) does not find wholehearted co-operation from the United States.

In short, re-assertion of Britain as the most dominant power in the world will be the trend of future British foreign policy. To assert this policy, Britain will try to maintain and augment her hold in Egypt and India and use resources, man-power and strategic position of these countries to the fullest extent, *even by making some minor concessions to the nationalists of these countries.* So long as the great powers of Europe continue to be hostile to each other and play into Britain's hands and so long as Britain can utilize Egypt and India and other Asian peoples to further her ends, and so long as Britain has nothing to fear from the United States, there is no reason to think that the ambition of British statesmen will be thwarted by any local opposition or any opposition from a single power.

The future peace of the world largely depends upon British foreign policy. British statesmen will not willingly give up their country's dominant position when challenged by any power. British statesmen want peace on the basis of *status quo,* maintaining the present British Empire and upholding British dominance in world politics. They will not hesitate to mobilize the immense power of the British Empire and enlist support of other nations to crush Britain's rivals. This has been the history of Britain's foreign policy. But there is no possibility of world peace on the basis of *staus quo. Unless rivalry between Great Powers ceases and they agree to allow other nations—weak and subjugated ones such as India and Egypt— to enjoy equal freedom, there will be international conflicts, in which Great Britain with her far-flung empire will be directly and indirectly involved. In such future conflicts of Britain, Egypt, India and other subjugated Asian peoples will be forced to make great sacrifices in men and wealth for the glory of the British Empire.*

POLITICAL UNIFICATION OF INDIA

By Sri AUROBINDO

A right knowledge of the facts and a right understanding of the character and principle of the Indian socio-political system disposes at once of the contention of occidental critics that the Indian mind, even if remarkable in metaphysics, religion, art and literature, was inapt for the organization of life, inferior in the works of the practical intelligence and, especially, that it was sterile in political experiment and its record empty of sound political construction, thinking and action. On the contrary Indian civilization evolved an admirable political system, built solidly and with an enduring soundness, combined with a remarkable skill the monarchical, democratic and other principles and tendencies to which the mind of man has leaned in its efforts of civic construction and escaped at the same time the excess of the mechanising turn which is the defect of the modern European State. But there is another side of politics on which it may be said that the Indian political mind has registered nothing but failure. The organization it developed may have been admirable for stability and effective administration and the securing of communal order and liberties and the well-being of the people under ancient conditions, but even if its many peoples were each of them separately self-governed, well-governed and prosperous and the country at large assured in the steady functioning of the highly developed civilization and culture, yet that organization failed to serve for the national and political unification of India and failed in the end to secure it against foreign invasion, the disruption of its institutions and an age-long servitude. Here again the first necessity is to get rid of exaggerations, to form a clear idea of the actual facts and their significance and understand the tendencies and principles involved in the problem that admittedly throughout the long history of India escaped a right solution. A great deal has been said and written about the inability of Indians to unite, the want of a common patriotism—now only being created, it is said, by the influence of Western culture—and the divisions imposed by religion and caste. Admitting even in their full degree the force of these structures,—all of them are not altogether true or rightly stated or vitally applicable to the matter,—they are only symptoms and we have still to seek the deeper causes.

The whole basis of the Indian mind is spiritual and inward turn, its propensity to se the things of the spirit and the inner being fi and foremost and to look at all else secondary, dependent, to be handled and det mined in the light of the higher knowledge a as an expression, a preliminary, field or or at least a pendent to the deeper spiritu aim,—a tendency therefore to create whate it had to create first on the inner plane a afterwards in its other aspects. This mentali and the consequent tendency to create fr within outwards being given, it was inevital that the unity India first created for hers should be the spiritual and cultural oneness. could not be, to begin with, a political unific tion effected by an external rule centralize imposed or constructed, as was done in Ro or ancient Persia, by a conquering kingdom the genius of a military and organizing peopl It cannot, I think, justly be said that this w a mistake or a proof of the unpractical tu of the Indian mind and that the single politic body should have been created first and afte wards the spiritual unity could have secure grown up in the vast body of an Indian nation empire. The problem that presented itself the beginning was that of a huge area contai ing more than a hundred kingdoms, clan peoples, tribes, races, in this respect anoth Greece, but a Greece on an enormous sca almost as large as modern Europe. As Greece a cultural Hellenic unity was necessar to create a fundamental feeling of oneness, he too and much more imperatively a conscio spiritual and cultural unity of all these peopl was the first, the indispensable condition wit out which no enduring unity could be possibl The instict of the Indian mind and of its gre Rishis and founders of its culture was sound i the matter. And even if we suppose that a outward imperial unity like that of the Roma world could have been founded among th peoples of early India by military and politica means, we must not forget that the Roma unity did not endure, and it is not likely tha a similar attempt in the vast reaches of Indi without the previous spiritual and cultural basi would have been of an enduring character: I

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

cannot be said either, even if the emphasis on spiritual and cultural unity be pronounced to have been too engrossing or excessive and the insistence on political and external unity too feeble, that the effect of this precedence has been merely disastrous and without any advantage. It is due to this original peculiarity, to this indelible spiritual stamp, to this underlying oneness amidst all diversities that if India is not yet a single organized political nation, she till survives and is still India.

After all the spiritual and cultural is the only enduring unity and it is by a persistent mind and spirit much more than by an enduring physical body and outward organization that the soul of a people survives. This is a truth which the positive western mind may be unwilling to understand or concede, and yet its proofs are written across the whole history of the ages. But spiritual unity is a large and flexible thing and does not insist, like the political and external, on centralization and uniformity; rather it lives diffused in the system and permits readily a great diversity and freedom of life. Here we touch on the secret of the difficulty in the problem of unifying ancient India. It could not be done by the ordinary means of a centralized uniform imperial State crushing out all that made for free divergence, local autonomies, established communal liberties, and each time that an attempt was made in this direction, it has failed after however long a term of apparent success, and we might even say that the guardians of India's destiny wisely compelled it to fail that her inner spirit might not perish and her soul barter for an engine of temporary security the deep sources of its life. The ancient mind of India had the intuition of its need; its idea of empire was a uniting rule that respected every existing regional and communal liberty, that unnecessarily crushed out no living autonomy, that effected a synthesis of her life and not a mechanical oneness. Afterwards the conditions under which such a solution might securely have evolved and found its true means and form and basis, disappeared and there was instead an attempt to establish a single administrative empire. That endeavour, dictated by the pressure of an immediate and external necessity, failed to achieve a complete success in spite of its greatness and splendour. It could not do so because it followed a trend that was not eventually compatible with the true turn of the Indian spirit. It has been seen that the underlying principle of the Indian politico-social system was a synthesis of communal autonomies, the autonomy of the village, of the town and capital city, of the caste, family, *kula*, religious community, regional unit. The state or kingdom of confederated republic was a means of holding together and synthetising in a free and living organic system these autonomies. The imperial problem was to synthetise again these states, peoples, nations, effecting their unity but respecting their autonomy, into a larger free and living organism. A system had to be found that would maintain peace and oneness among its members, secure safety against external attack and totalise the free play and evolution, in its unity and diversity, in the uncoerced and active life of all its constituent communal and regional units, of the soul and body of Indian civilization and culture, the functioning on a grand and total scale of the Dharma.

The failure to achieve Indian unity of which the invasions and the final subjection to the foreigner were the consequence, arose therefore at once from the magnitude and from the peculiarity of the task, because the easy method of a centralized empire could not truly succeed in India, while it seemed the only device possible and was attempted again and again with a partial success that seemed for the time and a long time to justify it, but always with an eventual failure. I have suggested that the early mind of India better understood the essential character of the problem. The Vedic Rishis and their successors made it their chief work to found a spiritual basis of Indian life and to effect the spiritual and cultural unity of the many races and peoples of the peninsula. But they were not blind to the necessity of a political unification. Observing the constant tendency of the clan life of the Aryan peoples to consolidate under confederacies and hegemonies of varying proportions, *vairajya, samrajya,* they saw that to follow this line to its full conclusion was the right way and evolved therefore the ideal of the Chakravarti, a uniting imperial rule, uniting without destroying the autonomy of India's many kingdoms and peoples, from sea to sea. This ideal they supported, like everything else in Indian life, with a spiritual and religious sanction, set up as its outward symbol the Aswamedha and Rajasuya sacrifices, and made it the dharma of a powerful king, his royal and religious duty to attempt the fulfilment of the ideal. He was not allowed by the dharma to destroy the liberties of the peoples who came under his sway nor to dethrone or annihilate their royal houses or replace their archons by his officials and governors. His function was to establish a suzerain power possessed of sufficient military strength to preserve internal peace and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to combine at need the full forces of the country. And to this elementary function came to be added the ideal of the fulfilment and maintenance under a strong uniting hand of the Indian dharma, the right functioning of the spiritual, religious, ethical and social culture of India.

There is no historical evidence that this ideal was ever successfully carried into execution, although the epic tradition speaks of several such empires preceding the Dharmarajya of Yudhishthira. At the time of Buddha and later when Chandragupta and Chanakya were building the first historic empire, the country was still covered with free kingdoms and republics and there was no united empire to meet the great raid of Alexander. It is evident that if any hegemony had previously existed, it had failed to discover a means or system of enduring permanence. This might however have evolved if time had been given, but a serious change had meanwhile taken place which made it urgently necessary to find an immediate solution. The historic weakness of the Indian peninsula has always been until modern times its vulnerability through the north-western passes. This weakness did not exist so long as ancient India extended northward far beyond the Indus and the powerful kingdoms of Gandhara and Vahlika presented a firm bulwark against foreign invasion. But they had now gone down before the organized Persian empire and from this time forward the trans-Indus countries ceasing to be part of India, ceased also to be its protection and became instead the secure base for every successive invader. The inroad of Alexander brought home the magnitude of the danger to the political mind of India and from this time we see poets, writers, political thinkers constantly upholding the imperial ideal or thinking out means of its realisation. The immediate practical result was the rise of the empire founded with remarkable swiftness by the statesmanship of Chanakya and constantly maintained or restored through eight or nine centuries, in spite of periods of weakness and incipient disintegration, successively by the Maurya, Sunga, Kanwa, Andhra and Gupta dynasties. The history of this empire, its remarkable organization, administration, public works, opulence, magnificent culture and the vigour, the brilliance, the splendid fruitfulness of the life of the peninsula under its shelter emerges only from scattered insufficient records, but even so it ranks among the greatest, constructed and maintained by the genius of the earth's great peoples. India has no reason, from this point of view, to be anything b proud of her ancient achievement in empi building or to submit to the hasty verdict th denies to her antique civilization a str practical genius or high political virtue.

At the same time this empire suffered the inevitable haste, violence, and artificiality its first construction to meet a pressing ne because that prevented it from being deliberate, natural and steady evolution in old solid Indian manner of the truth of deepest ideal. The attempt to establish centralized imperial monarchy brought with not a free synthesis but a breaking down regional autonomies. Although according the Indian principle their institutes and custo were respected and at first even their politi institutions not wholly annulled, at any rate many cases, but brought within the imper system, these could not really flourish under shadow of the imperial centralization. The f peoples of the ancient Indian world began disappear, their broken materials serving aft wards to create the now existing Indian rac And I think it can be concluded on the wh that, although for a long time the great popul assemblies continued to remain in vigour, th function in the end tended to become mo mechanical and their vitality to decline a suffer. The urban republics too tended become more and more mere municipalities the organized kingdom or empire. The hab of mind created by the imperial centralizati and the weakening or disappearance of the mo dignified free popular institutions of the p created a sort of spiritual gap, on one side which were the administered content with a government that gave them security and did interfere too much with their religion, life customs and on the other the imperial admin tration beneficent and splendid, no doubt, no longer that living head of a free and livi people contemplated by the earlier and t political mind of India. These results becar more prominent and were only final with t decline, but they were there in seed and render almost inevitable by the adoption of mechanical method of unification. The advar ages gained were those of a stronger and mo coherent military action and a more regularis and uniform administration, but these could compensate in the end for the impairment the free organic diversified life which was t true expression of the mind and temperame of the people. Meanwhile the empire serv well enough, although not perfectly, the end which it was created, the saving of the Indi soil and Indian civilization from that immen

flood of barbarian unrest which threatened all the ancient stabilized cultures and finally proved too strong for the highly developed Græco-Roman civilization and the vast and powerful Roman empire. That unrest throwing great masses of Teutons, Slavs, Huns, and Scythians to west and east and south battered at the gates of India for many centuries, effected certain inroads, but, when it sank, left the great edifice of Indian civilization standing and secure.

It is a later downfall, the Mussulman conquest failing in the hands of the Arabs but successfully reattempted after a long interval, and all that followed it, which serves to justify the doubt thrown on the capacity of the Indian peoples. But first let us put aside certain misconceptions which cloud the real issue. This conquest took place at a time when the vitality of ancient Indian life and culture after two thousand years of activity and creation was already exhausted for a time or very near exhaustion and needed a breathing space to rejuvenate itself by transference from the Sanskrit to the popular tongues and the newly forming regional peoples. The conquest was effected rapidly enough in the north, although not entirely complete there for several centuries, but the south long preserved its freedom as of old against the earlier indigenous empire and there was not so long a distance of time between the extinction of the kingdom of Vijayanagara and the rise of the Mahrattas. The Rajputs maintained their independence until the time of Akbar and his successors and it was in the end partly with the aid of Rajput princes acting as their generals and ministers that the Moguls completed their sway over the east and the south. And this was again possible because—a fact too often forgotten—the Mussalman domination ceased very rapidly to be a foreign rule. The vast mass of the Mussulmans in the country were and are Indians by race, only a very small admixture of Pathan, Turkish and Mogul blood took place, and even the foreign kings and nobles became almost immediately wholly Indian in mind, life and interest. If the race had really like certain European countries remained for many centuries passive, acquiescent and impotent under an alien sway, that would indeed have been a proof of a great inherent weakness; but the British is the first really continuous foreign rule that has dominated India. The ancient civilization underwent indeed an eclipse and decline under the weight of a Central Asiatic religion and culture with which it failed to coalesce, but it survived its pressure, put its impact on it in many directions and .remained to our own day alive even in decadence and capable of recovery, thus giving a proof of strength and soundness rare in the history of human cultures. And in the political field it never ceased to throw up great rulers, statesmen, soldiers, administrators. Its political genius was not in the decadence sufficient, not coherent enough or swift in vision and action, to withstand the Pathan, Mogul and European, but it was strong to survive and await every opportunity of revival, made a bid for empire under Rana Sanga, created the great kingdom of Vijaynagara, held its own for centuries against Islam in the hills of Rajputana, and in its worst days still built and maintained against the whole power of the ablest of the Moguls the kingdom of Shivaji, formed the Mahratta confederacy and the Sikh Khalsa, undermined the great Mogul structure and again made a last attempt at empire. On the brink of the final and almost fatal collapse in the midst of unspeakable darkness, disunion and confusion it could still produce Runjit Singh and Nana Fadnavis and oppose the inevitable march of England's destiny. These facts do not diminish the weight of the charge that can be made of an incapacity to see and solve the central problem and answer the one persistent question of Fate, but considered as the phenomena of a decadence they make a sufficiently remarkable record not easily paralleled under similar circumstances and certainly put a different complexion on the total question from that put by the crude statement that India has been always subject and politically incapable.

The real problem introduced by the Mussulman conquest was not that of subjection to a foreign rule and the ability to recover freedom, but the struggle between two civilizations, one ancient and indigenous, the other mediaeval and brought in from outside. That which rendered the problem insoluble was the attachment of each to a powerful religion, the one militant and aggressive, the other spiritually tolerant indeed and flexible, but obstinately faithful in its discipline to its own principle and standing on the defence behind a barrier of social forms. There were two conceivable solutions, the rise of a greater spiritual principle and formation which could reconcile the two, or a political patriotism surmounting the religious struggle and uniting the two communities. The first was impossible in that age. Akbar attempted it on the Mussulman side, but his religion was an intellectual and political rather than a spiritual creation and had never any chance of assent from the strongly religious mind of the two communities. Nanak attempted it from the Hindu side, but his

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

religion, universal in principle, became a sect in practice. Akbar attempted also to create a common political patriotism, but this endeavour too was foredoomed to failure. An autocratic empire built on the Central Asian principle could not create the desired spirit by calling in the administrative ability of the two communities in the person of great men and princes and nobles to a common service in the creation of a united imperial India; the living assent of the people was needed and that remained passive for want of awakening politial ideals and institutions. The Mogul empire was a great and magnificent construction and an immense amount of political genius and talent was employed in its creation and maintenance. It was as splendid, powerful and beneficent and, it may be added, in spite of Aurangzeb's fanatical zeal, infinitely more liberal and tolerant in religion than any mediaeval or contemporary European kingdom or empire and India under its rule stood high in military and political strength, economic opulence and the brilliance of its art and culture. But it failed like the empires before it, more disastrously even, and in the same way, crumbling not by external attack but by internal disintegration. A military and administrative centralized empire could not effect India's living political unity. And although a new life seemed about to rise in the regional peoples, the chance was cut short by the intrusion of the European nations and their seizure of the opportunity created by the failure of the Peshwas and the desperate confusion of the succeeding anarchy and decadence.

Two remarkable creations embodied in the period of disintegration the last effort of the Indian political mind to form the foundations of a new life under the old conditions, but neither proved to be of a kind that could solve the problem. The Mahratta revival inspired by Ramdas's conception of the Maharashtra Dharma and cast into shape by Shivaji was an attempt to restore what could still be understood or remembered of the ancient form and spirit, but it failed, as all attempts to revive the past must fail, in spite of the spiritual impetus and the democratic forces that assisted its inception. The Peshwas for all their genius lacked the vision of the founder and could only establish a military and political confederacy. And the endeavour to found an empire could not succeed because it was inspired by a regional patriotism that failed to enlarge itself beyond its own limits and awaken to the living ideal of a united India. The Sikh Khalsa on the other hand was an astonishiningly original and novel creation and its face was turned not to the past but the future. Apart and singular in its theocratic head and democratic soul and structure, its profound spiritual beginning, its first attempt to combine the deepest elements of Islam and Vedanta, it was a premature drive towards an entrance into the third or spiritual stage of human society, but it could not create between the spirit and the external life the transmitting medium of a rich creative thought and culture. And thus hampered and deficient it began and ended within narrow local limits, achieved intensity but no power of expansion. The conditions were not then in existence that could have made possible a successful endeavour.

Afterwards came the night and a temporary end of all political initiative and creation. The lifeless attempt of the last generation to imitate and reproduce with a servile fidelity the ideals and forms of the West has been no true indication of the political mind and genius of the Indian people. But again amid much mist of confusion there comes now a new twilight, not of an evening but a morning Yuga-sandhya. India of the ages is not dead nor has she spoken her last creative word; she lives and has still something to do for herself and the human peoples. And that which is seeking now to awake is not an Anglicised oriental people docile pupil of the West and doomed to repeat the cycle of the occident's success and failure but still the ancient immemorable Shakti recovering her deepest self, lifting her head higher towards the supreme source of light and strength and turning to discover the complete meaning and a vaster form of her Dharma.*

THE PROBLEM OF FOREIGN CAPITAL IN INDIA

By GAGANVIHARI L. MEHTA

The question of the operations of non-Indian industries in India deserves careful and thorough examination. It is necessary to emphasise, at the start, the aim of a policy of protection of industries by tariffs and bounties. The very foundation of protectionism, as has been pointed out by eminent economists, is the idea of nationality. "The use of protection," observed Prof. Bastable, "is substantially a *national* apprenticeship." When Indians asked for protection, they did so in order to promote Indian enterprises with Indian capital and under Indian control. The Government of India in the initial stages understood the nature of this demand and agreed with it. Speaking in 1916 on the resolution which led to the appointment of the Industrial Commission, Sir William Clarke, the then Member of Commerce, said,

> "the building up of industries where the capital, control and management should be in the hands of Indians is the special object we all have in view."

He deprecated the taking of any steps which might "merely mean that the manufacturer who now competes with you from a distance would transfer his activities to India and compete with you within your own boundaries." Similarly, Sir Frederic Nicholson said,

> "I beg to record my strong opinion that in the matter of Indian industries we are bound to consider Indian interests firstly, secondly and thirdly. I mean by 'firstly' that the local raw product should be utilized, by 'secondly' that industries should be introduced and by 'thirdly' that the profits of such industries should remain in the country."

The enrichment of the country, which is the real justification of a protective policy, depends, in other words, upon the earnings of the industry remaining in the country itself. The Indian Fiscal Commission also discussed this question in Chapter XV of their report. The Majority Report after discussing the usual objections to foreign capital differentiated between industries established in India behind tariff wall erected under a policy of protection and between industries which were in the nature of a monopoly or concession or to which some kind of pecuniary assistance is given from public funds or which is licensed to act as a public utility company. They were of opinion that while in the former case, no restrictions were either practicable or desirable, in the latter case "it is reasonable that Government should make certain stipulations" and "lay special stress on the Indian character of the companies thus favoured." For instance, they suggested that companies enjoying such concessions should be incorporated and registered in India with rupee capital, that there should be a reasonable proportion of Indian Directors on the Board and reasonable facilities should be offered for the training of Indian apprentices at Government expense. In this connection, they referred to the statement made by Mr. (now Sir) Atul Chatterjee on behalf of the Government in 1922, when he observed,

> "the settled policy of the Government of India, as I think we have mentioned more than once in this Assembly, is that no concession should be given to any firms in regard to industries in India unless such firms have a rupee capital, unless such firms have a proportion, at any rate, of Indian directors and unless such firms allow facilities for Indian apprentices to be trained in their work. This has been mentioned more than once and I can only repeat this declaration."

The majority of the Indian members of the Commission, who wrote a Minute of Dissent, were unable to appreciate the distinction sought to be drawn between companies getting Government concessions and companies establishing themselves owing to the tariff policy of the Government. They rightly pointed out that

> "under a policy of protection the right to establish an industrial enterprise behind the tariff wall is a concession in itself. There is really no distinction between Government granting subsidies and bounties out of money collected by them by way of taxation and allowing an industry to tax the people directly by means of higher prices resulting from protective duties."

They, therefore, recommended that

> "every company desiring to establish an industry after the policy of protection has been adopted in India should be subject to the same conditions as are recommended for companies receiving concessions, namely, that all such companies should be incorporated and registered in India with rupee capital, that there should be a reasonable proportion of Indian directors on the board and that reasonable facilities should be given for the training of Indian apprentices."

They had no objection to foreign companies in India obtaining the benefit of the protective policy provided suitable conditions are laid down to safeguard the essential interests of India. The Minute of Dissent foresaw the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

danger of foreigners establishing manufacturing industries in India within the tariff wall and while reaping the benefits at the expense of the Indian consumer and tax-payer to carry away the entire profit outside India. (*Vide* Paragraph 53 of the Minute of Dissent of the Indian Fiscal Commission). They, therefore, stated that

> "Indian capital should have full scope for investment in Indian industries and foreign capital should merely supplement it to accelerate the pace and to provide the early relief of the burden on the consumer. . . . . No foreign country should be allowed to monopolise the profits due to the policy of protection in India and at the cost of the Indian consumers."

It might be pointed out here that Section 5 of the Steel Industry Protection Act, 1924, laid down that no bounty in respect of steel rails, fish plates or waggons shall be payable to or on behalf of any company, firm or other person not already engaged at the commencement of this Act in the business of manufacturing any one or other of such articles unless such company, firm or person provides facilities to the satisfaction of the Governor-General in Council for the technical training of Indians in the manufacturing process involved in the business and in the case of a company unless (*a*) it has been formed and registered under the Indian Companies Act, 1913 and (*b*) it has a share capital, the amount of which is expressed in the Memorandum of Association in rupees and (*c*) such proportion of the directors as the Governor-General in Council has by general or special order prescribed in this behalf, consists of Indians. This policy was definitely accepted by the Government of India. When the Indian Radio-Telegraph Co., obtained a license from the Government, it was laid down in their agreement with the Company that 60 per cent of new capital should be reserved for Indians. In subsidising civil aviation, Government have approved and adopted the principle of reserving a majority of share capital and directorate for Indians. It might be recalled that the External Capital Committee also recommended the imposition of similar stipulations to safeguard Indian interests where definite pecuniary concessions such as bounty or subsidy is given and stated that it was the declared policy of the Government of India and the Indian Legislature. The External Capital Committee stated in their report that "it is more advantageous to India that its requirements for new capital should be supplied from internal rather than from external sources so far as internal capital is forthcoming" and that "India possesses a vast amount of dormant capital awaiting development which would be sufficient to meet a larger part of India's industrial requirements." That internal capital is available is shown by the remarkable growth of the sugar industry during the last few years and proves that once confidence is created by adopting the policy of protection, the difficulty in obtaining the requisite capital would largely disappear.

It might be observed here incidentally that apart from the question of protective duties India's general tariff, although framed for purposes of revenue, has been raised to a level especially after the surcharges on customs duties where it affords a varying degree of protection to many small industries of various kinds. In this sphere, non-Indian concerns have been established and have benefited by the revenue tariff which, because of the surcharges, has a protective effect. Several instances of the growth of such non-Indian enterprises could be cited. As regards the non-Indian industry developed behind a protective tariff wall, the most important example is that of matches. But in many other industries like soap, chemicals, shoe-making, sugar, etc., non-Indian companies have established themselves in India and, in several cases, are competing keenly with Indian enterprises. It was understood some time ago that Japanese interests contemplated the establishment of a sugar and a silk factory in India. It is obvious that such non-Indian concerns with their superior financial resources, longer experience and better equipment, technical skill and efficiency are able to oust their Indian competitors from the market and, in some cases, even exterminate them. Information regarding the capital, production, growth and methods of competition of such enterprises are not available and the Government should, therefore, collect full statistics and data in regard to all these matters and publish them at an early date so that the public might be fully acquainted with the nature of the whole problem. As was pointed out in the Minute of Dissent in the Fiscal Commission Report, when a policy of protection is adopted, it becomes essential that the Government of India should have, in the interests of the consumers, full information and complete control over industries established in this country. The extent to which non-Indian enterprises have established themselves in this country either as a result of the revenue or protective tariff is largely a matter of guess work and the first requisite, therefore, is to obtain full information regarding such concerns operating in this country, their affiliations and ramifications in other countries and their activities in relation to competing Indian enterprises. The argument is particularly strong in the case

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of industries receiving Government assistance either through protective duties or bounties. Protection after all involves sacrifice and cost and is resorted to as a means to national development of indigenous resources. If the consumer has to pay a higher price and the taxpayer to bear the burden of assisting an infant industry or a key industry, it is only equitable that the benefits from such industrial enterprises should remain in the country and not be lost to it. It has been suggested that the surplus profit granted to the external capitalist by governmental action at the cost of the counry should be recovered from him in some form of taxation or at least expended in some manner directly profitable to India. The Tariff Board on the Match Industry acknowledge that from the national point of view, the two adverse results of the establishment of a monopoly or quasi-monopoly by the Swedish Match Company are that profits instead of remaining in the country would be diverted abroad and that Indian capitalists would be deprived of a reasonable share in the industry. As the Tariff Board stated,

> "in the case of a company financed by foreign capital the additional profits which would otherwise remain in the country would be transferred abroad, while the company would also obtain those profits which in other circumstances would be distributed among Indian firms or shareholders. Further, if a monopoly is established by a foreign firm, the industry is closed to the Indian capitalists. In a country so backward as India industrially, the encouragement of *entrepreneur* class in all industries is a matter of considerable importance."

The Tariff Board, therefore, recommended that in the event of the Swedish Company using its large financial resources to attempt to extend its present share on the Indian market by means of unfair competition, Government should take necessary steps to safeguard the Indian industry. It is, therefore, essential that Government and the public should be in possession of full facts in order to know whether the share of non-Indian enterprises in such cases has been and is being extended and also whether this is being done by means of unfair competition. It will be recalled in this connection how a concession was granted last year to the Imperial Chemicals Co., a British firm, to exploit the mineral resources in the Punjab and it has been stated that the lease is for 50 to 60 years. No detailed information regarding the contract between the Government and the Imperial. Chemicals was given to the public, although interpellations on the subject were put in the Assembly.

It is needless to point out that in all countries the activities of foreigners in several economic spheres are restricted through legislation or administrative decrees and certain domestic spheres of trade are reserved for nationals. Numerous instances could be cited in support of such a policy. The problem in India, is, however, complicated by several factors, not the least important of which is the absence of an Indian nationality. The constitutional provisions in the Government of India Act outlined in Chapter 3 of Part V relating to Discrimination, etc., make it impossible henceforth to differentiate between British subjects and Indian-born subjects. The only concession made is that in regard to a new company to which any bounty or subsidy is to be given, the Federal or Provincial Legislature might lay down that (*a*) the company is to be incorporated by or under the laws of British India, that (*b*) such proportion not exceeding one half of the members of its governing body are Indian subjects of His Majesty and that (*c*) the company gives such reasonable facilities for the training of Indian subjects as may be prescribed. [*Vide* Section 116(2)]. As will be observed, these conditions are far less satisfactory than even the stipulations recommended by the External Capital Committee.

A discussion of this question, if it is to bear any relation to existing facts, must, therefore, take into account the constitutional provisions of the new Act and the impossibility of differentiating between British and Indian subjects so far as the industries benefited by the protective policy are concerned. Moreover, there are industrial concerns in which the position is not exactly easy to define. For instance, there are jute mills whose management is entirely non-Indian and yet in which a majority of the shares are held by Indians. There are also cases in which sterling debenture loans of protected enterprises have been raised in England or America and of amalgamation and combinations with non-Indian interests as in certain hydro-electric, textile and steel concerns. The position of Aden salt in the scheme of salt protection is also a peculiar one which requires careful consideration and solution. Generally, it might be stated that the criterion should be that of the controlling interests and if the controlling interests are in the hands of Indians, then the concern should be considered to be predominantly Indian in character.

As regards the methods to be adopted to deal with such non-Indian enterprises as are detrimental to national concerns, the first condition is, as already observed, to obtain full and reliable information. So far as the measures to safeguard Indian interests are concerned, the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

most important means that could be adopted are (*a*) quota and (*b*) differential excise duty as between Indian and non-Indian concerns. Both these methods were put forward before the Tariff Board on Match Industry and were discussed in their report. The Tariff Board did not favour the levy of a differential excise duty but considered that in case of unfair competition some kind of licensing factories and control of sales through an independent organiza might be feasible. It is desirable that this is should be clearly faced and presented before Tariff Board whenever they next consider scheme of protection in which non-Ind interests are likely to benefit or are likely come into the country for establishing compa in India in order to obtain advantage of tariff policy of the Government.

APPEAL WITH A VIEW TO A "HENRY BARBUSSE" FUND

PEACE is mankind's most precious gift. The most imposing progress in human history has been achieved in peace and it is in peace, that the greatest fruits of culture have been brought forth.

This gift is in danger. The forces of war, which were thought to be quelled once and for all, which never again, after the massacre of 1914-1918, were to launch mankind into such a catastrophe, are restlessly stirring once more.

There are those who would raise up war as youth's ideal, the glory of man's life; almost, they would have it as a doctrine of state. But men and women, all those who aspire to life, are straining every fibre against war and thinking with horror of the destruction which would threaten whole countries.

No. War shall not be, for it would mean the most terrible catastrophe at the cost of millions of sacrificed men and women.

Mankind can and must vanquish war. May a great ideological onslaught sweep over and change the face of the earth, that wherever hatred between nations is fomented and sanguinary preparations desperately pushed on, the Front of Peace may rear an insurmountable barrier!

But powerful means are needed for this propaganda, means to counter those at the disposal of the profiteers of war.

Henry Barbusse devoted his life to the struggle for peace; he wrote *Le Feu*, fin of books against the war; he wore out strength in the defense of peace. His name for ever bound up with peace. It is the livi symbol of man's will for peace. It is his nam which this fund must bear, this fund which want to gather together across the frontie over the barriers, separating nation fr nation, to make propaganda for peace, achieve the union of all peace forces.

The administration of this fund will submitted to the fullest public inspection. T names of the donors will be inscribed in *Golden Book of Peace*—a witness to go do to history of the sacrifices made to preser mankind from war.

We call upon upright men, those who ha nothing to gain and everything to lose fro war, those, fired by the greatness of sacrifice the cause of mankind, to help us in building this fund, which will be devoted to this cause. In the name of fathers and mothe we call upon young people; in the name young people, upon fathers and mothers, contribute to this fund, the most sacred mankind, the FUND OF PEACE.

MODERN GERMAN LITERATURE

HANS FRIEDRICH BLUNCK

By CHRISTIAN OTTO FRENZEL

developments now taking place in the ical world of Germany, and which can be n every sphere of national life, have extend- nemselves also to arts and letters. It would be true to say that the State has *organized* arts: what it has done has been to form a of protectorate, the business of which is urther all promising art, that is to say, all which is in the interests of the nation. For reason the Chamber of Literature was ted.

The reasons for the far-reaching disputes e sphere of literature are deep-rooted, and little to do with the new national-socialist The world war had a vast influence upon literature of all countries and so, naturally, ermany too.

But it was not only with the arrival of the alled "war literature", that is to say, books were novels or personal accounts of the that the "war literature" started, for it really long before the "front generation" ed writing that there was a noticeable turn- to new aims and objects.

The "new literature", which was making f felt long before the war, was characterized a turning away from a materialist attitude nind. In place of this, there was a marked occupation with things of nature, with the hely life of the people and with the historic t. All these were to give a new driving er to modern life. During the eighties of the century, German literature, which placed worker as a great subject to be written about, s profoundly influenced by the French and rwegian "naturalistic writing" of Zola and en, and this type of literature was the direct e-runner of the present-day writing which es as its theme not merely one person or one ss, but the whole people, and which sets each ividual, as a representative of his class, in osition of equal importance with any other ividual.

To tireless exponents of the new literature ong, in the older generation, Hermann Stehr, o is still living, and Paul who died in 1934, d the women writers Ina Seidel and Agnes egel; but, above all, and of a younger neration, that of the war, Hans Carossa, Max ll, Friedrich Griese, Hans Johat, Kolbenheyer d Hans Friedrich Blunck.

Hans Friedrich Blunck is the president of the Reich Chamber of Literature in the new National Socialist State, but it is not intended here to enlarge on his capabilities as an official, but to speak of his writings, which caused him to be given his office.

Blunck, with the exception of a few juvenilia, has written all his books in the post-war period. His whole mind is steeped in folk-lore, and in spite of his wide values and genuine knowledge, it was extremely difficult for him to make his voice heard amid the changing fashions and careless appreciations of those years. His unshakeable faith in the German people finally brought him rewards, and his writings are of and for the German people. The manners and customs, the ancient stories, the great folk-lore of his country are intimately known to him and have been by him awakened to life. He has used his knowledge to give a new meaning and a new hope to modern people.

Blunck's work is divided into three sections: his fairy stories and legends of the lower Elbe district; his novels of modern trends and his novels dealing with Germans living abroad. He has also published poems and ballads, the latter mostly historical. His work is greatly distinguished; he has written simply and beautifully the fairy stories of the Elbe, that have been told from one generation to another by word of mouth. His great three-volume novel *Urvatersaga* (Ancestral Saga) deals with the early history of Germany and describes with a wealth of imaginative art the evolution of German character. His trilogy *Werdendes Volk* (Developing People) relates the history of south Germany from the time of the German conquest by the Franks, through the bitter religious quarrels of the Middle Ages and at last over the devastation of the Thirty Years War, that is to say, this book covers the whole period of medieval times in Germany. He has also written an historical romance *Die grosse Fahrt* (The Great Journey), which tells of the discovery of North America by Diederik Pining before the discovery by Columbus. Truth and imagination in this book are welded into a triumphantly successful piece of work.

It is upon Blunck's love for his country and his close approach to the people that his great success rests.

HOW A "HARIJAN" CANDIDATE WAS DEFEATED

By R. S. PANDIT

December 3rd—polling day—was approaching and Prayag Dutt, the canvasser, tried to speed up the delivery of the candidate's cards.

"Who is this Hari," enquired the Brahman elector, an Advocate of the High Court, "and what is his caste?" Prayag Dutt canvassing on behalf of the Harijan candidate replied that the candidate was a Chamar by caste. Thereupon the Advocate spoke in his persuasive manner: "Why don't you Chamars stick to the ancestral work of shoe-making? It should pay well. Why do you want to stand for the Municipal Election—what can a Chamar do in the Municipal Corporation?" Prayag Dutt agreed that shoe-making would be profitable work. But he said: "We pure Chamars would never have given up the shoe trade but for the fact that in this city there are now a number of mongrel Chamars." "Who are these mongrel Chamars?" asked the Advocate, and Prayag Dutt replied: "A number of Brahmans, Khatris, and Baniyas have set up shops of imported boots and shoes and are making profits by underselling the hard-working Chamar in the shoe business." The elector felt disconcerted and perhaps in order to get rid of the canvasser expressed his willingness to vote for the Harijan candidate.

The local Congress Committee had decided to help the poor to win a seat during the recent Municipal Election at Allahabad from the Civil Lines, which includes a number of Bastis with hundreds of voters who are for the most part poor manual workers. With its modern roads, which serve the houses of the high and mighty, surrounded by gardens and lit with electricity, the Civil Lines area is a contrast to the Bastis of the poor whose huts are taxed by the Municipality, which has, however, never shown any anxiety to make a road or provide the poor with water or even oil lamps. During the rains water collects in pits in the dust tracks and little children die by drowning in the very midst of the Bastis.

The nomination of a Harijan candidate from the Civil Lines caused a flutter in the dove-cotes of orthodoxy. While some of the educated and respectable middle-class voters took this as a personal affront to their intellectual attainments, others regarded it as a challenge to caste superiority and the sacred principle of private property. The Adv Association sensed the coming danger i tively and some of the learned fraternity the writer to explain why the Congre dared to nominate a Chamar for a sea the Civil Lines. A Kashmiri Pandit a with vehemence that he would never t a Harijan candidate. His attention was to the fact that caste was immateria candidate was a Kashtkar (farmer), and a nationalist and was chosen by th Congress Committee as a straightforwar incorruptible man. Indeed, he was pers known to many as a faithful servant late Pandit Motilal Nehru. But the l Counsel was adamant. He said he wou prepared to vote for a Chamar or e Mehtar if the latter were "reformed Islam or Christianity!

The issue was thus side-tracked. I not one of religion or of caste. It was secular. The poor knew where the pinched and it was their right, if they so to elect as a representative from among selves one who would bring the grievan the poor and needy before the Municipal mittes and get them redressed as far as po The reactions of the so-called high caste the intellectuals revealed that they were unconscious of the sufferings of large nu of the so-called depressed classes or that refused to act justly towards masses o poor born within the fold of Hinduism were perpetually on the anvil under the of a hundred hammers.

The issue involved in Hari's candid was thus misrepresented. Hari's canv included enthusiastic students and Advocates who had volunteered their ser When they presented his card and appeal the high-caste voters they found that ma them forgot, in their anger, that the cand was set up by the Congress. One of Brahman Advocates was amazed that should have been asked to vote for a Ch He tore up the card and threw it in the of the Advocate canvasser.

At first in the Indian Clubs it was sidered a joke, but when the canvassin favour of Hari, the representative of working class, became increasingly succes

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the menace was considered too grave for the "high caste" to ignore it. The tension ended in a storm of opposition in the Civil Lines against the very idea of the candidature of a Chamar.

In the Civil Lines there are two seats for the Non-Muslim constituency, which is a joint constituency for Europeans and Indians, Hindus, Christians, Parsees and others. With one solitary exception, about 19 years ago when a Hindu was returned, the Civil Lines area has been represented heretofore only by Europeans, Anglo-Indians or Christians. The Congress Committee had set up a candidate to contest one out of the two seats with the *bona fide* desire to train the voters among the poor and manual workers to exercise their rights. Two Hindu candidates were in the field this year, besides three Christians, for the two seats. Municipal elections had heretofore evoked no enthusiasm in the Civil Lines, but this was a dangerous departure. Every house now discussed the pros and cons of this problem and opinion was sharply divided until the orthodox of all kinds combined and determined to reduce the support Hari had already gained by a vigorous campaign of counter canvassing. Single voting for the high-caste candidates was resorted to to secure the defeat of Hari. The substantial support already secured among all classes of voters, including Europeans, Parsees, Professors, Doctors, Advocates, Theosophists, Christians and others was thus neutralised. The working classes, such as the Kashtkar, the carpenter, the mason, the dhobi, the petty shop-keepers at street corners were easily divided by the agents of the high-castes. The poor lacked organization and their support was undermined, without much difficulty, by methods commonly employed in elections. The orthodox and respectable of all sections had combined to save religion and respectability from the menace of the Harijan. And they won.

THUS SING THE COUNTRYWOMEN IN THE PUNJAB

By Prof. DEVENDRA SATYARTHI

The countrywomen in the Punjab sing thousands of songs with an unruffled devotion and childlike simplicity. There is, of course, a rich variety of purely indigenous tunes to which these songs—the time-honoured favourities of the fair sex—are originally put. The countrywomen's holiday-spirit is veritably reinforced by these songs and, as such, they furnish the strenuous routine of village-life with the Elysian thrills of joy.

Especially during seasonal festivals and various religious or semi-religious ceremonies the countrywomen are as free to sing as the birds of the air or the wind that bloweth where it listeth. Everywhere is seen a feast of happy faces and gorgeous colours—blue, rose-pink, sombre red, yellow, jet-black, and many others. Life passes before us like a kaleidoscope. The choice of songs, of course, differs according to the nature of the various gala days. The joy of these days minus the countrywomen's songs is, in fact, very inconsiderable. The colour of the holiday thrills is further enhanced by *Gidha*, a popular dance current throughout the length and breadth of the land of five rivers.

The countrywomen appear to be the true apostles of their native Muse and they have always been observing and comprehending the natural channels through which their national poesy has found an exact medium of expression. The spontaneous art of music is perennial, and the new fields of inspiring airs, which the countrywomen of these days have explored for the creation of contemporary songs, will be cultivated with great profit by their progeny, imbibing the true spirit of national song.

The characters, portrayed in these songs, old and new alike, represent types rather than individuals. Here we see the very soul of the rural Punjab, expressed by these types. They have the true air and light of the village-life, and in the words of the poet "live in description and look green in song." Such types, in no way less important, are, of course, very rare in the crowded towns, where life is full of complexities, and where their joys and sorrows are limited by restraint and convention. How inspiring is the simplicity of life which delights to gambol and frolic in Nature's company! Young women are seen singing of their healthy bridegrooms; their happy faces outshine the spring-flowers. The

maidens strive to imitate the peacock-dance; how lovely they look chequered beautifully and richly with variegated flowers; their charmful process of throwing flowers on their languid sweethearts not only arouses them from sleep, but also awakens the sleeping poetry in our hearts. In autumn, when the berry trees bend down with the burden of their fruit, we see the girls making friends and going out to make a berry-feast; it revives sanguine hopes in their minds with a fair promise of redeeming their heart-felt desires and they are engaged in national song and dance. They compare their lovers with the parrots and pigeons, and their lovers in return compare them with the she-cranes. Again they sing of their lovers calling them their moons, and seek to hear from them songs describing the beauty of the twinkling stars. To some a newly-married bride appears on the scene as the morning-star, and to others she is marked as the golden ear of the wheat plant. There are lovers with tongues as sweet as sugar-candy, and bodies as fragrant as the sandal trees. The happy couples are seen enjoying national songs and dances on the banks of the native rivers; in their hours of inspiration they sing of the local landscape personifying each other as the Ravi and the Chenab. There are maidens who are elated with the hidden joy of their coming weddings and await the auspicious blessings of the Almighty Father in finding venerable fathers-in-law and mothers-in-law who keep many a she-buffalow for milk, curd and butter, and who are rich enough to provide them with a considerable number of orrnaments made of gold. But in spite of their long-cherished ambition they cannot help being overpowered by the predominating pathos, when they have to bid adieu to their parental dwellings for the new ones; we see their sad hearts depicted as streamlets of tears. They sing of their blessed travails when new sons appear on the scene. There are brides who sing of their spinning-wheels made of gold; some of them are seen making a demand for the spinning-wheels made of *Shisham* wood. How eager and impatient they become to go to their parents during the rains; it is the distinguishing characteristic of their filial and parental love. Women are seen shedding tears for the deceased ones: for the daughters who used to sing as sweet as the *Koels* do, and who have now flown away to sleep in the nest of Death: for the fathers who were *Subedars*: for the brothers who looked like highly polished logs of *Shisham* and *Sandal*: for the husbands who knew very well the language of their wives' dreamy eyes: for the fathers-in-law whose voice was remarkably majestic. The are minstrels' wives who lament and mourn the loss of influential villagers, the masters big estates, steeds and elephants, and bullock carts, well-celebrated for their broad-mindedne which taught them to offer most liberally gif of cows and steeds, and dole out gold and silv in charity; they pray for the eternal peace those happy souls, who can only be commem rated if strictly followed by their progeny their foot-prints of generosity and benevolenc

When they Sing of Nature

The direct and immediate contact with th benign and auspicious aspects of Nature mak village-life all the more sweet and charming.

An average countrywoman must acquai herself with the country flowers. Some of th flowers stand for New Life and Youth in folk lore, and thus become cynosures to the spell bound and love-swollen hearts. *Basanti Ph* is the Punjabi word for the spring-flower; it ha come to live as a symbol of ever-fresh youth:

> O how enchanting looks the spring-flower!
> 'O let me fully behold it'—exclaimeth my ey

In the crowded towns, where life is full o complexities, they hear the call for spring-cele bration only on the *Basant Panchmi* day, bu the countrywomen, who pass their days an nights just in the lap of Mother Nature, celebrat each day of the season as a spring-festival whe the New Season furnishes them with a cradle o beauty. Their blooming faces shine among th abundant flowers that adorn the local landscape and some one of them bursts into song:

> O how my heart aspires,
> To enjoy the charm of spring every day.

These are the days when *Sarhon* * blosso forth in its full charm. Everywhere are see the yellow *Sarhon* flowers. How inspiring i the yellow colour—the emblem of the spring The countrywoman admires readily the beaut and grace of the *Sarhon* flower when she trie to see it in the bridegroom's face:

> Behold thy groom,—O he looks no less than th *Sarhon* flower;
> You seem to be a lucky one, my daughter, but ho can it be predicted with a guarantee?

Some one may try to seek the *Sarhon* flowe on the pretty face of a village-bride:

> Lo! here comes *Chandkur*,† the moon-princess;
> O just behold, her face is like a *Sarhon* flower.

---

* Sarhon is a kind of mustard.

† *Chandkur* is one of the most popular names borne by the peasant girls in the Punjab. It is made up of two words, *Chand*, meaning "the moon," and *Kur*, meaning "princes."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

But beauty must pass away in course of time, and, lamenting over the departed youth, the beloved sings to the lover in a complaining mood:

O why didn't you turn up to me, my friend,
When I was just a *Sarhon* flower?

Attention is also paid to the efficacy of the *Motia* flowers:

O let me throw a *Motia* flower on my lover,
To arouse him from sound sleep.

The Author's Wife

She has been accompanying her husband in his travels for the representative collection of All-India folk-songs. The texts of the majority of the folk-songs, used in this article, were originally recorded by her from the living lips of the countrywomen

When *Genda* blossoms, the countrygirls sing of its youthful beauty and grace along with an innocent prayer for the long life of their brothers and parents:

O look at the charm of the *Genda* flowers
O just take one for thee, my friend.
O listen to me, O maiden, going astray from my side,
O listen to me, O maiden. coming close to my side,
Long live the brothers of the sisters,
Long live the parents of the daughters,
O look at the charm of the *Genda* flowers,
O just take one for thee, my friend.

How the linseed flower awakens the dormant appreciation when a bride sings:

O get my *Ghagra*‡ dyed, my love,
Like the flower of the linseed plant.

When the berry trees bear fruit, the girls go out to make a feast. These are the days when they make friends:

O the berries are ripe,
Lo! here comes the season of friendship.

A fair girl of exquisite stature is compared

A peasant bride in her national costume
She appears to be the true apostle of her native Muse

to an elastic shoot of the mulberry, and a rough peasant boy becomes a subject of satire:

O the peasant boy's bride is like an elastic off-shoot of the mulberry;
While he himself looks like a rough rod of wild acacia.

The 'units' of a sugar-cane stand for the sweethearts:

O the peasant boys will be delighted,
To have the units of a sugar-cane.

An ear of the wheat plant is often an emblem of a beautiful maiden:

O thou the ear of the wheat plant,
Thy sweetheart keeps many a handkerchief—O he'll just come to water the field.

‡ *Ghagra* is a particular garment, never worn by the unmarried ones.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The peacocks have their own colour in the village-surroundings. Some of the girls dance as the peacocks do:

Come, O moon-queen, come,
Let's perform the peacock-dance.

But most of the girls have a genuine liking for the pea-hens rather than the peacocks. This is perhaps the background of the following song:

O prepare a star-studded foot-wear for me
And embroider on it a few pea-hens.

Koonj is the Punjabi word for the she-crane. It is the beau ideal of feminine beauty as well as symbolical of girls in the native folk-lore. A migratory bird, the she-crane comes down to the plains in winter, and in summar it goes back to the hills, just like a girl who bids adieu to

A landscape
The direct and immediate contact with the benign and auspicious aspects of Nature makes the village-life all the more charming and sweet

her parental nest to go to her new home after the wedding. The masses suppose that *Raj Hans,* a particular kind of swan, takes pearls and its lady-love—the she-crane—has also acquired this habit. The following song, originally sung by a village-swain who compares himself to a *Raj Hans,* should be studied in this light:

O just pick up the pearls,
O my she-crane, having such an exquisite body.

Here is a duet:

The peacock exclaimeth: 'Year after year you come over here, O she-cranes, like the wayfarers who bid adieu to their home. It is that your country is ill-civilized and ugly, or you are love-stricken?'
The she-cranes reply: 'Our country is, of course, civilized and beautiful, nor are we love-stricken. The food allotted to us is so mercilessly scattered by the Almighty Father that we come over here year after year leaving aside our children in the hills.

The wild pigeon often stands for cupid and the parrot for the lover:

It hath made its nest on thy bosom,
Look at the wild pigeon, (O youthful maiden)!
It hath made its nest on thy plaited hair,
Look at the naughty parrot, (O young maiden)!

The wild pigeons are also depicted as unfaithful lovers:

They are no more than the wild pigeons,
Clap thy hands once and no more are they seen.

The she-pigeon may stand for a lady-love:

Lo! Lachi flew away like a she-pigeon,
From the green fields of wheat.

The kite's nest is, of course, so high that human hands can not approach easily to the eggs lying there. Some one may compare lady-love to the kite's egg:

O just behold my *Chandkur,* the moon-princess,
Lo! She is no less than a kite's egg.

There are innumerable songs of this type.

Country Mother going towards the river-side along with her children. They sing as they walk
The villages, situated amidst the lovely scenes and sites of river-side landscapes, are furnished with many a sylvan shade. The simplicity of life in these villages is not lacking in genuine repose, and the daughters of the soil sing and dance to the natural rhythm to which their native rivers generally flow

When they Sing of their Rivers

The hearts of the countrywomen in the Punjab—the land of five rivers—are, of course, as fertile for song-harvest as their plains for corn. There are innumerable songs depicting the countrywomen's love for their well beloved rivers—the beauty-spots of the rural Punjab. The villages, situated amidst the lovely scenes and sites of river-side landscapes, are furnished with many a sylvan shade. The simplicity of life in these villages is not lacking in genuine repose and the daughters of the soil sing and dance to the natural rhythm to which their native rivers generally flow.

The Chenab is wonderfully immortalized in the countrywomen's songs. It is celebrated in songs not simply for the vivid green foliage of its landscapes, nor for the cool shade beneath the trees that adorn its banks; it has become sacred to them for, it is the place where *Hir* and *Sohni*—the immortal heroines of Punjab

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

lklore—executed the ever-new play of Love. her hour of inspiration an average daughter the soil pays a homage of praise to *Hir* and *honi* and celebrates the Chenab.

My heart always goes to the Chenab;
How I wish to make an abode on its bank.

Again:

Let us go to the Chenab, my love,
Let us go to the Chenab,
We will perform the peacock-dance there,
Let us go to the Chenab.

Next to the Chenab comes the Ravi:

Even the slightest touch of the memory of her parental nest, where the simplicity of life was in no way marred by convention, makes the bride long for her parents. It is generally her brother who comes to take her to the parental house. In the commemoration of her brother's blessed coming, the sister wishes to build a hut on the Ravi:

I have just crossed the river

The hearts of the countrywomen in the Punjab—the land of five rivers, are, of course, as fertile for song-harvest as their plains for corn

On the Ravi-bank, O mother-in-law,
We may build a hut,
O, if some one from my papa's land
Comes to the door of our hut.
Many come and go, O mother-in-law,
But never comes my mamma's son.
On the Ravi-bank, O mother-in-law,
We may build a hut.
O if someone from my papa's land
Comes to the door of our hut.

Here is a duet originally sung by a happy couple:

'Here flows the Ravi and on its waves floats a *Chulai* flower.
Had I not been born, then could you be ever married, my lover?'
'Here flows the Ravi and on its waves floats *Ganderian*,* my love,
Hadn't you been born, O I couldn't easily get a lady-love.'

The Ravi is the symbol of the bride, and the bridegroom is depicted as the prince of the Chenab, or the Chenab itself:

Why dost thou snatch away our Ravi,
O thou the prince of the Chenab?
Thou art my Ravi and I am thy Chenab,
O my fair darling!
Hand in hand we sing and dance daily,
O my fair darling!

I sing as I grind

The beauty of the river-bank landscape is all the more endeared when the dark-eyed dreamy girls are seen there fetching pitchers full of water. They have a gesture and pose,

A water-side scene

The rivers are, of course, the beauty-spots of the rural Punjab—the land of five rivers

as old as their tradition and culture. They sing as they walk. One of the most interesting themes of these songs is to compare Love with a river:

Here flows the river of Love, my friend,
Here flows the river of Love;
Don't be drowned, O innocent one,
Here flows the river of Love.

When they Sing of Love

Love has always been worthy of commemoration in songs. Such is its ever-new rhythm! Both men and women have a genuine liking for the inspiration they derive from it. It lives in all walks of life and is abundant everywhere.

* A small piece of peeled sugar-cane.

As evident from a large percentage of Punjabi love-songs, the woman's love for her man is considered to be the unsurpassable symbol of true love. It is so even in the works of the Sikh Gurus and various other saint-poets of the Punjab, who represented themselves as women with God as their husband. Here is one of the most popular Sikh songs; its author—the Great Guru Govind Singh—appears in the role of *Hir*, the peasant-princess of the Punjabi folk-lore:

> O go to my dearest friend and relate to him the story of his worshipper like me: 'How painful it is (my friend), to be covered with a quilt when thou art not by my side. I just live the life of *Nagas*, the naked ones. As for myself, the goblet has turned into a spear (without thee, my friend), and the cup seems no less than a sword. Ah me, how painful is the butcher's killing knife! I always suffer. Far superior to me is thy dirty hut, O my friend (Ranjha), to the palaces of the *Kheras*.'*

When an old granny spins
The spinning-wheel has its own music. It has been coming from the ancient mothers

Says Prof. Puran Singh:

> 'Our lyrics and love-hymns are always symbolically sung by a woman. Poetry is a nymph. . . . . It is the peasant-princess Hir who paints the beauty of the eye-brows of Ranjha to us. . . . In the Vedic hymns, God is described as Purusha, the Man, and all humanity, recipient of His grace, inspiration and love, is shown as a woman waiting for Him. . . . . This art has been sustained in the Punjab.

There are many patterns of Punjabi love songs, current among the countrywomen. Here is a set of two-lined love-songs:

> My sweetheart is sugar candy,
> How sweet appear his talks!
> My sweetheart is just a sandal tree,
> I am a-thrill with the delight of the scent.
>
> I seek with joy in moonlit night
> The foot-prints of my love.
>
> The dust beneath thy feet is sacred to me, love,
> I besmear it on my fair bosom.
>
> The world enjoys the face of the pretty cre moon,
> My moon is my sweetheart.
>
> O do come to the garden, my love,
> I would hear thy songs about the twinkling
>
> Ranjha is the swan of Heaven,
> Hir forebodes the pearly string.
>
> Ranjha is the moon of Heaven,
> Hir presents the morning-star.
>
> O my Ranjha is the celestial moon;
> Direct from God have I got him.

* The family in which Hir was forcibly married.

Reminiscences of the days of Chivalr

There are scores of semi-historical s furnishing us with the reminiscences of the d of chivalry. Thousands of young men w go to the battle-field whenever there was a in order to defend the country against for invasion. Mothers and sisters in th days of chivalry addressed their sons as (*lit.* hero); many of the daughters of the are still the mothers and sisters of the he who are well-known soldiers of the Indian ar and have given a brilliant proof of their val in various battle-fields. But the original se of the word *Vir* is no more and it has co to live only as 'dear' or 'brother.' Howe optimistic have been the soldiers' wives, Punjabi proverb, *Sipahi di bahuti sadai ra* —'a soldier's wife is always a widow'—v depicts their outlook. There is, of cou nothing like timidity behind the self-express of the countrywomen, but how can they h being overpowered by the predominating pat of the tragedy which can happen any mome whenever the cruel hand of Death smatc away the fighting soldiers from the sta Prof. Puran Singh says that every-day life the old Punjab was always threatened by forei invasions and therefore:

> "It was the lover of the woman—the man—w became as rare and precious as he was brave fearless. Sisters and mothers (and also wives) him alive one moment; the next, the fair young died on his sword."

Then came the hour of mourning, but

> "Most of the tragic lamentations rose from heart of the mother."

The following song is a dialogue betwe a recruit's wife and her mother-in-law; former is naturally very sensitive while

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

latter—the mother of the hero—is remarkably optimistic. A translation cannot, of course, give an adequate idea of the pathetic atmosphere created by the tune to which the women originally sing it:

'My love—thy son, O mother-in-law, leaves for Jammu to join his rank!'
'Neither backed up by me, nor by thee, my daughter-in-law willingly he leaves for Jammu to join his rank.
Engage thyself with all thy heart in silk-embroidery; the recruit will return victoriously with immense wealth.'
'Thy rotten silk is full of knots, O mother-in-law and what can a sad bride like me understand of embroidery?'
'Be content with the plain fare, daughter-in-law, it is thy own home; the recruit will return victoriously with immense wealth.
'Ascend to the top of our roof, daughter, and look around; see if someone comes homeward.'
'He rides on a blue horse, and is clad in white, O mother-in-law; Lo! someone comes homeward.'
'Whom does he resemble and like whom is he dressed, daughter, whose soldier comes homeward?'
'He resembles my *Nanad** and is dressed like my *Dior*,* O mother-in-law, my soldier comes homeward.'

The victorious soldier is no less than a king to his proud wife—the king of her heart as well as the hero-king of the battlefield. Every soldier is expected to follow the high ideals of chivalry, and one who is morally weak, however brave and fearless he is, is always disregarded. Here is a song which portrays a soldier who inclines to go astray from the marital vows, and his wife is seen appropriately checking his weakness:

'In whose yard grows the lemon, O queen—my life,
In whose yard grows the lemon?
In whose yard—O in whose yard, O queen—my life,
The *Champa* flowers blossom in abundance?'
'In my yard grows the lemon, O king—my life,
In my yard grows the lemon;
In the gardener's wife's yard, O king—my life,
The *Champa* flowers blossom in abundance.'
'Who takes the lemon-juice, O queen—my life,
Who takes the lemon-juice?
Who wears—O who wears, O queen—my life,
The *Champa* flowers in abundance?'
'I take the lemon-juice, O king—my life,
I take the lemon-juice;
The gardener's wife—the gardener's wife, O king—my life,
Wear *Champa* flowers in abundance.'
'The hot water turns cold, O king—my life,
The hot water turns cold;
O just approach to me, O king—my life,
And take thy bath in the palace.'
'In the palace, I wouldn't take my bath, O queen—my life,
In the palace, I wouldn't take my bath;
I'll do so in the gardener's wife's house, O queen—my life,
Rather than doing so in the palace.'

The queen of Punjabi love-song
As evident from a large percentage of Punjabi love-songs, the woman's love for her man is considered to be the unsurpassable symbol of true love. Poetry in the Punjab is "the peasant-princess Hir who paints the beauty of the eye-brows of Ranjha to us"

'Ready for thee I have, O king—my life,
Superior rice and she-buffalow's milk;
Approach to me, O king—my life,
Let's make a feast in the palace.'
'In the palace, O queen—my life,
I wouldn't share the feast,

* *Nanad* is the term for the husband's sister, and *Dior* for his brother.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

I'll do so in the gardener's wife's house,
Rather than doing so in the palace.'
'Bed have I spread, O king—my life,
On our topmost floor;
Approach to me, O king—my life,
Enjoy thy dreams in the palace.'
'The palace is full of mosquitoes, O queen—my life,
My dreams I wouldn't enjoy there;
I'll do so in the gardener's wife house,
Rather than doing so in the palace.'
'Come down, O rain-cloud—my darling,
Do not make delay;
Demolish at once, O mighty cloud—my darling,
The gardner's wife's place.'
'Drenched totally I come, O queen—my life,
Drenched totally I come.

A village-beauty
Such types are not very rare in *Trinjans* or 'the spinning-parties'

Wake up at once, O queen—my life,
And open the door of the palace.'
'It is all full of mosquitoes, O king—my life,
It is all full of mosquitoes;
Go to the gardener's wife's house, O king—my life,
Rather than coming to the palace.'
'Get up ye, all my sisters, my darlings,
And open the door at once;
Ah me, my king reclines in a manger,
Rather than enjoying his dreams in the palace.'

When they Sing while Spinning

The spinning-wheel has its own music. It is handed down from mothers to daughters, and the daughters of the soil in the Punjab still have a genuine liking for the auspicious labour of spinning. *Charkha* is the Indian word for the spinning-wheel; an average countrywoman possesses her own *Charkha* and sits to spin whenever she is free from other house-hold duties.

Try to picture to yourself a group of countrywomen and girls, assembled together for spinning. *Trinjan* or *Tinjan* is the Punjabi word for this spinning-party, imbibing the true spirit of competition. They may fix any time for it in the day, and occasionally they join in *Trinjan* even a few hours before day-break. Some are mothers, happy or sad as the goddess of fortune has made them; but they can sing as they spin even if they are sad: some are newly-married brides; they are ever-eager to sing, and in the realm of their songs they enjoy the happy play of 'hide and seek' with the inspiring sentiments of love, beauty, and youth: some are mature virgins, overpowered with the hidden joy of their coming weddings; they have their own songs, appropriate to their taste, knowing no restraint. Such picturesqueness! Such dark-eyed dreamy types! Such an indescribable feast of native grace! All these are, of course, the living symbols of ancient tradition and culture. Along with the chorus-music the 'sisters of the spinning-wheel' often enjoy solo-singing, too. Spontaneity, freshness and originality are the very heart-beats of these songs which breathe the psychological depth of the women's inner life. Here we find a wide range of home-spun themes representing their own lights and shades.

In some of these songs the moon stands for the lover and the countless stars for the hours of long separation:

O moon! rise and display thy light;
In counting the stars have I passed the night.
Lo! Here appears the moon, dear fellows,
Here appears the moon.

Here is something about *Khund-m-khundi** (the village hockey) and *Jhur mutra* (a dance performed in a ring):

The swains are gathering on the high mounds,
Lo! Here appear the maidens on the lower ones,
Dear fellows, here appear the maidens.
The swains are playing *Khund-m-Khundi.*
Lo! The maidens enjoy *Jhurmutra,*
Dear fellows, the maidens enjoy *Jhurmutra.*
Among the swains is seen my younger brother,
Lo! So coloured looks his club,
Dear fellows, so coloured looks his club.

* In some parts of the Punjab it is known as *Khuddo-Khundi.*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Among the maidens is seen my younger brother's bride,
Lo! In nine plaits are braided her hair,
Dear fellows, in nine plaits are braided her hair.

Here is a song about the spinning-wheel itself:

O with its warbling sound (so sweet),
Goes on my spinning-wheel, dear mamma,
It is all made of gold: but silvern is its *Gujha*,*
O with its warbling sound (so sweet),
Goes on my spinning-wheel, dear mamma,
Silken is its *Mal*† : and is dyed in a lovely colour,
O with its warbling sound (so sweet),
Goes on my spinning-wheel, dear mamma.

But it is only a sweet dream. The spinning-wheel is generally made of wood—acacia wood in all cases and *Shisham* wood only in the case of the rich.

My spinning-wheel is made of acacia,
Just get me one of *Shisham*, my love,

Cotton?—O I wouldn't spin it: wool?—O I wouldn't spin it.

O just get me silk, my love.
My spinning-wheel is made of acacia,
Just get me one of *Shisham*, my love.

As the pollen is formed on the fruit-trees, so love is formed in the human heart, is one of the popular themes in these songs:

The pollen is formed on the berry trees, my friend,
Thou hast taken up thy residence at Rawalpindi, far from me hath gone thy heart.
On the cornice do I stand daily (expecting thee), my friend,
On the berry trees is formed the pollen, and
Love for thee is formed in my heart.

(To be concluded)

* *Gujha* is a particular part of the spinning-wheel.
† The thread that makes the wheel move.

MINGUN

THE GRAVEYARD OF A KING'S COLOSSAL AMBITION

By K. B. IYER

In the annals of Burma the name of King Bodawpaya stands out as one of its most powerful monarchs and yet as an unhappy, ill-balanced combination of contrary qualities that in the aggregate contributed more to the unhappiness of the people. His reckless daring and boundless ambition were only in keeping with his imperious arrogance and restless energy. While he promoted a literary revival and undertook costly construction projects for the glory and benefit of his country, he involved it in long drawn-out ill-planned, campaigns against neighbouring powers that ended in depopulating and enervating the nation. He who made the smoking of opium and the killing of an ox or buffalo a crime punishable with death did not scruple to massacre hundreds of his subjects at the slightest suspicion of disobedience or treachery. He built pagodas by the dozen, sent out a costly mission to Gaya for a Bodhi branch; brought the famous Mahamuni image from Arakan and installed it with a splendour and magnificence almost unparalleled. But, doubt and scepticism seizing him, he contemplated a change of faith. Abruptly changing again he proclaimed himself Arimittya, the new Buddha. He subjugated Arakan and actually claimed Bengal on the ground that at one time it was a tributary to Arakan. He refused to treat with the Viceroy

of India, not being the equal of the "Lord of the White Elephant," and cherished wild dreams of conquering India and China, which were only thwarted by his repeated failures in the Siam campaigns. He was a grandiose Moghul, with Napoleonic ambitions and daring but with limited powers and resources and spoiled with a sense of pride that bordered on eccentricity.

Fancying himself the greatest and most powerful monarch on earth, he decided to leave his "golden foot-prints" on the sands of time. He would do something worthy of himself, something that would stagger future generations into stupendous admiration, something about which they would keep on talking for eternity. He would immortalise himself as the greatest builder. Immediately he put into execution the

A front view of the headless griffin, 95 ft. in height, The biggest in the world

construction of the "biggest pagoda, the biggest bell, the biggest tank and the biggest pair of griffins." No matter, how the people suffered under famine and constant wars, the will of the "Lord of the White Elephant" should be carried out.

The site chosen for these superlative structures was at Mingun a picturesque spot, a little to the north-west of Mandalay on the great river Irrawaddy. There the river is in one of her most expansive moods, studded by sand-banks islands that break it up into ambient serpentine windings. On one side stretches Mandalay, the capital of Burmese kings, still the unofficial capital of the race, a busy hive, its waterways thronging with timber-rafts, sampans and steam boats. On the other side, stretches a range of hills, its undulating outlines crowned by the pearl-white morning clouds. The sand banks slightly veiled in vapourous mist, the rays of the early sun here and there breaking this magic web of gauze and creating shimmering patches on the water surface that glitter magic discs, the splash, splash of the tiny oars like baby beatings on the deep, broad bosom of the river, the even flow of the boatman's long-drawn-out ditty as he tows you up stream; these exercise a magic spell as you approach the historic monument.

Almost overlooking the river and at the entrance of the pagoda are a pair of griffins (chinthes) the usual gate-keepers in the pagodas of Burma. These are huge monsters in brick, sitting on their hind legs and in that posture 95 feet in height. Their appearance has been rendered further hideous by the earthquake of 1838 which sundered their heads which lie broken and scattered. Creepers and huge plants springing from the deep fissures on them give them the appearance of jungle-covered hillocks. The brick work was plastered over with glazed coloured stucco, patches of which remain still intact. Their huge elephantine backs are adorned with ornamental trappings. Their eye-balls are said to have measured 13 feet in circumference. Even in their ruined and broken condition they remain the biggest griffins. The barbaric splendour of these monsters and their extremely dignified pose and demeanour are such, as to extort the admiration of the commoner and the art connoisseur alike.

The pagoda itself stands on a vast courtyard. The lowest base 450 feet square, rises in terraced basements. The outer one has a narrow perambulating corridor, paved with stone slabs with makara or crocodile water-spouts set in the walling of the next higher basement. The pagoda-structure proper is a huge unfinished pile of bricks, 165 feet in height, less than a third of what it was intended to be. The king himself personally superintended the construction and for over a decade countless artisans and villagers were pressed into service, while the king's men scoured the country for more men and more money to complete this white elephant in brick

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The exaction fell so heavily on the people that when in 1797 the king's officers demanded more bricks for the construction of the pagoda, village after village in Arakan beat the war drum and the people rose wholesale under the leadership of one Nga Chin Pyan. Soon a prophecy rose that "the pagoda is rising but the country is ruined." It reached the "golden ears" of the king. His faith in the supernatural put a check on his insensate ambition and he abandoned the project, lest his proud dynasty should come to an end. And there it remains in an unfinished condition, one of the biggest brick-ruins of the world, decidedly inferior in its architectural qualities to the two adjacent pagodas at Mingun. The earthquake of 1838 rent this structure and parts of it are crumbling ruins. Its huge, deep, cracks and summit are overgrown with trees and shrubs. A great dream shattered to smithereens! At the base are four niches at the cardinal points sheltering four Buddha images.

The bell intended for this shrine was finished. It weighs about 90 tons and is the second largest in the world. Its outer height is nearly 12 feet and the external diameter 16 feet 3 inches. The earthquake which came to undo the work of the king tried its destructive hands at the bell too. The supports gave way and for a long time this giant bell rested on the ground, the world never hearing the resounding tone of the great bell of king Bodawpaya. A few years back, it was lifted up and slung on an iron beam, with a pucca shed over it.

It was at Mingun while supervising the construction, the king fancied he had a vision and then proclaimed himself the new Buddha. But a recalcitrant clergy and laity were in no mood to accept this preposterous pretension. He realised that there was a limit even to kingly powers. His fanciful dream shattered even as did his pagoda and griffins. Mingun, the graveyard of his ambition and hopes, still continues to attract a steady stream of visitors and the foreign tourist seldom misses it.

THE PAST. PRESENT AND FUTURE OF INDIAN EDUCATION

By SASADHAR SINHA, Ph.D.

A century of English education in India is sufficiently good ground for taking stock of its achievements. How far is modern India its creation, and contrarywise how far is it responsible for keeping India medieval are questions that require to be answered. For modernness and backwardness are irreconcilable terms; India cannot be both modern and backward at the same time. This element of contradiction in Indian educational progress is a mind-sign of much that is contradictory in Indian life. Modern India is a composite entity, made up of the most diverse elements, the most modern and the most primitive; the motor car and the bullock cart rubbing shoulders in the towns are its visible symbols. Compare some of India's outstanding personalities, the finest flowers of modern India, with the pathetic figure of an Indian peasant, ignorant and superstitious, withal, virtuous and hard working. Typically Indian both, but whence is this difference?

Modern Indian education is not only alien in origin and ideals, but its methods are those which instead of reconciling the cultured and the uncultured, as in all progressive countries, drive them ever wider and wider apart as days go by. Instead of creating harmony out of discord, order out of chaos, it makes confusion worse confounded. The spectacle of India, a house divided against itself, is thus no anomaly. It is in the very nature of things.

Like many another vital need of Indian life, Indian education is faced with a double problem. Quantitatively it is at its very beginning; it has barely touched the hem of the Indian population. Of late, even in this respect, changes are perceptible. The plea of financial stringency, so far held out as an excuse for the tardiness of educational progress, is slowly giving way to wider considerations of policy. Firstly because it is wiser to pay lip-service to public opinion on this question than be looked upon as reactionary and secondly because higher education no longer enjoys the same favour with the powers that be that it once did. Instead of viewing the growing political consciousness as a natural development, it is regarded as the evil fruit of higher education, frustrated ambition and the like. The introduction of universal elementary education is still a distant ideal, but signs are not lacking that attempts are being made definitely to put back the clock of higher education. To try to put a brake on India's political aspirations is in any case a belated effort, but the cause for real concern lies elsewhere. Under the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

cloak of fostering elementary education, the educational progress of the country may be seriously jeopardized.

The qualitative inferiority of Indian education is even more serious. The deficiency of numbers may be made good in time, but the evil legacy of an inferior or wrong kind of education is not easily wiped out. Quality, however, is a comprehensive term which may mean many different things. It may connote the actual material content of the education given, or its method, its ideal or finally the medium of instruction, a feature unique in the case of India.

Taking the above in the reverse order, one must agree that the one single factor which bears the major responsibility for the backwardness of Indian education, both in its qualitative and quantitative aspects, is the medium of higher education in India, namely, English. It has made education the privilege of a small coterie, and stamped it with intellectual sterility. Form has taken precedence over subject matter. Education instead of being the cradle of creative thought and activities has, with honourable exceptions, been the burial ground of all thoughts and activities. The cheap gipe levelled at the "failed B.A.'s" by India's educators shows as much want of good taste as shallowness.

"It was because," writes Tagore in a significant passage in his *Reminiscences*, "we were taught in our own language that our minds quickened. Learning should as far as possible follow the process of eating. When the taste begins from the first bite, the stomach is awakened to its function before it is loaded, so that its digestive juices get full play. Nothing like this happens, however, when the Bengali boy is taught in English. . . . While one is choking and spluttering over the spelling and grammar, the inside remains starved, and when at length the taste is felt, the appetite has vanished. If the whole mind does not work from the beginning its full powers remain undeveloped to the end."

Happily, the Macaulayan attitude, to which even educated Indians fell victims in the past, that everything Oriental is inferior to the Occidental, that the highest achievements of the human, that is, Western mind is incapable of transmission except through the medium of a Western language, in this case English, has been shorn of its old-time assurance. Even as it is, Indians have justified their mind and character. But was this worth the price?

The ideal of education at once raises the larger issue of human civilization. The nineteenth century assumption that civilization w peculiarly European instead of an essentia co-operative product of all historical peop has left its impress on educated India throu English education. It has had two contradi tory effects. On the one hand, a class of India were alienated from their parent culture, a looked abroad for inspiration, and despise their own people in imitation of their rule while on the other, another class react violently against everything Western, carryi their zeal for national self-assertion to t length of buttressing up everything Indian, n because it was of value, but because it w Indian. Unavoidable though they were again the existing background, they were both u healthy manifestations, clearly demonstrating, demonstration was necessary, that on the ide plane at any rate, English education had faile of its purpose. The fostering of self-respe is one of the prime functions of educatio Education which detracts from self-respect ca never be productive of social good. It mus either encourage self-assertion to the point o arrogance or humility to the point of self-abase ment. And both are familiar spectacles i modern India; they are the two sides of th same shield.

Nor is this all. The ideal of educatio being conceived too narrowly, utility was, a it still continues to be, its chief test and justi fication. Education in its light-bearing aspec that is, in so far as it leads to knowledge fo its own sake has been unduly sacrificed to fruit bearing at its lowest level—administrativ employment. It has produced clerks an lawyers galore until there is overproductio but little more. Indeed, it cannot be otherwis as long as education continues to be an adjun of the administration of the country. The rela tive barrenness of India's political, social an cultural life is its most eloquent testimony.

Although closely connected with its ideal the method of Indian education is yet distinc In short it may be characterized as primaril theoretical and largely literary. The adminis trative tradition of education still persist Thus even the teaching of science fails in it main purpose. It does not evoke the scientifi spirit. Nor has it any relevance to practica life. The evil is more fundamental than mer divorce between theory and practice. In th absence of scientific spirit, the pursuit of scienc as an end in itself, which alone can ensur contribution of value to science, is still th exception rather than the rule; while withou scientific agriculture, industry and the lik scientific education must perforce remain sterile

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

In other words, the method of Indian education suffers from the very limitation of its ideals.

The too narrowly utilitarian outlook of Indian education, as pointed out above, is bound to bring its own nemesis. Its very aims limit it to a curriculum whose main object is to produce an army of clerks of tolerable efficiency. The importance given to English in the high school and University curricula, for instance, is out of all proportion to the other subjects of study. First, because English being the administrative language of the country its acquisition is indispensable, while secondly, its use as a medium of instruction at the high school and University makes it the *primum inter pares* of the subjects taught. Subjects like mathematics, history and geography, for instance, not to speak of scientific subjects like chemistry, physics or biology receive scant or no attention at all in the schools. They are neglected in inverse proportion to their importance for administrative employment. On the other hand, the vernaculars of the country are looked at askance throughout all stages of education. It is primarily a question of economy of time and energy. The average pupil after having spent the best years of his youth in acquiring a difficult foreign language, not only to follow instruction at school or college, but also to make it the only language in which he is capable of expressing his thoughts in later life, if at all, has little time and less energy to probe deeper into the subject-matter of his studies. The content of Indian education is thus bound to be shallow and it has little to do with the individual pupil's personal capacity. The bookishness of Indian education, the inveterate vice of cramming to which Indian children are heir, are inherent in the system. It is the line of least resistance for the average pupil. Whatever he learns he invariably associates with its form which is English. The mould is more important than the content; bookishness and cramming are the inevitable sequel. Mentally therefore he remains immature throughout his school and university career, and later life does little to cure this. All personal initiative, the true sign of life, is killed in his youth. He is the victim of a vicious system of education without parallel.

The prevailing education in India has not been without its critics. One of its most original criticisms came from Rabindranath Tagore, with its appeal to Indian cultural traditions and freedom. A more conservative reaction came from the late Swami Sradhanand in the Punjab. Tagore however had, so to speak, his feet firmly planted on the ground, and consequently his attitude towards the problem of Indian education took a modernistic form. This is a difference of capital importance which it is essential to take into account for a proper understanding of modern India. The idea fostered by unsympathetic critics that Indian national awakening is essentially a reaction against the spirit of modern science, or against the West, as it is sometimes crudely put, is as untrue of the facts as it is mischievous. The leading spirits of India see, and see only too well, that India's salvation lies in modern science, in the inculcation of the scientific spirit, and the application of science to India's daily problems. What goes by the name of English education in India has stultified itself by killing the appetite for knowledge and stifling curiosity, the very breath of science. Hence the revolt; hence the insistence on national education, modern in spirit, but national in form, serving the larger interests of life, away from the narrowly utilitarian.

With each successive wave of the national movement, the changing outlook on Indian education has taken more and more definite form. The national movement indeed is only one facet of the spiritual *malaise* for which the thwarting of the intellect is responsible. Emotion and intellect which would normally flow out in creative impulses—in art, literature and music, science and philosophy have sought outlet in political unrest.

The national wakening of India has affected the outlook on education in two ways. In the first place, by focussing the attention of the country on the importance of education as the regenarator of national life, and secondly, by bringing into sharp relief the shortcomings of existing education. The national movement in its turn has been affected by this change of outlook. This is shown by the shift of emphasis from formal politics to economics, that is, to the realization that the political struggle which neglects economic amelioration of the country must end in futility.

The increasing attention to economic and technical studies; the corresponding industrial progress of India cannot fail to attract the attention of any observer, however casual. The fostering of research in Indian antiquities at the different universities is helping at the same time to re-establish Indians in their own estimation. The vicious method of imparting knowledge in an alien tongue also bids fair to come to an early end. This is a change of major importance in the history of Indian education. The first step has been taken towards the emancipation of the Indian mind and the release of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

creative energy the prime function of education.

India's backwardness can now be assigned its true setting. It is both absolute and relative; absolute because of the lack of education for the vast majority; relative because of its qualitative inferiority. There is no direct relation between education and progress in India. In her case, progress instead of being a function of education, as normally has taken place by reacting against it. It is a reflex of the growing political consciousness of India. But even here it is hampered at so many different points that comprehensive educational reform must be integral in any political reform of the future. Education must take its rightful place in Indian life as a vehicle of progress.

THE DESIRABILITY OF UTILIZING THE NATURAL HYDRAULIC RESOURCES OF BENGAL

By S. C. MAZUMDAR, B.Sc. (Cal. and Glasgow), M.I.E. (Ind.),
Superintending Engineer, Government of Bengal

I propose to speak to you this evening on "The desirability of utilizing the natural hydraulic resources of Bengal." Bengal was mostly built up by the rivers and, in some parts, it is still being nourished by them. Even in the rest of Bengal, there is no dearth of water resources, but the problem is one of distribution which has to be solved if the growing deterioration in health and productivity of the soil is to be arrested and the old prosperity restored. The subject of my 'talk' is thus vitally connected with the rural development of Bengal, which is being so widely discussed in these days. It is a very comprehensive subject, as it includes within its purview, not only the direct sources of water such as the rivers and the local rainfall, but indirectly, also the natural assets of Bengal, by means of which these direct resources could be brought to the use of man. It will also be necessary to consider the problems which these direct sources of water, either due to the operation of natural causes or by human interference, have given rise to and how best these could be solved. In short, the subject brings within its purview all the highly complex problems in rural Bengal that the Irrigation Department is trying to solve. The natural sequence of my 'talk' would therefore be to briefly review these problems and then to consider what natural resources are available and how best these could be utilized for their solution.

The problems vary in different parts of Bengal. Thus in Western Bengal, specially, in Bankura and Birbhum Districts and the western portions of Midnapore, Burdwan and Murshidabad districts, the most pressing demand is for irrigation. Though in normal years the total rainfall may be considered to be more or less adequate, its distribution is erratic and during the latter half of September and in October the rainfall is usually insufficient to meet the requirement of crops. In consequence, the outturn is usually poor even in normal years and in years of scarcity, occurring, say, once in 5 to 7 years, there is a total or partial failure of crops. Again, the rayats can hardly afford to use any artificial manure and the productivity of the soil is gradually decreasing. Canal Irrigation is also required to increase the productivity of the soil, as the silt carried by the rivers in Western Bengal, particularly the Damodar, the More or Mourakshi, the Ajoy, the Dwarkeswar, etc., is very rich in manure. Thus irrigation is required to enable the rayats to obtain in normal years adequate return for their hard labour on the fields by timely distribution of water suited to the requirement of crops and by manurial value of silt deposited by Canal water and in years of scarcity to ward off the almost famine conditions which would otherwise prevail in those parts.

In the eastern portion of Western Bengal also irrigation would be useful, but the most pressing need is to improve its sanitary condition and to increase the productivity of the soil by means of flood flushing of which the area has been deprived by means of embankments and to restore the network of rivers within the area which, being deprived of the flushing from the parent streams, have badly deteriorated and can no longer serve as efficient drainage channels. The ideal solution would, no doubt, be to remove the embankments and to restore the natural conditions prevailing before the embankments were erected. But owing to large vested interests such a solution is hardly practicable except in isolated areas where local conditions permit it. The next best solution would be to provide escapes at suitable places in these embankments, improve the drainage channels and to flush the area during floods. This will be the most practicable approach to natural condition and is likely to improve the sanitary conditions. Though the occurrence of floods, when only flushing will be possible, may not always synchronize with the time when crops will require water, it is expected that the manurial value of silt carried and spread over the fields in the process of flushing and the improved drainage of the land will ensure much richer harvest and increased prosperity to the rayats as compared with the present condition.

The problem in Central Bengal is more or less similar to that in the eastern portion of Western Bengal, *viz.*, the demand is for flood flushing and improvement of drainage facilities. But unlike that area the present situation has been created not so much by means of embankments but by nature, *viz.*, the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

diversion of the Ganges flood down the Padma channel. Being deprived of the Ganges spill this area is not only rapidly deteriorating in respect of health but the productivity of the soil is also gradually decreasing. The network of spill channels which orginally used to distribute the Ganges spill over this area and keep it in health and prosperity are now dead or dying. The most pressing need for this area is to improve these dying rivers and to restore the function allotted to them by nature, *viz.*, to draw from the Ganges a portion of the floods now running to waste, distribute it over the land, thus improving its sanitary condition, and after the silt, very rich in manure, has been deposited over the fields and increased its productivity, to drain the water into the sea.

The southern portion of Central Bengal, *i.e.*, the area lying within tidal influence, has not yet deteriorated to this extent. The area is traversed by the lower reaches of these spill channels and though owing to the desertion by the Ganges flood, they can no longer continue their beneficent activity of flushing the area with silt-laden sweet water and raising the delta from above, similar work is being done by nature to a certain extent with the help of silt-laden water from the sea through the agency of the tides, except where man has interfered by prematurely reclaiming the land by means of embankments. In these latter areas, the position is gradually becoming more and more serious, as not being able to spill, not only are the channels rapidly deteriorating by the deposition of silt carried with the tides, but land, which is well below high tide level and which should have been gradually raised by this silt, cannot rise. In consequence, difficulties of draining these lands are gradually becoming more and more acute. The solution is partly of a preventive nature, *viz.*, removal of existing embankments as far as practicable and the prevention of further embankments along tidal channels. But the main solution with which we are concerned this evening, is the restoration of the Ganges spill referred to above, which, on its way to the sea through these channels, will flush them and keep them efficient by transporting back to the sea the silt deposited in their beds by the tides.

In Eastern Bengal, none of these problems have yet arisen, as the country is still being annually flushed by the silt-laden floods of the Ganges and the Jamuna and is being kept in health and prosperity. In the north-eastern portion of Eastern Bengal, for instance, in Mymensingh District, drainage difficulties are no doubt being experienced owing to the diversion of the Brahmaputra flood through the Jamuna channel and consequent deterioration of the old Brahmaputra passing through the Mymensingh and Dacca districts; but these are nothing compared with those experienced in Central Bengal. Along with the tidal portion of Central Bengal, Eastern Bengal possesses, as important natural asset, the network of navigable channels and the demand is to conserve and improve these natural resources.

In Northern Bengal, Irrigation is necessary in the western portion but the most pressing need is the resuscitation of the moribund rivers which can no longer serve the country as drainage channels and damage to crops due to waterlogging and Malaria are the results. In this case, also the present situation has been created not by the acts of man but by the desertion of the area by the Teesta river. Prior to the diversion of the Teesta to its present course along the north-eastern extremity of this area in 1787, it used to distribute its waters through the Atrai, Jabuna, Karatoya and Punarbhaba and keep Northern Bengal in health and plenty. Deprived of the upland floods carried by the Teesta which is now running to waste into the Brahmaputra, these rivers of Northern Bengal are now dying and are unable to function efficiently even as drainage channels. The most pressing problem in Northern Bengal is to resuscitate these dying rivers so that they can at least serve as efficient drainage channels.

Having stated the problems and indicated in very broad outlines their solution, I shall now proceed to consider what natural hydraulic sources are available and how best these could be utilised.

In Western Bengal, utilization of local rainfall for purposes of irrigation by means of bunds is possible only to a very limited extent in the western parts of Bankura district, where the country being undulating, some sites for bunds or natural storage tanks are available. But generally speaking the valleys are shallow and the storage capacities that could be made available would be small. In the Bankura and Birbhum districts, there are also a large number of excavated tanks or ponds which are being utilized for irrigation by "lift." These tanks were excavated long ago when labour was cheap but they have badly deteriorated by silting. Though in view of the present rates of labour, restoration of these tanks cannot be considered as profitable commercial undertakings, their value in a year of scarcity can hardly be exaggerated. They are also the only sources now available for irrigating *rabi* crops. It is therefore suggested that the villagers should utilize their leisure time in improving these tanks. In times of famine, when it is necessary to start relief operations, the authorities entrusted with the control of these operations should also see that restoration of these tanks and bunds forms an important item in their programme.

But the natural resources on which we have to mainly depend to meet the demands for irrigation and flushing in Western Bengal, are the rivers, such as the Subarnarekha and the Cossye in Midnapur district, the Silye and Dwarkeswar in Bankura district, and the Damodar, the Ajoy, the More (Mourakshi), the Dwarka, the Pagla, the Brahmani, etc., in Burdwan, Birbhum and Murshidabad districts. These rivers have their sources in the Chota Nagpur and Santal Perganas hills and their catchment areas not being very far from the area to be irrigated, the incidence and distribution of rainfall are more or less similar. Thus though these rivers bring in very heavy floods at times, the times of occurrence of floods do not always synchronize with the time when irrigation is required. Specially in September and October when rain usually fails in Western Bengal and irrigation is required these rivers also bring in rather scanty flow. For this reason irrigation by means of daily flow of these torrential streams is possible only to a very limited extent and the cost is proportionately rather high, as the necessary diversion and cross drainage works will have to be made to suit the maximum flood discharge, which is usually very high.

If it were possible to impound higher up in the river valleys even a portion of these floods which are now running to waste to supplement the daily flow of these rivers in times of scarcity, their irrigable capacities could be enormously increased and the cost also would proportionately be rather low. South-Western monsoon seldom fails in Bengal and even in a bad year there will be sufficient flood discharge available for storage in June to August for utilization in September and October. This is a special advantage of storage schemes in Bengal, as in other parts of India,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

for instance, in Madras, water has to be stored in October to December for utilization during the next transplantation season, *i.e.*, in July and August when rain usually fails. Not only is there considerable loss due to absorption and evaporation during dry months but stored water has to be supplied at a time when the requirement of crops is the maximum. In Bengal, on the other hand, the stored water will have to be utilized mainly with a short time after impounding, involving very little loss, and as the requirement of crops in September and October, when irrigation is mainly required, is the minimum, a very high storage duty can be realized.

It has been calculated that while in Madras 1 M. cft. of stored water can irrigate only 5 acres, it could irrigate over 30 acres in Bengal. Though storage schemes are usually costly, this special feature ought to make them rather profitable undertakings in Bengal. Besides for reasons explained before, irrigation on a large scale is hardly possible from these torrential rivers without storage and for rabi and sugar-cane irrigation, storage schemes provide the only solution. This is another important feature which requires special mention. Bengal is lagging behind other provinces as regards sugar industry which, owing to high duty recently imposed on foreign sugar, is bound to develop in India. Cultivation of sugar-cane on a large scale is not however possible without irrigation from storage, as sugar-cane requires water throughout the year and in Western Bengal not only is there no rain during the dry months but the rivers also run practically dry. In these days of low prices of paddy not only would the storage schemes considerably improve the economic prosperity of the rayats by enabling them to grow more valuable rabi and sugar-cane crops but by developing sugar industry, they will also solve to a certain extent the unemployment problem, which is growing rather acute in Bengal.

But though storage schemes are likely to be rather profitable undertakings in Bengal, so far we have been able to discover only two good sites for storage dams, *viz.*, one across the Dwarkeswar river at Suknivasa in Bankura District about 15 miles above Bankura and the other across the More (Mourakshi) river at Mossanjore in Naya-Dumka district about 21 miles above Suri. Preliminary investigations for both these schemes are being made and it is expected that about 200,000 acres of paddy in Bankura and Burdwan districts, could be irrigated by the former and 4,32,000 acres in Birbhum and Murshidabad districts by the latter, besides irrigation of rabi crop and sugar-cane almost to the extent upto which cultivation of those crops would be possible within the area commanded. The site for the proposed dam at Mossanjore is almost an ideal one, being a narrow gorge (about 2,000 ft. wide) bounded by hills on either side through which the More is descending from the Dumka plateau into the plains of Western Bengal. Though the site lies within Bihar and Orissa, it is of no use to that province. On the other hand, it may prove to be a very valuable asset for Bengal, if the B. & O. Government would only permit its utilisation.

Further investigation may no doubt reveal the existence of suitable sites for storage dams across the upper valleys of some other rivers, specially the Subarnarekha, the Ajoy and the Bansloi and in view of the overwhelming advantage of storage schemes future investigations should proceed on this line. As regards flow irrigation schemes, *i.e.*, irrigation by daily flow without storage, the Cossye in Midnapur district, the Damodar in Burdwan district and the Bakresw in Birbhum district, have been fully tapped to irrig about 80,000, 1,80,000 and 10,000 acres respective and it does not seem possible to extend irrigation these sources any further without the help of stora

Several other flow irrigation schemes in Weste Bengal have been investigated but owing to the prese financial stringency, their construction has not been put in hand. Apathy of the rayats to apply irrigation leases and the present method of accounti which takes into consideration only the direct reven realised from irrigation projects, ignoring the increa of indirect revenue which these projects bring in improving the economic condition of the people a increasing their purchasing power, are also standing the way of development of irrigation in Bengal. may be mentioned that the present Irrigation A stands on a voluntary basis; that is to say, it is entire optional to the rayats to apply for canal water. Raya are however mostly illiterate and can not appreciat the benefit of canal irrigation in the shape of time distribution of water and the manurial value of si carried by canal water. They no doubt realize th value of canal irrigation in an abnormal year of ver low rainfall, but as this occurs only once in 5 or years, they feel shy of entering into a binding contrac for a long period and prefer to gamble with the rainfa till the last moment.

No irrigation project can under the circumstance be made a financially sound concern unless th voluntary basis of the present Act is changed an the rayats are made to take canal water every yea in view of the extra yield expected from the manuri value of silt and equitable distribution of water suite to the requirement of crops. Justification for thi principle of compulsion is that irrigation provides th main solution for the economic uplift of rural Beng where more than 80 per cent of the people ar dependent on land. And if the present method c charging a fixed water-rate is substituted by a suitabl system of sharing with the rayats only the extra yiel caused by irrigation, there should not be any complain on the ground of price fluctuation during the pendenc of the lease, which appears to me to be quite a legiti mate objection under the present system. The ris involved under this arrangement, *i.e.*, whether th project would be financially sound or not, is all on th side of the Government, while the rayats will surel stand to gain by taking in a share of the increase yield which they have not earned but which has bee caused solely by irrigation at Government cost.

For the purpose of flushing the eastern portion o Western Bengal the sources of supply are the sam rivers which in their upper reaches have to be tappe for irrigation. The area is flat and has probably bee built up by the silt carried by these rivers—particularl the Cossye in Midapore district and the Damodar an the Ajoy in Burdwan district. But before the lan could be sufficiently raised by nature, it began to b reclaimed by flood embankments long before the British occupation. In those days these embankments do no appear to have been efficiently maintained by th Zemindars and breaches were frequent. Though thi caused temporary inconvenience and damage to th people, the land used to be flushed occasionally by silt-laden floods and the health and productivity of the soil did not deteriorate to the extent that it has done now. Evil effects of these embankments were not, of course, realized in those days and for more efficient maintenance they were gradually taken over by Government

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and improved with the object of preventing breaches as far as possible. In consequence, though the breaches are now less frequent and the protection enjoyed by the people is now more thorough, this very fact has brought into prominence the evil effects of these embankments.

Breaches are now rare and even when they occur they are closed immediately so that the land has been deprived of even the limited flushing with silt-laden flood water which it was enjoying when these embankments were being inefficiently maintained by the Zemindars. In consequence, not only the health and productivity of the soil are rapidly deteriorating, but the difficulty of draining these areas is becoming more and more acute. For the embankments have not only prevented the gradual rise of the land by silt deposit during flood flushing but on the other hand it is actually becoming gradually lower though at a very slow rate, due to the loss of surface soil washed away by the rains. To make the case worse, the floods confined within embankments and unable to spill and deposit on the land as was intended by nature, are depositing a portion of the silt contents within the river beds which are gradually rising, connoting higher and higher flood level. The irrigation Engineers in Bengal are thus faced with the most unenviable situation created by the gradual lowering of land to be drained and rise of river beds into which the drainage has ultimately to be disposed of and in some area, it has already become impossible to drain by gravity, as in Sabong Moyna Circuit in Midnapore District.

The position is undoubtedly very serious and unless a bold policy of improvement is followed, this tract will, in course of time, revert to swamps and jungles from which it was prematurely reclaimed in the olden days. The ideal solution would be to remove the cause of the deterioration, *i.e.*, the embankments and raise the land and increase its productivity by the silt of these river floods which is very rich in manure; and where possible, this solution should certainly be adopted. Millions of tons of this silt is now running to waste along with the floods and the land for which this silt was intended by nature is starving. Above tidal limits where the water is sweet such natural flood flushing need not necessarily destroy crops, for along with the removal of the embankments the flood level will also fall considerably lower as compared with its present level, which has been artificially raised owing to the river being confined within embankments. Besides, the floods of these rivers in Western Bengal are short-lived and do not last more than a few days at a time. In years of high floods crops may be damaged during the transition period, *i.e.*, till the land has been sufficiently raised but the loss will be more than compensated by the increased yield in normal years due to the manurial value of silt and the improvement in health.

In most of the areas, however, owing to important vested interests, such as existence of Railways, towns, etc., such uncontrolled flood flushing is hardly practicable and here we must be satisfied with limited flushing as may be found possible by drawing the flood water through regulated escapes to be built on these embankments. It is quite possible to introduce such limited flushing in the area lying between the Cossye, the Silye and the Rupnarain rivers in Midnapore district and that lying between the Damodar, the Banka and the Hooghly rivers in Burdwan, Hooghly and Howrah districts. For the latter area, contour survey was recently made and it is under contemplation to place a special officer to do the necessary investigation and prepare the estimate. In the first place, the network of channels which formerly used to serve both as spill and drainage channels but have now badly deteriorated by being cut off from the parent rivers by means of embankments, have to be improved. For the area is already waterlogged and we cannot possibly introduce any flood water unless adequate drainage outlets have been provided. After the improvements of these drainage outlets, regulated escape will have to be constructed at suitable points in the embankments to draw the floods from the Damodar and Cossye, the same through these channels. It will also be necessary to construct a network of minor channels for equitable distribution of this water over the land.

In Central Bengal, where the problems and their solution are more or less similar, the source of supply for the purpose of flushing is, of course, the Ganges. Central Bengal has been built up by the silt carried by the Ganges, which in the olden days used to distribute its waters mainly through the Bhairab, which probably constituted the easternmost branch and the Bhagirathi which, in the lower reaches, trifurcated into three main branches, *viz.*, the Jamuna, the Bhagirathi (or Hooghly) and the Saraswati. But since the diversion of the Ganges flood through the Padma channel in the 15th or 16th century, these rivers began to deteriorate.

The Bhagirathi, which once constituted the main channel of the Ganges, now remains practically cut off from this river except during floods and even then the share of the Ganges flood it now receives is almost insufficient as compared with what used to pass before the diversion. In consequence, its western and eastern branches, *viz.*, the Saraswati and the Jamuna are now dead and the Bhagirathi also would probably have shared the same fate but for the rivers in Western Bengal which have their outfalls into this river and tidal flushing in the lower reaches, which, thanks to the frequent dredging of bad shoals by the Calcutta Port Trust and other conservancy measures, is being allowed as freely as is possible. But in the upper reaches, the river is fast deteriorating and even in the lower reaches its condition is not free from anxiety, as further deterioration will threaten the very existence of Calcutta as a Port.

The Bhairab also is now dead, having been cut through first by the Jalangi and then by the Mathabhanga. These two spill channels of the Ganges opened comparatively recently, as if being repentant of the mischief caused to Central Bengal by the diversion of the Ganges flood, nature tried to make good the losses with the help of these channels. And undoubtedly they did a lot of good for a time. But they are also fast deteriorating and though not completely dead yet, can no longer draw sufficient water from the Ganges to be able to spill over the land nor to keep their distributaries alive. The large number of distributary channels, such as the Nabaganga, the Chitra, Kobadak, Betna, Kodla, etc., which used to distribute this spill equitably over the entire area have also died or are dying, resulting not only in the progressive impoverishment of the soil but acute difficulty of drainage and waterlogging. Practically the whole area traversed by these channels, is highly malarious and unless the old condition of flushing by the Ganges flood can be restored, this area will also share the same fate as predicted in case of embanked areas of Eastern Bengal, *viz.*, revert to swamps and jungles.

The principal spill channels which are not yet completely dead and on which we have to depend for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the purpose of drawing from the Ganges and carrying a portion of her flood for flushing this area are the Bhagirathi, the Jalangi and the Mathabhanga. In view of the apparent tendency of nature to enrich the Padma at the expense of these rivers, the question of primary importance to be considered in connection with their improvement and that of their offtakes is not so much the danger of uncontrolled openings as is apprehended in connection with the removal of embankments in Western Bengal, but whether an appreciable portion of the Ganges flood can at all be induced to pass through them in preference to the Padma, of which the hydraulic conditions are of course much more sufficient.

The Late Sir William Wilcox advocated the constructions of a barrage across the Ganges with a view to induce a portion of the Ganges flood to pass through these channels. Though it is no doubt a very sound proposition technically, the cost of the barrage together with that of river protective works that would be necessary to prevent outflanking and their maintenance would be so heavy that those who have to finance the scheme may not be disposed to seriously discuss it in the present economic condition of Bengal. We have therefore to consider the question of improvement of these rivers even without the barrage.

The first consideration is whether nature has permanently forsaken this tract or its desertion by the Ganges flood is only a temporary phase.

It may be mentioned in this connection that in the process of building up the delta the river oscillates within wide limits: first flowing on one sde and after the riparian tracts have been raised to a certain extent it bursts through its banks and flows through the comparatively lower areas of the contiguous tract, and so on. After these latter tracts have been raised the process is reversed to raise still higher the tract which has been raised before. This is perfectly consistent with the natural conditions governing the flow of a river which, following the immutable laws of nature, always tends to take the line of least resistance. The lower land not only gives it better hydraulic slope but by providing better facilities for spill and consequently abstracting larger portion of its silt burden helps to maintain the river in a more efficient condition, than if it has to pass through higher land. It is therefore reasonable to expect that after the Ganges has raised the tract through which she is flowing—she will again turn her attention to Central Bengal and the present decadent rivers of these parts will improve.

Reference may also be made in this connection to the report by the Committee presided over by the Hon'ble Mr. C. J. Stevenson Moore on the "Hooghly river and its Head waters." The Committee stressed the importance of the Ganges freshets carried by the Nadia Rivers (Bhagirathi, Jalangi and the Mathabhanga) for the preservation of the Hooghly and came to the conclusion that these rivers pass through successive phases of deterioration and improvement and that there is no definite proof that they have permanently deteriorated to any great extent. We may have to wait for decades or perhaps centuries before nature turns her attention to Central Bengal and ends the present phase of deterioration of these rivers. But having regard to this finding of the Committee, it does not appear to be unreasonable to expect that it may perhaps be possible to accelerate the end of the present "temporary" phase of deterioration and the advent of that of improvement by artificial action. And the problem not only affects the decadent tracts of Central Bengal, the very existence of which as a place for human habitation depends on its satisfac solution, but also the interests of the Port of Calc and the maintenance of the Hardinge Bridge, w would be comparatively easier if an appreciable por of the Ganges flood could be diverted above the br to pass through Central Bengal.

Recently I had occasion to inspect the offt of these rivers and was impressed by the vast cha that are taking place in the regime of the Ganges. danger of outflanking of the Hardinge Bridge to pre which more than a crore of rupees is being spen the Railways authorities on the necessary protec works, is really the effect of the changes that are ta place higher up the river. Near the bridge tendency of the river appears to be to take the co as existed in 1868, *i.e.*, to flow along its southern fl The next bend higher up where the main cu strikes the opposite or north bank is at Sara and reflex bend higher still in the south bank com the present offtake of the Mathabhanga near Jal village. It is reported that some years ago the entr of the Mathabhanga was masked by an exten char, but a very wide and deep channel is now hug the south bank and violent erosion is going on for m on either side of the offtake, which is also shewin definite tendency to face the parent river downstr —an indication that the Mathabhanga will prob improve if other conditions are favourable. In here also the Ganges appears to be trying to take course followed in 1868 when the Mathabhanga quite a vigorous river. Similarly the positions of present Jalangi offtake at Akrigunj and the Bhagir offtake at Nondia appeared to be favourable tho not to the extent observed in the case of Mathabhanga. I gathered this impression from observation only and it is not of course possible express a definite opinion without a survey show these changes, as the river is much too wide to visualised with eye observations alone.

But mere improvement of the offtakes is enough; it merely shows the tendency of nature. be able to fully utilize these tendencies to our adv age, it is necessary to improve the carrying capaci of these channels and provide suitable outlets or tributary channels of adequate capacity, and o facilities for spill over the country side. For unless increased discharge that could be drawn in view the favourable position of the offtakes, could carried by these channels and disposed of, no mate improvement over the present condition can expected. As regards the Mathabhanga, suit outlets are available such as the Kumar, the Nabagan the Chitra, the Kobadak, the Kodla Benta, Ichhamati, etc., which, though in a very bad condit could be improved at a comparatively small cost. for the Jalangi and the Bhagirathi such outlets have to be provided.

In their lower reaches these channels are t and except where free tidal flushing of their spill a has been interfered with by premature reclamati their condition is not so bad and they are still serv the purpose of drainage and communication—a v valuable natural asset, which should be preserved all cost. Mere tidal flow, unless reinforced by sup of upland water, cannot, however, maintain any chan for an indefinite period. Tides in these parts carry large proportion of silt with which nature is trying raise the delta now deserted by the Ganges flo

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

but it is only a question of time when the spill areas having been raised up to tide level, this silt, unable to spread over the land, will deposit in the channel bed in larger and larger quantity and will finally choke it. A gutter channel will probably remain for draining the local rainfall but the channels will no longer be fit for navigation. Besides, with the reduction of pressure of sweet water from above the salt water limit is also being pushed up these channels and a serious situation is likely to arise if the upper reaches of these channels continue to deteriorate and the supply of sweet water is further reduced.

The improvement of these channels and the diversion through them of a portion of the Ganges flood thus appear to be necessary even in the interest of the tidal portion of Central Bengal, though its present condition is not quite so bad as that of the upper areas. With the help of a copious supply of sweet water, it will be possible not only to maintain these tidal channels permanently but also to push down the salt water limit and extend cultivation more and more towards the sea-face even without embankments, as is the practice in Eastern Bengal.

Together with the tidal portion of Central Bengal Eastern Bengal possesses very important natural resources in her navigable channels, the value of which in promoting trade and providing facilities for cheap communication can hardly be exaggerated. We have first the principal highways, *viz.*, the Ganges, the Brahmaputra and the Maghna, providing water communications with the bordering provinces of Behar and Assam. Then we have the network of feeder channels connecting these as in water-ways with the trade centres including Calcutta, one of the important ports in the world. Again, in Eastern Bengal, which is inundated by the floods of these rivers, it is possible during the monsoon to carry goods by water practically from every village to the nearest feeder channel and from there to one of the principal highways for transport to the several trade centres. This is perhaps unique in the history of the world, for, though there are other countries possessing natural waterways I do not know of any where the system of internal boat communication has been so thoroughly planned by nature as in these parts. Apart from its value to trade, it is also providing employments to hundreds of thousands of people, the importance of which in a province like Bengal where the pressure of population is already being felt, can hardly be exaggerated.

The importance of censerving and improving, where possible, this valued gift of nature is therefore obvious. As regards the principal highway, no attention is really needed except during the dry months, when it may be necessary near bad shoots to train the available flow through particular channels so as to increase the depth of water to suit the requirement of navigation. A large quantity of the discharge of the Ganges and her tributaries is however being utilised for irrigation in the upper provinces and so long as it is extracted during the monsoon months it does not seriously matter, as there is plenty to spare. But further extraction of low water discharge of these rivers should be a matter of serious concern to Bengal and Behar, as not only is this likely to endanger navigation in the Ganges during low water season but after the improvement of her spill channels in Central Bengal, we shall require more and more of this discharge to pass through them to keep them efficient.

It therefore seems necessary to keep an eye on the future development of irrigation schemes in the Ganges basin in the upper provinces and as the interests of these provinces are likely to conflict with those of Bengal, the necessity for the establishment of a representative body to adjudicate those interests has to be considered.

But the main problem with which we are faced at present in the matter of improving facilities for communication by water is with regard to the feeder channels connecting these principal highways, specially with Calcutta. In the olden days, when the Bhagirathi was in better conditions, Calcutta was, of course, directly connected by water with the Ganges. Later as navigation through the Bhagirathi became more and more difficult the Jalangi and the Mathabhanga were being utilised for the purpose. These rivers no longer give access to the Ganges, except during the rains and it is doubtful if they can be improved sufficiently within reasonable cost to restore the old facilities for navigation. We have therefore to depend solely on the tidal channels in the Sundarbans to get access to the Ganges from Calcutta. But in the absence of upland water supply and due to premature reclamation of spill areas, these channels are fast deteriorating and the steamer route through the Sundarbans is being gradually shifted more and more towards the sea-face. I have already said that along with the improvement of the rivers in Central Bengal in their upper reaches and the diversion through them of a portion of the Ganges flood their tidal reaches will also automatically improve and with the copious supply of upland water thus available a solution will be found to maintain these tidal channels on a permanent basis, which is so vitally necessary in the interest of inland navigation in Bengal.

In this connection, it may be mentioned that to shorten the distance by water between Calcutta and the Ganges, the Madaripur Bil Route was opend early in the present century. As the name indicates it was a passage about 20 miles long cut through a series of bils connecting the Madhumati at Manickdah with the Kumar river at Fatahpur and through that river and the Ariel Khan with the Ganges. The scheme was highly successful, as the spill of the Ganges and the Madhumati after depositing the silt on the bils and the country-side lying to the north and west of these channels was sufficient to give them a thorough flushing which was more or less self-maintaining. This route practically monopolised the whole volume of waterborne traffic between Calcutta and Behar and Upper Assam and apart from immense benefit to trade it was also yielding decent revenue to Government. But to meet the demand of the growing heavy traffic it was considered necessary to widen the bil route, which, in consequence, began to draw more and more of the available spill supply at the expense of the Kumar, which, for want of sufficient nourishment, is now being starved to death and navigation is no longer possible during the dry months. It is a highly complicated subject and cannot be probably dealt with in a short evening talk. But I mention it just to indicate that in this case also we have got the requisite natural resources in the large volume of flood water now running to waste in the Ganges and the Madhumati and the problem is one of diverting a portion to feed the Kumar, which is starving to death for want of adequate supply.

While speaking on the subject of communication I wish to sound a note of warning, specially to those of you who live in areas which are still being favoured

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

by nature in the shape of annual flood flushing. We hear talk of extension of railways in these parts, for instance, rail road to Barisal, to Madaripur and between Dacca and Aricha, etc. Imporvement of facilities for communications is certainly necessary as this is a vital factor in the cultural and economic uplift of a nation. But rail roads in these parts have to be carried on high embankments materially interfering with the flushing arrangement devised by nature. We should not therefore repeat the mistakes made in the case of Western Bengal, and, instead of embanked roads or railways, our policy in future should rather be to meet the demand for communication in these parts by improving the existing waterways and making new waterways where none exists at present.

As regards Northern Bengal, I must confess that our information is rather scanty, as it is only in recent years that this area has been brought within the purview of the Irrigation Department. I have already stated the problems, but in the absence of adequate data it is hardly possible to indicate a definite solution. The Western portion of this area is traversed by the Mahananda, which is a river of fair size and can be utilized to meet the demand for irrigation and also for flood flushing to a certain extent. The other rivers such as the Atrai, the Jabuna, the Karotoya and the Punarbhaba, after their desertion by the Teesta, which used to feed them originally with silt-laden water from the Himalayas, have now badly deteriorated and can not serve even as efficient drainage channels.

The area has been built up mainly from the north by these rivers but is also being raised partly by the Jamuna from the east and the Ganges from the south so far as it is commanded by the flood level of these rivers. In consequence, there is an extensive depression in the middle, in the heart of which lies the Chalan Bil. It is becoming extremely difficult to drain this area and in years of heavy rainfall, it suffers considerable damage. It appears to be possible to improve the drainage of this area by clearing the outl channels leading to the Jamuna and improve t Karotoya and other rivers to serve as efficient draina channels. Though this would certainly be an improv ment over the existing condition, it will not help raising this area, for which purpose flushing by sil laden water is essential.

It might have been possible to utilize the Bor for this purpose and raise a portion of this depressio by the silt drawn from the Ganges. But the Railwa authorities feel rather nervous about the developme of this river, which might, in their opinion, endang the safety of the Hardinge Bridge. We have therefo to depend mainly upon the Teesta for the supply silt-laden water and to restore the old condition, *i.e.* resuscitate the Atrai, the Punarbhaba and the Karotoy as far as possible. There are sufficient resources for th purpose, as the Teesta brings down enormous flood which are now running to waste, into the Brahmaputr As these rivers were once fed by the Teesta, level also will probably be suitable. But it is not possibl without investigations to express any opinion as t whether such diversion, which will certainly neces sitate the construction of a barrage across the Teest at an enormous cost, would be a financially soun proposition.

I have not made any attempt to give you an idea of the cost of the various proposals discussed this evening; nor is it possible to do so without detailed investigations. Nature has been rather kind to Bengal and has given her water resources in abundance which are now being mostly wasted. Her soil is also mostly soft alluvium and presents no engineering difficulty in its excavation either for the purpose of improving moribund channels or for making new ones. It is now left to us to utilize these resources if the growing deterioration in health and productivity of the soil has to be arrested and the old prosperity of rural Bengal restored.

EDUCATION IN DARJEELING DISTRICT

By X

Darjeeling, Kalimpong and Kurseong, as hill-resorts, are well known to visitors from the plains. But the number of people who go there and return can scarcely know of the state of affairs prevailing in those Himalayan regions which directly form a part of the Indian Empire or belong to such States as Sikkim or Bhutan.

Those who take the trouble to roam about this region are on the one hand attracted by the natural beauty and the childlike simplicity of the hill people, on the other hand, they are invariably disgusted with the appalling superstitious customs and manners of the people due to the lack of scientific education now available to the more fortunate inhabitants of the plains. No doubt the British Missionaries in their own way have done and are still doing spendid work in the matter of spreading education but hardly any big effort has up till now been made by the Indians to move in the same direction.

To give briefly an idea of the problem, it is necessary to speak of the total population living in the Darjeeling District and their racial characteristics. The population of this Himalayan District is composed of Nepalis, Bhutias, Lepchas and tribal Mongolians—people who have no fixed abode but roam about with the change of the climate The total population is about 400,000 and their education is managed by a few State and Missionary High Schools at Darjeeling, Kurseong, Siliguri and Kalimpong. There are some minor English schools and lower Primary schools in towns which are managed by the different municipalities and district boards. There are also a few elementary schools in some of the tea estates. So far

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Y. M. B. A. School at Darjeeling

Sikkim is concerned, there is only one high English school in its capital, Gangtok, controlled by the State, while there are a few elementary schools of the Missionaries in the interior of the State. So far as Bhutan is concerned, there is no school either of the State or of the Missionaries. That gives an idea of the state of affairs so far education of this part of the Himalayas is concerned.

It has been found from experience that if the present mode of living of the hill people of this area and their manners and customs are not to be disturbed violently then a form of education should be evolved and imparted which may enable them to lead a simple, honest, religious and healthy life. Religious teachings along with industrial, agricultural as well as secular education are the primary need of the hour and with these objects in view a Buddhist Bhikkhu Rev. S. K. Jinorasa who lives in Sikkim has been in Calcutta and seen eminent educationists and public men, in order that some effort may be made to educate the hill people on the lines indicated.

It is understood that the Bhikkhu's initial effort has so far been successful to the extent of giving a start to this scheme by building a school house at Bhutia Busty in Darjeeling town at his own expenses and by establishing an Association to be called "The Young Men's Buddhist Association" there with a fee of Rs. 10 as annual membership. It is further understood that Mr. J. K. Birla and Mr. Sri Prakash have already agreed to serve as a Board of Trustees of the Association. Among the members of the Association are Raja S. T. Dorji, Prime Minister of H. H. the Maharaja of Bhutan, Sardar Bahadur Laden La, Kumar T. N. Pulge, Rai Sahib B. M. Chatterji, B.A., B.L., and Mr. S. Sanyal, M.A., B.L., Government Pleader.

Under this Association two L. P. and Middle English schools besides the one at Bhutia Busty imparting education of the type necessary for the hill people at Alubari in the Darjeeling District and the other at Chakung in Sikkim, about 16 miles from Darjeeling town, are functioning. The maintenance of even these few schools has been rather difficult for the organizer, who spent a sum of Rs. 13,000 from his own private funds and Rs. 12,000 by loan for the purpose. At one time the situation was made so difficult for him by the creditors that the timely help of Rs. 4,600 by Mr. J. K. Birla, the generous Marwari gentleman of Calcutta, enabled him to tide over it. Although for such troubles the work at neither of the institutions has suffered, the Bhikkhu S. K. Jinorasa has again come to Calcutta to explore all avenues for the carrying out of his scheme by meeting public-spirited gentlemen of British India and educationists with an appeal to take up this national work of educating the hill people of the Himalayas who are gradually being depressed by the economic forces to give up their time-worn ideas and mode of living and are becoming a new problem, which, if unsolved, will, in course of time, far from helping the regeneration of India, retard her progress and full development.

BOOK REVIEWS

BOOKS in the principal European and Indian languages are reviewed in THE MODERN REVIEW. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.—Editor, THE MODERN REVIEW.

SANSKRIT-ENGLISH

MANASARA ON ARCHITECTURE AND SCULPTURE: *Sanskrit text with Critical Notes. Pp. XXIV+14 +510+311. 37s. 6d. Architecture of Manasara, translated from original Sanskrit. Pp. LIX +793. 37s. 6d. Architecture of Manasara: Illustrations of Architectural and Sculptural objects. Pp. 70+ Plates I—CXXXV (Architectural) CXXXVI—CLVII (Sculptural) 60s. (Vols. III—V of Indian Architecture) Oxford University Press, 1933.*

Professor Prasanna Kumar Acharya has now completed his study of Hindu Achitecture by adding to his *Dictionary of Hindu Architecture* and *Indian Architecture according to Manasara Silpasastra* the Sanskrit text of the *Manasara,* edited with critical notes, a translation in English of the Architecture of *Manasara* and a collection of one hundred and fifty-seven illustrated Plates in line and colour.

Full recognition has already been accorded by all students of Indian art and science to the fundamental value of Professor Acharya's earlier contributions to the elucidation of the Sanskrit texts on architecture and the invaluable character of his *Dictionary* is admitted on all hands. The three new volumes which are now available form an indispensable part of his undertaking. They present the material on which the results stated in his earlier works were based, and they afford the means for further investigation into the many obscure issues which still remain to be solved. It is almost impossible to exaggerate the difficulties of producing a satisfactory text of such a work as the *Manasara.* It has been necessary to prepare the edition from eleven manuscripts, not one of which presents a readable or trustworthy text. It is clear, however, that, even if we had much older manuscripts than those which have been preserved, we would still find a text written in very defective Sanskrit. It is plain that the writers on technical science, whether medicine, or mathematics or architecture, were far from being proficient in Sanskrit, and, after making all those conjectures which the state of the manuscripts renders legitimate, we are left with a text which, in many places, not merely violates the rules of Sanskrit grammar, but offers the most serious difficulty of translation. The editor has most wisely shown the utmost caution in his reconstruction of the text. has made such amendments only as are indispensa for the constitution of an intelligible text; he marked these clearly in the text itself and he given in full all real various readings in his authorit It is most improbable that any manuscripts will come to light which will enable us substantially improve the style of the *Manasara.*

The translation of a work of this type prese endless difficulties, and the utmost credit is due the author for the energy with which he has reckon with the problems presented by the text. Even most cursory examination shows how impossible it without the aid of the translation and the expla tions given in the *Dictionary* to understand with precision the directions of the text. An indispensa adjunct to the translation and the *Dictionary* al is afforded by the volume of illustrations of archit tural and structural objects. It is impossible exaggerate the importance of this feature of the wo The author describes the difficulties which he exp enced in obtaining the means of producing th illustrations, and our most grateful thanks are due Mr. H. Hargreaves, who placed at the disposal Professor Acharya the services of Mr. S. C. Mukhe a graduate in Sanskrit, who had received training the methods and principles of Graeco-Roman modern architecture. The material is now availa for an investigation of the question whether the ext monuments of Hindu architecture are based on methods and principle which are set forth in *Manasara.* It is interesting to note that the great difficulties were experienced in securing the servi of a Silpin to supply the sculptural drawings in line in colours. It is hoped that the same artist may available to execute the remaining sculptural dra ings, some three hundred in number.

The labour involved in this great work has be lightened by the encouragement of many scholars, it will be of particular interest to see whether work in making available the true doctrines of ancient Hindu authorities can be turned to practi benefit for India and for its people. The Ruler Oundh, whose interest in Indian culture and art is w known from his contributions to the great edition the *Mahabharata,* intends to build a house accordi to the directions of the *Manasara,* and it may w

be that modern India has something to learn in this as in other matters from the achievements of its past.

A. BERRIEDALE KEITH

ENGLISH

VOCATIONAL EDUCATION IN MYSORE: *By K. N. Kini, Bangalore Press, Bangalore. Pp. viii+205. Price Rs. 2.*

Mysore has always been one of the most advanced Native States in India in the matter of educational progress. It has developed an all-round and sound system of education of which it can be really proud. The problem of vocational education has received closer and more systematic attention in Mysore than anywhere else in India. In his book Mr. Kini has given us a valuable and detailed survey of the efforts of the State to develop agricultural, commercial and industrial education on modern lines. The survey is illuminating and interesting reading. It will be read with profit by every student of Indian education and economics.

The book opens with a brief review of the American system of vocational education which Mr. Kini had the opportunity of studying through a scholarship grant given by the Mysore State. The economic and occupational conditions in Mysore being markedly different from those in America any total transplantation of ideas or institutions from there to this country would be impracticable and futile (and Mr. Kini rightly warns us from doing that). In spite of this in certain respects, I think, U. S. A. serves a better model to us than any other Western country excepting Russia. U. S. A. is neither wholly agricultural nor industrial, whereas England and most of Western European countries are mainly industrial. As a result the problem before U. S. A. has been to co-ordinate agriculture and industry. India's problem is similar. She cannot remain for ever the producer of raw materials nor can she become industrialized to the extent to which England has been. Thus in India it is our task to change from a purely agricultural state to one where both agriculture and industry are blended in a wholesome proportion.

The first few chapters of the book deals with the history of industrial, commercial and agricultural education in Mysore. As a result of a systematic and progressive policy inaugurated in 1862 Mysore has today a network of vocational schools of different types. In the fifth chapter Mr. Kini has discussed the basic theories of vocational education and his discussion shows the extent to which he has been influenced by American writers. The English Board of Education has published some very valuable pamphlets and reports on the subject. I wonder if Mr. Kini consulted these, he would have found interesting materials therein.

In the sixth chapter Mr. Kini has put forward proposals for a complete system of vocational education up to the secondary stage. This chapter ought to be read by everyone interested in the subject.

Mr. Kini has also discussed the problems of training of teachers for vocational schools and of vocational guidance too. His suggestions regarding vocational guidance are worthy of consideration by every educational authority in India. His book is indeed a valuable addition to the educational literature of India and I congratulate him on its production.

ANATH NATH BASU

ANCIENT VERSUS MODERN SCIENTIFIC SOCIALISM: *By Dr. Bhagavan Das, D.Lit., Theosophical Publishing House, Adyar, Madras, India. 1934. Price Re 1-8.*

Dr. Bhagavan Das criticizes the experiments of Fascism and Communism and offers the Institutes of Manu as a much better, happier, nobler code to follow than either the Leninism of Russia or the Fascism of Italy. Reduced to essentials, man's primary constituents cannot be successfully perverted for any length of time. The hunger for religion is with man as much a necessity as the hunger for bread; to attempt to root out this idea, according to him, is to try the impossible. It is here that the Bolshevik ideal is, according to him, wrong; in trying to root out religion, family ties and ownership of private property, seeking as it does to go against the primary instincts of man which are to be guided and surely not to be suppressed. The other ideal which is gaining ground in modern Europe is the fascist ideal. Capitalism is another menace, and prior to the two '-isms' discussed above; its evils have been so manifest that communism and fascism have grown by way of reaction.

If, however, the evils of capitalism are so patent, those of communism and fascism are easily to be found out on examination and discussion. Each of them is an extreme view of life, and each fails to see life steadily and see it whole. The lack of balance in all of them is almost surprising and may be only explained as due to the necessity, almost inevitable, of showing us the excellence of harmony in life. Such a harmony is taught above all in the ideal of life presented in the Institutes of Manu, a critical study of which is sure to prove beneficial to all thinkers on state and society. Manu has provided for four classes of men in the state, in accordance with four primary functions of life—thinking, acting, desire and work. Brahmins, Kshatriyas, Vaisyas and Sudras are thus more or less to be found always in every society and instead of heriocally attempting to level all class distinctions we should rather try to admit to ourselves the existence of these four classes—and see that each arrogates to itself nothing but its own functions. Thus the earthly emoluments are generallly fixed for each and the State is to manage its expenses from one tax, the income-tax, generously levied on all classes, specially the Vaisyas who increase the wealth of the State. It is never a case of Brahmanism as is generally and nonetheless erroneously the idea, but a State in which the four classes are nicely balanced against one another. Retirement after fifty will qualify for work as a legislator, disinterestedly seeking the good of the society.

Dr. Bhagavan Das has the courage of his conviction, and his learning and sholarship as well as the general sanity of his outlook commands respectful attention from his readers. But one feels tempted to exclaim in Dr. Das's own words: "Even less fine but strong new clothing is better than the most splendid old garments if they have become irreparably tattered." Of course, he wants us to fix our attention only on the main principles on which Manu bases his code; and so far he is quite justified. Difference, often very wide, there must be between our angle of vision and his; but when all is said and done, modern thinkers on state and society—at least the commonsense man in the street—will lose nothing and gain much by shutting up their Marx, Engels, Lenin and Mussolini for the time being and studying the dusty Institutes of old Manu just for a while. And for this incentive let us thank Dr. Das.

A RECOVERY PLAN FOR BENGAL: *By S. C. Mitter, B.Sc. (London), M.L.C. Demy 8vo., 699+xxii, cloth gilt, with a map in a back cover pouch.*

Economic Planning has latterly become first-class news copy all over the world. The idea of so arranging and utilizing the natural and human resources of a nation as would yield the maximum usefulness to its nationals, was first boomed in the twentieth century by the Russians as an original economic invention. Many other nations adopted the cult of Planning after the Russian Five-Year Plan got going.

History, however, does not give credit to Russia for this innovation. Planning has been done by many nations at different stages of their history for one purpose or another. Japan, for instance, put through a scheme of planning, with phenomenal success, in the nineteenth century, and changed over from her own medieval existence into full modern and Western nationalism. It is, however, not my intention to compare *Meiji* with *Gosplan* in this connection.

Economic Planning is a very necessary thing in a nation's economic life. The economic machine, if built up haphazardly and run without a plan, breaks down easily, results in waste and causes great suffering to the workers of a nation. The present world-wide economic crisis is a good example of planless economy. Mr. Mitter has done exhaustive labour to present before his readers a detailed picture of Bengal's economic life and to suggest means whereby it can attain the fullest vitality and productive power. In agriculture he has tackled the problem of every crop. How particular crops *are* grown, stored, manufactured and put on the market and how these *should* be done. The side lines of agriculture, *e.g.*, orcharding, vegetable gardening, dairy and poultry farming, growing fodder, etc., are not overlooked. Irrigation, agricultural finance and indebtedness and co-operation have received their proper share of attention. Pisci-culture has received a thorough analysis. The Industries have been divided into their three natural groups, cottage industries, small industries, and big industries and enquired into with painstaking care. Labour, Marketing, Financing, Research and Education, Transport, etc., have all been discussed in detail and commented upon. In short, *A Recovery Plan for Bengal,* gives one a complete picture of the existing economy of Bengal, its defects and possibilities and suggestions for effecting improvements in all fields. As a compendium of information relating to every branch of economic activity in Bengal Mr. Mitter's book will be found very useful by all students of the economics of Bengal.

ASHOKE CHATTERJEE

LONDON'S HEART-PROBE AND BRITAIN'S DESTINY: *By Ayube M. Edun. London. Arthur H. Stockwell, Ltd. 29, Ludgate Hill, E. C. 4. Price 6/- net. Pp. vii+212.*

The author, who is an Indian hailing from British Guiana, went on a visit to England a few years ago. He tried to observe English life with a critical eye, and came to the conclusion that there is something fundamentally wrong about her social and economic organization, which has to be set right before England can, once more, regain her position of cultural leadership in the world. He is optimistic enough to believe that such is her destiny, if she takes to the right path.

The author's observations on the condition of London's poorer population will be an eye-opener to many. His style is free and easy; but as there are frequent lapses into superficiality and a readiness to philosophize, it takes away materially from the orig charm of the book.

THE SHASTRAS ON UNTOUCHABILITY: *V. G. Desai, with a foreword by M. K. Ga Harijansevaksangha, Nainital. Price 1 anna 3 Pp. 24.*

This booklet of 24 pages contains a resume of original in Marathi of Mahamahopadhyaya Shri shastri Pathak of Dhulia. It contains numerous qu tions from various scriptures proving that unto ability as practised today, has no support in Shastras. The quotations are very significant, but chapter and verse of each has, unfortunately, not given in every case. As Mahatma Gandhi says, anti-untouchability worker should be without booklet, for it will enable him to combat all orthodox argument in so far as it has any conne with Hindu Scriptures."

NIRMAL KUMAR BOSE

THE PHILOSOPHY OF BHEDABHEDA: *P. N. Srinivasachari, M.A. Published by Srini Varadachari & Co., 190, Mount Road, Ma Pp. 366. Price Rs. 5/-.*

This is an exposition of the philosophy *Bhaskara*—"a more or less neglected side of Veda as Prof. Radhakrishnan puts it. But the title of book is somewhat misleading, for Bhaskara's is not only School of Bhedabheda (or difference—non-di ence). Nimbarka also held the same view and probably better known as an exponent of this vie

We have it on the authority of Prof. Rad krishnan that, as an exposition of Bhaskara, the auth work is "very competent and careful." In some of chapters, however, we have little more than a com tion of others' opinions. To take one example random, in chapter X, the author only presents with a series of quotations from different writers hold conflicting views about Spinoza's system, and atten nothing beyond this.

There is an index and an almost equally long of *errata* at the end of the book.

U. C. BHATTACHARJEE

ANNUAL REPORT OF THE MYSO ARCHAEOLOGICAL SURVEY FOR THE YE ENDING MARCH 1930, *Bangalore, 1934, Pp. 1-5 plates I-XXIV.*

This is the second volume of the new series of *Annual Report of the Mysore Archaeological Dep ment,* inaugarated by the present Director, Dr. M. Krishna. Dr. Krishna has already established reputation as one of the most distinguished of Ind younger archaeologists, and under his able guida the State of Mysore is gradually creating an envi record. The present work consists of five pa I Administrative, II Monuments, III Numismat IV Manuscripts, V Inscriptions. Parts II and V sub-divided into sections according to the provenan of the monuments and inscriptions. The volume a contains twenty-four illustrations, a list of inscripti arranged according to the dynasties and dates, th appendices and an 'Index' all bearing eloqu testimony to the care for details that characterizes the works of Dr. Krishna. In the year under revi excavations were continued at the now famous site Chandravalli, where thousands of antiquities w recovered. Trial excavations carried out at Brahmag that is the site near the Asokan inscriptions Siddapura, revealed evidences of occupation of the s

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

om the fifth millennium B.C. to the Chalukyan times. s the learned explorer's conclusions on the results of he excavations are tentative, it would be uncharitable o discuss them in detail. The results of further xcavations will be awaited with interest. Trial renches were also dug at a place called Kittur and esulted in the discovery of brick structures, confirming hereby the theory that the site contains the ruins of Kirttipura the capital of the ancient kingdom of unnad.

Part II is devoted to a consideration of arious monuments. The most important section of his part is the account of the magnificent temples at Halebid, the ancient Dorasamudra. The account is ccompanied by a sketch map of the place. At first ve find a general description of the Hoysalesvara emple, and a brief historical account. Then follows wo out of thirty-five heads under which the monuments are proposed to be studied by the Director; the est had to be left out for want of space. Two plans f the great temple together with several well-selected lates facilitate the study of one of the most ornate tructures of southern India. In part IV a very useful ummary of a Kannada manuscript named *Hydernamah*, eing a biography of Hyder Ali written by a Hindu fficer of his has been published. Part V is devoted to ext, translation, transliteration and notes of various scriptions collected during the year under review.

A. C. BANERJI

DEEPMALA OR INSPIRATIONAL PASSAGES ELECTED FROM UNIVERSITY CONVOCATION DDRESSES: *By Murarisharan Mangalik of the rovincial Educational Service; Lecturer in English, the raining College, Agra; sometime State Scholar for tudying Western Methods of Education; formerly eadmaster, Government High School, Nainital. oreword By Prof. Sir S. Radhakrishnan, Vice-hancellor, Andhra University. Published by The ndian Press, Ltd., Allahabad, 1934. P. 295.*

The sub-title of this admirable compilation is ertainly open to objection as the compiler himself has nticipated in the preface, for, if he has spared no pains o select those speeches and part of speeches which are aspirational, the number of speeches keyed to a far ower level is not small. But of course, they are all timulating and thought-provoking; and the author eserves gratitude and admiration for his novel conception and choice selection. The speeches not only ome from such eminent thinkers, philosophers and cholars as Dr. Sir Brajendra Nath Seal, Sir J. C. Bose, ir Ashutosh Mookerji, Sir S. Radhakrishnan and others ut are also the specimens of the best and noblest houghts they have given utterance to. The book will ertainly be valued by students, publicists, and general ook-lovers as a store-house of inspirational and timulating passages and also as containing a valuable ecord of different outlooks of so many different great nen on education and life.

The printing and get-up of the book are good.

B. CHAUDHURI

LAW OF HEARSAY EVIDENCE: *By Ugar ain Jain, LL.B.*

A crude attempt to explain philosophically the Law nd Theory of Evidence, especially hearsay evidence.

THE LAW AND PROCEDURE OF MEETINGS N INDIA: *By Sohrab R. Davar. Pp. XXX+333. xford University Press. Price Rs. 6.*

As Mr. Justice Wadia of the Bombay High Court bserves in the foreword, "the book is a useful compendium of the principles of law and the rules of procedure relating to meetings." The book is full of information on the subjects dealt with—and the information is both theoretical and practical; it is not enough to know how meetings have been or can be conducted, unless one also learns how best he himself can conduct a meeting. The book has been divided into 3 parts; Part I dealing with company meetings, Part II dealing with Public meetings and Part III dealing with Clubs, societies and trade unions *etc.*; and it deals with the whole law relating to different types of meetings from an Indianized standpoint. It will be found to be as useful to a busy lawyer as to the company secretary. We have got one suggestion to make, which we think will enhance the usefulness of the book to the Lawyers of provinces other than Bombay, namely in the Table of Cases to give all the references, where the same case happens to be reported in more than one law report, and in the case of older English decisions to give the corresponding references to English Reports or Revised Reports.

J. M. DATTA

SANSKRIT

1. *VAJASANEYI PRATISAKHYA* OF KATYAYANA WITH THE COMMENTARIES OF UVATA AND ANANTABHATTA, *edited by V. Venkatarama Sharma, Formerly Fellow in Sanskrit, University of Madras.*

2. THE *RIGVEDABHASYA* OF SKANDASVAMIN. (*First Astaka*). *Edited by C. Kunhan Raja, M.A., D.Phil (Oxon.) Reader in Sanskrit, University of Madras.*

We have received these two important books from the University of Madras, which are included in its series as Nos. 5 and 8.

The *Vajasaneyi Pratisakhya* with the commentary of Uvata has already undergone at least three editions. Yet, there was a necessity of another edition. The present edition, which is neatly executed, is therefore welcome. But it leaves much to be desired. Its special feature is that it supplies us with a commentary which is published for the first time. It generally follows Uvata, and as such has not much independence or special importance excepting some cases where difference in readings throws some light on the text. The glaring defect of the edition is that references to examples from the Samhita are not given, nor are accents shown on the words, even where they are absolutely necessary. It could very easily be done, and in fact it is done in the previous editions. Another defect of the edition is that there are many misprints.

Even a few years back it was generally believed that Sayana's *bhasya* was the only *bhasya* on the Rigveda. But within about a decade it has been discovered from the recent researches of a few scholars of the country that there are many commentaries and Sayana was not the earliest commentators of the *Rigveda*. One of those scholars is Dr. Raja of the University of Madras. In some of the sessions of the All-India Oriental Conference he told us of his researches on the discovery of commentaries and the commentators other than Sayana, such as Madhava, Skandasvamin, Udgitha, etc. According to the same scholar there are at least four Madhavas who wrote commentaries, three of them on the Rigveda and one on the *Samaveda*.

For the present we have received from him in the volume before us a part of Skandasvamin's commentary

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

on the Rigveda. It comprises only the first *Astaka* (I 1—121) of the book. The MS. of the whole of the commentary is not yet available. But fragments of some subsequent portions are found and Dr. Raja is preparing an edition.

The first *adhyaya* of the work is already published in the Trivandrum Sanskrit Series, but, as will be evident from a comparison, there is a marked difference between the two texts.

Skandasvamin's commentary is not so elaborate or extensive as that of Sayana. Yet, sometimes it is very helpful and criticizes Yaska and even the author of the *Pada* text finding fault with them, and in some cases he seems to be justified.

As a commentator of the *Nirukta* Skandasvamin has been made well known by Dr. Lakhmansarup's publication of his commentary (Skandasvamin-Mahesvara) so far as has been available. And, it is now through Pandit Sambasiva Sastri of the Trivandrum Sanskrit Series and specially Dr. Raja, who is preparing also a comprehensive study of his works, he will be well known also as a commentator of the *Rigveda*.

The usefulness of the book is marred by the great number of misprints, some of which are not noticed in the List of Corrections. We wish the get-up had been better.

VIDHUSHEKHARA BHATTACHARYA

GUJARATI

BUDDHA CHARITA: *By Narsing Rao B. Divatea, B.A., C.S. (Retd.). Printed at the Gujarati Printing Press, Bombay. Pp. 128 : Cloth bound with coloured plates. Price Rs. 2-0-0 (1934).*

Episodes from the Light of Asia: This is how the author describes this collection of poems on incidents in the life of Buddha. Sir Edwin Arnold's Light of Asia is a classic on the subject in English. Its charm as a piece of poetry is inimitable. The pleasure it gives is ethereal. Shall we say that the present collection contains verses—which though translations from Arnold's poems—in no way fall short of all that is good and charming—uplifting—in Arnold's own work. The spirit has been so well imbibed and the inspiration so well caught, that one could hardly realize that it was a translation and not an original work, but for the author telling us so. He has in order to complete the chain of episodes in Buddha's life till his return back to his home, incorporated in the collection a fine poem of another poet—the late Botadkar—and thus showed an appreciation—by considering him fit to sit with him —which is at once unique, and generous. The notes given at the end are scholarly and betray a deep study of the subject. The structure of the verses is of the old type of Gujarati poetry, and the poet's facile pen is at home both with the new and the old phase of our verse literature. We welcome this valuable addition to Gujarati literature.

VAKTA BANO : *By Muni Maharaj Shri Vidya Vijayji. Printed at the Lohana Mitra Steam Printing Press, Baroda. Paper cover. Pp. 111. Price Re. 0-10-0 (1934).*

The Muni Maharaj in this small book has given practical hints to one who aspires to become a speaker. The suggestions are based on his own experience implemented with opinions and directions gathered fro old and new books on the subject. Each chapter h got at the end a summary of the lessons imparted it, and this is the most useful part of the book. Anyo who is inclined to follow these hints will soon real how useful they are, because of their simplicity. The is nothing complex or difficult about them.

GUJARAT NI LAGNA VYAVASTHA AN KUTUMB SAMSTHA : *By Mrs. Sarojini Meh M.A. Published by the Gujarat Vernacular Socie Ahmedabad. Pp. 263. Paper cover. Price Re. 1-((1934).*

This book which describes the modes of marria in vogue in Gujarat and the structure of the family i in the province, was in its origin a thesis written Mrs. Mehta which brought her—her M.A. degree. order to make her research as complete as possible, s took the trouble of visiting several villages to get h information first hand; and the result is a history a a storehouse of accurate statements throwing amount of light on the subject, on the basis of whi an anthropologist can work, as well as a sociologist. was necessarily written in English but the translatio under notice is if anything better, inasmuch as th writer was at home in developing her subject in h own mother-tongue.

K. M. J.

ENGLISH-KANARESE

SAYINGS OF BASAVANNA : *By M. Venkate Iyenger, M.A., Punblishers: Veerashaiva Taru Sangha, Gadag. Price As. 4.*

While we know so much of continental literatu of Europe, our knowledge of the literatures of o neighbours, *e.g.*, of the different vernaculars of Ind —especially of the Dravidian languages—is ve limited. So every attempt that is made to populari and spread the contents of these literatures amo the people at large must needs be highly appreciate The Kanarese people are therefore to be congratulat for their efforts in bringing to the notice of the wo the literary output of the Kannada people—old a modern. Of the work done in this direction by the as well as by others mention may be made of t following. The History of Kanarese Literature b Rice is a very useful publication. Mr. Narasimh charya has brought together much interesting a important information regarding Kanarese literature his *Lives of the Kanarese Poets*. The *Quarte Journal of the Kannada Literary Society* gives alo with every number a brief summary in English the articles published in it. The book under revie contains the text and translation of a selected numb of the thought-provoking sayings of Basava (12 century), the famous reformer of the Veerashaiva se These sayings would be read with interest and pro even to this day. These are accompanied by short b useful introductory and explanatory remarks whi help the reader in easily grasping the significance these enigmatic sayings. The reading public wou feel indebted to Mr. Iyengar for bringing to th doors this treasure of Kannada literature in such handy volume and at so cheap a price.

DR. SIR BRAJENDRA NATH SEAL

A SHORT TRIBUTE OF GRATITUDE AND ADMIRATION

By Sir MICHAEL E. SADLER

May one of his pupils (for pupil I was during the years 1917-19 and shall always revere him as one of my *Gurus*) express in a few words love and admiration for Dr. Brajendra Nath Seal, and gratitude, which grows with the years, for his guidance in my thought and for what he taught me during many long and intimate discussions about education and about the needs and genius of India.

Dr. Brajendra Nath Seal

Dr. Rabindra Nath Tagore

He was, indeed, guide, philosopher and friend to me. More than fifteen years have passed since we last met in the flesh. But the feeling of his presence is still strong in my mind. So close was the friendship which he allowed to grow up between us, that I can still turn to him as if I were at his side and can hear the kindly tone of his voice. Guru indeed he was to me, and I bless his name. There are streets and lanes in Calcutta, there are paths and terraces in Darjeeling, which were the background of our talks. And, as if I were still in Bengal, I can see what I saw then and hear once more what I then heard.

In several volumes of the Report of the Calcutta University Commission, and notably in volumes 7, 9, 10 and 12, there are writings from the pen of Dr. Brajendra Nath Seal which are of permanent value and will, I hope, be reprinted (at least in part) in any future issue of his works. A report, like that of the Calcutta University Commission, may wear the look of a Mausoleum. But it is really an Arsenal. Much, written sixteen years ago by Indian statesmen, scholars and philosophers, is

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

published in these volumes, especially in the volumes containing the Evidence and Documents which has not lost its force through the lapse of years. The historian will in future turn to many pages of these volumes for precious materials contributed by Indian scholars and publicists who had deep knowledge of India's needs and faith in India's future. And among the documents to which he will turn with eager attention, are the replies to several of the Committee's questions, written by Dr. Brajendra Nath Seal.

The linguistic skill which many Indian scholars show in their command of the English Language is deeply admired. This power of speaking or writing in, a language not his own, Dr. Brajendra Nath Seal possesses in a degree. But even more remarkable than command of the English vocabulary is the that, in English, he writes a style of his His English has the distinction of his sonality. When you read one of the characteristic sentences in an essay written him in English, you say to yourself "*Th* written by Dr. Seal and no one else but Dr. could have written it." Every word, as we the cast of thought which determined choice and order of his words bears the auth mark of his personality.

That personality we honour and love. salute him with reverence and gratitude.

December 4, 1935.

GIRIJABHUSAN MOOKERJEE

A LONG-FORGOTTEN CONGRESS ORGANISER

By SATYA JIBAN MOOKERJEE

India is just going to celebrate the fiftieth anniversary of the Indian National Congress. An authentic history of its birth and gradual progress will, no doubt, be re-compiled by experts under the auspices of this Jubilee Celebration. But there is every chance of missing facts in the compilation of history of such an old and important Institution as this, unless they are supplied by men who knew them. The poet justly said—

> "Full many a flower is born to blush unseen,
> And waste its sweetness in the desert air."

This is truly applicable to the short life of the late Babu Girijabhusan Mookerjee, a long-forgotten Congress organiser. Babu Girijabhusan's activities in the field of Congress lasted only for a brief period of two years, when he was carried off by the cruel hand of death. Among the three Bengali delegates who took part in the deliberations of the first Indian National Congress held in Bombay in the year 1885, Girijabhusan Babu was one. The other two gentlemen, namely, the late Mr. W. C. Bonnerjee, the then President-elect and the late Babu Narendra Nath Sen of the *Indian Mirror*, had been blessed with their long lives to become famous for their future activities towards the political freedom of their motherland, but Girijabhusan was cut off in the prime of life at the age of 38.

Girijabhusan's brief life as depicted by then contemporary newspapers has culled in the following extracts:—

The *Amrita Bazar Patrika* said on Oct., 1887,

> "The news of the death of Babu Girijabh Mookerjee of this city has come upon us li thunderbolt. . . . His untimely death . . . personal loss to us and a loss to the country. was a distinguished graduate of the Calcutta Un sity . . . obtained the Prem Chand Roy C studentship in 1872. . . . He declined the very offer of a Deputy Magistrateship by Sir G Campbell, as he intended to join the bar. . . . was a member of the Asiatic Society, did very u work on the Board of Directors of the Hindu Fa Anunity Fund, was a very hard-working membe the Central Text Book Committee, and the In Association. He worked very hard for the Nat Congress at its sittings both at Bombay (1885) Calcutta (1886) and took part in the delibera of the Press Association which was organized on occasion of the Imperial Assemblage at Delhi. B joining the High Court he was for over 8 mont touring political missionary and with indefatig zeal and earnestness moved from town to town village to village throughout Bengal, preparing minds of the educated classes for political re The privations and hardships of the journey see have impaired his health. He was a patient, ear but silent worker, and disliked nothing so muc fuss or noise. He was for many years the Editor of the *Nababibhakar* in its palmy days, was remarkable for a liberality of views and a s of strict impartiality."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Indian Mirror of 18th October, 1887, said,

"He was one of the foremost working members of the Bengal National League, and laboured much in connection with the Indian National Congress held in Calcutta last year. The success of the Congress was in no small measure due to his efforts. He indentified himself lately with many national movements, and his loss is an irreparable one."

The vernacular paper *Bangabasi* of the th Kartik, 1294 B.E., said:—

"Owing to the fall of the 'Somaprokash' on account of Act 9, Girijabhusan Babu started the *Nababibhakar*. Under his care and direct sopervision *Nababibhakar* had a wide circulation and secured a very high place among the then contemporary vernacular newspapers. . . . Girija Babu was deputed by the Indian League to educate the minds of the people for political reform and his zeal was such that he almost had to give up his practice as a Vakil of the Calcutta High Court in order to fulfil his duty of a political missionary and slowly and unostentatiously he carried out his schemes with much success."

Sir Bepin Krishna Bose of Nagpur in his *Stray Thoughts on some Incidents in my ife'* (p. 174) has written.

"The first Congress had been held at Bombay in the year previous. Its next sitting was announced to be held at Calcutta in December, 1886. Girijabhusan Mookerjee, who was my College friend, was one of its Secretaries and organisers. . . . In those days it needed no small courage to take part in political movements in our Province. The Congress, just then brought into existence, was looked upon with distinct disfavour by the official hierarchy. . . . Girijabhusan was carried off by the cruel hand of death and my native country (Bengal) lost in him one of the brilliant young men and a selfless worker."

Sir Alfred Croft, the then Director of Public Instruction, wrote in a letter dated the 14th June, 1889 to the Government,

"Nor should I pass over in silence the names of those members whose loss we have to deplore, namely, . . . Babu Girijabhusan Mookerjee, M.A., B.L., whose work in the committee until they were removed by the hand of death was of the highest value and importance. . . ."

The history of the Congress will remain incomplete, if the name of such a martyr is not included, who almost succumbed to the privations and hardships of his journeys of a political missionary in October, 1887, just before the sitting of the third Indian Congress.

THE INDIAN NATIONAL CONGRESS

THE STORY OF ITS FOUNDATION

By BHUPENDRA LAL DUTT

THE Indian National Congress completes its iftieth year on the 28th December, 1935. ittle do the present-day relations between the overnment and the Congress suggest that the atter was brought into being with the blessings f the former. But fifty years ago this did appen. To a retired member of the Indian ivil Service, Allen Octavius Hume, belongs he credit of inaugurating this All-India organization. But his original idea was to have an annual gathering of the leading men of India for the discussion of social and other non-olitical problems affecting India,' and it was eserved for the British Sovereign's representative and highest executive officer in India, Lord Dufferin, Viceroy and Governor-General 1884-1888, to suggest that the annual gathering hould discuss the administration and give xpression to the grievances of the people. To many of us today it appears to be a puzzle hat, of all persons, the head of the administration had a hand in the ushering in of a body of critics. But Lord Dufferin was a statesman of no mean order and we may rest assured that the situation at the time demanded such a course.

The Indian National Congress cannot claim to be the first political organization in India. India is a big country and it comprised within its geographical boundary States of different size, status and importance, grading from the vast Mughal Empire to the small village principality, and the British sovereignty is not the result of a single move on a single day. From the acquisition of the *Dewani* of Bengal, a minor share in the civil administration of a frontier province of the Mughal Empire, by a company of British traders to the proclamation of a British Sovereign as the Kaiser-i-Hind is no short story. During this long period covering more than a century there was no dearth of criticism of British administration in India but there was no method, no system, everyone had his own way. If Maharaja Nanda Kumar,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Minister of the Nazim of Bengal, looked to the British Parliament for redress long before that august body dreamt of claiming any sovereign right over an inch of Indian soil, the illiterate indigo cultivators practised non-co-operation in their own crude way many years before the gospel of this new faith was expounded by the saint of Savarmati. Indeed a new institution

A. O. Hume

developed in India in the Press, and the Government felt disturbed so much so that from 1799 to 1834 it was placed under strict censorship. During the short administration of Sir Charles Metcalfe the Press regained its freedom and it lost no time in zealously taking upon itself the responsible task of imparting political education to the people of the land. The preaching of the Press was not lost upon the country. In course of twenty years a political body was established in Calcutta. The Zaminders always claim to be the leaders of public opinion and they were the first to orga The British Indian Association was start 1851 under the inspiration of Ram Gopal G Harish Chandra Mukherjee and Rajendra Mitra and others. It would be an insu the memory of Kristo Das Pal if it is not g fully acknowledged here that, 'though m piece of the landholders, this Association r failed to champion public interest of the p when called upon to do so.'

In less than a quarter of a century a dynamic force entered the arena of politi India and it was at once discovered that British Indian Association could not go the w length. Surendra Nath Banerjee desired remain a member of the Indian Civil Se but fate ordained otherwise. Providence pl him in close touch with the students of Be and he was not slow to take full advan of the situation. 'The political advancemen the country,' thought he, 'must depend u the creation among our young men of a gen sober and rational interest in public aff The beginnings of public life must be impla in them.' And Students' Association was es lished in 1875 with Ananda Mohan Bose President. The elders thought that yo Surendra Nath was playing with fire, whil thought that educational and political work interlinked.

Surendra Nath could not be satisfied the Students' Association alone,—he require wider field of activity. He felt that an asso tion to represent the views of the educ middle class was a desideratum. Says he:

> There was indeed the British Indian Associ which, under the guidance of the great Kristo Pal, who was then Secretary, valiantly upheld popular interests when necessary; but it was essen and by its creed an Association of land-holders. did an active political agitation, or the creatio public opinion by direct appeals to the people, a part of its recognized programme. There was the clear need for another Political Associatio more democratic basis. . . . .

That the British Indian Association not quite sufficient to help the nation in forward march to political advancement admitted on all hands. Pandit Iswarchan Vidyasagar and Dwaraka Nath Mitter conte plated to establish an association, but w unsuccessful. Sishir Kumar Ghose and Sambhu Chandra Mukherjee started India League. It is not for us to discuss Surendra Nath did not join hands with Si Kumar. He and Ananda Mohan Bose est lished an association of their own in July, 18 Surendra Nath exhibited wonderful control o his mind on the occasion when he attended

inauguration meeting under the shadow of a great bereavement, his son having died that very morning. Surendra Nath kept himself in the background, he was neither the President nor the Secretary, but worked zealously for the Association with the following programme before him:

(1) the creation of a strong body of public opinion in the country,
(2) the unification of the Indian races and peoples upon the basis of common political interests and aspirations.
(3) the promotions of friendly feelings between Hindus and Muhammadans, and
(4) the inclusion of the masses in the great public movements of the day.

This Indian Association may very well claim to be the British Majesty's Permanent Opposition, though Lord Dufferin reserved this appellation for the body to come under his benign blessing. This Association was the first to offer, as we shall see, organized opposition to the British Majesty's Bureaucratic Government in India. Bold expression of public opinion there was, but want of organization makes such boldness look audacious. The year 1876, the year in which this Association was started, witnessed such a tragedy. The erection of a memorial in honour of a departing Viceroy is a time-honoured custom and when Lord Northbrook was leaving India, a meeting under the presidency of the Lieutenant-Governor of Bengal was held in the Town Hall to consider the erection of such a memorial. Dr. Sambhu Chandra Mukherjee, a moving spirit of the newly-founded India League, came to the meeting with nine others, mostly of the League, and Mr. Mallic, their spokesman, but not a member of the League, gave notice of an amendment which was nothing short of a vote of censure upon the outgoing Viceroy. The whole meeting was 'thunderstruck' and Dr. K. M. Banerji, the President of the League, in his anxiousness to make himself 'clear' before the Lieutenant-Governor, came with the proposal that votes be taken whether the amendment should at all be allowed to be considered. The inevitable followed. Dr. Mukherjee's band, the 'immortal ten,' as Kristo Das called them, alone voting in favour of considering the amendment. Loud was the condemnation hurled upon their heads, Keshub Chandra Sen leading and the *Hindu Patriot, Indian Mirror, The Bengalee* following. *The Statesman* could not see eye to eye with them and remarked:

> The meeting had a clear right to determine whet it would listen and whether not; but the Chair ought not to have refused to put the amendment. . The Babu should have been allowed to offer amendment, and any others he had to propose, the meeting had a full right to decline to hear to speak thereto. We notice the matter since it be useful to our young Republic to know the rule such matters.

The Amrita Bazar Patrika, which was this time edited by Babu Sishir Kumar Gho another moving spirit of the League, blam Mr. Mukherjee, not because he raised a d cordant note but because he did not take su cient care to make the tone loud enough to be ignored:

> It has been said that Babu Sambhu Chandra is the bottom of this movement. If it is so, he has reason to be ashamed of it. . . . . He should have gone there, or if he had gone there at all should have gone with sufficient force to carry point. In this Nineteenth Century, men are judged by their motives, but success, and so t poet says:
>
> Treason never succeeds, and for this reason,
> If it succeeds, who dares to call it treason?
>
> But look to the other side of the question. Th is the first time in the annals of important publ meetings in this country, that ten men are foun conscientious and energetic enough to oppose movement. . . . There was the sure prospect of defeat and no prospect of reward, but yet inspite all, amidst hisses of many, they boldly fronted th Lieutenant-Governor himself to press their views up the public. We only wish there were many su tens in our country. The political significance of th action of the ten can scarcely be over-rated.

It is no wonder that the India Leagu with K. M. Banerji as President and Sish Kumar Ghosh and Sambu Chandra Mukherje as members could not stay on for lon But let us see how Surendra Nath organ ized. Within a very short span of tim the Indian Association was called upon t justify its existence and it did not la behind. Lord Salisbury, Secretary of State fo India, ordered the reduction of the age-limi from 21 to 19 years, for the open competitiv examination for the Civil Service. The India Association took up the challenge. Th attempt in England to exclude Surendra Nat from entering the service even though he wa successful in the examination, on the questio of age and that 'for an insignificant lapse o his part he was hounded out of the service were still fresh in the memory of every publi man. That was indeed a personal affair, an might be cast aside, but here was an attempt 'a deleberate attempt to blast the prospects o the Indian Candidates.' The Indian Associatio at once began to work for an All-India move ment and Surendra Nath was elected 'Specia Delegate' to visit the important places o

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

India to organize an all-India memorial to be submitted to Parliament. So devotedly did Surendra Nath work that Sir Henry Cotton wrote in his *New India*:

> The Bengalee Babus now rule public opinion from Peshawar to Chittagong; and, although the natives of North-Western India are immeasurably behind those of Bengal in education and in their sense of political independence, they are gradually becoming as amenable as their brethren of the lower provinces, to intellectual control and guidance. A quarter of a century ago there was no trace of this; the idea of any Bengalee influence in the Punjab would have been a conception incredible to Lord Lawrence, to a Montgomery, to a MacLeod; yet it is the case that during the past years the tour of a Bengalee lecturer, lecturing in English in Upper India, assumed the character of a triumphal progress; and at the present moment the name of Surendra Nath Banerjee excites as much enthusiasm among the rising generation of Multan as in Dacca.

Sir Henry has greatly underrated the work by taking it as triumph for Surendra Nath personally and of Bengal provincially. It is the beginning of the all-India conception of Nationalism. However, thanks to the munificence of Maharani Swarnamoyee, well known as 'Lady Bountiful,' of Cossimbazar, the Indian Association managed to send a deputation to England in 1878, and thanks to the oratorial gift of Lal Mohan Ghose 'the deputation . . . was attended with an unexpected measure of success.'

The year 1877 opened with the great Delhi Durbar when Victoria, Queen of England and of India too since 1858, was declared Empress of India. The Press was invited and young Surendra Nath was there as representative of the *Hindu Patriot*. He was not the person to let an opportunity slip, and organized, nay, led, a deputation to the Viceroy on behalf of the press representatives assembled there. But this did not improve the situation. The Vernacular Press Act was on the Statute book in April 1878. It 'came as a bolt from the blue,' 'it was passed the very day it was introduced.' Not a single dissentient voice was raised in the Council Chamber, Maharaja Jatindra Mohun Tagore of the British India Association voting for it. Indeed the *Hindu Patriot* wrote against it 'but not with the warmth that usually characterized its patriotic utterances.' Surendra Nath again conducted an agitation which 'disclosed the growing power of the middle class, who could act with effect for the protection of their interests, even though the wealthier classes were lukewarm and official influence was openly arrayed against them.'

The British Indian Association had an organ in the *Hindu Patriot*, the Indian Association had none. Nor could it afford to run one. But Surendra Nath felt, specially at the attitude of the *Hindu Patriot* in connection with the Press Act, that there must be a mouthpiece of the educated middle class and so he acquired *The Bengalee* for himself in January, 1879.

Lord Lytton was induced to come to India, as we know from the letter of the then British Prime Minister, Mr. Disraeli, as 'in this high post you will have an opportunity, not only of serving your country, but of obtaining an enduring fame.' An enduring fame he obtained indeed, for, though he 'had no policy of his own except the policy which had been dictated

Lord Dufferin

by the conservative Ministry' of England, during the period between April 12, 1876, when he took the charge from Lord Northbrook and June, 8, 1880 when, on the fall of the Conservative Government, his lordship resigned and handed over the charge to Lord Ripon, 'the reactionary government of Lord Lytton has roused the public from its attitude of indifference and has given a stimulus to public life.'

Indeed the Vernacular Press Act was repealed in 1881, but it was soon followed by an important prosecution. Surendra Nath was called by the High Court to answer a writ why he should not be committed for contempt of Court. He was allowed hardly three days time and by a majority verdict of the Full Bench he was convicted and sent to jail for two months. Surendra Nath modestly says:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

> I claim the honour (for such I deem it) of being the first Indian of my generation who suffered imprisonment in the discharge of a public duty.

There was a great upheaval of feeling, genuine and widespread, and a National Fund was created as a memento of Surendra Nath's imprisonment, 'to secure the political advancement of the country by means of constitutional agitation in India and in England.'

In 1883 India experienced an agitation not by the children of the soil but by the Europeon residents, 'the like of whicch had never been seen in India.' A small amendment to the criminal law proposing to give Indian magistrates jurisdiction to try European offenders roused the 'tiger qualities of the British Lion'

Lord Lytton

and 'All-India was in alarm.' Mr. C. E. Buckland narrates in his *Bengal under the Lieutentant-Governors:*

> The Governor-General, the Marquis of Ripon, was personally insulted at the gate of Government House on his return to Calcutta for the cold weather of 1883-1884. A conspiracy had been formed by a number of men in Calcutta, who had bound themselves, in the event of Government adhering to their projected legislation, to overpower the sentries at Government house, put the Viceroy on board a steamer at Chandpal ghat, and send him to England *via* the Cape. The existance of this conspiracy was known to the Lieutentant-Governor . . . .

Lord Ripon had to give in.

The lesson of this 'combined and intense political agitation' was not lost upon the Indian agitators. And before the year was out the first National Conference,—Conference, and not Congress, was convened at Calcutta. It sat for three days, from December 28 to 30, 18 Surendra Nath claims:

> In its organization I had no inconsiderable sha *quorum magna pars fui.* It was a reply of educated India to the Ilbert Bill agitation, a resc blast on their golden trumpet.

It is the first conference of the people which representatives from all parts of In were invited. Representative Councils, S Government, Education general and techni Separation of judiciary and executive and wi employment of Indians in public service w the subjects discussed.

The Conference was followed by anot whirlwind march of Surendra Nath accompan by his able assistant Govinda Chandra Das visiting almost every town of importance fr Calcutta to Multan. Public opinion was on whole well-organized. As a result of a series articles in *The Bengalee*, the organizers of farewell honour to Sir Ashley Eden did not d to speak in the name of the public but had be satisfied to subscribe themselves as 'frien and admirers' of the retiring Lieutenan Governor. It was apparent that the Eu pean Community would stand aside at the fa well demonstration in honour of Lord Rip and as a retort the Indians organized a gra popular demonstration—'there was no su demonstration in honour of any other Vicer before and afterwards too.' 'If it be n what does it mean?' queried Sir Auckla Colvin, Indian Finance Minister, 'The d bones in the open valley had become insti with life.'

In 1884 there was no sitting of the Natio Conference. But in 1885 the second sitti was held in Calcutta under the auspices of th associations of Bengal representing three diffe ent, shall we say, interests, *viz.*, the Briti Indian Association for the Zamindars, the Indi Association for the Middle Class, and t Central Mohammadan Association for t Muhammadans. It met for three days, December, 25, 26 and 27, 1885. Representativ from other provinces were present.

While Surendra Nath and his friends we organizing the Conference in Calcutta, All Hume made himself busy in southern India have another all-India assemblage. It difficult to explain why the necessity of a riv conference was felt if it was not to exclu Surendra Nath and his Bengal colleagues. W not Bombay selected because in northern Ind it would have been impossible to find a pla where any all-India organization could be he without Surendra Nath? Kashinath Trimba Telang wrote to Surendra Nath to furnish hi

with some notes about the first Conference, but nowhere do we find any mention that Surendra Nath and his friends were invited by the organizers, Allen Hume and his party, to attend the Bombay Conference which was named the Indian National Congress. At last W. C. Bonnerjea asked Surendra Nath to attend it. Whether it was a sincere call for his service or a move to make the sitting of the Conference a failure is not beyond dispute. We have on the authority of Surendra Nath the following statement:

> I told him (Mr. Bonnerjea) that it was too late to suspend the Conference, that as I had a large share in its organization it would not be possible for me to leave Calcutta and attend the Congress.

Thus the Indian National Congress was inaugurated excluding the *enfant terrible* in politics in India—Surendra Nath Banerjea, the Indian Association and those who made themselves champions of the people's cause and thus incurred the displeasure of the bureaucracy.

THE INDIAN NATIONAL CONGRESS

A BRIEF SURVEY OF FIFTY YEARS' ACTIVITIES

THE Golden Jubilee of the Indian National Congress was celebrated throughout the whole of India on the 28th December last. The record of the efforts and achievements of the Indian National Congress is, in the main, the history of the political re-awakening and reconstruction of India during the last fifty years. We can, however, give here only a very brief sketch of its career.

With the gradual awakening of political consciousness among the educated Indians, the need of an All-India organization and platform to discuss the various political problems that confronted them came to be felt in the latter half of the nineteenth century; and this was felt all the more necessary owing to the very effective organization and propaganda of the Europeans against the famous Ilbert bill during the Viceroyalty of Lord Ripon.

Responding to this desire for a National Assembly the Indian Association of Calcutta, under the leadership of Surendranath Banerjea,—who himself was in no small degree responsible for awakening this desire in the country—organized the National Conference at Calcutta in 1883. This National Conference, which met for a second time at Calcutta in 1885 with a more representative gathering from other provinces, was the spiritual precursor of the Indian National Congress and was incorporated into it, when Surendranath, with his friends and followers, joined the Congress in its second session at Calcutta in 1886.

Allan Octavius Hume, now famous as the Father of the Indian National Congress, was mainly responsible for organizing the first Congress in which task he had the blessings of Lord Dufferin, the then Viceroy; these blessings, however, the Congress soon forfeited, as it grew more and more enthusiastic and earnest in its demands and activities.

1885, December 28, Bombay, the first session of the Indian National Congress. W. C. Bonnerjee—President. Resolutions urging the appointment of a Royal Commission, the abolition of the Council of the Secretary of State for India and reform of the legislative council and other political and administrative reforms were adopted at this session.

1886, Calcutta. Dadabhai Naoroji—President; Dr. Rajendra Lala Mitra—Chairman, Reception Committee.

1887, Madras. Badruddin Tyabji—President; Raja Sir T. Madhava Rao—Chairman, Reception Committee. A committee to frame rules and regulation for guiding the Congress was appointed at this session.

1888, Allahabad. George Yule—President; Pandit Ayodhyanath—Chairman, Reception Committee. The National Congress, by now, had forfeited the confidence of the Government and this session took place in face of obstacles put in its way by the Civil and Military authorities of Allahabad.

1889, Bombay. Sir William Wedderburn—President; Pherozeshah Mehta—Chairman, Reception Committee.

Sankaran Nair
Amraoti 1897

1890, Calcutta. Pherozeshah Mehta—President; Manomohan Ghosh—Chairman, Reception Committee.

1891, Nagpur. P. Anand Charlu—President; C. Narayanswami Naidu—Chairman, Reception Committee.

1892, Allahabad. W. C. Bonnerjee—President;

Pandit Bishwambharnath—Chairman, Reception Committee.

1893, Lahore. Dadabhai Naoroji—President; Sardar Dyal Singh Magithia—Chairman, Reception Committee.

1894, Madras. Alfred Webb—President; P. Rangiah Naidu—Chairman, Reception Committee.

1895, Poona. Surendra Banerjea—President; S. M. Bhide—Chairman, Reception Committee.

1896, Calcutta. Rahimatulla Sayani—President; Sir Rames Chandra Mitter—Chairman, Reception Committee. It may be mentioned here, in passing, that the Congress, during these years as well as for some years to come, contented itself with the passing of resolutions praying for political and administrative reforms, depending almost entirely on "the sense of justice and generosity of the British People." The ideas of self-reliance and of the "right to freedom," had not yet firmly established themselves throughout the country; any thought of mass propaganda and awakening with a view to attaining freedom was still foreign to most of the Congress leaders: all that was yet to come.

1897, Amraoti. C. Sankaran Nair—President; G. S. Khaparde—Chairman. Reception Committee. This session recorded its protest against Regulations in Bengal, Bombay and Madras authorizing deportation without trial. The year 1897 was called the "Black year" by the Congress leaders, for it saw the prosecution of Balgangadhar Tilak and others consequent on the Black Plague measures at Poona, and other troubles in the country; these, in their turn, gave occasion for the gradual rise of the Nationalist or Extremist Party.

1898, Madras. Anandamohan Bose—President; N. Subba Rao—Chairman, Reception Committee.

1899, Lucknow. Romes Chunder Dutt—President; Banshilal Singh—Chairman, Reception Committee. Lord Curzon, already installed as the Viceroy of India, had by now started his compaign of curbing popular rights and privileges, culminating in the Partition of Bengal, 1905, and the Congress, in this session as also afterwards, recorded it protest against Lord Curzon's anti-popular policy. Rules and regulations to guide the activities of the Congress were now framed and its creed, as determined in these rules, read as follows: "The object of the Indian National Congress shall be to promote by constitutional means the interests and wellbeing o people of the Indian Empire."

1900, Lahore. Narayan Ganesh Chandavar President; Kaliprasanna Ray—Chairman, Reception mittee.

1901, Calcutta. Dinshaw Edulji Wacha—Presi Jagadindranath Roy of Natore—Chairman, Rec Committee. Gandhiji, whose sphere of action was confined to South Africa, was present at this se and moved the resolution on South Africa, as "a tioner on behalf of the 100,000 British-Indians in Africa."

1902, Ahmedabad. Surendranath Banerjea—P dent; Ambalal Desai—Chairman, Reception Commit

1903, Madras. Lalmohun Ghose—President; N Syed Muhammad—Chairman, Reception Committee.

1904, Bombay. Sir Henry Cotton—President; Ph shah Mehta—Chairman, Reception Committee. A pr was made at this session against Lord Curzon's pro for the partition of Bengal as also against employing Indian troops to conquer patriotic people fighting their country.

1905, Benares. Gopal Krishna Gokhale—Presi Munshi Madholal—Chairman, Reception Committee. Bengal Partition scheme was notified in July, 1905: settled fact," to come into force on the 16th of Oct This partition gave birth to a new spirit in the con particularly in Bengal, which was to permeate the of India fifteen years later. Bengal now grew sick sending pathetic prayers and petitions, and decide have recourse to "more powerful methods of pro as the boycott of British goods, which she resolved eventually proved to be. The Congress in this se emphatically protested against the partition. A re tion protesting against the repressive measures was adopted, in seconding which Lala Lajpat Rai had occasion to offer his felicitations to Bengal as the h of a New Era in the country. An attempt was mad this session to have the Bengal programme acc as the Congress policy, but the conservative ele would have it confined to Bengal alone.

1906, Calcutta. Dadabhai Naoroji—President; Rashbihari Ghose—Chairman, Reception Committee. word *Swaraj* as the objective of the Congress was.

troduced in the Congress phraseology this year in the esidential address, which defined *Swaraj* as "Self-overnment as in the United Kingdom or the Colonies." he boycott movement in Bengal was re-approved in this ssion, which extended its support to the Swadeshi ovement, advising preference of articles made in India en at some sacrifice.

1907, Surat. Dr. Rashbihari Ghose—President; ribhubandas Malvi—Chairman, Reception Committee. his session could not be properly held and broke up midst excitement owing to high feelings between the noderate' and the 'extremist' groups of the Congress. he moderate leaders were now left at the helm of the ongress affairs owing to the secession of the other group ho did not find the Congress progressive enough to ice the new ideas and aspirations of the country. The der leaders after the break-up of the open session lled a National convention, a committee of which pre-ared a creed for the Congress in 1908. The object of e Congress, according to this creed, was the attainment a system of Government similar to that enjoyed by e Self-governing Members of the British Empire, and is object was to be achieved by constitutional means, y bringing about a steady reform of the existing system f administration. Every delegate to the Congress was o express his acceptance of the objects of the Congress s laid down in the creed.

1908, Madras. Dr. Rashbihari Ghose—President; Dewan Bahadur Krishnaswami Rao—Chairman, Reception Committee. This Congress gratefully welcomed the coming Morley-Minto) Reforms, appealed for the reversal of he Bengal Partition and protested against deportation ithout trial.

1909, Lahore. Pandit Madan Mohan Malaviya—President; Harkishen Lal—Chairman, Reception Committee. This Congress repeated its appeal for re-consideration of the partition of Bengal, and a deputation onsisting of Surendranath Banerjea and Bhupendranath Basu was appointed to proceed to England to place this uestion before the British public.

1910, Allahabad. Sir William Wedderburn—President; Pandit Sundarlal—Chairman, Reception Committee.

1911, Calcutta. Bishen Narayan Dar—President; Bhupendranath Basu—Chairman, Reception Committee.

1912, Bankipur. Ranganath Mudholkar—President; Mazharul Haque—Chairman, Reception Committee.

1913, Karachi. Nawab Syed Muhammad—President; Harchandrai Bishendas—Chairman, Reception Committee. This session adopted a resolution on the need for joint action, with a view to attaining self-government, by the Congress and the Moslem League.

1914, Madras. Bhupendranath Basu—President; Sir S. Subrahmanya Iyer—Chairman, Reception Committee. Mrs. Annie Besant joined the Congress, for the first time, in this session. It was through her efforts that the nationalists were later persuaded to return to the Congress fold.

1915, Bombay. Sir Satyendra Prasanna Sinha—President; Dinshaw Edulji Wacha—Chairman, Reception Committee. A resolution pressing for Provincial autonomy and other reforms was adopted this year; it was further resolved that the All-India Congress Committee, in consultation with the Moslem League, should prepare a common scheme of self-government.

1916, Lucknow. Ambica Charan Mazoomdar—President; Pandit Jagat Narain—Chairman, Reception Committee. It was at this session that Balgangadhar Tilak and his nationalist followers joined the Congress after a long absence, as the result of a compromise previously arrived at. It was also at this session that the Congress-League Reporms scheme, along with the Hindu-Muslim Concordat, (better known as the Lucknow Pact) was formulated and adopted.

1917, Calcutta. Mrs. Annie Besant—President; Baikunthanath Sen—Chairman, Reception Committee. Mrs. Besant had started the Home Rule League in the beginning of this year which resulted in her internment. The Congress passed a vote of confidence, as it were, in Mrs. Besant and her movement by electing her to the presidential chair, which she occupied so ably.

1918, August, Bombay, Special Session. Syed Hassan Imam—President; Vithalbhai Patel—Chairman, Reception Committee. This special session was convened to discuss the Montague-Chelmsford Reforms Report (July, 1918) which it found disappointing, unsatisfactory and unacceptable.

1918, Delhi. Pandit Madan Mohan Malaviya—

George Yule
Allahabad 1888

President; Hakim Ajmal Khan—Chairman, Reception Committee. This session re-affirmed the special session resolution re: the Montague-Chelmsford Report. On the motion of Mrs. Besant, this Congress claimed "the recognition of India by the British Parliament and by the Peace Conference as one of the progressive Nations to whom the principle of Self-Determination should be applied," the right of free discussion of political problems, and the assimilation of the law of sedition to that of England. This session also disapproved, on the motion of Bepin Chandra Pal, the recommendations of the (Rowlatt) Sedition Committee Report (July, 1918).

1919, Amritsar. Pandit Motilal Nehru—President; Swami Sradhanand—Chairman, Reception Committee. Amritsar was chosen as the venue of this session, particularly because it was the place of occurrence of the well-known Jalliwanwallah Bagh tragedy. On the motion of Chittaranjan Das, the Congress re-affirmed the resolutions of the previous session on self-government, and declared the Montague Reforms "inadequate, unsatisfactory and disappointing." Gandhiji, who still had faith in the British sense of justice, wanted to delete the word "disappointing" and also wanted the people to work loyally the new Reforms. A compromise was arrived at, according to which the Congress trusted that so far as possible the reforms should be worked so as to secure an early establishment of Responsible Government. Gandhiji's faith, however, proved futile and no satisfactory redress of the Punjab wrongs and no solution of the Khilafat problem were made by the Government and things moved in such a way as to compel Gandhiji to formulate a programme of Non-co-operation in 1920.

1920. Calcutta, Special Session. Lala Lajpat Rai—President; Byomkesh Chakravarti—Chairman, Reception Committee. This session considered the Non-co-operation programme and declared that "in view of the fact that the Government had failed in their duty to the Indian Muhammadans in the matter of the Khilafat, and, further, in view of the fact that the Government failed to protect the innocent people of the Punjab," "the only effectual means to indicate national honour and to prevent similar wrongs in future is the establishment of Swarajya." The programme of Non-violent Non-co-operation, advised by the Congress until the said wrongs were righted and Swarajya established, included the following items: (*a*) surrender of titles and honorary offices and resignation nominated seats in local bodies; (*b*) refusal to a Government Levees, Durbars and other Government tions; (*c*) gradual withdrawl of children from s and colleges owned, aided, or controlled by Govern and in place of such institutions, establishment of na schools and colleges; (*d*) gradual boycott of B Courts by lawyers and litigants and establishme arbitration Courts for the settlement of disputes; * (*f*) withdrawal by candidates of their candidatur election to Reformed Councils and refusal on the pa the voters to vote for any candidate; (*g*) boyco foreign goods. We have gone into the Non-co-oper programme in some detail as also into the Co activities henceforward, for the adoption of the co-operation formula marks a definite change in method and mental attitude of the Congress. It change, already come over Bengal during the Swa Movement, from simple trust on the Government to reliance, from the idea of political concessions to belief in the nation's right to freedom.

1920, Nagpur. C. Vijayraghabachariar—Presi Seth Jamnalal Bajaj—Chairman, Reception Comm The Non-co-operation programme was re-affirmed in session. The Congress creed was changed, which altered, read thus: "The object of the Indian Nat Congress is the attainment of Swarajya by the peop India by all legitimate and peaceful means." The co tution of the Congress also underwent a great de change.

1921, Ahmedabad. Hakim Ajmal Khan (*vice* C ranjan Das, President-Elect, arrested)—Presi Vallabhbhai Patel—Chairman, Reception Committee. country had already thrown itself into the Civil obedience Movement, under the leadership of Mah Gandhi, and the Congress confirmed the Non-co-oper resolutions of the Calcutta and Nagpur sessions, re mended individual and mass Civil disobedience. called upon all over 18 years of age to join the Nat Volunteer Organization and offer themselves for a Mahatma Gandhi was appointed as the sole dictato the Congress. For the first time in the history of Cong Maulana Hasrat Mohani wanted to declare "Cong Independence free from all foreign control" as Congress goal and to have the creed changed accordi

Calcutta 1911

Mohammad Rahimtullah Sayani
Calcutta 1896

The motion, however, was opposed by Mahatma Gandhi, and was lost.

1922, Gaya. Chittaranjan Das—President; Brijkishore Prashad—Chairman, Reception Committe. Early this year, mass Civil disobedience was abandoned consequent to Chauri-chaura disturbances and Gandhiji advised a constructive programme. Later, Gandhiji himself was arrested. A committee appointed by the Congress to report on Civil disobedience and to recommend any necessary change in the Congress programme advised Council-entry with the idea of carrying on an obstructionist policy. The Congress however, held fast to the old programme of the boycott of councils. The congress camp was divided, and Chittaranjan Das, Pandit Motilal Nehru and others, who advocated Council-entry, formed the Congress Swarajya Party after this session.

1923, Delhi, Special Session. Maulana Abul Kalam Azad—President; Dr. M. A. Ansari—Chairman, Reception Committee. This session was held to effect a compromise between the two wings of the Congress divided over the question of Council-entry. This session, on the motion of Maulana Mahammad Ali, permitted Council-entry by Congressmen.

1923, Cocanada. Maulana Mahammad Ali—President; Konda Venkatappa—Chairman, Reception Committee. The Delhi resolution re : Council-entry was confirmed, without however, abandoning faith in the Gandhi programme of boycott.

1924, Belgaum. Mahatma Gandhi—President; Gangadhar Rao Deshpande—Chairman, Reception Committee. Gandhiji, who was released early this year, entered into a pact with the Swarajya party, according to which the Non-co-operation programme (excepting the boycott of foreign goods) was suspended, the Swarajists were declared to be the Council Section of the Congress, while the constructive programme remained. A spinning franchise for the Congress was introduced. This pact was ratified by the Congress.

1925, Cawnpore. Mrs. Sarojini Naidu—President; Dr. Murarilal—Chairman, Reception Committee. In the middle of this year, Mahatma Gandhi proposed to place the whole machinery of the Congress at the disposal of the Swarajists; this proposal was ratified in this session. It was also decided that the Swarajists should accept no office until the national demand of February, 1924, in the Assembly was satisfactorily dealt with by the Government.

1926, Gauhati. Sreenivas Iyengar—President; Tarunram Phookan—Chairman, Reception Committee. The Swarajist programme was re-affirmed in this session.

1927, Madras. Dr. M. A. Ansari—President; Muthuranga Mudaliar—Chairman, Reception Committee. On the motion of Pandit Jawaharlal Nehru, *Purna Swaraj* or Independence was accepted as the objective of the Congress. Introduction of joint electorates for the election to Councils, with reservation of seats, if necessary for particular communities, was recommended.

1928, Calcutta. Pandit Motilal Nehru—President; Jatindramohan Sen-Gupta—Chairman, Reception Committee. This session resolved that the Congress should accept a Dominion Status constitution, (as sketched in the). All parties Conference Report, 1928, if the same was granted within December 31st, 1929; otherwise it should start on a campaign of Non-co-operation with a view to attaining *Purna Swaraj* or Independence.

1929, Lahore. Pandit Jawaharlal Nehru—President; Dr. Saifuddin Kitchlew—Chairman, Reception Committee. *Purna Swaraj* was declared to be the goal of the Congress, as no understanding could be arrived at about the granting of Dominion Status to India. This session called upon the members of the different legislatures to withdraw themselves, and decided on launching a campaign of Civil disobedience as soon as the country was prepared for the same. Accordingly, Mahatma Gandhi sent a long communication to Lord Irwin, the then Viceroy, on British Rule in India and its deplorable economic results; and unless some relief were guaranteed, Gandhiji declared, he would start breaking the Salt law. As he received no satisfactory reply ("on bended knees I asked for bread and I have received stones instead") he started on the famous Dundee March to break the Salt law, to be followed by a general Civil disobedience movement throughout the country.

The time for the usual sitting of the Congress was shifted from December to February-March from now; no session of the Congress, accordingly, took place in 1930.

1931, Karachi. Sardar Vallabhbhai Patel—President; Chaitram Gidwani—Chairman, Reception Committee. This Congress ratified the pact already entered into

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

between Gandhiji and Lord Irwin suspending the Civil disobedience movement and it was decided to send Congress representatives to the Second Round Table Conference. No regular session of the Congress could since then be held till 1934, owing to disturbed political situation in the country.

Two sessions of the Congress, declared unlawful (1932, Delhi, Seth Ranchorlal—President; 1933, Calcutta, Mrs. Nellie Sen-Gupta—President) were described as held.

1934, Bombay. Rajendra Prasad—President; K. F. Nariman—Chairman, Reception Committee. This Co declared that it "neither accepts nor rejects" the munal award which gave occasion for much unfavou criticism. It was also decided that Congressmen sh re-enter the legislatures with a view to wrecking the Constitution. Mahatma Gandhi retired from active p cipation in the Congress in order to organize an All-I Village Industries Association to ameliorate the econ condition of the villages. Certain important changes made in the Congress constitution with a view strengthening the organization.

INDIAN WOMANHOOD

Miss Basanti Das Gupta, B.A.

Miss Basanti Das Gupta, B.A., whose death occurred recently in Calcutta, was a refined girl with extraordinary proficiency in music and fine arts. She was connected with various cultural and educated organizations and societies in Calcutta, who would feel her sad and untimely death. In the post-graduate class of the Calcutta University she made her mark. She was the daughter of Babu Barada Mohan Das, B.L. of the Sylhet District Bar.

FOREIGN PERIODICALS

International Irony

The Italo-Ethiopian conflict has revealed to the observant many surprising contradictions in the society of nations. *The Unity* publishes some examples of them:

Soviet Russia stands for peace, condemns imperialist war, organizes, through the Comintern, work against war and fascism. Soviet Russia is selling to Mussolini most of the oil he is using for naval and commercial vessels, and for the Italian armed forces, on the Ethiopian adventure.

Officials of the Union of South Africa have stated that it will never permit the use of its citizens for a foreign war. From the Union of South Africa comes much of the meat being used by Mussolini's invading army.

Canadian statesmen of all parties have decried the march on Abyssinia. The Canadian Pacific ships, *Melita* and *Minnedosa*, have been sold to Mussolini to transport troops.

The United States government has passed a neutrality act which prohibits the shipment of war munitions; its spokesmen have decried the piling up of war profits. Our business interests have expressed jubilation over increased production in steel, partly due to export for the Italian army, and over rises in the quantity and prices of scrap iron exports, chiefly sent to Italy, Germany and Japan.

Great Britain deplores Mussolini's aircraft and their menacing operations with Ethiopia in mind. Britain's official representatives at the disarmament conference killed a plan to ban aerial bombardment of colonial peoples; and, according to House of Commons documents, government officials issued during the six months ending about August 1 permits for 26 airplane flights of Italian planes over British Somaliland.—*Nofrontier News Service.*

The Living Age also cites some such examples:

Sir Samuel Hoare, British Foreign Secretary, finds no inconsistency in maintaining imperial rule from Ireland to India and then protesting against Italian aggression in Africa in these words:—

We believe that small nations are entitled to a life of their own . . . . and that backward nations are, without prejudice to their independence and integrity, entitled to expect that assistance will be afforded them by more advanced peoples in the development of their resources and the building up of their national life.

Both Winston Churchill, spokesman for the Tory die-hards, and the Labour Party have rallied to the National Government's support while J. L. Garvin's Conservative *Observer* takes the opposite view. As for Lord Rothermere's *Evening News*, it has been transformed overnight from a sabre-rattling advocate of preparedness into a cooing dove of peace. It calls the League of Nations 'a war trap and nothing else' and warns against an anti-Italian policy:—

If we pursue an anti-Italian policy, we are likely to find ourselves before long at war with a country that has always been our friend and that is now, incidentally, one of the most powerfully armed in Europe. And will the League, when that comes to pass, supply us with friends in need? Not a one. They will commend our high-mindedness—and keep out of the fuss.

And it is the same story all along the line. Germany interrupts a feverish campaign of preparation for war to endorse President Roosevelt's neutrality programme and to declare its undying devotion to peace. The same French militarists who have been roaring for German blood since their late-lamented leader earned the name of 'Poincare-la-Guerre' now refer to the leader of the French Socialists as 'Blum-la-Guerre' because he advocates the use of sanctions against Mussolini.

But the Communists occupy the most peculiar position of any group. In London their official organ, the *Daily Worker*, appeals to the workers of the world not to handle goods destined for Italy while at the same time Soviet workers in the Black Sea ports busily ship wheat and oil to Mussolini's Fascists.

New Germany

Dale DeWitt makes certain interesting observations, based on impressions gathered first-hand, on the internal condition of New Germany in *The Christian Register*, reproduced here in part:

In the midst of an artificially induced state boom, Germany appears busy and even in some respects prosperous. New automobiles in the cities, quite a number of building projects, and good crops with whole families working in the fields, and still the sense of enthusiasm for the new Germany, all combine to give the impression to many travellers that everything is all right and most of the stories we hear are lies. It is possible, too, if one talks with the right people, to get a most favourable view of the reaction to the present government. It is only when one begins to look more critically into things, and especially the human aspects, that the surface deception is realized.

The newspapers of Germany are, of course, completely under the domination of the propaganda ministry. This means that there is little world news of any dependability, much Nazi propaganda, and that the papers carry an almost deadly sameness and monotony. The result is that the Germans, formerly great newspaper readers, now do not pay much attention to them. Every effort is made to sell them, but with scant results. Statistics are available as to the decrease in circulation and are impressive. I watched carefully after the first day in Berlin, and saw by actual count only five papers purchased in five days. This must be rather extreme, but it is indicative of a type of unconscious reaction, the implications of which remain unrealized to the average German.

The consolidation of the nation under the conception of the National Socialist Party as the state is the outward expression of what Hitler constantly refers to as the unity of Germany. In view of the realities of the situation, it creates an interesting and growing contradiction. For there is apparent, as this process of unification goes on, an equally progressive disunity of another sort. Here if ever the saying can be reversed from "In union there is strength" to "In union there is weakness." For this very political and outward unity adds, by each step taken, some stress and strain on the loyalty of the Germans, by pulling them away from other loyalties which have tied them.

The whole question of unity and disunity is the most interesting phase of the German situation. Hitler in effect says, not "Thou shalt have no other gods before me," but rather, "Thou shalt have no other gods but me." In an almost literal sense there is a kind of deification of Hitler among masses of the people. And almost literally, too, the German unity depends on the maintenance of this deification. There is much under the Nazi regime that the Germans do not like. Their dislike of various happenings is frequently vocal. But the criticism is not of Hitler. He is still the "good man," "the righteous one," messiah of German liberation, too great and too busy to be bothered with the problems which involve criticism. But there is a certain detachment of the messiah which is maintained in a number of ways. People seldom know where Hitler is. He jumps around from place to place in an airplane, appearing unexpectedly here or there to make a speech. The legend is psychologically maintained by the propaganda ministry. In addition he so far has been able to sustain his position by actual achievements accredited to him. The two things which hold unbounded impressiveness for the people are the repudiation of the treaty of Versailles and the re-establishment of the army. German unity, which is genuine in support of National Socialism, is thus up to the present based on the semi-deification of Hitler, the freeing of Germany and the establishment of the army. Future unity depends on the maintenance of Hitler's unique position, the continued valuing of those achievements and, a very critical point for the peace of Europe, the consolidation of all Germans into the nation. This means primarily the political annexation of Austria. Germany can stand a great deal of internal trouble due to the unworkability of the National Socialist program if the present "spell" can be maintained and the Germans believe in the prospect of including their blood brothers in the nation.

There is a great deal of journalistic talk about a struggle for power between the National Socialist Party and the army. Some writers see the army as the dominant power in Germany and expect that it will soon depose Hitler in favour of the aristocrats of older Germany. The viewpoint which I gathered on this question was to the effect that, although the army is very powerful and could undoubtedly rule politically, it was not greatly interested in doing so. It is not interested in politics expect as its own development is concerned. Whenever the political activities interfere with the military ambitions of the army politics has to yield, as when a large number of pastors were released from prison to make easier the negotiations of the naval treaty with Britain. Hitler's belief in a powerful army makes him a satisfactory instrument for their purposes, and so long as he can maintain his political prestige there is no reason to think they have a real quarrel with him. If, however, the spell is ever broken and the unworkability of the Nazi program becomes too apparent, the army would undoubtedly be the dominant factor in determining the political set-up. Their pow present is used only in a negative sense and invoked in their own interest.

Words have a peculiar significance in Germany t Besides unity there is the word liberty, used with greatest indifference to the fact that there is less liber Germany than almost anywhere in the world today. T is the word justice, which comes to mean the will of Nazi official who has power of decision in any sp case. The distorting of the word justice is one of saddest of all. A former high official in Germany, asked what he would do first if back in power, answ that he would first re-establish some standards of ju all standards having been abolished.

The word truth means whatever the propag ministry wishes one to believe. Julius Streicher, the extremist foe of the Jews, at his Berlin meeting in Au said that to lie was impossible in Germany, but th was possible for newspaper correspondents to send thing they wished to other countries. The first par his statement may be right, in view of what the word has come to mean to the Nazis.

Equal Pay for Equal Work

D. J. Aickman's plea for equal pay equal work as between men and women in trades and professions, reproduced here in p from *The Catholic Citizen,* will be of inter in India as women here enter the sa professions as men in increasing numbers, thou conditions in India and abroad are not identic

In the Teaching Profession, equality of service indisputably evident. The training of men and wo teachers demands an equally long probation to ob equal qualifications. Both men and women work same hours, teaching an equal number of scholars, sit for the same examinations, and are expected to re the same degree of proficiency. No one will now as that the education of girls is of less value to the co munity and of less importance than that of boys. Bear these facts in mind, it is hard to appreciate the reas for paying a woman teacher only four-fifths of a m teacher's salary, and for finally penalizing her at the e of her career by awarding her a smaller pension, sin in this profession, pensions are based on the aver salary for the last five years of service.

It is important to remember that Equal Pay is symbol of a movement much wider than its monet aspect. It is assumed too often that the question merely one of wage differentiation. Its antagonists bri forward the old argument that women's needs are as great as men's, assuming that women have no requi ments beyond the strictest necessities of life; a therefore, demanding that this entirely fictitious assumpt should govern their rate of payment. Actually monetary aspect of the problem is the lesser one. real evil, apart from the grave injustice to the wom concerned, lies in the effect this under-payment has u men workers, and potential workers in the same occup tions. A large supply of cheap labour—in this case female labour, jeopardizes the position of men, a reacts adversely upon wage standards; for, in all ca where a reserve of cheap labour is available, employe tend to give it preference, men's positions beco correspondingly precarious, and any attempt to secu

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

improvement in wages is defeated at the outset.

These facts must be forced home to men and women alike. The strength of the case for Equal Pay grows as women increasingly demonstrate their ability to do the same work as men, and to do it under similar conditions.

Control of Crime

People, as a rule, look upon the criminal as a strange species of human being and the question of whether or not he might be a product of our social system, or whether or not there might be a possibility of rehabilitation, generally escapes them. Floyd F. Caldwell contributes an instructive paper on criminal control to the *World Order* from which the following excerpts are made:

In far too great a majority of cases our institutions, which ostensibly are for the purpose of correction, are failing miserably. They are not rehabilitating those who enter but are providing ways and means by which these individuals sink even lower into the sea of iniquity. Society has provided a place where outward conformity of rules repress all efforts at constructive improvement and expression; where motivation is provided by fear of punishment rather than by operation of economic motives or eyes, even appeal to higher motives; where men are taught to cringe rather than to develop in strength of personality; where practically no attempt is made to develop attitudes of self-helpfulness and self-improvement.

Another principle which is receiving very little consideration is that which has to do with individual differences. At the present time the emphasis is placed upon the type of crime committed and not upon the individual who commits the crime. We still assume that a human being or a group of human beings has the wisdom to know beforehand just what treatment is necessary to accord to the prisoner and what time it will take to rehabilitate him and return him to society a useful citizen. We are evidently still primitive enough to assume that all individuals suffer the same and react the same to the same kind of treatment.

Treatment of the mal-adjustment is largely a problem of prophylaxis, education, and re-education. As these are primarily the application of psychological principles, psychology is of paramount importance. Society must make more of an organized effort to provide a proper environment for the child from birth to maturity and even on throughout adulthood. In our institutions of learning and in our correctional institutions, those in charge find themselves much in the same predicament as a physician who locates the causes of a disease but has no drugs to administer. The child is under the supervision of the educator approximately only six hours of the twenty-four. When the aggravating difficulty lies in the home and surrounding environment, what is the educator to do to gain control of the situation? With the prisoner the life is so artificial that he may become adjusted to the situation within the prison but fail utterly when released again upon society. These individuals need training in social life and in economic independence. They have failed here, why not train here? Present practices, organization and social taboos, however, will not permit.

The correctional institutions should be such in fact and not in name only. They should be places in which all the knowledge concerning human nature is being applied intelligently with the definite aim in view of rehabilitation. To do this the prisons must be either more numerous and smaller than they are at present, or a force of skilled workers must be provided and be allowed the opportunity to give much individual attention to the inmates. For, we must remember that every inmate is an individual problem and cannot be considered otherwise. At the present time congested conditions in our prisons are deplorable, and little of a constructive nature can be expected until these conditions are remedied. A careful study should be made of each individual case before being retained in prison or being paroled. Under the present system, through the activity of friends, many individuals are released who have no intention of reforming while a friendless prisoner, who would die rather than commit another crime, may be forced to spend a lifetime behind the walls.

The Difficult Road Away from War

Bruce Bliven, writing in *The New Republic*, criticizes Sir Samuel Hoare's suggestion of a redistribution of colonial territories as a solution of war, and offers some suggestions of his own:

Public discussion of the factors making, in the long run, for war, has now advanced to the point where practically all serious students of the subject agree that the primary causes are economic, though these causes may assume one or another of many Protean forms. We are therefore beginning to hear from such distinguished authorities as Mr. Frank Simonds and Sir Samuel Hoare that what the world needs is a redistribution of colonial territory, to adjust the balance between the hungry and the sated nations. It is part of this general proposal that the world's raw materials should also be allocated among the nations on a basis of need. But surely no man in his senses imagines that the existing government of any of the Great Powers would consent to either of these courses, or would be permitted by existing public opinion at home to do so. One has only to reduce this pretty generality to concrete terms to see how absurd it is. Would the British give Hongkong to Japan, or the French, Indo-China? Would France care to hand over the Syrian mandate to Italy, or Britain surrender Egypt to Il Duce? Which of the Great Powers is prepared to give vast quantities of iron, coal or oil to nation that is likely to employ these materials in some future war against the donor? It is safe to say that the international conference which attempted to carry out these policies would be the immediate prelude to a new general conflict.

The underlying weakness in these grandiose schemes is that they presuppose the continuance of private capitalistic enterprise in all those countries where it now exists; and that such enterprise presupposes the continuance of large and expanding foreign trade. To be sure, there is now an important counter-current in the world: the movement toward economic self-sufficiency, toward "autarchy," which seeks to make the nation economically independent to the highest possible degree, to balance imports and exports on a physical basis, reducing them virtually to barter. If this movement could be carried to its logical conclusion throughout the world, it could do much to alleviate the war danger. Unfortunately, however, this will not happen. Autarchy

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

is not a policy deliberately pursued by the nations for the sake of peace. It has been forced upon certain countries by necessity, the necessity of stopping the flight of capital, of protecting the national gold supply, of preventing currency depreciation. While it has aimed heavy blows at private capitalistic enterprise, these have been the blows of a friend seeking, let us say, to knock drowning capitalism unconscious and drag it to shore. In Germany, where this process has gone farthest, there has not appeared the slightest renunciation of imperialist ambition. On the contrary, German autarchy has been in large degree part of the preparation for a war that would conquer vast new territories for the Reich.

To simplify and condense a complicated historical process in a summary that is not unfair, no matter how much it may outrage the historians: The coming of the factory system, enormously increasing the productive power of each individual, might have been used to enrich all mankind. Instead, through nobody's fault in particular but because that was the line of least resistance, it resulted in a tremendous increase in the population of the industrialized countries with, probably, some slight raising of the standard of living of the whole number of people and a great increase in wealth for a limited few. An important part of the process from its beginning has been the creation of an "exportable surplus" through the production of goods either in excess of the domestic demand or in excess of the domestic purchasing power. As the industrial revolution has run its course, this exportable surplus, exchanged for raw materials, services or handicraft objects from abroad or for investments overseas, has tended to grow larger, while the area for consumption of such goods in the formerly "backward" parts of the world has steadily been reduced as these countries were themselves industrialized.

In other words, the great manufacturing nations must compete harder and harder in dwindling markets to dispose of goods of which, under "free capitalist activity," there are larger and larger surpluses. Such competition played an important part, though certainly not the only part, in bringing about the Great War. It has played a part in the international tension that has gone on ever since and is steadily mounting.

There is only one way to relieve this international tension, to bring the situation under control and thus to do away permanently with the greatest single cause of war. The formula is obvious: we must not only allocate colonies and raw materials, as so many people are nowadays lightly suggesting, but we must allocate foreign trade as well. We must tell each of the exporting nations how much it shall send abroad and where and what. This may sound simple, but in fact it is the most revolutionary proposal that anyone can make. The links in the logical chain are inexorable. First of all, the nations must be willing to delegate to some international authority control over their vital economic processes. Second, in order to avoid calamitous overproduction, the quantities of goods produced for the domestic market must be limited just as sharply as are those for export, since the manufacturer who is too optimistic regarding the quantities he can sell at home can no longer hide his mistakes by dumping his surplus abroad.

Naval Disarmament

The following excerpts from a paper contributed by David H. Popper to the *Foreign Policy Reports* will be found interesting in of the Naval Conference of 1935:

The atmosphere of crisis which has become in Europe and the Far East obviously precludes efforts to curb an armaments race. The world is confronted by the possibility of two dangerous f naval competition—quantitative and qualitative.

Quantitative competition is in a sense fostered by the ratio system which emphasizes gr of strength. In a world apparently dominated by nationalism and conflicting national policies, it is n than natural that inferior ratios should cause in among the lesser naval powers. Considerations of and prestige have led Italy to claim equality with which in turn demands for its fleet a higher rati respect to the leading navies of the world. Si Japan demands parity with Great Britain and the States, which have adopted the principle for the but refuse to extend it to others. Where relative are so clearly defined, action by one country is cer be reflected in the naval policies of its rivals. In Germany's rearmament has provided the im impetus for increased naval activity; Japan's in designs have had the same effect in the Pacific. I regions an ascending spiral of naval armaments a imminent, with limits set only by financial consider France is determined to preserve a margin of supe over Germany and may thus provoke competitive b in Italy. Britain, unwilling to abandon the preser power standard, may begin a program of ship constr which would again clear the way for additional G tonnage under the terms of the Anglo-German agreement and bring about a repetition of the process. Increased British construction, moreov virtually certain to be followed by American act maintain a navy second to none. Even if the Eu naval scene remained quiescent, the avowed determi of the United States to preserve the existing treaty would lead to competition with Japan. The Ro administration, while less inclined than its predece make diplomatic protests, has already proved more to strengthen its navy.

To this danger of quantitative competition there be added the probability of another form of rival no agreement is reached to preserve the present s of ship categories, new and larger vessels design outclass the treaty types will render large numbe ships obsolete at one stroke. A possible basis for tinued limitation is mere qualitative restriction, w quantitative limits. Japan, however, refuses to co this suggestion until its demand for parity is con Should the naval treaties expire without being re by any agreement, the only collective experime disarmament will have succumbed to the forces lead to war.

International Co-operation

In concluding a learned discourse on progress in international co-operation in *Political Science Quarterly*, September, Prof. Pitman B. Potter says:

There has been a great deal of progress in orga international co-operation in the past fifty years especially in the past fifteen years; that at certain (particularly at culminating points such as codific ratification, revision, adjudication, disarmament and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

s) decisive progress is still retarded; that this rdation is attributable to very general psychological d even sociological causes, such as the lag of opinion hind factual evolution and of governmental action hind lay opinion (with notable contradictions here), d the unwillingness to go upon scientific learning in e conduct of public affairs, and finally to the variations position and interest among nations and the presence gaps or loosenesses in the solidarity of international ations in time and space which bring it about that ternational co-operation may not be at all times and all cases beneficial to every nation concerned or may asonably be doubted to be. The nature of the actions eded to remedy these defects (where they are defects i.e., excepting the last case) is implied in each case by e nature of the deficiency; it is to express one of those ticlimaxes which are none the less sound and important cause they are banal to aver that more education and ntrol of diplomacy by public-spirited and scientific men e what is needed to cure the situation.

The Fear of Marriage ?

There is, nowadays, a growing attitude of oung men all over the world to shirk the sponsibilities of married life. The following marks by Arthur Fressanges, in *The Month*, tober, 1935, may help one to shirk the fear marriage:

Matrimony is the Sacrament of early manhood. It the purpose of matrimony to sanctify wedlock, to ritualize the mature man, passionate, virile and enthustic, in the full ardour of his sense life. The graces matrimony provide for all the difficulties that must necessity beset the season of married life. When two ople give themselves to one another in all the freedom d grace of youth, they are not thereby certain of rmony and concord. Troubles must arise and difficulties pear in the course of their life together. Love is vinely created, and the union of two human beings is e condition of all life on earth. Those who make this ntract make it in full expectation that no matter the als ahead—and these are inescapable—they will receive e light and courage to conquer them.

The preoccupation of modern Youth with weighty onsiderations is a denial of God's Providence. Let it be illing to love greatly, even if married life should require eroic sacrifice, and its confidence in God will have its wn reward. The well-being of the State demands that atrimony be the basis of society, and through the acrament of plighted troth God promises all the ecessary help and security for family life. When the Holy Spirit draws for us that picture of the ideal housefe in the Old Testament, she is not represented as the omfortably indolent mistress of solid means, but rather as the young matron happy with much busyness. "Her children rose up and called her blessed. She hath sought wool and flax and hath wrought by the counsel of her hands. Strength and beauty are her clothing and she shall laugh in the latter day."

If only our young men and women lay hold of this channel of Sacramental grace, confident in the Providence of God, their love would deepen into a love that casteth out fear.

Fact and Fancy

In reviewing the French version of a book of fairy-tales by Abanindranath Tagore, Ranjee G. Sahani observes in *The Asiatic Review:*

If a short story is a most difficult achievement, it is still more so when it assumes the form of a fairy-tale (unity of impression is what fixes the *genus*); for then a different and, to my mind, more sensitive type of mind comes into play. Mere knowledge and experience of life are irrelevant: what matters is the capacity to enter into and make use of the dream consciousness. The world of dreams, as A. E. was wont to say, is the world of creation *par excellence*. To tap—by innate gift or cultured discipline—this mysterious mine and materialize its forms unknown to the waking vitality is the secret of success in this domain.

It is scarcely necessary to add that the eminently practical and commonsense kind of mind is the least fitted to indulge in this genre of writing. It can fabricate according to pattern, but it cannot create new entities. The West, little given to introspection and brooding, has (with a few notable exceptions) not excelled in the fairy-tale. Its achievements belong to the world of eye and touch. The most notable collections of fairy-tales in Europe are, more or less, copies or adaptations of things Oriental. India is the home of the fairy-tale.

The *Poupee de Fromage* comes to us from the hands of Mr. Abanindranath Tagore, an ardent Folklorist, with much of the aroma of the soil from which it has sprung.

Mr. Tagore has to be heartily congratulated on resurrecting this delicate little masterpiece, a veritable jewel of art. This tale is not a slice from life, nor indeed a pure phantasy. It belongs to a different order of writing, an order of writing that one or two Frenchmen are said to have invented recently. Be this as it may, in this tale we have a harmonious blending of fact and fancy, a perfect union of the world of experience with the world of dreams. The incidents of the story are such as might have happened in real life; but there is a superstructure of ideas. The form that T. E. Lawrence imagined but despaired of successfully evolving has been achieved with complete mastery here. The attention of Western artists should be drawn to this gracious creation. From the artistic point of view, it is a triumph.

INDIAN PERIODICALS

The Spirit of War

The Theosophist, in criticizing the motives of either combatant in the present Italo-Abyssinian conflict in entering upon the war, writes:

War has, though some, like Mr. George Lansbury, would probably reply with an emphatic negative, an ultimate justification in so far as it becomes the last resort to defend a nation against unprovoked aggression. Doubtless there are occasions on which force should be met by non-violence, by non-resistance. But also are there occasions on which force must needs be met by force, when tyranny and brutality would seek to impose might upon right.

I do not rule war out in a world such as we have at present, for we are still only half civilized, and the concomitants of barbarism must lie about us. But no civilized nation will go to war save in the gravest emergency. Indeed upon a civilized nation must war be thrust —it could never be sought.

Unfortunately, no nation in the world, or at most but one or two, has a blameless record in respect of war, and I doubt if it be an exaggeration to say that almost every nation which at present is denouncing Italy has itself engaged in war for aggrandizement, often at terrible cost to those who have been helpless before it. Even today war is going on, expansion of empire is taking place, to which no exception is being taken by those very nations so sedulous in denouncing Italy. One is thus forced to the conclusion that the attitude most nations take towards the actions of another nation is dictated by self-interest; and it becomes difficult to blame Italy for not rating at a very high level the protests of her sister nations. On the other hand, Italy's future greatness depends upon her nobility and not upon her size, and she is pronouncing her irrevocable doom except in so far as she can lay her hand upon her heart to declare that Abyssinia's unprovoked attacks upon her are the sole cause of her reluctant entry upon a war which may set the whole world ablaze. The same acid test applies to Abyssinia, and with regard to either it is finer and nobler to die a martyr than to triumph by tyrannical force. Italy will crumble to pieces as she seeks to build up an Empire upon force, as have perished all other Empires in the past.

War and Women

Madame Ellen Horup, secretary to the International Committee for India, Geneva, in discussing the attitude of women towards war in *The Calcutta Review,* says:

All big nations are trained for warfare. In Germany, Italy and Japan all endeavours for peace are suppressed. Those who do not want war are traitors to their country. War is the national aim.

Women look differently upon war. They have done so. The old outworn ideas about the field of heroic deeds and decorations for bravery can be g for ever in the eyes of men. But women do not the other side. They see their husbands and sons or dead. They see despair, privation, and of continuous toil, hunger and need for them and children. And they see how the field of honour and spreads so that it will soon encompass the earth. The field of honour is no longer reserv their sons and husbands. Their little children, th parents, their sick and helpless are all included. honour and glory in the coming war will be in s more of them than the enemy succeeds in hitti one's own country.

What for example has the Great Powers' latest "collective security" to offer the workers? It wa security they had in the League of Nations' Pact that, in spite of all other talk about security, wa only place where it had ever been found. It mean they all stood together against that Power which the pact. According to Article 11, all members League are to regard themselves as at war with th breaker. All connections, diplomatic, commercial, private, are to be broken. A boycott is to be atten If that does not help, then the mouths of cannon be turned towards her in the defence of peace. Suc collective security. With its help war would virtually been precluded. No Power could have fought a the combined armed forces of the others and by of this it would have been possible to begin coll disarmament.

What the Great Powers now mean by it is n but nonsense. There can be no security in cond which change from one day to the next. Some month it was France, Italy and England who repre ente collective security but that was only up to the tir Stresa. There France and Italy left the security i lurch and haggled about Abyssinia indepe ident England, and after the negotiations of the three P had failed, France could find neither collectivity security and ended by sticking to the strongest, Eng That is what collective security is worth.

War is the most palpable acknowledgment o rights of the strong and the power of money.

The Origins of Indian Nationalism

Hirendra Nath Mukerjee in tracing origin of Indian nationalism in *The Hindu Review,* says:

The national movement thus began to grow we were conscious, slowly but surely, that foreign nation hurt not only our racial self-esteem but our self-interest. Congress was no longer demandi few more jobs for Indians; it was, on the one asking for fiscal autonomy, for control of national ex

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

diture, and on the other, trying to organize movements in support of Indian industry. It is significant that, down to as late as 1924, the British Government was pursuing a policy primarily of encouraging British imports, especially textiles from Lancashire; when a tariff for revenue purposes was laid down, it was counter-balanced by an excise duty on Indian products. It is also to be noted that by far the greater number of the Government irrigation works were for the irrigation of cotton-growing land, in order to supply the needs of Lancashire, while at the same time adding to the amount which could be collected in land revenue. Nationalism, however, was winning its tardy victories; Indian steel production was fostered by tariffs and by bounties, while Indian cotton mills have succeeded in securing protection to the extent, even, of a duty against Lancashire imports.

The influence of economic factors is apparent in the more notable stages of our national struggle. It is not without significance that anti-Partition agitation in Bengal went hand in hand with an enthusiastic movement for "Swadeshi," the encouragement of Indian industry and manufacture. The economic tumult of the War period brought into the ranks of the national movement large sections of the proletariat and the peasantry whose participation in the struggle against post-war repression put a different complexion on Mahatma Gandhi's *Satyagraha* and non-co-operation in 1919-22. In 1929-30, the world depression fell on India with the force of a topical typhoon; prices of agricultural produce fell by a half between the harvests of 1929 and 1930, the depreciation of silver robbed the peasants of their beggarly savings, while the new rupee ratio added 11 per cent to India's external debt. It is no wonder, then, that Mahatma Gandhi could again marshal an impressive array of nationalist forces which, for a time, kept the mighty British Government at bay.

Indian Military Expenditure

Sir P. C. Ray in his article in *The Indian Review* on Indian Military Expenditure makes the following observations:

The question of military expenditure to be borne by Indian revenues, however, in its ultimate analysis, centres round the fundamental problem of a mercenary army *vs.* a national army as being necessary for the defence of India. The army policy of the British rulers of India has necessarily been governed by a complete mistrust of those sections of the people in whom there has been the faintest dawn of political consciousness.

The policy persisted in by the Government was thus described and citicized by Sir K. G. Gupta:

When the English first secured the sovereignty of India, there was a National Army in all the provinces officered by Indians who usually came from the land-holding and middle classes, whose interest it was to keep up the martial spirit among their tenants and neighbours. But the British policy has, from the very commencement, been to deprive Indians of all authority in the army, and recruitment has been confined to the rank and non-commissioned officers. . . . .

One may almost exclaim that the *Pax Britannica* of which so much is made in certain quarters has been the greatest drawback of British rule in India; for it has effectually emasculated the whole nation and has made it incapable of doing anything in self-defence.

The division of the people into martial and non-martial races is artificial and unreasonable and must be ascribed to the decision of the authorities to exclude some races from military service and the development of the martial spirit for reasons other than efficiency.

In reply to a question put in the Legislative Assembly in 1921, the Finance Member said that out of the total expenditure in India, including that of the provinces, 33½ per cent was for defence, 11¾ per cent for sinking fund and interest charges on the national debt, 4 per cent for education and ¾ per cent for sanitation. The total expenditure then amounted to 127.60 crores. Today it is not more than 115.10 crores. It was found at that time that

1. Even a rich country like England did not spend more than 20 per cent of its total expenditure on defence (army, navy and air force).
2. Canada did not spend more than 11 per cent.
3. The expenditure of South Africa on this account did not exceed 8 per cent.
4. Portugal spent 20 per cent.
5. Norway spent 11 per cent.

While poor India had to spend 33 per cent and that too in peace time! The situation is the same today and military expenditure sits on the chest of the country like an incubus from which she cannot escape till the whole policy is changed.

What is Hinduism

Rabindranath Tagore in dwelling upon the essence of our true religion, defines Hinduism in *The Visva-Bharati Quarterly:*

What then is this Hinduism of ours, when it reveals itself in its purity, like the sun when it rises above the obscurity of the mist and the tangled obstructions of the jungle on the lower horizon?

I have already suggested its definition, when I said that man has a feeling that in him the creative manifestation of life has come to the end of a cycle, ready to ascend to one still wider and higher. When life first evolved its physical senses from the depth of amorphous darkness, it came to a wondrous world of forms, and this adventurous spirit of life is yet urging the spirit within man to develop an inner vision which will lead him through these endless forms into a world of infinite meaning, where he will cross the boundaries of the senses to a freedom which is ineffable.

Hinduism believes that this unfoldment of man's inner being and revelation of the realm of spirit will gradually happen to him, when he realises his relationship with the Infinite through a life of self-control and self-sacrifice, when he feels the longing to adjust his activities to a faith which takes this world, not to be a mechanical combination but to be spiritual, and his own soul not an arena of ravenous passions, but a musical sphere of beauty and truth, that has its harmony with the keynote of creation.

When insensate indifference is everywhere, all doors closed, all lights out, and darkness and emptiness left so supreme that man in his desperation clutches even at them for support, the messenger of salvation, in some mysterious fashion, finds his way there and stands at the door unexpected, unrecognized, and looked upon by the cowering multitude as an enemy.

This was what happended in our country. It had come to this pass that our heaped-up, dead traditions had threatened to smother our consciousness of the Infinite, making petty our daily life, breaking up our

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

communities into a hundred different sections, reducing our manhood to a narrow provincialism. We had ceased to be aware of the rule of the One, and were kept distracted by the tyranny of the many. In the nightmare, by which we were oppressed, we viewed the world as peopled with nameless terrors from whose depredations we sought to preserve our aimless lives, as far as we might, by charms and amulets, votive offerings and propitiatory sacrifices.

When thus the timidity of our minds, the weakness of our efforts, the diffidence in our intercourse, the narrowness in our outlook, the crass ignorance which pervaded every department of our lives, were dragging us down to the depths of our doom, a great shock from outside fell upon the tottering walls within which we were pent.

Those of us who were awakened by the shock realized, in an agony of returning consciousness, what it was we had lacked, what the darkness was which enveloped us, what meant the all-pervading lethargy, the joyless death-in-life, with which we had been stricken. Our very sky had been screened off, all access denied to light, the life-giving breezes from the Infinite shut out, a hundred barriers of artificiality set up against intercourse with the Universal. The cry went up from our heart: "We want freedom,—freedom from the mechanical, from the dark, from the dead!"

This cry is the cry of all humanity. It is the same all over the world. Here, man has hidden his true welfare behind the veil of antiquated custom; there, in his attempts to grow bigger by acquisition and accumulation, he has allowed his self to eclipse that which is greater than self; everywhere, whether it be by inert slothfulness or by unmeaning activity, he has been lost to the sense of his greatest good.

The unshackled Hindu mind has always proclaimed this freedom of joy as the true object of man's religious striving. And whenever any particular scripture, temple, philosophy or ritual has usurped the place of such grand freedom, it has done so contrary to the spirit of truth and necessarily therefore of true Hinduism.

The Clash of Cultures

Gaganvihari Mehta in *Contemporary India* asks all thinking people to realize that the problem of cultural affinity between the two great continents of Europe and Asia is one of the fundamental issues of the present times:

Culture, is a complex phenomenon and cultural contact of the East with the West today is mainly determined by the nature of political and economic contacts. Partly because of the inherent strength of the material motive and partly because of the character of industrialism which has become worldwide in its ramifications, economic forces are the most vital factor affecting the cultural conditions of the East. Economic forces are not only affecting the entire world but they tend to influence it in much the same way everywhere. Whether it is in America, or China, Africa or India, industrialism with its factories and large-scale production gives rise to similar problems of over-crowded cities, class divisions, mass education, popular government, the press and other forms of social life obtaining in the West. Economic forces, no doubt, are not fatal and overwhelming; they are the products of human beliefs and passions and could, therefore, be counteracted by changes in those beliefs. No omnipotent deity but capitalist syndicates composing mortal and fallible beings control the operation of th forces. Nevertheless, in an industrial world so clo knit, economic forces are really powerful and ne irresistible. But if the spread of industrialism in East is almost inevitable and yet if many of its feat and reactions are undesirable, is it possible to ad industrial methods and have technical efficiency with reproducing the evils associated with industrialism the West?

The question is not by any means simple since its solution there lurks the temptation of a facile synthe It is a commonplace to suggest, for example, that millenium could be achieved through a union of civilizations mingled somehow or other. It is of imagined that we can have the rose without the thor we can have the technical efficiency and physical pow of the West without the strikes, the class-war, the pois gas and the social organization of the West. On t other hand, those who regard civilization as a comp nent whole or those who interpret history in materialis terms, argue that culture in the last analysis is the p duct of economic forces. But it is not necessary to be Marxian in order to hold this view. Some years ag Mr. Lowes Dickinson wrote an essay on the civilizatio of the East after extensive travels. At the end of h journey his belief in the possibility of achieving synthesis between the East and the West was somewh shaken. "Civilization is a whole," he writes, "Its ar its religion, its way of life all hang together with i economic and technical development. I doubt wheth a nation can pick and choose." It is a dreary spectac since it leads to the conclusion of all or nothing—bac to the land and handicrafts or forward to Americanism It is a cheerless prospect because it shows that th Eastern countries will have to go through the whol process of industrial evolution with all its attendant evil in order to achieve what the West has achieved. But i is for the East now to belie these forebodings. It ca vindicate its title to spirituality by making science sub serve human ends and by harnessing physical power to social purposes instead of the degradation and destruction of mankind. Only thus can harmony between th East and the West be achieved—not by any premature synthesis nor by the superimposition of an exotic culture

---

The Association for Moral and Social Hygiene

In an article in *The Young Men of India, Burma and Ceylon* Miss Miliscent Shephard speaks thus about the foundation of the Association for Moral and Social Hygiene of which she is the representative in India:

We settled in to the morning of work. What is the work? It is the challenge against the traffic in women and children. Our Association for Moral and Social Hygiene has been at work in India, for varying periods since 1875, when Keshab Chandra Sen joined our General Council. In 1876 he went to see our Foundress, Mrs. Josephine Butler, in her Liverpool home, and her letters to her sister in Italy, Madame Meuricoffre, tell of the great impression he made on their minds. "We were so encouraged by his lofty spirit," she wrote, "and his conviction that, though we should not live to see it, victory would be with our cause in the end."

Someone asked me about the foundation of our Association, and I spoke of Josephine Butler, that radiant, lovely, gracious, cultured woman, with her strong-souled

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

husband. (I wondered if I should ever get time to type that article for Mr. Hogg?) I told of her vision by the Lake of Geneva, in 1877, when she spoke of her longing for bands of men and women of every nation to understand and take up the challenge to which she felt herself called.

I told him to remember that without vision the people perish, and that her principles had been acknowledged, beside that same Lake of Geneva, as the foundation of all the work which the Social Questions Section of the League of Nations had been able to do, since they began building on the foundation she had laid in different countries, when in 1918 they were asked to take up the challenge against the traffic of women and children. I spoke too of the house in Liverpool in Abercromby Square (of which I had the privilege of being one of the first students in 1920), in which educated women who wish to be trained in the technicalities of law and psychology and social science, can spend some time in preparation, before undertaking their share in fighting this age-old evil. Many Indian women have visited this House, now called by Mrs. Josephine Butler's name.

The Uses of Jute

Pulin Behari Sarkar concludes his illuminating article in *Science and Culture* on the jute fibre with the following remarks on the uses of jute and jute crisis :

As regards the uses of jute, by far the most important is for making gunny bags; about 60 per cent of the world consumption in raw jute is used for sacks. Until lately it was considered as the cheapest packing material. But many substitutes have been found out and it is no longer so. Germany is using her own fibre for sack making, while Japan is exporting powdered sulphur to India in rice-straw bags. With the coming of economic depression, there has been a reduction in world trade and consequently in the demand for packing; secondly, there is the competition of inexpensive paper and other substitutes, and thirdly, there are the exchange restrictions which make it difficult to move jute goods freely, and facilitate matters for competing goods. As a result market has become extraordinarily dull, and new uses for jute must be found out. In Germany, for instance, the war had taught the manufacturers the importance of the substitute for jute, and when normal conditions returned to Germany, jute industry had difficulty in regaining the old markets for jute goods. They were thus compelled to find new uses for jute, and they have undoubtedly been successful in their research efforts.

Jute has lost, for the time being at least, its principal recommendation, namely, its comparative cheapness. Four main factors are held responsible for the inroads which the substitutes have made upon the jute industry. Of the first importance are the cheapness and the stability of price, both of which are illustrated in the case of paper bags, which have kept a steady price level; the other reasons are better durability, as in the case of cotton and sisal, and the desire of certain countries to utilize their internal resources wherever possible to the elimination of jute and jute fabrics.

Jute trade is thus in a critical state. But it determines, so to speak, the pecuniary condition of Bengal. It is high time that a good deal of research work should be done in order to save her from this crisis. Government of India derives an appreciable income from jute but spends practically nothing either for the Bengal cultivators or for research. The Meston award was until last year a settled fact, the glaring inequity of which has been repeatedly pointed out by Mr. Ramananda Chatterjee, editor of the *Prabasi* and *Modern Review* with irrefutable arguments. It is said that the Imperial Government spends a small percentage of tariff income from agricultural products for research work; as for example, for cotton, timber, tea, lac, etc. But Bengal has been unfortunate even in this respect. We do not know what debars the India Government from granting the same favour to Bengal for establishing a jute research institute of her own. The Imperial Council of Agricultural Research is spending lacs of rupees for research every year, but strangely enough, it does not, for reasons unknown to us, include jute in its list of agricultural products. And not a farthing it has granted up till now for research on jute.

Some Contemporary Poetesses of Japan

E. E. Speight illustrates his article in *The Orient Gong* on some contemporary poetesses of Japan, with an interesting selection of modern Japanese poems:

Every race has but the literature it deserves, it has been said, and the foreigner who could justly take the measure of the Japanese people from his familiarity with their literature has yet to appear. For that miracle long years of labour are needed, lighted by intuition and sanctified by a sympathy involving trustful self-surrender.

In gentle words Rabindranath Tagore once spoke to me of the sadness this exclusion of Japanese poetry from the hearts of the world made him feel. It seemed to him that there was something almost perversely remote in a poetic literature whose deeper import could only be comprehended at such a cost.

It seems to me that in the poems of the living poetesses of Japan we have a response to the appeal many besides Rabindarnath have felt constrained to utter.

As I look over this little selection of poems made from the work of but a few of the innumerable poetesses of the present day, they seem to me like a rosary of beautiful beads, lustrous and dark, starry and sombre, clear as the autumn moon or mysterious as an ancient forest.

The calm of this moment is very precious; there is no sound in heaven or earth, and I am alone with the moon.—Baroness Kujo.

As the smoke of the incense in my porcelain burner floats upward on this spring day of mine, my room is like a great temple and my heart serene.—Mrs. Akiko Yosano.

Above the wild shore the first moon of autumn rose, clinging to a robe of white waves.

The morning star is left alone as though it had no country to return to, and the autumn wind is blowing. —Mrs. Akiko Yosano.

When the night comes, the world, covered with quietness, becomes enchanted, and I hear the mountain stream murmuring old stories.—Mrs. Yosano.

As the sun was rising from the snow, the earth was a great white lotus flower.—Mrs. Yosano.

The setting sun—is it the spirit of some hero, or is it my soul—like a flame or the tides of the blood?—Baroness Kujo.

My soul went out wandering many years ago and even yet has not come back.—Byakuren.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

No birds are singing, it is a quiet day; the very gentle sound of my soul may be heard in the sky.—Mrs. Hiroko Katayama.

Because the world of the past is deeper than the sea, I cannot find pearl or coral.—Mrs. Yosano.

The fires of a volcano subside, and the waves sink back, but what shall I do with the might of love?

Are you not lonely, you who preach about virtue and have never felt the touch of warm blood (coursing through) soft skin?—Mrs. Yosano.

Clothed in a robe of colours cooler than water, the moon in her calmness brings to my heart the autumn of the world.—Miss Hide Takeyama.

India's Oldest Buddhist Caves

G. Venkatachalwa gives the following brief description, in *The Young East,* of India's oldest Buddhist caves:

The oldest Buddhist caves, so far discovered are located not far from Bhuvaneshwar in Orissa. They are two small hillocks that rise out of a wild jungle below, and are known as Udyagiri and Khandagiri. A passable road, about six miles from the town of Bhuvaneshwar, leads you to the foot of the caves, and a good Travellers' Bungalow lies to the left, amidst picturesque surroundings. The ascent to the caves is not hard, and there is nothing worth noting in most of them except the antiquity of the caves with some powerful carvings, which date back to about 500 B.C. There are small cells with no carvings of any kind, indicating primitive cave-dwellings. Some have pillared verandahs and other friezes and relief carvings, showing gradual development in the arts of architecture and sculpture. The most notable of them is the two-storied building, known as "Raninur," and it has some interesting sculptures in basrelief. Some of the caves in the Udyagiri hill, which is separated from Khandagiri by a narrow gorge, are fantastic and elemental in appearance, like the Tiger Cave, which when seen from far, looks like a tiger with wide open mouth, powerful jaws, terrifying eyes and nose and teeth overhanging the entrance. The rock itself is so formed as (with a little clever touch by the stone-cutters) to produce this quaint effect. These caves indicated interesting phases of the art of stone-carving and form a useful background for the study of the rock-cut temples in India.

The temples at Bhuvaneshwar represent a high water-mark of Orissan art; a close study of some of them clearly shows this art in various styles and in different stages of development. It is said that there were over five thousand temples built round the vicinity of modern Bhuvaneshwar, and the present big temple of Siva was raised by the founder of the Kesari dynasty. A glance from one of the smaller towers over the surrounding country confirms this tradition. Countless shrines and sikharas peep through parched jungles. The beautiful big tank enhances the attraction of the place.

Milk as Human Food

In writing about quality in food in *The Scholar,* Prof. V. Subrahmanyan observes:

Among the various articles of human food, milk will naturally take a pride of place. It is the chief source of nourishment for infants and invalids; it provides the adults with a rich and healthy drink, supplying a large part of the deficiencies in other articles of food. It great importance, therefore, that the milk comes a proper source and possesses the requisite qu Recent enquiries have shown that the nutritive of milk is highly variable and is largely determined the breed, nature of the surroundings and the typ food which the animal receives. It is well known Indian milks—especially town supplies—are gene poor in fat, proteins and vitamins. They also lack essential minerals, particularly calcium and phosph This is largely due to the deficiency of the Indian tures and other animal feeds in the requisite constitu As most diseases arise, directly or otherwise, from d tive nutrition, it need hardly be pointed out that a deal more of attention should be paid to milch ani particularly their feed and general hygiene.

Milk products also merit serious attention. Even cold countries, cream does not keep well and has to pasteurized if it is to stand reasonable amount of sto and transport. In India (and in tropical countries general), cream is not very safe except when it is fre prepared and should therefore be avoided. Butter k better than cream but even that soon turns rancid develops off flavour if kept for more than a few d In Indian households, butter is not completely freed f adhering curd: nor is any salt or other preservative ad to it, so that the butter gets very easily spoilt. C keeps well, provided it is freed, as far as possible, f moisture and is not exposed to air. These two conditi are not, however, generally observed so that even gen ghee does not keep well for more than a few we There is very little demand for cheese in India, so ca is gerenally coagulated by salt and is either sold as m or converted into sweets. The salt-coagulated produc not easily digestible as the finely dispersed casein of milk. It would be desirable, therefore, to either skimmed milk as such, or dry it in such way that casein does not get denatured during the process.

Japan and the Japanese

F. Rustomjee describes Japan and Japanese in *Young Ceylon:*

If Ceylon can be fittingly described as "the Pearl the Orient," then Japan may without doubt be called Paradise on God's earth." Nature, art, science and civ zation have combined to transform Japan into a won land. Can there be another country, which accommod a highly civilized and cultured nation like the Japan and where nature, art, science, and civilization harmonise thus singularly.

It will be a matter of curiosity to all our people Ceylon to know, what there is in Japan, and what rema able qualities and characteristics the Japanese poss which tend to produce, in the mind of a foreigner Japan, the indelible impression of admiration and profo regard for the Japanese as a nation. Mr. H. G. We in his book entitled *A Short History of the Wo* has said, that since 1865 "with astonishing energy intelligence, they set themselves to bring their cult and organisation to the level of the European powe Never in all the history of mankind did a nation ma such a stride as Japan then did. In 1866 she was mediaeval people, a fantastic caricature of the extreme romantic feudalism; in 1899 hers was a complete Westernised people, on a level with the most advanc European Powers. She completely dispelled the pers sion, that Asia was in some irrevocable way hopeles behind Europe. She made all European progress se sluggish by comparison."

HINDUISM AND THE UNTOUCHABLES

By RAMAPRASAD CHANDA

VIGOROUS agitation for constitutional reform with full *swaraj* for its aim has been accompanied by agitation as vigorous for the expansion of Hinduism by *suddhi* or purification and re-conversion on the one hand, and for closing the ranks of the Hindu community by removing untouchability on the other. Unfortunately these religious and social reform movements have been carried on by Hindu nationalists regardless of reactions and consequences that might weaken the nascent spirit of nationalism. The agitation for the expansion and consolidation of Hinduism has alarmed the non-Hindus, particularly the Musalmans, and the bitter attacks on the orthodox section of the caste Hindus for observing untouchability have destroyed the spirit of charity and toleration that characterised the relations between the touchables and the untouchables from time immemorial. On the top of it all, has come the declaration by the mighty leader of the untouchables that he would abjure Hinduism with his followers and adopt some other religion. This declaration has greatly alarmed the Hindu nationalists of all shades. The ties that bind the untouchables to Hinduism and the possibility of their conversion to Christianity or Islam or Buddhism *en masse* deserves serious consideration.

Hinduism, in a narrower sense, includes three different creeds: Vaishnavism, Saivism and Saktism. Evidence furnished by the sacred books of the Hindus indicate that these religions probably orginated among autonomous communities living outside the pale of Brahmanism who formed the nucleus of the untouchables. The code of Manu forms a landmark in the history of Indian religions. It is mainly concerned with the duties of the Brahmans, the other two twice-born castes (Kshatriyas and Vaisyas) and the Sudras. The study of the Vedas and the performance of Vedic sacrifices are enjoined for men of twice-born castes, and then "having studied the Vedas in accordance with the rule, having begot sons according to the sacred law, and having offered sacrifices according to his ability, he may direct his mind to (the attainment of) final liberation." For seeking final liberation one is required to leave his house and wander as a mendicant meditating and concentrating his mind on Brahma. Manu does not enjoin the sectarian worship of Vishnu, Siva or Sakti as the Supreme Being. It is stated by Medhatithi, the author of the oldest and the most authoritative commentary on the code of Manu (II.6),

"Thus all the alien (*vahya*) sects like the Bhojakas, Pancharatrikas (Vaishnavas), Nirgranthas (Jaina), Anarthavadas, Pasupatas (Saivas) and others hold that the great men and particular deities who are the authors of their creeds directly perceived the truths underlying them, and think *dharma* (religion) did not originate from the Vedas."*

Modern historians of Indian religions who start with the assumption that India has given birth to only one advanced civilization, the Aryan Vedic Brahmanic civilization, do not admit that there could be any advanced religion in India that was *vahya*, alien, or *Veda-vahya*, non-Vedic, in the strict sense of the term. But the genuine Indian tradition is against such assumption, and recent archaeological discoveries lend support to the tradition. Kumarila, the author of an elaborate sub-commentary on Sabara's commentary on the *Mimamsa Sutras*, who flourished in the seventh century A.D., writes in his *Tantravartika:*

"These *Smritis* (codes) that are not honoured by those who know the Vedas, are: the compilation of certain texts relating to *dharma* and *adharma*, by *Sakya*, and the propounders of the systems of *Sankhya, Yoga, Pancharatra, Pasupata* and the like, all of which have in them a mixture of the Veda, and hidden under a thin cloak of righteousness . . . . quite unconnected with the Veda." *

The views of Kumarila and Medhatithi carry as much weight with the orthodox as the words of the ancient Rishis. The *Sankhya* and the *Yoga* systems are now classed with two systems of *Mimamsa*, the *Purva-Mimamsa* and the *Uttara-Mimamsa* (Vedanta), as orthodox systems of philosophy. These philosophico-

* एवं सर्व्व एव वाह्या भोजक-पाञ्चरात्रिक-निर्ग्रन्थानर्थवाद-पाशुपत प्रभृत्य स्वसिद्धान्तानां प्रणेतॄन् पुरुषातिशयान् देवताविशेषांश्च प्रत्यक्षतदर्थदर्शिनो ऽभ्युपयन्ति, न वेदमूलमपि धर्म्ममभिमन्यन्ते ।

religious systems are the works of great thinkers and throw little light on the religious beliefs of the common people. The systems founded by the Sakya saint Gautama or Buddhism and the Jaina saint Mahavira or Jainism mark revolts from within the fold of Vedism, and are openly hostile to the teachings of the Vedas. But Pancharatra or Vaishnavism, Pasupata or Saivism, and, along with these, Saktism, stand on a different footing. They rely on two-fold scriptural basis: directly revealed texts known as the *Agamas* and the *Tantras*, and the *Mahabharata* and the Puranas that profess to derive their authority from the Vedas, and like the *Dharmasastras* of Manu, Yajnavalkya and other Rishis are classed as Brahmanic Smritis or codes. Though thus indirectly affiliated to the Vedas, there are evidences to show that Vaishnavism, Saivism and Saktism that constitute modern Hinduism are non-Vedic at base. These evidences are found in texts called Nibandhas or digests either in the form of commentaries on one or other of the Dharmasastras, or as independent compilations. According to Indian scholastic tradition texts that have such commentaries, and extracts from other texts that are found in such compilations, only are genuine and authoritative. Raja Rammohan Roy who is not only the pioneer of religious and social reform of modern India but was also a profound Pandit writes in the *Brahmanical Magazine*, No. 2:

"But it is particularly to be noticed, that there is no end of the Tuntrus (Tantras). In the same manner the Muhapoorans (Mahapuranas), Poorans (Puranas), Oopupurans (Upopuranas), Ramayana &c., are very numerous: on this account an excellent rule from the first has been this, that those Poorans and Tuntrus which have commentaries, and those parts which have been quoted by acknowledged expounders, are received for evidence; otherwise a sentence quoted on the mere authority of the Poorans and Tuntrus is not considered evidence. Those numerous Poorans and Tuntrus which have no commentary and are not quoted by any established expounder may probably be of recent composition." *

Two of the writers who are called "acknowledged" or "established" expounders of the sacred books by Raja Rammohan Roy, *viz.*, Aparaditya or Apararka the author of an elaborate commentary on the *Yajnavalkyasmriti* called the *Apararka* (twelfth century A.D.), and Mitramisra, the author of a voluminous digest called the *Vinamitrodaya* (teenth century A.D.) fully discuss the que how far the sacred books of the non- religions like Vaishnavism and Saivism authoritative.

Apararka opens the discussion by these stanzas attributed to Vyasa (the author of the Mahabharata and Puranas):

"Those who want pure *dharma* not seek any other (source) than the Ved (the Vedas are) the pure source of *dh* Therefore the *dharma* that is derived fro Vedas is the highest; the *dharma* taught Puranas and other texts is inferior." *

Apararka is an orthodox champion Vedic rites. The Vedas are believed authorless, self-existent, eternal (*apaurush* the Buddhist and Jaina texts have authors; and Vaishnava, Saiva and *Agamas* and *Tantras* have divine being their authors. After discussing the rel texts Apararka concludes:

"Even there (in the Pancharatra Pasupata texts) what is (written or has said) by an author should not only be not upon, but lacks value as evidence and s be rejected. Therefore teachers said, texts that have authors should not be follo that should be known as lacking auth because that is the creation of the intelle a male.' Further discussion is unnecessar

Mitramisra, who wrote nearly five hun years after Apararka, takes a different atti After reproducing a stanza attributed to Yajnavalkya he writes:

"Here the statement made by Apar that (in the stanza) beginning '*Sankhya*, *Pancharatra*' and (ending with) 'should n opposed by arguments' denotes that systems are beyond criticism, but not author

is not an acceptable opinion because it is in the stanza that they are very authorita-" *

But the evidences relied on by Apararka not be flouted. Therefore, to effect a compromise, Mitramisra quotes this stanza from *Vayusamhita*:

"The Saiva scriptures are divided into two sses, the Vedic and the non-Vedic; the Vedic ss contains the essence of the Vedas, and the er class is independent." †

Mitramisra, in order to prove that there are o two classes of the *Pancharatra* texts, dic and non-Vedic, writes:

"It is stated in the *Kurmapurana*, Kapala, ncharatra, Yamala, Bama, Arhata and similar her systems are for misleading people. Here e misleading character is attributed to the n-Vedic Pancharatra. Because in the begin-ng of the passage of the *Kurmapurana* stems opposed to the Veda only (including e *Pancharatra*) are referred to thus; "Those verse scriptures opposed to the Vedas and the riti (Brahmanic codes) that are found in the rld—following them in practice is due to orance." ‡

According to Ramanuja (commentary on e *Vedanta-sutra* II, 2,36) the Kapalas are a ss of Saivas. Yamala is the name of a class ntric texts, and Bama denotes the left-hand de of Tantric worship of the Mother Goddess hich involves the offering of wine and meat.

Mitramisra's anxiety to prove the existence the Vedic form of Vaishnavism and Saivism distinguished from non-Vedic forms referred in the earlier texts should be attributed to e fact that by the time when he wrote Vedic ligion had ceased to be a rival of the other o creeds and had been replaced by them.

The writers of authoritative digests have also quoted texts to show that the followers of the non-Vedic religions, whatever their caste, were treated as untouchables by the orthodox followers of the Vedic religion. Apararka quotes this stanza from an unnamed smriti:

"On looking at the Kapalikas, Pasupatas, Saivas with the Karukas (?) one should look at the sun, and on touching them should bathe."*

Madhava quotes these stanzas from a metrical digest called the *Chaturvimsatimata*:—

"One should plunge with his garment on touching the Buddhists, Pasupatas (Saivas), Jainas, Lokayatikas, Kapilas and twice-born men who do not perform their proper duties; on touching the Kapalikas he should perform the Pranayama (regulation of breath) in addition." †

Kapilas may be the followers of the Sankhya system, or it may be a misreading for Kapalas. Lokayatikas are the atheists who do not believe in life after death. Kapalikas are a class of Sakta ascetics. The Buddhists and the Jainas, as already stated, stand on a different footing from the Saivas, Vaishnavas and Saktas. The Saivas, Vaishnavas and Saktas recognize the authority of the Vedas and claim Vedic origins. Therefore the origin of these three religions should be sought elsewhere than within the Brahmanic fold where among the Kshatriyas jealous of the Brahmans originated Buddhism and Jainism. Buddhism, Jainism and Sankhya share a very important common element with the orthodox Brahmanic Vedanta, the doctrine that final liberation can be gained by supreme knowledge only. They are all branches of the path of knowledge. But Saivism and Vaishnavism are branches of the path of *bhakti* or loving devotion to a personal deity. Madhava quotes this stanza from the *Puranasara*:—

"Saiva, Vaishnava, Sakta, Saura, Vainayaka, Skanda are the six religious systems belonging to the path of *bhakti*." ‡

The worshipper of the sun god (Surya) as the Supreme Being is called Saura. Such an worshipper of Vinayaka (Ganesha) or Skanda (Karttikya) is called Vainayaka or Skanda respectively. These three sects no longer survive. Paths of knowledge and of *bhakti* indicate different initial mental outlook. Independent origin outside the pale of Vedism is also indicated by certain non-Vedic primitive elements in Saivism and Saktism.* Untouchables are called *antya*, living on the frontier, and *antyaja*, born among those who live on the frontier, in Sanskrit. This *anta* or frontier is the frontier of the orthodox Brahmanist community now represented by the caste Hindus. Historical interpretation of the texts quoted above points to the conclusion that most of the important elements of modern Hinduism originated outside the pale of orthodox Brahmanism among the *antyas* and the *antyajas*. In origin Hinduism is more a religion of the untouchables than of the touchables. This stanza attributed to Svayambhuva quoted by Apararka gives a vivid picture of the Brahmanist Hindu:—

"Inwardly a Saiva, outwardly a Kaula, and socially a Vaidika, extracting the essence (of all), one should appear as a coconut fruit." †

Worshipping the deity with the offering of meat and wine is a feature of the Kaula ritual. Vedic domestic ceremonies like marriage and funeral rites and the employment of Brahman as the officiating priest (*Purohita*) constitute the shell of Hinduism. There is little that is Vedic within the shell. Even the Vedanta or the supplement of the Veda has ceased to be the monopoly of the Brahman. But it is the shell of the coconut that refuses to break.

In a fit of disappointment, therefore, the leader of the untouchables proposes to advise his followers to abjure Hinduism and embrace some other religion *en masse*. Conversion in a mass even in a limited area is not known in the history of Christian Missions in India. But there is authentic record of such conversion to Islam in Bengal in the fourteenth century A.D. This event throws light on the condition under which conversion in a mass is possible in India.

Muhammad son of Abdullah, surnamed Ibn Battuta, a learned and pious native of Tangier in Morocco travelled in Be 1445-46 A.D., when Sultan Fakh (Mubarak Shah) was reigning at S (Saptagram) and Sultan (Alauddin) Ali was reigning at Lakshmanavati (Gaur) Battuta arrived "at the land of Bangal sea. He writes:

"The first city in Bengal that we e was Sudkawan, a large town on the co the great sea. Close by it the river Gan which the Hindus go on pilgrimage, an river Jun unite and discharge together in sea. They have a large fleet on the river which they make war on the inhabitants land of Laknawti (Lakshmanavati)."

Ibn Battuta states that at the time visit Sultan Fakhruddin resided at Sudk He then proceeds:

"I set out from Sudkawan for the tains of Kamaru, a month's journey from . . . . . My purpose in travelli these mountains was to meet a notable who lives there, namely, Shaykh Jalaludd Tabriz. At a distance of two days jo from his abode I was met by four of his des who told me that the Shaykh had said t darwishes who were with him, 'The tra from the West has come to you; go out to come him.' He had no knowledge wh about me, but this had been revealed to I went with them to the Shakyh and arriv his hermitage, situated outside the cave. T is no cultivated land here, but the inhabi of the country, both Muslim and infidel, to visit him, bringing gifts and presents, the darwishes and the travellers live on offerings. The Shaykh however limits hi to a single cow, with whose milk he break fast every ten days. It was by his lab that the people of these mountains became verted to Islam and that was the reason his settling amongst them." *

Speaking of his return journey from hermitage of Shaykh Jalaluddin Ibn Ba writes:

"When I had bidden farewell to Sh Jalaluddin I journeyed to Habanq an exceedi large and beautiful city, traversed by the which descends from the Kamru mount This river is called the Blue River, and is by travellers to Bengal and Laknawti. people are infidels under Muslim rule, who mulcted of half their crops and pay taxes and above that. We travelled down the for fifteen days between villages and orch

* Primitive elements of Saktism, offering to the Mother Goddess wine and meat and other Tantric magical rites, are well-known. For the primitive elements of Saivism see Ramanuja's commentary in the Vedanta-Sutras, II, 2, 36.

† अन्तः शैवं बहिः कौलं लोकाचारे तु वैदिकम् ।

just as if we were going through a bazaar . . . . . After fifteen days' sailing down the river, as we have related, we reached the city of Sunurkawan (Sonargaon), where we found a junk on the point of sailing for the land of Java (Sumatra), which is a journey of forty days from there, so we embarked on it." *

Before we can accurately determine in which part of Bengal conversion of Hindus to Islam on such a large scale took place under the influence Shaykh Jalaluddin Tabrizi it is necessary to discuss the confusing geographical data furnished by Ibn Battuta. In those days Kamru or Kamarupa was bounded on the west by the river Karatoya and included the Rangpur and Jalpaiguri Districts in Northern Bengal (Rajshahi division) and the Brahmaputra valley in Assam. Yule identifies Sudkawan with Chittagong and considers Sylhet as the sphere of Shaykh Jalaluddin Tabrizi's missionary activities. Local tradition recognizes Shah Jalal as the conqueror of Sylhet and an old mosque on his tomb near the Sylhet town is a place of pilgrimage. † But remains of monuments erected on the *astanas* or places of residence of Shah Jalal are also found at Pandua in the Maldah district in the Rajshahi Division in Bengal. In the inscriptions on the monuments and in *Riyazus-Salatin* the saint's full name is given as Shah Jalaluddin of Tabriz. ‡ So there can be no doubt that the Shah Jalal of Sylhet and Pandua is Shaykh Jalaluddin of Tabriz whom Ibn Battuta met in a hermitage (cave) in Kamarupa. So far as we know no *astana* of Shah Jalaluddin has yet been found in Kamarupa proper. Space will not permit us to discuss the geographical data of Ibn Battuta more fully. But Cordier's identification of Ibn Battuta's Sudkawan with Satgaon (Saptagrama) on the Ganges (in the Hughli District) appears to me more reasonable than Yule's Chittagong, and Ibn Battuta probably met the saint somewhere in Northern Bengal at the foot of the Himalayas. Muhammedans are as numerous in Sylhet as in Northern Bengal, and this number should be attributed to conversion *en masse* sometime in the past. Ibn Battuta's testimony warrants us to believe that such conversion took place in the first half of the fourteenth century under the influence of Shaykh Jalaluddin of Tabriz. Ibn Battuta further writes about the saint:

"This (Shaykh Jalaluddin) was one of the most eminent of saints, and one of the most singular of men, who had achieved most worthy deeds, and wrought miracles of great note. He was (when I saw him) a very old man, and told me he had seen the Khalif Mostasim Billah the Abbasid at Baghdad, and was in that city at the time of his murder (in A.D. 1258). At a later date I heard from the Shaykh's disciples of his death at the age of one hundred and fifty years. I was told that he had fasted for some forty years, breaking his fast only at intervals of ten days, and this only with the milk of the cow that he kept. He used also to remain on his legs all night." *

It was the fame of Shaykh Jalaluddin that attracted Ibn Battuta to Bengal. Landing at Sudkawan (Satgaon), Ibn Battuta did not visit the Sultan, but proceeded straight to the hermitage of the saint. The main shrine of the saint at Pandua is endowed with an estate called *Bais Hazari* held by a *Mutawalli* (trustee) out of which *fakirs* and travellers are still given meals throughout the year.

Conversion of Hindus to any other religion on a large scale is only possible under the influence of saints who can work miracles.

NOTES

Fifty years of the Indian National Congress

There may be men among the members of the Indian National Congress as also among outsiders who think that it has not achieved anything worth mention, or in any case its achievement has not been such that its members can celebrate the completion of its fiftieth year with rejoicings and demonstrations. We think otherwise.

It is true the main object of the Congress has not yet been gained. Neither *Purna Swaraj*—complete self-rule, including independence—nor even the "substance of independence," has yet been won. It may even be admitted that, in spite of or rather because of the efforts mainly of the Congress and to a lesser extent of the Liberal party, the future Government of India has been made even more autocratic than now. But all this does not mean that failure is writ large on the forehead of the Congress.

There is no reason to be despondent because self-rule has not been won by fifty years' struggle. It is after some seven or eight centuries of subjection that the greater part of Ireland has won the substance of self-rule. Before she became one and free in the last century Italy was divided and a subject country wholly or in part for fourteen centuries. Both in Ireland and in Italy a united struggle for freedom was easier than in India for a good many reasons. Ireland and Italy have each practically one language, India has a good many. Practically one religion prevails in Ireland and in Italy, whereas there are many religions in India. The inhabitants of neither Ireland nor Italy consist of various races and castes, as in India. In addition to these numerous divisions, India is divided into the two main divisions of the Indian States, numbering many hundreds, and British India—the latter again be divided into many provinces. For these reas a combined struggle for freedom is very diffic in India. That Congress has neverthel succeeded in bringing representative men of Indian races, religious communities, cas groups, linguistic groups, economic classes a other sections on one common platform is mean achievement. All sections have not, is true, responded to its appeal for co-operati with equal zeal and alacrity. But that because they have not made equal education progress and do not occupy the same econom or social stratum. Moreover, persistent, co tinuous and steady efforts have been made keep some sections of the people away from t Congress and wean away those who ha already joined it, by appealing to and promoti their narrow communal, class or caste interest

The political movement in India h acquired considerable momentum because the activities of the Congress. There has bee it is true, a lull for some time past. But mo probably it is only the lull before a period renewed activity.

We wrote in *The Modern Review* f October, 1920:

> "The greatest significance which attaches to t adoption of a programme of non-co-operation by t Congress is the change in the mentality of the peop which it definitely indicates, though it is neither sudden nor an entirely new change. After the Par tion of Bengal there was such a change, but it w confined for the most part to the Bengalis. Befor and after that period there was the resignation about thirty municipal commissioners of Calcutta a a similar attitude of many municipal commissione in the U. P. after the passing into law of th Jahangirabad amendment. The change that has no taken place has affected all the provinces. Speakin generally, the mental attitude of the people ha hitherto been one of dependence on the sense of justic and generosity of the British people for the attainme of political freedom. That is no longer the prevalen

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

attitude. The Indian people now want to win their right to freedom by their own strength. It is evident that a section of them would have resorted to physical force, if they had arms and if they had not been kept under control by wiser heads. So the choice has fallen on the adoption of non-violent methods. The programme adopted may or may not be effective; but what are most noteworthy are the revolt from previous methods and the confidence of the people in their own strength."

The changed mental attitude is that which is indicated in the question:

Hereditary bondsmen, know ye not,
Themselves must strike the blow who would be free?

Only the blow, intended to be struck by the Non-co-operators, was to be non-violent.

The changed mental attitude of self-reliance was a great achievement. It is true, civil disobedience is in abeyance for an indefinite period. But there has not been any return to that subservience which is officially misnamed co-operation. No true Nationalist, whether Congressman, Liberal, or known by any other name, is for such so-called co-operation.

Another achievement of the Congress is that there has been some political awakening among even the illiterate masses of the people, however small may be the number of the politically conscious among them.

That thousands of people have been ready to fearlessly face all risks and to make the utmost sacrifice in the cause of the country, that many of them have actually made the greatest sacrifice and undergone great sufferings and privations with great courage—is another achievement of the Congress.

That girls and women, whose lives were spent for the most part in the seclusion of their homes and many of whom had little or no book learning, came out in the open, bore the "mild lathi charges" of the police and went to jail—that they were inspired to such heroism was a very significant achievement.

That the British people in their Parliament have had to pass an Act in 1935 to make the Government of India as autocratic as may be necessary to frustrate the endeavour of the people of India to win swaraj, shows the strength of the freedom movement.

That the "depressed classes" and the labouring population have become self-conscious, is not a little due to the Congress movement. It is difficult to prophesy whether the leaders of the Congress will be able to prevent schism on their part from the main body. But if they can keep capital and labour, landlord and peasant, "high-caste" and "depressed-caste" people and the different religious communities under a common flag, for carrying on a combined struggle for the welfare of the common motherland, that will be a proof of their patriotism, wisdom and tact. What part in that struggle is to be assigned to and played by the people of the Indian States, is a problem which the leaders must face with courage, faith, hope, imagination, sympathy, and wisdom. It is not claimed that during its past life of half a century the Congress has not made any mistakes as to choice of men or methods. No human organization is or can be infallible. What is claimed and claimed rightly, is that the Congress has throughout stood for and striven for the whole nation—not for any class, section or community more than for any other.

Ahrar Leaders and Congress Jubilee Celebrations

Nine Ahrar leaders of the Panjab, including the President and the Secretary of the Majlis-i-Ahrar-i-Islam, have issued a statement in relation to the Congress Jubilee celebrations, in the course of which they say:

"In some matters we have had differences with the Congress, but, just as we bravely and confidently expressed our views when we differed, in the same way it is our duty to leave no stone unturned to make the Jubilee celebrations a success. The sacrifices made by the Congress in the struggle for freedom and the excellent share contributed by the Muslims all over India towards those sacrifices is very well known.

"The Jubilee is the occasion for the demonstration of India's love of freedom, and everyone who loves freedom must partake in the Jubilee celebrations. If Muslims hesitate in participating in the celebrations, the whole world will have the impression that the Muslims of India do not like to see their country free.

"Our party has never been a mere spectator in Congress's struggle for freedom, but on the other hand most of our workers joined in the struggle and made every sacrifice.

"We appeal to all communities in general and the Muslims in particular to join in the celebrations of the Golden Jubilee of the biggest organization in India."

The signatories to the above statement are:

Maulana Habib-ul-Rehman, President, Majlis-i-Ahrar-i-Islam-i-Hindi, Lahore and Maulanas Ghulam Ghaus, Mohammad Daud Ghaznavi, Ch. Afzal Haq, M.L.C., Maulvi Mazhar Ali Azhar, M.L.C., Maulvi Nur-ud-Din, Lyallpur, Mr. Abdul Aziz, Begowal, Maulana Abdul Reham Ghazi and Mr. Hisam-ud-Din of Amritsar.

Muslim leaders in other provinces also should appeal to their co-religionists to join not only in the celebrations but in other Congress activities as well.

"Covering the Track of Centuries in a Year"

In our first note in this number we have pointed out how the freedom movement had to be carried on for centuries in Italy and Ireland before the goal could be reached or almost reached. In doing so, our object was not to say that we also must struggle for centuries. We only want that our people should not lose heart or hope. We must take heart from the example of other countries in Europe which have become free in the current twentieth century after a briefer struggle than ours. We, too, should strive so sincerely, so enthusiastically and with such wisdom as to be able to cover the track of centuries in a decade at the longest.

Many British politicians, including some Governors-General of India, have told us that Rome was not built in a day, that we must advance step by step, and so forth and so on. But there was also Mr. Lloyd George speaking at the American Luncheon Club six weeks after Russia ceased to be an autocracy and became a democracy, and saying:

> "There are times in history when this world spins so leisurely along its destined course that it seems for centuries to be at a standstill. There are also times when it rushes along at a giddy pace covering the track of centuries in a year. These are such times. Six weeks ago Russia was an autocracy. She is now one of the most advanced democracies in the world." (*Cheers.*)

Britishers are best pleased if the world in India spins as leisurely as is imaginable. Perhaps they would be even better pleased if the world in India moved backward. They have actually succeeded, by the new Government of India Act, in making India's constitution march backwards.

Question of Releasing Indian Political Prisoners in Parliament

Moving in the House of Commons the second reading of the Government of India Reprinting Bill,

> Mr. Butler said that no alteration of real substance or principle was involved. He explained the alteration with reference to Baluchistan and said that no point of controversy need arise. He hoped that the members would regard this first discussion of Indian affairs in the new Parliament as a happy harbinger of future dealings of Indian Affairs.

"Happy harbinger" indeed! We have no leisure to ransack a dictionary of the English language to find out the exact words for characterizing this observation of Mr. Butler's.

> Mr. Morgan Jones intimated that the Labourites did not object to the principle of the Bill, but reserved the right to raise at later stages a few matters, w seemed to make substantial changes.
>
> Mr. Maxton wished to raise questions conn with the treatment of Indians in India, but Deputy Speaker, Mr. Bourne, replied that questions could not arise on the Bill.
>
> Mr. Maxton replied that he did not wish no re-open the whole question, but referring Mr. Butler's words, "happy harbinger," he urged the question of treatment of political prisoners sh be approached more generously.
>
> Mr. Bourne replied that such a question was affected by whether the present Bill was passe not.
>
> Mr. Maxton argued that if the Government entitled to make certain substantive changes, he entitled to discuss what changes were desirable. said that the treatment of political prisoners was a more substantial point than the substitution of Governor-General for the Chief Commissioner Baluchistan.
>
> Mr. Maxton was ruled out of order; like Miss Wilkinson, who protested against the att that nothing could be done with regard to poli prisoners.
>
> Miss Wilkinson insisted that the Government sh not be allowed to alter a comma in the Governm of India Act and suggested the examining of Bill clause by clause so as to make its pas very difficult. "I protest against the passage of Bill, while thousands of Indians are held polit prisoners without any charge being preferred."
>
> Mr. Thurtle requested the Government to sug to the Government of India that the Government India should, as a friendly gesture to organi political opinion in India, mark the occasion of fiftieth anniversary of the Indian National Cong by granting amnesty to political prisoners wh cases appear suitable for such action.
>
> Mr. Butler replied he was unable to add to reply given on December 9.
>
> Mr. Thurtle asked, "Is not the Governm interested in creating a better atmosphere?"
>
> Mr. Butler replied the Government is interested creating and has created a better atmosphere. It m leave this decision to the Viceroy.—*Reuter.*

Mr. Butler shelved the question by leavi it to the Viceroy. Similarly, if the Gover ment of India were heckled, the question wou be left to the decision of the Governor of Beng and so on and so forth.

Separation of Burma Forced on unwilling Burmans

On the same occasion,

> Mr. Molaren, Labourite, asked why India a Burma are to be divided and said that the Bill w being forced on the unwilling people of Burma, w had never asked for this constitution.
>
> Mr. Butler replied that he was unable at pres to discuss the separation of Burma, but was qu ready at the proper time to debate on the vari points raised.

Mr. Butler was "quite ready," because h knew that, whatever the character of his fac

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

d arguments, his party would support him th its standing majority.

Scrapping Prisons and Gallows": And nternment Camps?

Sir Douglas Young, Chief Justice of the anjab High Court, replying to the toast proosed by His Excellency the Governor at the nnual dinner of the Panjab Boy Scouts, said st month:

> The spirit which in happier circumstances produces Empire builders, explorers, Governors or great Missionaries, makes dacoits of some Punjabis. We revere and honour the one group and hang and imprison the other.

Proceeding, he observed:

> I never send a man to the gallows in this Province without having an uncomfortable feeling that there, but for the grace of God, goes the Chief Justice. (Cheers.) In spite of the gallows and the jail we continue to hang and imprison the same numbers every year—I believe the numbers increase.
>
> Further South in India where men are less virile and poorer in physique, violent crime is comparatively rare. It comes to this that the finer the men the more we destroy.
>
> Punishment can never stop violent crime when it is natural in origin. Discipline, education and healthy sports can and will, and that is again where the Scout Movement comes in: Train a Punjabi boy as a Boy Scout and we find that instead of murdering and burying his fellows he digs their dead bodies out of the ruins of Quetta. I firmly believe that better results might even be achieved if the prisons and gallows were scrapped in the town and in their place trained enthusiastic scout-masters and Boys' Clubs were installed in the villages. It would also be very much cheaper. Perhaps we might invite His Excellency the Chief Scout to suggest consideration for this point to His Excellency the Governor (Cheers). Brayne tells me that in Norwich the local police started a club for boys. Some 3,000 were taken out of the streets and given healthy games and training all supervised by the police. The result was a large diminution of crime. Is it too much to hope that in this Province the Police Stations may become centres of light in every village even if we cannot yet convert them into boys' clubs.

One is curious to know what remedy the Panjab Chief Justice would suggest for the cure of terrorism in Bengal and whether he would prescribe Boy-scouting as a substitute for internment without trial on mere suspicion.

"The Bengal Government's Standard of Morality"

The official Report on the Administration of Bengal for the year 1933-34 contains the following passage on page V, part I:

> During the third week of January, Jawaharlal Nehru paid a short visit to Calcutta, and after consultation with leaders of most of the subversive movements in Bengal, prescribed a militant programme based mainly on his own extreme Socialist views and designed primarily to attract the peasant masses. This agitation was to be carried on under the guise of anti-untouchability activities and with money collected for Harijan work. He was eventually prosecuted before the Chief Presidency Magistrate in respect of three violent statements. The Pandit did not defend himself beyond attempting to deliver a further seditious speech from the dock and was sentenced to two years' simple imprisonment on the 16th February.

A friend having drawn Pandit Jawaharlal Nehru's attention to it, the Pandit observes in the course of a statement meant for the Press:

> "This paragraph contains a number of errors and insinuation, but realizing as I do that the Bengal Government and I are as poles apart in regard to ideas and outlook, it would serve little purpose for me to argue these matters with them. But there is one specific statement in it that I was attempting to carry on an agitation under the false cloak of anti-untouchability activities, and with money collected for Harijan work, which I cannot, in fairness to my colleagues in the Bengal Harijan Seva Sangh and myself, allow to pass uncontradicted. This statement is an absolute falsehood, which could not have had the shadow of a foundation. Whatever else I might be guilty of, I hope that I have never indulged in duplicity in my work. A definite and unequivocal statement having been made and contradicted by me, it is desirable, in the interests of public morals, for them either to justify it or to withdraw it publicly, and express regret for it. I do not know what the Bengal Government's standard of morality is, but I do know that there are certain things which are not done by decent people, and if an error is committed an apology is forthcoming. An error in my case may not matter much, for the opinions that my countrymen form of me are not based on the Bengal Government's views on the subject. But a Government has the tremendous power of the State's apparatus of coercion behind it, and its errors are likely to affect the lives and liberties of a vast number of people."

Mr. Nehru's contradiction has been published in England and *The Manchester Guardian* has asked the Bengal Government either to prove the allegation made in the Report or withdraw it.

> In the House of Commons Mr. Anderson and Miss Ellen Wilkinson drew attention to the repudiation by Pandit Jawaharlal Nehru of the allegations against him made in the Bengal Government Administration report. Mr. Butler replied that Lord Zetland was asking for a report from the Government of India.

The last paragraph in the "Introduction" to the Report runs as follows:

> "The Report is published under the authority and with the approval of the Government of Bengal, but this approval does not necessarily extend to every particular expression of opinion."

Taking advantage of the latter part of this sentence the Government of Bengal may say that their approval does not extend to the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

allegation made against the Pandit. But will they do it? Or will they stand up for the prestige of the nameless writer or writers of the Report?

Allegation Against Mr. Subhas Chandra Bose

In replying to a question in the British House of Commons Mr. Butler, Under-Secretary of State for India, said that the detention of Mr. Subhas Chandra Bose was due to his connection with revolutionary activities. This is an allegation which has never been proved, as Mr. Subhas Chandra Bose was never brought to trial on this charge—and never will be, if one may judge from the Government's not taking up the challenge thrown out by his elder brother Mr. Sarat Chandra Bose against whom a similar allegation had been made. Mr. Sarat Chandra Bose challenged the Government to bring him to trial. The result was that, after the lapse of a decent interval, he was unconditionally released.

Mr. Butler and others before him who have made similar allegations know that they cannot be sued for saying such things. That gives them their courage, if courage it can be called.

Renewal of Vow of Self-immolation

Mr. Subhas Chandra Bose has sent the following message in connection with the Congress Golden Jubilee celebrations:

"The Indian National Congress now completes fifty years of its existence. During this period it has grown from a small group into a country-wide organization with ramifications from the Himalayas to Cape Comorin. It is the only organization which stands for the Indian people as a whole. It is the unique embodiment of all our political hopes and aspirations and is the central organ of our struggle for political emancipation.

"As we look to the past and the future we are filled with pride and hope, pride, because of the nation's past achievements and hope, because of the confidence in our ultimate victory. With feelings of pride and hope let us participate in the Jubilee celebrations of the Congress.

"On this auspicious occasion let us pay our respectful homage to our national heroes who made the Congress what it is today. Let us pray for added strength to continue their unfinished task till the victory is achieved and last but not the least, let us devise means and measures to rectify our past errors and ensure our future success.

"The Indian National Congress is not a property: its registered members only are the property of the Indian Nation. To the entire nation, I therefore, appeal to make the Jubilee celebration a success worthy of themselves and their country. Let us all renew on this memorable occasion our vow of self-immolation at the altar of India's Freedom."

Pandit Jawaharlal Nehru's Greetings

In the course of the message of gre to the Indian nation which Pandit Jawa Nehru has sent from Germany, he writes:

"Fifty years are not much in the life of a a mere flash in the millennia of India's long Yet fifty years are a long period in a huma and within their span can be crowded a wo endeavour and achievement. Those fifty years seen the end of an era passing of the world mighty transformation everywhere. How hav fared in this period? Have we moved with the rushing river of life and adapted ourselves t changing conditions, or do we remain in black that move not and change little, entangled in that paralyse us and benumb our mind and The real change and growth is of the spiri the mind, the rest merely follows it.

"Fifty years of the Congress tell us wher were and what we are. Read the reports o early Congress and the astounding and hardly prehensible new mentality that they now ex And then go through its later tribulations and flicts, its splits and divisions, when those who in the weeds and black waters wanted to h back but could not do so.

"With much travail it emerged to freer waters much to its own surprise found itself younger stronger than ever. A time came when under inspiration of a great leader it tried to brea shackles which still hold it back and hurled forward with the pride and confidence of youth

"There were greater difficulties and obstacles it had expected and many a time it stumbled staggered but ever it kept its eyes on the Sta Freedom that beckoned. It became a symbo millions of their hearts' desire and they gave willing allegiance. As the struggle became fie and difficulties greater, ever it kept in the fore and in its darkest hours never gave up hope.

What of us, who have grown up under its w and caught sometimes a reflection of its greatn We are of it, how can we think ourselves as from it? What we have done has been under inspiration; our achievements have not been achievements of individuals, but of a vast multi spread out all over our great country and b together by the invisible link of the Congress. have felt strong and brave because of that bond we have greatly dared because of it.

On the Jubilee occasion of the Congress I sh like to send from a far country my greetings to t innumerable links that make up the strong c of the Congress, to comrades who have many a ga struggle to their credit and many a another to in the future, to innumerable men and women India who have fought a brave fight for fredom un the Congress flag. In the past, Congress has s for full freedom and it has widened its horizon looked to the masses. May it never falter or fo its mission and may it become even more than has been the real representative and the voice millions who toil and suffer in our country and s to remove all shackles, political, social and econo that prevent them from rising to the height of th destiny!"

Bengal Government's Retrograde Education Policy Condemned

The Government of Bengal's new education policy enunciated in the name of the Indian minister but really dictated by those who can dictate, has met with strong opposition. The Bengal Education League has already held two public meetings to criticise it and to formulate its own constructive plan. The Calcutta University Syndicate and Senate have also criticised the scheme published under the authority of the minister and made their own constructive suggestions. At the second public meeting held in Calcutta under the auspices of the Bengal Education League on the 19th December last many leading educationalists and others were present. Prominent among those noticed were Sir Nilratan Sircar, Principal Heramba Chandra Maitra, Mr. J. N. Basu, Mr. Hirendranath Datta, Professor Nripendra Chandra Banerji, Mr. Sudhir Kumar Lahiri, and Dr. Pramathanath Banerji (in the Chair). Besides the President, Mr. J. N. Basu, Professor Nripendra Chandra Banerji, Mr. Ramananda Chatterjee, Mr. Hirendranath Datta, Sir Nilratan Sircar, and others made speeches strongly condemning the Government scheme.

The meeting passed the following resolution:

This meeting is of opinion that most of the proposals contained in the Resolution of the Government of Bengal on the re-organization of school education are of a very retrograde character and calculated to prove detrimental to the educational interests of the country. The meeting, therefore, urges that the scheme be abandoned, and the following measures be adopted by the Government in order gradually to place the educational system on a sounder and more satisfactory basis:—

1. Free and compulsory primary education should be introduced within a period of five years. In the meantime facilities for education should be expanded as widely as possible, and with this object in view a large number of new primary schools should be established in unschooled areas, but no existing schools, however small, should be abolished.

2. Money spent on primary education should be immediately doubled and progressively increased year by year.

3. Substantial and increased grants should be made to the existing primary schools so as to enable them to enhance their efficiency by the appointment of better-paid and more qualified teachers and the provision of proper equipment.

4. All institutions imparting elementary instruction and supported mainly out of public funds, local or provincial, should be of an entirely non-sectarian and non-denominational character and should be known simply as "Primary Schools" and not as "Maktabs" or "Tols." But if and where the different religious communities want separate denominational schools for themselves, each such community may conduct its schools at its own expense under any denominational name it may choose to adopt, receiving grants-in-aid from public funds on an equitable basis, *e.g.*, the number of pupils taught, the number of teachers employed, etc.

5. Model schools should be established in the more important villages so that their influence may help to improve the efficiency of other schools in the neighbourhood.

6. Special care should be taken in the matter of framing curricula and of selecting text-books which should be suitable to the capacities of the learners, and the methods of teaching should be such as may be calculated to draw out the best in the pupils and encourage noble sentiments and correct ideas regarding social relations and activities.

7. Education through books should be supplemented by instruction of a practical character in conformity with environmental conditions, and such media as public libraries, the lantern, the cinema and the radio should be utilised for the purpose.

8. Arrangements should be made for imparting moral instruction in all schools of general type on non-denominational lines.

9. A number of vocational schools should be established in every Sub-division in which suitable training should be provided in agriculture, dairy farming, fruit culture, kitchen gardening and the various arts and crafts.

10. Instead of attempting to resuscitate Middle Vernacular schools which have died a natural death, Middle English Schools should be placed on a sounder basis; the curricula of such schools should include optional subjects which may be taken up by the students according to their capacities and requirements.

11. Better arrangements should be made for the sufficient training of teachers really qualified and inspectors with a broad and comprehensive social and moral outlook.

12. No person with inadequate qualifications should be appointed as inspectors, and it should be recognized as the main duty of the inspectorate to guide and inspire the teachers in the matter of school instruction and the development of a healthy community life.

13. The control of secondary education should be vested in the University, which should work through a Board representative of the teachers, the guardians of the pupils, the Governing bodies of the schools and the general public and adequate sums should be placed at the disposal of this board so as to enable it to improve the efficiency of secondary schools.

14. A fully-equipped Technological Institute should be established in the province with the object of providing further training to the capable students who have completed their courses in the vocational schools.

15. Adequate steps should be taken to extend education among girls by providing, where necessary, separate schools for them and prescribing curricula suitable for Bengali homes.

16. Physical training should be made compulsory in all the stages of education.

Student Demonstrations in China

Japanese imperialists have learnt from their Western masters all the various methods and means of empire-building. In addition they are devising new methods and means. They have

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

placed on the throne of Manchuria a puppet emperor, who must dance to their tune. And they have now been trying to make northern China autonomous. Even if China were divided into really independent states, this sort of division must make that large country less powerful than if she could be organized into one free country. A so-called autonomous north China under Japanese leading strings must make China weaker still. So it is not surprising that there is unrest among large bodies of students in China. Youth in no country can submit to loss of freedom. One telegram relating to this state of things, dated Tientsin, December 19, runs thus :

> Three thousand students, including five hundred girls, demonstrated today in sympathy with the demonstration of the Peking students on Monday against the "Autonomy" regime. The demonstration was peaceful and there was no violence.
>
> The students paid a visit to the Mayor and forwarded five demands including the protection of the patriotic movements. The Japanese military officers protested against the demonstrations. The chief of the Chinese police is conferring with the College presidents for devising a method to avoid possible complications.

Treaty between China and Italy

According to a Hongkong telegram, dated December 20, a secret agreement has been signed between the Nanking Government and Italy. This sudden and astounding disclosure has come upon the various foreign embassies there like a bombshell. It is said that, according to the terms of the agreement, Italy has undertaken to reorganize the entire Chinese army, navy and airforce by the year 1939.

This reported secret agreement does not seem quite credible though it is not impossible. Japan is greatly interested in not allowing any Western power to have a finger in the Chinese pie, even to the extent of lending her money. Is it possible for any European power to conclude such an agreement with China without her near neighbour Japan having even an inkling of such an affair, considering that there must be an army of Japanese spies scattered all over China?

However, if such an agreement has actually been concluded, it cannot but give rise to complications between Italy and Japan. From before the outbreak of the Italo-Abyssinian War, Japan has been enjoying certain commercial concessions in Abyssinia and has been allowed to use an extensive area for cotton cultivation there. So, the prospect of Italy swallowing up Abyssinia must have already made her unfriendly at heart, though such unfriendliness may not have as yet manifested itself in any hostile action. The re secret agreement, if true, may precipitat hostile action.

After writing the above, we foun following two telegrams in the morning of the 22nd December :

> ROME, Dec
>
> A complete denial is given by the Foreig to a report circulated abroad that an agreem been reached between China and Italy for organization of the Chinese fighting forces b A Foreign Office spokesman declared that th never been any discussions with China thereon did not expect that there ever would be.—
>
> SHANGHAI, Dec
>
> Semi-official Chinese circles deny the above which they surmise has arisen from the nego interrupted by the Abyssinian war, for the es ment of a military aircraft factory in China Italian control. These negotiations followe arrival last year of an Italian air mission t and equip the Chinese air force, of which m the members have returned to Italy in consequ the war.—*Reuter.*

Fertilizing the Soil by Adding Molasse

Professor Dr. Nil Ratan Dhar, Preside the National Academy of Sciences, Allah delivered a very useful address last mon

Prof. Dr. Nil Ratan Dhár

its fifth annual meeting on "A New Metho Nitrogen Fixation and Conservation, Reclamation of Alkali Lands." He pointed that,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

It is well known that crop production in India is quite inefficient in comparison with the yield in other countries, as is evident from the following figures :

	RICE	
India	..	1,295 lbs. per acre.
Japan	..	3,040 „ „ „
Egypt	..	2,783 „ „ „
	SUGAR	
India	..	2,400 lbs. per acre.
Japan	..	3,340 „ „ „
Egypt	..	3,378 „ „ „
Java	..	11,988 „ „ „
Hawaii	..	18,799 „ „ „

The Professor said that this poor yield is mainly due to the deficiency of nitrogen in the Indian soil which contains only 0.04% nitrogen as against 0.1% present in the soil of European and other cold countries. It is gratifying to note that the Indian soil generally contains plenty of potash, lime, phosphate and other necessary plant food materials.

In order to improve the crop yield in India we must increase its nitrogen content. Unfortunately the Indian peasant is too poor to purchase artificial nitrogenous compounds imported from foreign countries as there is no nitrogen industry in this country.

It was next stated in the address that,

The researches of Prof. Dhar and his collaborators, notably Drs. C. C. Palit, Gopala Rao, A. K. Bhattacharya, Messrs S. P. Tandon, Atma Ram, N. N. Biswas, S. K. Mukerjee and E. V. Seshacharyulu, have definitely established that nitrogen is added to the soil by the application of molasses. The sugars present in the molasses combine with the oxygen of the air with the help of bacteria, sunlight, and substances like iron, manganese etc., which are always present in the soil. In this process of oxidation (combination of sugars with oxygen) large amounts of energy are set free and this energy is utilized for the combination of the nitrogen and oxygen of the air forming nitrates and ammonia which are excellent plant food materials, the free nitrogen of the air cannot serve as food for most of the plants. Molasses not only adds nitrogen to the soil but also increases its humus content and the beneficial effect lasts over two years.

Prof. Dhar and his colleagues have been able to increase the soil nitrogen by a hundred per cent on the addition of molasses. The crop yield has also been considerably increased in the molasses fields in comparison with the controls. Rice is highly benefited by the application of molasses, molassed land producing 14.5 maunds per acre as against 8.1 in the unmolassed field. The straw is also greater in the molassed than in the unmolassed field. Messrs Parry & Company of Madras, and the Government Shahjehanpur Farm have obtained an increased yield of 40% with molasses as manure in sugar cultivation. Prof. Dhar has made it amply clear that molasses must not be added to the growing crop, but should be added to the fields 2 to 3 months before the sowing of the crop. After the application of the molasses the soil should be ploughed 3 or 4 times before the sowing, watering the soil is just the same as in ordinary cultivation. Prof. Dhar and his collaborators have always found that the moisture content of the molassed field is greater than the unmolassed.

The addition of molasses to the soil produces another valuable result. It conserve soil nitrogen.

The results obtained by Prof. Dhar and his collaborators with the artificial fertilizer ammonium sulphate added to the soil with and without molasses show that the nitrogen of the molassed plots is always greater than that of the unmolassed ones. Hence molasses can act in the conservation of soil nitrogen. In tropical countries, a mixture of molasses and ammonium salt is a better fertilizer than ammonium salt alone.

The researches of Professor Dhar and his colleagues also show that for the reclamation of alkali soils molasses can be very usefully applied.

The results of Dr. Dhar and his collaborators show that molasses is a better reclaiming agent for alkaline land than either gypsum or powdered sulphur, as there is nitrogen loss from soils when these latter reclaiming agents are added to alkaline soils, whilst molasses adds nitrogen. The reclaiming effect of molasses is much quicker than that of gypsum or powdered sulphur.

It has been reported that four years are necessary for reclaiming alkaline lands on treatment with gypsum or powdered sulphur, but with molasses four to six months are quite adequate.

Alkaline lands have been successfully reclaimed in different parts of the United Provinces and in Mysore by the application of molasses, and good crops are growing in these reclaimed areas, where no vegetation ever grew.

Bengali Folk Art in London

Before a distinguished gathering of the India Society of London, an interesting lecture on the folk art of Bengal was recently delivered by Mr. Guru Saday Dutt, I.C.S. Mr. Laurence Binyon, the well-known literary figure and art-critic, occupied the chair. Mr. Dutt dealt mainly with what he described as the continuous survival of cultural expressions in living art traditions—song, dance, decorative work, cottage architecture, wood sculpture and painting. By a clever selection of lantern slides, he was able fully to illustrate his lecture and the audience highly appreciated the exquisite examples of Bengali domestic art, such as decorative work, mural painting, wood sculpture, etc., which he showed. The point that Mr. Dutt made was that the rural art of Bengal was something autochthonous, peculiar to the children of the soil, dating back to remote antiquity. It was the vital expression of the people of Bengal and no mere imitation of the art of Ajanta or Rajputana. In this Mr. Binyon agreed with the speaker. They were, as he pointed out, hitherto wrong in talking about Indian art "as if it were all one, just as they might talk of European art without realizing all the different growths in different soils and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

that they would not go far unless they studied first the arts of each region and then went on to see what they had in common with the other arts." Mr. Dutt then outlined the history of his own efforts in seeking the samples of rural art hidden away in remote corners of Bengal, culminating in the foundation of the Rural Heritage Preservation Society of Bengal in 1932. In concluding the meeting, Mr. Binyon congratulated Mr. Dutt on his attempts to awaken to fuller life arts that are still alive and rooted in the soil but had been neglected and largely forgotten and for thus being instrumental in bringing back to his own people "the sense of wholeness of life and the lost harmony of man with nature."

Kulapati Dr. James H. Cousins

James H. Cousins was born in Ireland, in 1873, and gained experience early in commerce and teaching. At 24 he removed to Dublin found his place as a fellow-worker with "A and W. B. Yeats as a pioneer of the I Literary and Dramatic Revival, to which contributed some of its earliest dramas an succession of books of poetry. In 1915 he c to India as a journalist, but soon returne teaching, and was for some time Principa Madanapalle College. From 1922 to 192 was Director of Studies of the Brahma-V Ashram at Adyar, Madras.

A year's professorship of poetry in T University, won him the first doctorate literature conferred by the Imperial Japa Ministry of Education on a foreigner. F 1928 to 1933, Dr. Cousins travelled in Eu and America lecturing on art and litera education, oriental culture and various asp of synthetical thought and life. For a year was visiting professor of poetry in The Col of the City of New York. America placed poetry as "among the major poetry of time," and brought out his life-work in volumes.

Dr. Cousins is known all over India as exponent of India's culture. He is back Madanapalle College as its Principal once m The South Indian Teacher's Union confer the title of KULAPATI on Dr. Cousins in year 1934. In the recent birthday celebrati of His Highness the Maharaja of Travanc the State presented him with the VEERA-SR KHALA and the PANDIT'S SHAWL in recog tion of his services to culture in the State.

KULAPATI DR. JAMES H. COUSINS, Principal of Madanapalle College, Madras Presidency, wearing the VEERA-SRINKHALA (gold bracelet of prowess with precious stones) and the PANDIT'S SHAWL (gold embroidered) with which he was invested by His Highness the Maharaja of Travancore during the recent birthday celebrations, in recognition of Dr. Cousins' services to culture in the State, particularly in organizing the recently opened State Gallery of Indian Painting. He is the first European to receive these honours

The Philosophical Congress

The eleventh session of the Philosoph Congress was held last month in Calcut Sir Manmatha Nath Mookerjee, Acting Ch Justice of Bengal, opened the Congress with thoughtful speech, which he concluded by obs ving :

> "For the distracted world of today, the philosoph particularly the orientals, have got an important c tribution to make. The East may be a negligi partner in the geographical dispensation of the Lea of Nations, but not so, as we believe, on the spiri side of it. The star has always risen in the E and "eastern lights," to use the happy phrase of of our leading thinkers, are being hailed from expected quarters. As representing the West point of view, Dr. Tung has truly remarked, "It the East that has taught another wide, more profo and a higher understanding through life." Truly, the East, philosophy has never served as an intellect pastime merely, but always in its classical sense a Way of Life—life being in ultimate analysis only effective commentary upon the theory. Such outlook upon life may not commend itself to all. B

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

it is there, as a silent preacher in the background, and greets us across the perspective of centuries. Therein consists the individuality of Indian thought and culture: and at this thought-exchange of the world it would be courting sheer bankruptcy if we were to undervalue our own thought-currency in order to secure an international credit."

The Rev. Dr. W. S. Urquhart, Principal, Scottish Church College, welcomed the delegates in the capacity of chairman of the reception committee. The Rev. Dr. A. G. Hogg, Principal of the Madras Christian College, was elected President and delivered a learned address.

Philosophers Discuss Democracy

At the second day's session of the Philosophical Congress in Calcutta there was an interesting discussion on the future of democracy.

Prof. D. N. Banerjee of the Dacca University, in the course of his speech, said:

> Democracy means nothing else than the rule of the whole people expressing their sovereign will by their votes. There may be occasional necessities for dictatorship when the safety of the State is at stake. But, the most serious objection against Absolutism is that it produces a most demoralising effect upon the Government. Freedom of thought, freedom of speech would be impossible in such a regime. But it is undeniable that it will be much easier for a democratic state to bring about a better distribution of wealth and to put a stop to the dehumanising process of the existing system than for any other form of state. Moreover, democracy promotes mental expansion and elevation of the average citizen more than any other form of state.

Prof. E. Asirvatham of the Lucknow University said:

> Democracy is not a mere form of Government. It is an order of society, an industrial condition as well as the moral and the spiritual principle. What it seeks to do is to reconcile the principle of equality with the fact of natural inequality. It attempts to bring into existence a social machinery which would make for the enrichment and expression of personality. The evils which we see in it are not inevitable. They can be cured by the people themselves by proper education, reflection and experience.

Prof. M. Venkatarangiya of the Andhra University said:

> It was in democracies alone that Government was carried on the basis of discussion, conference, and consultation and these resulted in power being conferred only on those that proved their capacity to exercise it in the interest of all.

Prof. H. Bhattacharyya of the Asutosh College, Prof. P. G. Dutta of Monghyr, Prof. Indra Sen of Delhi, Prof. R. N. Kaul of the Allahabad University, Prof. Euryyanarayan Sastri, Head of the Department of Philosophy, Madras University, Professors N. C. Mukherjee and N. B. Banerjee, Dr. D. M. Dutta of Patna and Mr. Lownde also took part in the discussion.

The Rev. Dr. A. G. Hogg, General President of the Session, in winding up the discussion, remarked:

> Good Government means self-government. It is to be seriously considered whether the voters who exercise their votes have any passion for some noble end. Merely by giving every one the right of vote will not further the larger interest of humanity if the right to vote in a democratic Government is not exercised for the realization of some noble cause. Tackling the problem from the religious side he remarked that complete self-mastery could only come from the margins of the individual in the divine will.

Prof. Vidhusekhara Sastri on Indian Philosophy

Professor Vidhusekhara Sastri, President of the section of Indian Philosophy, advocated co-operation between orthodox Sanskrit scholarship and modern scholarship.

> Such co-operation, he thought, might be facilitated by using the Sanskrit language, side by side with the English, as a medium of discussion in the Indian Philosophy section of the Philosophical Congress, and by urging young orthodox scholars to acquire a working knowledge of English. The Professor enlarged upon the necessity of translating into Sanskrit the important works of the Western Philosophers. He also pointed out that the two other foreign sources of Philosophic thought, *viz.*, the Chinese and the Tibetan, should be tapped with a view to enriching our own fund of knowledge.

Prof. Vidhusekhara Sastri

Prof. Sastri next proceeded to say a few words on Indian Philosophy.

> Indian Philosophy, he declared, was not merely an abstract or speculative science. It is intimately bound up with the problems of life and it has a supreme interest for men in that it shows the 'way to liberation.' Thus there exists no gulf between Philosophy and Religion in India. The two are harmoniously blended together.
>
> Prof. Sastri concluded by pointing out the great popular interest and appeal of Indian Philosophy. "The profound teachings of Philosophy," he said, "filter down to the masses through poems, tales, dramas, stories, legends, architecture, etc."

Tributes to Dr. Sir Brajendra Nath Seal

Eloquent and striking tributes were paid to Dr. Sir Brajendra Nath Seal, the great Indian philospher and savant, at the celebration of the completion of the 72nd year of his life, held under the auspices of the Indian Philosophical Congress in the Calcutta University Senate Hall on December 19 last. A distinguished gathering, including delegates to the Congress and a large number of women students, was present. Sir Nilratan Sircar presided.

Prof. Damle, Sir Nilratan Sircar, Sir Brajendra Nath Seal, Dr. A. G. Ho[illegible] and Dr. Urquhart.

The Poet, Rabindranath Tagore, sent a magnificent poem, of which the following is an approximate English rendering :

TO BRAJENDRANATH SEAL

On the inaccessible heights of
Knowledge
Thou art soaring in supreme majesty,
O thou Pilgrim,
In regions where ridges of self-realization embrace thy far-reaching vision.
Where, from deep caverns emerge the ocean-going Message, in rock-cleaving current, building ever new banks of pilgrimage;
Where, free-eyed mountain peaks stand piercing the mist of Illusion, reading the epistle of the Morn conquering darkness:
Where Eternal Time appears in the stellar sphere, turning the rosary of fiery globes in myriad lights;
Where, on the heights of sunrise, appears that One who resembles the Sun in glory, who unfolds through the drapery of the dying Earth the awaking of the world of Immortality, resounding the many throated voice of ascetics :
"Listen ye creatures of the world,
Ye children of the Immortal,
I have seen the Supreme Person
Shining beyond darkness,"—
Where Man listens to superhuman message, gains the radiant sight in a trice and receives anew the intimation of the Infinite on the frontiers of finite regions.
Thou noble guest! Thou seer in the penance-forest of Humanity,
Where in the heavens of meditation, in the interval of aeons, the stars greet one another, emerging from the deep,
Where, on the canvas of Imagination the Adoration of Eternal Beauty is painted in diverse tones and colours.
The ineffable white radiance of that region, like a garland of glory from the gracious hand of the Goddess of Speech, bedecked thy lofty forehead!
Thou knowest me as thy friend,
The Poet in his folded palm of rhyme,
Brings thee the benediction of the Motherland.
And, in the time of parting,
I entwine this thread of loving regards in thy arm.

19th December, 1935. RABINDRANATH TAGORE

For Bengali-knowing readers the orig[illegible] Bengali poem is transcribed below :

আচার্য্য শ্রীযুক্ত ব্রজেন্দ্রনাথ শীল, সুহৃদ্বরেষু—

জ্ঞানের দুর্গম ঊর্দ্ধে উঠেছ সমুচ্চ মহিমায়,
যাত্রী তুমি, যেথা প্রসারিত তব দৃষ্টির সীমায়
সাধনা-শিখরশ্রেণী ; যেথায় গহন গুহা হ'তে
সমুদ্রবাহিনী বার্ত্তা চলেছে প্রান্তরভেদী স্রোতে,
নব নব তীর্থ সৃষ্টি করি যেথা মায়া কুহেলিকা
ভেদি উঠে মুক্তদৃষ্টি তুঙ্গশৃঙ্গ, পড়ে তাহা লিখা
প্রভাতের তমোক্ষরে লিপি, যেথায় নক্ষত্রলোকে
দেখা দেয় মহাকাল আবর্ত্তিয়া আলোকে আলোকে
বহ্নিমণ্ডলের জপমালা, যেথায় উদয়াচলে
আদিত্যবরণ যিনি, মর্ত্ত্যধরণীর দিগঞ্চলে
অনাবৃত করি দেন অমর্ত্ত্য রাজ্যের জাগরণ,
তপস্বীর কণ্ঠে কণ্ঠে উচ্ছ্বসিয়া—শোন বিশ্বজন,
শোন অমৃতের পুত্র, হেরিলাম মহান্ত পুরুষ—
তমিস্রের পার হ'তে তেজোময়, যেথায় মানুষ
শোনে দেববাণী। সহসা পায় সে দৃষ্টি দীপ্তিমান,
দিক্‌সীমাপ্রান্তে পায় অসীমের নূতন সন্ধান।
বরেণ্য অতিথি তুমি বিশ্ব-মাঝারের তপোবনে
সত্যদ্রষ্টা, যেথা যুগ-যুগান্তরে ধ্যানের গগনে
গূঢ় হ'তে উদ্ধারিত জ্যোতিষ্কের সম্মিলন ঘটে,
যেথায় অঙ্কিত হয় বর্ণে বর্ণে কল্পনার পটে—
নিত্য সুন্দরের আমন্ত্রণ! সেথাকার শুভ্র আলো
বরমাল্য-রূপে তব সমুদার ললাটে বুলালো
বাণীর দক্ষিণ পাণি।
মোরে তুমি মানো বন্ধু বলি
আমি কবি আনিলাম ভরি মোর ছন্দের অঞ্জলি
স্বদেশের আশীর্ব্বাদ, বিদায়কালের অর্ঘ্য মোর
বাহুতে বাঁধিনু তব সপ্রেম শ্রদ্ধার রাখীডোর॥

An address on behalf of the Calcutta Philo-phical Society was presented to Dr. Seal by r. Sir Nilratan Sircar. This was followed by peeches by Dr. Urquhart, Dr. Hiralal Haldar, rof. Jay Gopal Banerji, Prof. Krishna Chandra hattacharya, Mr. Hirendranath Datta, Prof. rasanta Chandra Mahalanobis, Dr. Damle of ysore and others. Sir Nilratan Sircar offered m respectful felicitations on behalf of the ublic and himself, paying a tribute to his reat personality, his extraordinary genius, his ildlike simplicity, his lifelong and single-inded endeavours for the economic, moral, ntellectual and spiritual advancement of the ation. Dr. Sircar hailed him as the foremost essenger of the culture of the age.

In reply to the felicitations Dr. Sir Brajendra ath Seal said :

"Dear friends, out of the fullness of the heart the mouth speaketh. This may be so, but when the heart is overfull, silence is its only expression. I will not therefore attempt to express the inexpressible. I can only with bended head accept your kindly greetings in all human fellowship and indeed in all reverence. I bow to you all and to that spirit of love and sympathy which has brought you together. I will not speak of my weakness or decrepitude today in the presence of an all-sustaining love which wins strength from weakness and life from death itself.

My last days are embittered by one thought: the wranglings of those who as the children of India should be bound by ties of brotherhood and friendship. Remember that Hindu or Moslem, Christian or Sikh, you can fulfil the best in your religion by a spirit of give and take, by giving out of your abundance and taking in a spirit of sincere amity and goodwill. All that is merely sectarian and communal must yield to the spirit of a common nationality and nationality itself must be fulfilled in one common brotherhood of man in Universal Humanity. And I will not attempt to express my own sense of unworthiness in the presence of a love that out of its own abundance makes up for my own poverty of spirit in my present physical and mental condition.

This is perhaps my last appearance in public and I am therefore overwhelmed with a sense of solemnity in which I must betake myself to that silence which is the best expression of the inexpressible.

From this personal aspect I will proceed to certain impersonal reflections on the nature and meaning of that human sacrament, 'Jayanti,' which has called us together. I will, however, preface my remarks with one personal note which I cannot avoid on this solemn occasion.

In my case it so happens that this "Jayanti" coincides not with the triumph of life but of that other great master of our fate, death and its companions, weakness and suffering. If fate has denied to me fruition in my life, it cannot deprive me of that other fruition, which is the last and greatest, the heritage of silence, the mystery of mysteries, Death the revealer and the Consummator.

I will now turn to that observance, "Jayanti," which calls us together today. Our national heritage and culture has nothing more characteristic or more beautiful than this observance of "Jayanti."

Let me speak of certain Jewish, Greek and other national rituals which are so cognate and yet so disparate. The Jews in their Silom had a conception of individual immortality but their exclamation of triumph "Hallelujah" emphasises the triumph of the Lord Ya, Yovah, sinking the personal in the national or tribal aspect. Similarly the Greek cry of "Is Paean" misses the personal aspect and with the Romans also the state was all in all and personal immortality was only a shadow life in Hades and birth equally with death lost much of its personal significance.

Christ indeed had a heart to bless all human festive occasions like feasting and marrying. He sympathized even with the lot of publicans and sinners. But theology with its original sin and its doctrine of damnation turned Christ's religion of love and sympathy into despair. But human nature finally triumphed over theological dogma and in the end birthday greetings and festivities had their due place in Christian Society.

In this history the Hindus have a distinctive note in their observance of "Jayanti." At first "Jayanti" was a solar festival connected with the return of the Sun in spring. This gave rise to the legend of the Suras and Asuras and the victory of the former over the latter which was commemorated in the "Jayanti" festival. The hymn of triumph was now "Jayanti Devas."

This was as far as the Vedic Hindus reached, but in Buddhism "Jayanti" took on a cosmic human significance, in the triumph of the Buddha over Mara, in other words of Humanity over darkness and death. This was what was first commemorated in "Jayanti," and when "Jayanti" became a birthday greeting, what it meant to the Buddhist and later on to Post-Buddhistic Hindus was the triumph of powers of light over those of darkness, which was symbolised afresh in each birth. Indeed it was a promise of the ultimate redemption in "Moksha" or "Nirvana."

Apart from its cosmic significance "Jayanti" has a deep human meaning and import. The individual is born but once but the annual observance of "Jayanti" (the birthday) confers a sempiternal and recurrent character to what occurs but once in reality at a definite point of History. By this human device, the birthday is annually renewed and we thus win a sort of perpetual life for the temporal and occasional. It is thus that we win immortality and rejuvenescence from the Heavens.

With these words of immortal hope and greeting you in the name of Universal Humanity I bow to you again, taking refuge in that silence which is the first and, Yea! shall be the last."

Honour for an Indian Artist

It is with pleasure that we learn that the Council of the Royal Society of Arts (London) have invited Mr. Barada Ukil, artist and editor of the art journal *Rupa-lekha*, to be a Fellow of their Society. Our readers will find some account of Mr. Ukil's work and that of his two artist brothers in last year's July number.

The Royal Society of Arts is one of the three oldest Societies in England. When it was founded in 1754, only the Royal Society and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

the Society of Antiquaries were in existence. In 1908, King Edward VII, who was then the President of this Society, granted permission to it

Mr. Barada Ukil

to add the adjective "Royal" to its title. King George V is its Patron and the Duke of Connaught is its President. The Prince of Wales and the Duke of York are Vice-patrons.

The Meaning of Dadabhai Naoroji's Swaraj

It is more or less generally known that it was Dadabhai Naoroji who was the first among Congress presidents and workers to use the word Swaraj in the sense of self-government. But what kind of self-government did he want? It is generally thought that he claimed such self-government as the British Colonies enjoyed. But let us examine the passage in his Congress presidential address of 1906 in which he used the word.

> "(1) Just as the administration of the United Kingdom in all services, departments and details is in the hands of the people themselves of that country, so should we in India claim that the administration in all services, departments and details should be in the hands of the people themselves of India.
>
> "This is not only a matter of right and matter of the aspirations of the educated—important enough as these matters are—but it is far more *an absolute necessity* as the only remedy for the great inevitable economical evil which Sir John Shore point hundred and twenty years ago, and which fundamental cause of the present drain and The remedy is absolutely necessary for the moral, intellectual, political, social, indust every possible progress and welfare of the of India.
>
> "(2) As in the United Kingdom and the all taxation and legislation and the power of ing the taxes are in the hands of the repres of the people of those countries, so should als rights of the people of India.
>
> "(3) All financial relations between Engl India must be just and on a footing of equa whatever money India may find towards exp in any department—Civil or Military or N the extent of that share should Indians shar the benefits of that expenditure in salaries, emoluments, etc., materials, etc., as a partner Empire, as she is always declared to be. We ask any favours. We want only justice. In going into any further divisions or details rights as British citizens, the whole matter comprised in one word—'Self-government or like that of the United Kingdom or the Colon

The Congress session at which Da Naoroji read his address was held in the week of December. We remember the attended that session and took with us Allahabad copies of the first—the Jan number of *The Modern Review* for 1907. was in the February (1907) number th had an opportunity to comment on the ad And with reference to the passage quoted we wrote:

> The great merit of the address lies in the fa it states in clear and unequivocal language ou political demand, namely, Swaraj or Self-gover
>
> Some of us have concluded in a mood of hasty appreciation or of equally hasty fault that Mr. Naoroji is in favour of Self-governm colonial lines, but not of absolute autonomy the actual words that he uses, "Self-governm Swaraj like that of the United Kingdom colonies"—do not warrant any such con There is nothing to prevent us from interpret words to mean that he desires absolute au like that of the United Kingdom, but w content to have Self-government on colonial under British suzerainty.

What we wrote in 1907 we have rep several times in this journal and also in *Pr* It is necessary to point out again wh understand by what Dadabhai Naoroji

It will be observed that in (1), (2) (3) he wants for Indians all the powers rights which the people of the United Kin possess, *not* the powers and rights of Colonists. As the United Kingdom is colony of any other Power, as it is free independent, his goal was certainly abs autonomy. He knew, of course, that freedom and independence could not be ha at once, and, therefore, only in the last

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ined "Self-government like that of the ited Kingdom **or** the Colonies." Now, self-vernment like that of the United Kingdom ans absolute autonomy. If that could not had, he would be content, to begin with, to ve self-government like that of the Colonies.

This has always appeared to us to be a interpretation. Therefore, we have never mitted that Congress advocated *Purna araj* or complete self-rule only after coming der the influence of Mahatma Gandhi, though is true that that expression is of recent coinage. e Congress objective has been *Purna Swaraj* ce Dadabhai Naoroji spoke in December, 06, though that expression was not then used.

It is indisputable in any case that Dadabhai oroji wanted the substance of independence, ich Gandhiji has also demanded. For proof, d the enumeration of the rights he demands his countrymen.

There is a difference, no doubt, between means and methods advocated and adopted the pre-Gandhian and the Gandhian Con-ss. But methods of self-reliance had been opted in Bengal long before Gandhiji became minent. And Gopal Krishna Gokhale, the nce of Liberals, was not entirely against the ption of passive resistance if all other means led.

So there has been evolution in the Congress not a complete revolution.

beration by Enslavement

Italy claims that her soldiers have gone to hiopia on a mission of liberation. It is a ange mission this—that of liberation by slavement.

It may be true that there are in Ethiopia any slaves in the ordinary sense. They uld, however, have been emancipated from very by the League of Nations putting pres-re on the Emperor of Ethiopia, and he had ready taken steps in that direction. Fighting as not necessary for effecting the complete eration of the Abyssinian slaves.

Assuming that Italy would succeed in nquering Ethiopia, what would be the result? present in that country there are some ves in the ordinary sense and more free-en in the sense of non-slaves. After the nquest of the country by foreigners, both the ves and the non-slaves would be reduced to e position of political servitude. And there uld be ruthless exploitation of the country, , by foreigners. Would that be a very desir-e condition?

It may be argued that, as the Abyssinians ve no civic and political rights like those enjoyed by Britishers, Frenchmen, Americans and other free occidentals, their condition will not be worse than what it is now. But from the way in which the Abyssinians are fighting for their country, they appear to have some kind of citizenship which they value, though it may not be of the European or American brand. And their country is not impoverished by foreign exploitation.

But suppose they have no citizenship. Hence, though in subjection also they will have no citizenship, the conquest of their country will not make any difference in their political status. That may be the argument of the advocates or advertisers of Italy's mission of liberation. But foreign conquest will certainly make the economic condition of Ethiopia worse than it is now.

It is forgotten, moreover, that there is at least one man in Ethiopia who is a really free man, who can do what he thinks fit, and is, therefore, the political equal of any free man in the freest country in the world. He is the Emperor of Ethiopia. The conquest of Ethiopia by a foreign nation will reduce him, too, to a state of political servitude. So, whereas now there is at least one free man in that country, after her subjugation there will be none. One man's loss of freedom may seem insignificant, but it is not, and that for two reasons. One is that the freedom of even a single person, however humble, is valuable—at least to him, and so he ought not to be deprived of it. Another is that the position of this particular free man is such that he can, if he likes, make all his people free. And considering the intellect and character and patriotism of the Ethiopian Emperor, there is every reason to expect that, if he be not conquered by Italy, he will confer on his people the boon of representative Government, as the Emperor of Japan did in the last century.

But even if this expectation be not fulfilled, unconquered Ethiopia will have at least one free man, whereas subjugated Ethiopia can have none; unconquered Ethiopia will not be like a sucked orange, which it will be like, if conquered.

Death of Anglo-French "Peace" Proposals

A famous ancient Roman author said: "They make a desert and call it peace."

The British home Government and the French home Government, through their ministers Hoare and Laval, wanted to partition Ethiopia, giving a portion to Italy and the rest to the League of Nations as a "mandated" territory, and they called their designs a peace proposal.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

What did the proposal actually come to? It was a proposal to reward the aggressor, Italy, by conferring on it about half of Ethiopia, and to grab the remainder in the name of the League —other "mandated" territories have been swallowed up by the trustees ere this.

And a fine piece of idealism was this so-called peace proposal! The League of Nations has for its principal object the prevention of war and of spoliation by war. It could not prevent the Italo-Abyssinian war, but it made as if it wanted at least to prevent Italy from coming out victorious and swallowing up Ethiopia. But in the meantime the two most powerful members of the League were hatching a plan in secret to fulfil Italy's desire—at least in part, a desire of a kind which the League was established and exists to frustrate! And Italy would not agree to accept half of Ethiopia—she wanted the whole of it!

How generous these two European governments were! They wanted to give away to Italy property which did not belong to them. And, what is far worse, they wanted to give away to Italy human beings living in Ethiopia, who are not property, as if they were transferable like cattle and as if, because their complexion is not white, they do not possess the right of self-determination. No wonder, the Ethiopian Emperor could not appreciate and admire their generosity. He could not part with the independence of his country in order to enable others to become generous at its expense.

And why was this peace offer made? Mussolini said that oil embargo would mean war, and if Italy was prevented from having as much oil as she wanted, she would fight. The two European governments were afraid of a European war, and so proposed to make a free gift of an African country, not belonging to themselves, partly to Italy and partly to the League. And as they were the most powerful members of the League, the gift to the League meant a gift to themselves in part.

Those Britishers are entitled to praise who raised such an outcry against this nefarious proposal as to compel Sir Samuel Hoare to resign, though he is only a scapegoat. He could not possibly have been a party to such a proposal without the knowledge and consent of his colleagues.

Mr. Eden appointed Foreign Secretary

Mr. Eden has been appointed British Foreign Secretary in place of Sir Samuel Hoare. *Reuter* has cabled out what British newspapers, Geneva, Germany, Italy,.....think of the appointment. But as the British Gove remains unchanged, British policy al remain substantially unchanged.

The Late Principal Nava Krishna Ray

The late Rai Saheb Nava Krishna Ra began his career as a teacher as third ma the Berhampore collegiate school in Afterwards he was appointed professor of in Meerut College, U. P. His next appoi was that of professor of English in the Maharaja's College, Rajputana. His s ship, ability and character led to his pro to the post of principal of the College director of public instruction of the

Nava Krishna Ray

Though he was only a B.A., he used appointed paper-setter and examiner B.A. and M.A. examinations. He retir pension in 1928 and died recently in Ca at the age of 72.

The Late Principal Lalit Kumar Ghosh

In the late Principal Lalit Kumar G M.A., B.L., of the Bihar National C Bankipur, Bihar has lost a distinguished

tionalist. He was born poor. By self-reliance and industry he passed the M.A. examination, and was appointed professor of mathematics in the Bihar National College in 1906. From

Lalit Kumar Ghosh

almost the foundation of the Patna University he was a member of its senate and a member of its syndicate from 1920 to the day of his death. He was appointed principal of the Bihar National College in March, 1935, and, during the short period of his incumbency of that office, effected improvements in it in many directions.

Infection of Communal Representation Spreads

The spread of infectious diseases from country to country and continent to continent is sought to be prevented in various ways. But no attempt is made by any powerful organization to prevent the spread of mischievous political devices. The British people have introduced the plan of separate communal representation in India in order to ensure the permanence or prolongation of their domination in India. Other countries and peoples have looked on unconcerned. But the virus will travel. Therefore, all who love human liberty and democracy ought to fight this harmful political bacillus.

One proof of the fact that the infection is spreading is afforded by the composition of the proposed legislature in Palestine.

"The Jews are opposing the plan the details of which have been announced by the High Commissioner, Sir A. G. Wauchope, in a communique proposing the grant of a measure of self-government to Palestine. The proposed Legislative Council based on communal proportional representation would contain 11 Moslems, 7 Jews, 3 Christians, 2 Commercial representatives of undefined nationality and 5 British Officials. The Jews are thus in a minority in it."—*Reuter.*

Are there so many British officials in Palestine that they can have 5 seats in consideration of their numerical strength?

Education and Communalism : and Communal Rewards and Communalism

The Governor of the Panjab concluded his convocation address to the Panjab University with the following words:

> "Believe me, the solution of communal tension lies in the hands of the educated classes but not the masses. As education extends, the responsibility of this university grows for the formation and moulding of the conceptions of civic duty and the manner in which it discharges this responsibility will largely determine the political and social future of the province."

His Excellency the Governor of the Panjab will, we hope, excuse us for saying that we do not believe that the solution of communal tension lies wholly or mainly in the hands of the educated classes, though it does lie to some extent in their hands.

The Governors-General and the provincial Governors of India ought to tell the British nation and the British home Government that the solution of communal tension in India lies to a very great extent in their hands. They can do their share of the work by putting an end to Communal Reward No. 1, miscalled the Communal Decision, Communal Reward No. 2 by which particular communities and classes have been assigned fixed proportions (and excessive proportions) of appointments in the public services, and Communal Reward No. 3 by which differential and discriminatory franchise qualifications for different communities have been introduced, and by preventing the advent of other Communal Rewards in the future.

Depressed Class Leaders to Counteract Conversion Propaganda

It is good news that

> A party of depressed class leaders of Bengal, Bihar and U. P., consisting of Mr. Rasik Lal Biswas, B.A., B.L. (Vice-chairman, Jessore District Board), Mr. Jagneswar Mandal, M.A., B.L., Babu Gajadhar Prasad (Bengal); Babu Jagjivan Ram, B.Sc. Dr. Raghunandan Prasad (Bihar); Dr. Dharamprakash and Babu Ram Prasad Jayaswal (U. P.), is proceeding

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

on an extensive tour in the Bombay Presidency to counteract the propaganda launched by Dr. Ambedkar. They would interview Mahatma Gandhi on their way to Bombay.

Centenary of Mark Twain

There are many centenaries of which men generally do not take note. But of the centenary of the American humorist Mark Twain more note should have been taken than men have. On the 30th of November last Will Hayes wrote in *The Inquirer* of London:

> A hundred years ago today Samuel Langhorne Clemens was born at Florida, Missouri. He became a printer, and afterwards a Mississippi pilot. It was on the river that he heard the frequent call, "Mark twain!" (*i.e.*, "By the mark two fathoms") used in sounding. Clemens took the river-call as his pseudonym, and made it famous all over the world.
>
> And all this happened, as he explained later, because Cæsar crossed the Rubicon! And Cæsar crossed the Rubicon because—But that would take us back to Adam and Eve! Mark Twain's closely-reasoned argument about life-chains tells us, like Francis Thompson's poem, that
>
> All things by immortal power,
> Near or far,
> Hiddenly
> To each other linked are.
> . . . . Thou canst not stir a flower
> Without troubling of a star.
>
> And every link counts.
>
> Mark Twain became a popular writer, and a Prince among Trippers. His books are still well known—even if not read! *Innocents Abroad, A Tramp Abroad, Tom Sawyer, The Adventures of Huckleberry Finn, A Yankee at the Court of King Arthur*—these, and others, anyone could name. Two of Mark Twain's books (*Tom Sawyer* and *Huckleberry Finn*) are still read; and Stephen Leacock has bracketed Mark Twain and Charles Dickens together as the greatest humorists of modern times.
>
> Mark Twain made the world laugh. That was a great achievement. We are all more human because he lived. For man is the animal that laughs.

Sir C. P. Ramaswami Aiyar's Illuminating Address:

At the Second Annual Dinner Meeting of the Penguin Club held on 18th December last at the Spences Hotel, Calcutta, Sir C. P. Ramaswami Aiyar gave a picture of his vision of the India of the future.

> It was to be an India, said the speaker, where religion which is essentially a matter for a man's personal or inner life, was to be relegated nay sublimated to its proper sphere—the home. Religion unfortunately has today become a bargaining counter for the exchange of social and political privileges. It is sought to discover religious sanction for much of the communal unrest which has become a degrading feature of our body politic. As a contrast he cited the conditions obtaining in Turkey and China. In Turkey Kemal Pasha had the foresight to insist that religion should not obtrude in politics. We may approve of the method followed in Turkey but cannot be denied that they have proved emin successful. In that much-spoken-of country, Ch the father could be a Christian, the mother a Bud and the son a Mussalman and yet no one sugge that domestic life was unhappy. Sir Ramaswami made a passing reference to the recent contro in the Indian press on the question of admissio Indians into European Clubs. It struck him th was very necessary for them to shed this inferi complex as it was necessary for Europeans to their superiority complex. Personally he did not to which club he was invited or allowed to go. W he cared for was that Indians should shed off th inferiority complex and realize their equality. conflict of ideas is not necessarily a conflict interests and there is no reason, thought the speak why all who should dwell in the India of the fut should not be able to strive side by side for common good, irrespective of religion, caste or cre He referred to the traditional hospitality of India wh has sheltered—nay, pampered—the fugitives and persecuted of other lands who have sought the wh some shelter of her shores throughout the ages. cited instances from history of immigrants who ca and flourished in India. India of the future, said speaker, has to carry on the traditions of such glorious heritage and be a home to whatever ra choose to dwell in her lands in the new regime.

"India's Interests Are Your Interests"

Addressing the Associated Chambers Commerce of India in Calcutta on the 16th Dec ember last, the Viceroy paid a glowing tribu of praise to the British Mercantile Communi in India. Said he:

> I feel in common with everyone of you a justifiab pride in the contribution you have made to buildin up the India of today as we know it and in th service you have rendered to this country. In ma fields of endeavour you have led where others ha failed. By your perseverance, your industry and yo enterprise, India has in many directions enjoye advantages which might otherwise have been longe delayed. In the history of the relations betwee Great Britain and this country yours has indeed bee an honourable part.

If the British men of business deserve thi praise, let them enjoy it. But when the Viceroy spoke of "the service you have rendered to this country," or when he said that by their perseverance, their industry and their enterprise "India has in many directions enjoyed advantages which might otherwise have been longer delayed," to what country, to what India did he refer? The mercantile community have rendered service to themselves, to Anglo-India and it is Anglo-India which has enjoyed the fruits of their perseverance, industry and enterprise more directly and to a far greater extent than the India of Indians, if any, and in many directions the advantages gained by Anglo-India have been at the expense of Indians.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Viceroy concluded his speech in the following words:

> I have no doubt that as in the past, your leaders will be willing to come forward and take their part in the public life of the country. It will be their function to voice your interests. But, above all things, keep before you the future destinies of India, her welfare, her progress and prosperity. These are all matters of no less concern to you than to those for whom India is their home and motherland. India's interests are your interests. May I ask you to associate yourselves with all that leads to the advancement of this country and adds to her position and advancement. If you hold this ideal constantly before you, I am sure you will be fully recompensed in the future.

This is not the first time that a Viceroy has spoken to the British mercantile community in this strain. But they have never in the past considered the interests of the Indians to be their interests. How could they? They come out to India to make money, and the money they make would have been the money of Indians if India had been politically and economically independent. Can a body of as many British merchants and men of business as those engaged in commerce and industry in India make as much money in politically and economically independent countries like Germany, France, Italy, Belgium, Holland, Denmark, Sweden, Norway, Japan, or even the Dominions of Canada and Australia, as in India? They cannot, because the citizens of those countries will not allow them to.

No, India's interests are not the interests of the British mercantile community in India. If the interests of both had been the same, there would not have been so many "safeguards" in the Government of India Act, 1935—particularly there would not have been Chapter III, Part V, in that Act, containing "Provisions with respect to Discrimination, etc."

Unemployment Among Cadets of the "Dufferin"

The Indian Merchants' Chamber, Bombay, has drawn the attention of the Secretary to the Government of India, Department of Commerce, to

> the growing uncertainty as regards the cadets of the Indian Mercantile Marine Training Ship "Dufferin" obtaining employment as Officers after they receive their Board of Trade certificates of competency. My Committee understand that about eight duly qualified cadets are without employment at present and that when about 25 more cadets will obtain their certificates of competency as Second Mates early next year, the problem for finding employment for nearly 33 cadets will become really serious. My Committee further gather that this question has filled the members of the Governing Body of "Dufferin" with great anxiety and they have also made representations to the Government of India in this connection.

According to the Chamber,

> this growing uncertainty for securing employment has been mainly due to the non-Indian Shipping Companies either refusing to employ these cadets as Officers or not employing them in accordance with the undertaking given by them to the Government of India. My Committee find that the British India Steam Navigation Co., Ltd., with its very large fleet of over 130 steamers have given employment to only four cadets as Officers, while the P. & O. have refused to take any cadet as Officers on their steamers. My Committee are further informed that the Asiatic, the Moghul Line and the Nourse Line do not employ these cadets as Officers according to the undertaking given by them to the Government of India.

In 1926 and 1928 Lord Irwin, the Viceroy, expressed a hope that

> "British Shipping Companies will co-operate to make the training ship a success by giving fair opportunity of employment to Indian cadets."

In reply to a question in the Assembly Sir George Rainy said:

> "While anxious to avoid giving the impression that employment is assured to every passed apprentice, the Government desire to emphasise the opportunities of employment which exist for those apprentices who give satisfaction."

In January, 1934, Lord Willingdon expressed his appreciation that these shipping companies have made the scheme of the Training ship "Dufferin" a success. What sort of success, we wonder.

The Committee of the Chambers state

> whenever questions were put in the Legislative Assembly requesting the Government to take action by law for finding employment on the lines recommended by the Indian Mercantile Marine Committee, the Commerce Member told them that everything was O. K. and that the need for legislation had not arisen. Even last March, the Commerce Member stated in the Legislative Assembly:
>
> > "In this connection, the Government of India will take steps to impress on all shipping companies, whether British or Indian, engaged in the coastal trade, the importance of employing duly qualified Indian Officers in adequate numbers."

The Committee also point out that non-Indian shipping concerns have been unduly favoured at the expense of the Indian tax-payer and that they are getting favours from the authorities and public departments. So they are under obligations to employ trained Indian cadets. But they disregard these obligations.

The Committee of the Chamber further point out that

> "The Hon'ble Sir Frank Noyce stated in the Legislative Assembly on the 29th March, 1935, that, if any necessity arose, the Government would attach conditions as regards the training and employment

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of Indians as apprentices and officers on board the steamers of the Companies to whom they were giving annual subsidies for the carriage of mails."

So the Chamber "strongly urge upon the Government of India the necessity of taking immediate steps to attach conditions as regards the employment of these cadets as officers by the British India and the P. & O. Steam Navigation Companies 'in adequate numbers,' especially as they have been getting large amounts by way of subsidies from the Government of India."

If the interests of India and of British capitalists doing business with and in India had been the same, it would not have been necessary for the Indian Merchants' Chamber, Bombay, to write the letter on unemployment among trained cadets which they have written to the Government of India.

The Total Number of Trained Cadets

Considering that India is a big country having a population of 353 millions and several thousand miles of coast line, one might think that perhaps thousands of cadets had been trained and so 8 or 33 unemployed cadets are not too many among thousands. But no. There are neither thousands nor hundreds, nor even scores of trained cadets. They are only a few dozen.

In times past there were a thousand ports in round numbers in India and a large shipping and ship-building industry. All these found employment for millions. But now we cannot employ even a small number of cadets.

Scindia Steam Navigation Company to the Rescue

We understand that it is only because the Scindia Steam Navigation Co., having a comparatively small number of steamers, has given employment to 21 trained cadets that the number of unemployed among them is only 8; otherwise it would have been 29.

If India's shipping had received as much help in various ways from her Government as the shipping of other civilized countries having national Governments receive, the Scindia Steam Navigation Company would have been a much bigger concern than it is and there would have been many more such patriotic steam navigation companies.

Japan and China

We wrote in our last December number: "Perhaps taking advantage of the European situation arising out of the Italo-Abyssinian war, Japan has been trying to establish overlordship over China and extending her empire there." *The New Republic* of America wr in its issue of November 27, 1935:

> The Italo-Ethiopian war undoubtedly supplie reason why Japan has chosen the present mo to strike. The British fleet is engaged in Mediterranean, and Japan believes that Engla unlikely to protest while the European situ remains uncertain. Both England and America, ever, have substantial commercial interests in China. In the next few months, as the Jap begin slowly shutting the Open Door in their puppet state, the outcries from British and Ame business men are certain to be loud. . . . . .

The American weekly continues:

> The attitude of the Tory Cabinet in England s curiously mixed. Apparently the Tories would to see a strong and prosperous Japan in the Far as a counter-weight to the influence of the U States and Russia. But they are finally begin to suspect that a Japan which is too strong prosperous threatens the whole British positio Asia. Once Japan has absorbed north China, it be only a question of time and opportunity b it moves down into the Yangtze valley. If J should ever succeed in displacing British banks trading companies in Shanghai, the blow to Engla prestige would seriously weaken her grip upon I

U. S. A. and Japan

Las Vegas (Nevada) Dec. 2

> Senator Pittman, Chairman of the United St Senate's Foreign Relations Committee, in a stri speech declared that the United States would evitably be forced into a defensive war in the Pa Ocean if the present Militaristic Government contin in Japan and plans of conquest of the entire w based on ambitions similar to those of the ex-Ka were nurtured.
>
> If it should so happen that the navies of Bri and the United States participated in necess manœuvres in the Pacific near Japan at about same time, Japan would probably listen to reason without a shot being fired or a life being lost.

Mixed Motives Making for Filipino Freedom

The same American paper writes:

> On Friday, November 15, in the presence of President Garner and Secretary of War Dern, independence of the Philippine Commonwealth formally proclaimed and Manuel Quezon was augurated as its first President. Thus began ten-year probationary period that will end in the and final liquidation of America's most ambiti experiment in imperialism. Satisfaction over redemption of repeated pledges was tempered knowledge of the shameless barter and bicker that preceded the authorization of independe the knowledge that financial interests in the Un States were willing to let go of the Islands when they became convinced that they had bec a liability rather than an asset, and a realization the depth and seriousness of the economic plight the Philippine Commonwealth. Her natural resour were developed almost entirely as a feeder to American economy, and now that economy, barrassed by an excess of supply that threatens

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

all-precious profits, is willing to turn the Philippines adrift in the Pacific.

ral and Spiritual Progress and ientific Knowledge

In the course of his address at the Andhra iversity Convocation, Dr. Tirumurti, profes- of Pathology at the Vizagapatam Medical llege, observed :

> Though intellectually a race is adult, morally and spiritually the men may be still children. Do we not find men using their newly acquired knowledge to work desolation and death in their folly and fear and greed and pride ?

Sir Oliver Lodge and some other great entists have said that man's moral and ritual progress has not kept pace with his entific knowledge and power of mechanical vention. Hence scientific knowledge is utilized destructive purposes also, instead of being d solely for human happiness and welfare.

P. Unemployment Committee's Report

The report of the U. P. Unemployment mmittee, of which the very able chairman s Sir Tej Bahadur Sapru, has been submitted the Government. It is said to consist of pages. Some of the suggestions made by the mmittee have been mentioned in the papers. r example,

> Primary education should be made compulsory throughout the Province with a view to absorb the educated unemployed as teachers and simultaneously to spread mass education.
>
> Agriculture, irrigation, sanitation and medicine should likewise be enlarged both to find new occupation as well as for the welfare of the masses.
>
> Legal education is not to be discouraged, but the Committee has recommended a three years' course and suggested division of lawyers into two classes—attorneys and practitioners—the seniors only being qualified to draw legal documents.
>
> Education should be bifurcated at the intermediate stage towards industry or otherwise; the Government to provide facilities for both large-scale and cottage industries.

These suggestions are practicable and useful.

peal for More Land for Transvaal dians

> JOHANNESBURG, Dec. 16.
>
> The "Star," commenting on the appeal to the Government by the Indian Government Agent, Sir Saiyd Raza Ali for additional exempted land for Indians in the Transvaal gold areas, meeting not only the present needs, but providing for the increase of the Indian population for the next twenty years, hopes that the appeal will command the sympathetic attention of the responsible minister and Parliament.
>
> —*Reuter.*

The appeal should certainly evoke just and erous response. Indians have given their t to South Africa. There should be recipro- towards them.

A British Theatre's Contemptible Cowardice

> LONDON, Dec. 5.
>
> The German Embassy in London last week protested to the Garrick Theatre against the name of a pageboy, "Hezekiah Hitler," in the play, *Vicki*.
>
> The Actress Manageress producing the play regretted that she was unable to make any alteration, but the Lord Chamberlain to-night requested the Manager to omit all references to Hitler, and the pageboy has acordingly been re-named "George Bernard Gandhi."
>
> It is stated that the Embassy officials complained particularly that the boy's first name suggested that he was of Jewish descent. The Manager said that the Lord Chamberlain's instructions had been received at 5-20 p.m., and the name "Gandhi" had been temporarily included, owing to the impossibility of writing and rehearsing a new scene in so short a time—and hoping that Mr. Gandhi was "not in direct telephonic communication with London."

Even if Mahatma Gandhi were in direct telephonic communication with London, he is too high-minded a man to take any notice of such contemptible and ridiculous cowardice. High thoughts and important duties leave him no time for trifles.

Heroism of the Abyssinians

That Mussolini's threat that oil embargo would mean war and Italy would fight against such embargo led Britain and France to make their peace proposals in order to avoid a European war, shows how formidable Italy's army, navy and air-force are. The Emperor and people of Abyssinia are defending their country against such an aggressor and sometimes driving the enemy back and capturing his tanks and other modern armaments, though their own equipment is not at all completely up-to-date and adequate.

When during the last world war the Belgians and their King manfully defended their country against Germany, the white civilized world admired their patriotism and heroism, though Belgium had the help of such powerful friends as Britain and France. Abyssinia is fighting single-handed. But, because she is not in Europe and her Emperor and people are not white, therefore no chorus of praise of her heroism is heard in the West.

Progress of Womanhood in Iran

From New Year's Day to-day the women of Iran are not to observe parda. They will appear in public without the veil. Women teachers and adult girl pupils will freely go to school and women will attend public meetings with men.

Prabasi Banga Sahitya Sammelan

The thirteenth session of the "Prabasi Banga Sahitya Sammelan" was held in the premises of the Raisina Bengali School, New

"I Can Make You a Master Writer and a Convincing Speaker!"

—GRENVILLE KLEISER, Famous Speech Specialist

There is not a walk in life in which mastery of English language will not bring a rapid advance-nt, a larger income and wider influence, and make road to success smoother and surer.

Whatever your business or occupation, you need ommand of the English language to be successful. hether you are a teacher, a student, a doctor, a yer, a merchant, a salesman, a clergyman, or a rk, a command of English will bring you to the efront and lack of it will be a drag on your ward climb. You need good English in every ation of your life and it will help you, as no er single thing can, to reach the goal of your ires and achieve success.

Here is the way to gain a new command of glish in a few weeks. Grenville Kleiser, the eat expert of international fame in teaching glish, has discovered a new method of mastering is language. His Correspondence Course enables u to become a master of English by the easiest stem of study and in the shortest time possible. teaches you by post in your spare moments home, how to—

Enlarge Your Vocabulary by Thousands of Expressive Words;

Use the Right Word in the Right Place;

Correct all Errors of Grammar and Idiom;

Develop Originality of Expression;

Write Tactful and Forceful Letters, Essays, Advertisements, Articles, Stories, Speeches, Petitions, Memorials, Etc.;

Become an Engaging Conversationalist and Be Popular in Society;

Increase Your Power of Persuasion;

Earn More Money, Get Better Position and Achieve Greater Success.

Enthusiastic endorsements of this remarkable Course have been written by eminent masters of English. All lines of business, all trades, all professions, arts and sciences are represented among Mr. Kleiser's students who number more than 100,000 all over the world.

Send for Free Confidential Information.

There is absolutely no certainty—no guesswork—about Mr. Kleiser's methods. He has had years of experience n some of the leading educational institutions, and is generally recognized as the foremost teacher of English by ost. His Course is his life-work. In it he has put the ripe fruits of his vast experience. It is for every student, eacher, lawyer, judge, banker, manager, clerk, physician, journalist, salesman, politician, preacher,—in fact, for all mbitious men and women who would use the English Language for "all they are worth" in business and social life."

For full information send us the coupon above. Will you do it TO-DAY?

THE NEW PELMANISM

Enlarged Course of Famous System of Scientific Mind-Training Now Ready.

Write For Free Book, "The Science of Success," To-day.

THE Greatest system of scientific Mind-Training the world has ever seen comes before the people of this country now in a new and greatly improved form.

Pelmanism has become the New Pelmanism—a modern Course for the modern mind, a Course which deals with the problems of today with methods adopted to the needs of today.

Formerly there were only 12 Little Grey Books—"each of them," says the Baroness Orczy, "a small gold mine which goes to enrich the brain."

Today there are 15, and they deal with such subjects as :—

- **Driving out the Inferiority Complex**
- **How to Achieve your Purpose in life**
- **Concentration and Mental Control**
- **The Remedy for Mind-Wandering**
- **The Science of Self-Realisation**
- **The Qualities of the Money Brain**
- **Self-Expression and Personality**
- **How to Become Popular**
- **Good Judgment in Business**
- **How to Handle Facts Scientifically**
- **Your Sub-Conscious Life**
- **How to Create Original Ideas**
- **Imagination and Originality**
- **How to Organize Your Mental Life**
- **Pelmanism in Action**

and, of course many others.

The New Pelman Course embraces all the latest discoveries in Practical Psychology. No pains have been spared to make it the finest Course that can be taken up by any man or woman who wishes to achieve success (with the money-rewards of success) in any Business, Trade or Profession as well as in Social or Public life.

Vandyk

SIR HERBERT BARKER
who advises every reader who wants to succeed to "Take-up Pelmanism."

SUCCESSFUL ACTION

PELMANISM strengthens and develops all the valuable qualities of your brain. It gives you a wonderful all-round increase in power and capacity. It develops and strengthens your :

—INITIATIVE	**—WILL-POWER**
—JUDGMENT	**—ENTERPRISE**
—CONCENTRATION	**—OBSERVATION**
—SELF-CONFIDENCE	**—COURAGE**
—ORGANISING POWER	**—DECISION**
—MEMORY	**—DRIVING FORCE**
—PRESENCE OF MIND	**—BUSINESS ACUMEN**

and many important qualities. It teaches you the secret of successful action and gives you Personality.

PRAISED BY THE GREAT

GREAT men praise Pelmanism and recommend it to their friends. "I know of no other method, to compare with it," writes Sir Herbert Barker, "The system brightens our outlook on the glorious possibilities of life ; strengthens and quickens our memory and understanding ; gives coherence and clarity to our thoughts, and enhances, unbelievably, our capacity for intellectual enjoyment and usefulness. Benefit beyond computation can be secured by all who will follow the directions given in the Course."

WHAT "TRUTH" SAYS OF THE NEW PELMANISM.

FOR upwards of 50 years "Truth" has enjoyed a world-wide reputation for fearless and independent criticism. Unapprehensive of consequences, it has been the courageous exposer of knavery and the persistent advocate of every movement which it has felt to be for the public welfare. "Truth" has now made a special investigation into the merits of the New Pelmanism and has issued a report, a copy of which can be obtained on application. Here are a few extracts :—

* * *

"THE Pelman Institute has for many years studied the principles underlying the achievement of success, and acquired a systematic and formulated knowledge of the way in which those principles work. It has, in fact, placed success on a scientific basis."

* * *

"THE Pelman Institute must be unique in the richness of its resources and this undoubtedly explains its outstanding pre-eminence. In its own field of applied psychology to every day needs it certainly need never fear a rival."

* * *

A FULL description of the New Pelmanism is given in a book entitled "The Science of Success." To obtain a copy of this book, together with a copy of "Truth's" Report, cut out the following coupon and post it today.

POST THIS COUPON TO-DAY

OPEN LETTER TO PARENTS

Dear Sir or Madam,—When your children first arrived they brought with them a wonderful lot of sunshine. Later, you became proud of the intelligence they displayed, but, still later, you became anxious as to what would come of them in the future. Perhaps you were anxious when you visualised them as grown men and women.

Even with plenty of money it is not always easy to select the right career, and a parent is sometimes inclined to ask vice of some relative, and in ninety-nine cases out of a hundred that relative knows nothing at all about the ssibilities of employment.

Why not let me relieve you of some of your anxieties? In fact, why not let me be their Father?

We do not profess to act as an employment agency, but the nature of our business compels us to keep an eye upon e class of men and women that are wanted and who wants them.

There are some people who manufacture an article, and put it on the market to sell. We do not do that, we work exactly the opposite direction. We find out what employers want and we train our students to fill those jobs. We ve to be experts in the matter of employment, progress and prosperity.

If you have any anxieties at all as to what your sons or daughters should be, write to me, or, better still, let them rite to me personally—Fatherly Advice Department—and tell me their likes and dislikes, and I will give sound actical advice as to the possibilities of a vocation and how to succeed in it.

Yours sincerely,

J. H. Bennett

Iron and Steel Suppliers to the Nation

Over 50 lakh tons of **TATA STEEL** have now found use in bridging the country's mighty rivers, in the construction and maintenance of its vast transport systems and in housing its people.

We are proud of this truly national service, and prouder still, that to-day, as in 1912, when **TATA STEEL** was first produced, we remain the only producers in the country of rolled steel from indigenous basic materials.

Demand **TATA STEEL** bars, structurals, plates and sheets for strength, stability and quality.

MECHANICS!

LEARN TO BOSS THE JOB!

OBTAIN EXPERT TRAINING FROM A BRITISH COLLEGE IN YOUR OWN HOME

WHY STAY IN A BOILER SUIT?

GET OUT OF THE "HAMMER AND FILE BRIGADE"

If you intend to Succeed — If you intend to get above the "Hammer and file Brigade" — If you intend to become a Qualified "ENGINEER" and not just a "Mechanic" — Then you cannot afford to carry on without reading

"ENGINEERING OPPORTUNITIES"

"ENGINEERING OPPORTUNITIES" is a 250-page Handbook that has been prepared after years of patient search into the possibilities of various Engineering careers. It shows clearly and definitely the way in which *you* may carve out a highly successful career, irrespective of your age, education or experience.

The handbook is filled with matters of vital importance to you, from cover to cover. Among other things it outlines over 100 correspondence courses in all branches of modern Engineering practice. We coach for all examinations and have specialised in preparing candidates for the A.M.I.C.E., A.M.I.Mech.E., A.M.I.E.E., A.M.I.R.E., A.M.Inst.B.E., and other qualifications.

A special feature is made of many courses covering competitive exams. held for filling vacancies in Government Departments, the I.S.E., I.R.S.E., Posts & Telegraphs, etc. etc.

Many students annually prepared for Cambridge School Certificate.

Our records of successes in the recognised Engineering Examinations is unapproached by any Institute of its kind in existence. As evidence of the strength of our organisation it should be noted that WE ALONE GUARANTEE NO PASS—NO FEE.

To the man with initiative and foresight the Industry offers wonderful scope. The man who aims at becoming a Fitter or Mechanic will not go far, but he who aims at becoming a Qualified Engineer in the true sense of the word, and who is prepared to study towards this end will find a rich harvest for his labours. It is in your own interests that we urge you to send for a copy of "Engineering Opportunities" to-day so that you may know exactly what steps to take. *There is no cost or obligation whatsoever.*

The Latest in Shelving

GODREJ

STEEL

SHELVING

Each Section is a Complete Independent Unit with four standards to support it.

Easy to Erect, take down and Rearrange. Independent Sections can be most easily placed and joined together side by side or back to back from any length of shelving.

Greater Load-Carrying Capacity because each section is independently supported by four strong standards.

Anti-Rust Treatment before painting prevents any rusting later and makes Godrej Shelving long lasting.

Godrej gives you best value in Shelving Cupboards, Racks, Pigeonholes, etc., etc., of all sizes and types.

RAJMOHAN'S WIFE

By

BANKIM CHANDRA CHATTERJEE

THIS maiden Novel by the greatest Novelist of the 19th century was published serially in the "Indian Field" in 1864 in English. Then it disappeared from the public eye. It has at last been rediscovered and is ready for the admirers of Bankim and the readers of fiction. It will show how great was the master in his craft even in a foreign language.

Sir Jadunath Sarkar, Kt., C. I. E.:

"..his characters are already living entities and not mere dummies. Above all, his gift of gentle raillery peeps through in this very first fiction. The reader's attention is here held captivated and he is led to the very end of the volume without a break,—as in the Master's most mature work." (The *Amrita Bazar Patrika*, 15 Dec. 1935).

The Bombay Chronicle:—"The novel deals w village life in Bengal; the love, romance, intri jealousy and superstition of the Indian villagers all faithfully portrayed in a story that is as hu as it is full of incident. The vividness with wh he describes Indian scenes—be it the vill maidens at the well or the verdant fields or atmosphere within the Zenana—is in ompara The novel is a glorious addition to Indian fict (29. 12. 35)

SIROLIN "ROCHE" IS THE ONLY RELIABLE AND SAFE REMEDY FOR COUGHS, COLDS, BRONCHITIS, INFLUENZA, IN EARLY STAGES OF PULMONARY TUBERCULOSIS, ETC.

Sirolin "Roche" is prescribed by eminent Physicians all over the world. Below we mention a few of the many testimonials recently received.

"I am prescribing Sirolin (Hoffmann-La Roche) for some time past, to my patients suffering from chronic pulmonary and intestinal tuberculosis. It is a palatable preparation of Thiocol in syrup form. I find it an efficacious and strongly antiseptic preparation. It is very palatable, well tolerated by the stomach even during prolonged administration."

Dr. M. A. ANSARI, M.D., M.S. Delhi, May 12, 1934.

"In suspected and early stages of tuberculosis Sirolin 'Roche' will do more good than the best hill-station in the world."

Dr. S. K. BASU, B.Sc., M.B., D.T.M., D.P.H. Calcutta, January 17, 1934.

"For coughs, colds, and even early stages of tuberculosis there is all over the world no better medicine than Sirolin 'Roche.'"

Dr. U. P. BANERJEE, M.B., D. P. H. Calcutta, January 19, 1934.

The Christian Leader writes:

Dr. Sunderland's selections of Americans for his miniature Hall of Fame, and his comments on the men and women selected, are just what we should expect. He has singled out for description and sympathetic interpretation men and women of prophetic power and pioneering spirit, Lincoln, Emerson, Garrison, Lowell, Paine, O. W. Holmes, Channing, Whittier, Lucy Stone, Julia Ward Howe, Horace Greeley, C. A. Eliot, Charles F. Dole, and of the living, Alice Stone Blackwell. Would that we might be understood and judged as a people by such courageous and devoted servants of justice, truth and peace!

The stories of these heralds of a larger faith provide Dr. Sunderland with occasion and material for the service he has for so long been eager to render to the cause of friendship between Indian and American Liberals.

The Christian Register of Boston says:

It would be difficult, if not impossible, to find anywhere else such charming sketches of so many eminent Americans within the covers of one small book. The subjects of these brief sketches seem to come alive under the skilful pen of Dr. Sunderland. The lives of Lincoln, Emerson, Garrison, Lowell, Paine, Longfellow, Holmes, Channing, Lucy Stone, Alice Stone Blackwell, Whittier, Charles F. Dole, Julia Ward Howe, Horace-Greeley and President Eliot of Harvard, most of whom properly may be found in the Hall of Fame, form the substance of the book. Selections from the writings of each person are included, together with the chief events of their lives.

Without exception we may say that these eminent Americans were genuinely interested in the political and personal freedom of all sorts and conditions of men.

The book is a splendid series of vivid essays. It should appeal strongly to American readers, as well as to the people of India for whom it is intended. One of its happiest features is Dr. Sunderland's interpretation of the philosophical and religious viewpoint and the description of the high moral and spiritual character of each individual sketched.

THE MODERN REVIEW

FEBRUARY 1936

VOL. LIX., No. 2 WHOLE No. 350

ROBERT BURNS

BY J. T. SUNDERLAND

It is a century and three quarters since Robert Burns first saw the light of earthly day. It is a century and a third since his eyes closed for the last time on the Scotland that he loved —the Scotland which has since come to love him with such a tender and passionate affection.

When he died, his countrymen generally did not quite know what to think of him. A great throng gathered at his funeral. Most that came loved him, and poured out sincere tears at his death. Unquestionably he had already attained a strong hold upon the affections of his neighbors and friends because of his own great heart, and because of his abilities as a poet,—abilities which were bringing fame to the whole region. But his life had not been altogether regular, and he had written things which had put him out of favor with all the more soundly orthodox and the stricter elements of the Church. These were disposed to draw their garments about them, and shake their heads, and stand aside. His fame had gone over Scotland, and over England; and many men of the highest standing in literature had declared his writings to be wonderful for their brilliancy. And still Scotland was not yet quite sure, as England was not, whether this new light which had risen with such splendor, was to be enduring, or whether it would fade away, with the passing of a little time, and lose its dazzling quality. Was it really a new fixed star that had appeared in the sky of song, to hold its place there permanently? Or was it only a comet which would vanish as speedily as it came?

This was the situation when the sod fell sadly upon all that was mortal of him who had sung with such rollicking glee and power of Tam o' Shanter, and with such tender pathos of Highland Mary.

How stands the matter now? Does anyone doubt any longer where Robert Burns belongs? Today nobody questions his place among the fixed stars of the firmament of the world's great singers, and in that firmament how few stars shine with so brilliant a light! Scotland accepts him today as incomparably her greatest poet. England freely confesses that she has no lyric poet that can be named beside him. I believe he is the best beloved poet of the Western World. Scotchmen love him as they love their own kith and kin. All English-speaking peoples love him. His songs are translated into all civilized tongues, and wherever they go they have marvellous power to stir hearts and awaken affection for the singer. In every land of earth where Scotchmen live—and what civilized land is without them? —the anniversary of Robert Burns is a great day. And why not? Has he not sung for all peoples? True, he had in mind only his own beloved Scotland. But the human heart is one. And he sang so true to the Scotch heart that he found the heart of humanity.

What was there in this poor ploughman, that first his own land and then the world should take such an interest in him, and lift him up to such a place of honor? Let us see if we can discover in any degree the secret of that power, with which he has laid hold upon human hearts.

For one thing, he was young. He began writing at 17. Some of his finest poems were written before he was 25. He died at 37. There is a sort of fascination about youth.

Possibly we feel a little of it,—possibly the world has always felt a little of it, in connection with Burns. His life was a romance, and yet a tragedy. Externally it seemed plain, quiet, commonplace. But only the shallowest of men judges lives by what the eyes can see. Into those 37 years were crowded events that would make dramas and epics as thrilling as any to be found in literature.

A poor boy, struggling with poverty; struggling to get knowledge; often overworked; ambitious; eager to know books, yet having few within his reach; eager to read, yet with only such time as he could get in the evenings after the hard toil of the day, or in the field holding his book in one hand and his plow with the other; eager to make a place for himself in the world, yet shut up on every side; loving his father dearly, yet losing him early; the oldest member of a family of brothers and sisters who looked to him for help; with strong passions which he could not always control; with high and noble ideals, which he sometimes fell far short of reaching; surrounded by friends and companions, the influence of many of whom was to lead him astray, instead of to help him; surrounded by a society in which drinking was almost universal; surrounded by a religion which was hard and dogmatic, and with which he had little or no sympathy; himself a veritable genius, feeling all the fiery emotions of the muse sweeping through his soul, yet having all his life to do battle for his daily bread, in his own words, "hunted from covert to covert under all the terrors of a jail;" his difficulties and hardship so great that at one time he prepared to leave Scotland and migrate to the West Indies; after he had published his first book "picked up by fashionable society, taken to Edinburgh, lionized, and then when the novelty was gone, thrown aside like an exhausted bauble;" "today patted and flattered by fashionable prigs," tomorrow set—this poet soul, this child of the gods, this singer of songs sweet enough for angels to hear—tomorrow set to gauging beer for a living at a salary of 50 pounds a year! and soon deprived of even this beggarly pittance, because he dared to give free expression to his thought, and only kept from starving by the charity of a kind patron; until at last, with health broken, spirits gone, hope blasted, and vile slanders continually cast on his name, he sinks into an untimely grave. Such was the tragic side of the life of Robert Burns. Such were the clouds that darkened its skies and the storms that swept over it.

And yet, there was another side too; else he could never have written all that wealth of joy and hope and rollicking fun and tende with which his poems abound.

He loved his friends, and many of he saw much; he mingled in the festi going on among the people around him— of which we have so fine a picture in his "Halloween;" he greatly enjoyed the fields woods, the hills, the streams, the birds flowers, the "banks and braes of b Doon,"[1] the varied changes and beauties o seasons, which his eye was ever quick to He had warm affection for parents, brothers sisters, wife, children, neighbors, and into joys as well as the sorrows of all he em heartily, taking eagerly the cups of ple that offered themselves—sometimes, alas! of pleasure which he would better have alone—as well as drinking manfully also cups of sorrow and pain that came. Thus life was filled with shadow and sunshine, p and storm, crowding fast upon each other. may well picture his life as a mountain str Here its waters rippled and sang, while m of birds filled all the air; but anon the str was dashed against rocks, and hurled over cipices which tore it to tatters, and drow all music with its own dull roar.

Thus is understood what I mean wha say that his experience was mingled roma and tragedy. Both come out to view in wonderful poems. He wrote out of his he His writings are the ever changing mirror his soul. He dipped his pen now in laugh now in tears, now in his own very hea blood.

Perhaps this, more than anything else the secret of the fascination and the power his poetry. He who thinks clearly and gi his thought to others, helps them to think. who feels deeply and expresses his emo stirs feeling in other breasts. He who w clearness and power portrays the deep e periences of his own life, paints a picture wh interests all men, fascinates all men, stirs men, because in it all men see the shado forms of their lives, actual or possible.

But if Burns gives us himself, no less d he give us Scotland. No other writer so clea so vividly, with such wonderful insight genius, gives us the very life and soul of Scotland of a hundred and fifty years ago that is, the Scotland which existed before changes and the disintegrating influences caus by our modern telegraphs, telephones, rad cheap mails, automobiles, railways, tra mercialism and science. The old Scotla

Digitized by Arya Samaj Foundation Chennai and eGangotri

largely gone, as has the old England, the old Wales, and the old Ireland. But the Scotland that has *been* will live forever in the pages of Scott and Burns, especially Burns. Burns has made it immortal.

It is true that Burns wrote good poetry in pure English. But that which is most characteristic of him, that in which his peculiar genius comes out in all its inimitable perfection, is what he wrote in the Scotch dialect, that is, in the speech of his mother and his father and of his childhood. But if Burns has made the dialect of his people immortal, he has also given a very real kind of immortality to their customs, their habits, their traits of character, their manner, their many-sided life. No matter what changes may come over the Scotland of the future, the Scotland of the eighteenth century is secure. Even if some Vandal hoard should sometime overrun the land and wipe out all traces of its present civilization, even plowing up the sites of its present cities and villages, as Titus is said to have plowed up the site of Jerusalem, still in the poetry of Burns the Scotland of the past would live forever.

Burns was so perfect a representative of the Scotland of his time not simply because he was born in it, and lived all his days in the midst of its scenes and its people, but because he was the finest embodiment of its genius. If you ask me how or why he was so, I cannot tell. If you ask me why the genius of a people should come to its most perfect flower in a poor peasant's son, instead of in some one in a higher rank of life, I cannot answer. If you ask me what genius is, I cannot explain. I only know that here, there, and there, all up and down the Earth, and all along the ages, God pours celestial fire into this soul and that, of man and woman, sometimes of royal blood, more often of plebeian, and lo, history is starred with prophets, seers, poets, artists, teachers of the hidden things of nature and the deep things of the soul, leaders of their fellows upward and onward to larger life. Thus in the great Providence of God the world moves forward toward the better day.

Burns was very richly endowed in both head and heart. Perhaps his greatest lack was in will. If he had been possessed of greater will power, perhaps he would have done more sustained literary work—work less irregular, less fragmentary, less confined to short productions. Perhaps, too, if his will power had been greater it would have helped him morally, by holding him more steady and firm in the hour of temptation.

But in his intellect there was no lack. When he went to Edinburgh, the intellectual capital of Scotland, he held his own with the best minds. Indeed his mental keenness and grasp, and the brilliance of his conversation, seem to have impressed all who came in contact with him.

His endowment in heart-qualities too was not less rich than his intellectual gifts. He was generous and unselfish. He was frank and sincere, hating all shams and all pretenses. He was manly and self-respecting, honoring all men according to what he considered to be their worth, not according to their wealth or titles. This is strongly brought out in several of his poems, for example in his "Honest Poverty."

"Is there, for honest poverty,
Wha[2] hangs his head, and a'[3] that?
The coward slave, we pass him by,
We dare be poor for a' that.
For a' that, and a' that,
Our toil's obscure, and a' that,
The rank is but the guinea stamp,
The man's the gowd[4] for a' that.

What tho' on hamely[5] fare we dine,
Wear hodden[6] gray, and a' that;
Gie[7] fools their silks, and knaves their wine,
A man's a man for a' that.
For a' that and a' that,
Their tinsel show and a' that;
The honest man, though e'er sae[8] poor,
Is king o'[9] men for a' that."

Burns had great sympathy for the suffering. He had suffered too much himself not to feel for others. His expressions of sympathy and pity are numberless in his poems. In his poem "A Winter Night" he cannot forget that while some are warm and comfortable, others are cold and in want, and he breaks out—

"O ye! who, sunk in beds of down,
Feel not a want but what yourselves create,
Think for a moment on his wretched fate
Wham[10] friends and fortune quite disown!"

In his poem, "Man was made to Mourn," he gives us the fine lines,

"Man's inhumanity to man
Makes countless thousands mourn."

and then he follows on with other lines in which his pity for poverty mingles with sharp reproof for those who have power to relieve it and will not.

His feelings of kindness and pity extended

to suffering brutes as well as to suffering human beings. In his "Verses" composed on seeing a wounded hare limp by, which a hunter had just shot, he bursts out in indignation,

"Inhuman man! curse on thy barbarous act,"

and then he tenderly apostrophizes the suffering creature—

"Seek, mangled wretch, some place of wonted rest—
No more of rest, but now thy dying bed!
The sheltering rushes whistling o'er thy head,
The cold earth with thy bloddy bosom press'd."

But the most charming of his poems in which he expresses his sympathy for dumb creatures is that entitled "To A Mouse" written on turning up her nest with a plough.

"Wee[11] sleekit,[12] cow'rin, tim'rous beastie,[13]
Oh, what a panic's in thy breastie![14]
Thou need na[15] start awa[16] sae hasty,
Wi' bickering brattle![17]
I wad[18] be laith[19] to rin[20] an'[21] chase thee,
Wi'[22] murd'ring pattle![23]

I'm truly sorry man's dominion,
Has broken nature's social union,
An' justifies that ill opinion,
Which makes thee startle
At me, thy poor, earth-born companion
An' fellow-mortal!

Thou saw the fields laid bare and waste,
And weary winter comin'[24] fast,
And cozie here, beneath the blast
Thou thought to dwell,
Till crash! the cruel coulter past
Out thro' thy cell.

And then comes the sermon for men as well as mice:

"But Mousie, thou art not thy lane,[25]
In proving foresight may be vain;
The best-laid schemes o' mice and men
Gang aft agley,[26]
An' leave us nought but grief an' pain,
For promis'd joy!

Still, thou art blest, compar'd wi' me
The present only toucheth thee:
But och![27] I backward cast my e'e,
On prospects drear!
An' forward, tho' I canna[28] see,
I guess an' fear!"

His sympathy does not stop with a wounded mouse; it extends even to a hurt flower, seen in his exquisite poem, "To a Mountain Daisy."

"Wee, modest, crimson-tipped flower,
Thou'st met me in an evil hour;
For I maun[29] crush amang the stoure[30]
Thy slender stem;
To spare thee now is past my power,
Thou bonny[31] gem!

Cauld[32] blew the bitter-biting North
Upon thy early, humble birth,
Yet cheerfully thou glinted forth
Amid the storm,
Scarce reared above the parent Earth
Thy tender form.

The flaunting flowers our gardens yield,
High sheltering woods and wa's[33] maun shield,
But thou, beneath the random bield[34]
O' clod or stane[35]
Adorns the histie stibble field,[36]
Unseen, alane.[37]

There, in thy scanty mantle clad,
Thy snawie[38] bosom sunward spread,
Thou lifts thy unassuming head
In humble guise;
But now the share uptears thy bed,
And low thou lies!"

Robert Burns was a patriot. There was no warmer lover of Scotland than he. His love for his native land is well shown in his poems, "My Heart's in the Highlands," "Bannockburn."

But while he is a devoted lover of his native land and her freedom, he is too noble a soul to confine his love of freedom within territorial lines. The liberty which he desires for himself and his fellow Scots, he desires for all men. Hence one of his most stirring poems is that entitled, "The Tree of Liberty."

"Wi' plenty o' sic[39] trees, I trow,
The warld[40] would live in peace, man;
The sword would help to mak[41] a plough,
The din o' war wad cease, man;
Like brethren in a common cause,
We'd on each other smile, man;

11. "Wee"—very small.
12. "Sleekit"—sleek.
13. "Beastie"—diminutive of beast.
14. "Breastie"—diminutive of breast.
15. "Na"—no.
16. "Awa"—away.
17. "Wi' bickering brattle"—with hurrying scamper.
18. "Wad"—would.
19. "Laith"—loath.
20. "Rin"—run.
21. "An'"—and.
22. "Wi'"—with.
23. "Pattle"—a plow-staff.
24. "Comin'"—coming.
25. "Thy lane"—alone.
26. "Gang aft agley"—go often astray.
27. "Och"—alas.
28. "Canna"—cannot.
29. "Maun"—must.
30. "Amang the stoure"—amid the dust.
31. "Bonny"—beautiful.
32. "Cauld"—cold.
33. "Wa's"—walls.
34. "Bield"—shelter.
35. "Stane"—stone.
36. "Histie stibble field"—bare stubble field.
37. "Alane"—alone.
38. "Snawie"—snowy.
39. "Sic"—such.
40. "Warld"—world.
41. "Mak"—make.

And equal rights and equal laws
Wad gladden every isle, man."

One of the finest qualities of Burns as a is his humour, which runs rippling through verse in hundreds of unexpected places. Another quality which is not always so ely, but which he can use with withering ect when he will, is sarcasm. He has several ems of considerable length which are satires. d Damascus blades they are! The most table of them are, "The Holy Fair," "The dination," "Address to the Unco Guid,"[42] The Kirk's Alarm,"[43] and "Holy Willie's ayer." These satires are sometimes said to be rected against religion. This is not true. ey are directed against certain theological ctrines which he believes to be untrue, and rtain men whom he believes to be hypocrites ing religion for a cloak.

I have referred to Robert Burns' love of ture. Of this more should be said. This e was deep and almost passionate through- t all his life. It forms a sort of background all his poetry; or perhaps it would be better say that it runs like a thread of gold through his poetry, lighting it up and greatly autifying it. His love of nature is shown the fact that both as boy and man he loved wander in the fields, by the streams, in the ods. Often when toil at the plough or else- ere had occupied him all the day, his quiet lks were taken in the night. It was here at many of those thoughts had their birth ich found expression in his poems. He mented his early poverty partly because it nfined him so closely at home and prevented m from making excursions to other parts of s native land to see the fine natural scenery which Scotland is so rich When he had tained the first considerable sum of money om the publication of his poems, almost the rst thing he did was to make a series of urneys to the country round about the River Tweed and its tributaries, to the Highlands, nd elsewhere, to give himself the delight of iewing the scenery which he had so long desired o see.

No poet more abounds in descriptions of ature, and none gives us finer ones; and yet Burns did not write much poetry with the rimary aim of describing nature. The fact imply was that Nature was so much to him hat he could never get far away from her. oving her as he did it was impossible for him o write without painting pictures of her, and rawing illustrations and symbolism from her objects and scenes. No one whose attention has not been directly drawn to the subject can at all understand how much of the charm of his poetry comes from this everywhere present nature-element. To erase it would be like wiping the stars from the sky, or destroying the flowers of a garden by an untimely frost. Without it he would not be Burns, but would sink to a third rate poet, dreary and commonplace, whereas he is now the delight of the world. Illustrations almost without number might be cited. For example this from "Tam o' Shanter." He wants to tell us that pleasures are short-lived. Any ordinary expression of the thought will be a mere truism, which nobody will care to hear. How does the genius of Burns overcome the difficulty? He makes nature his ally. He summons to his aid a flower, a snow-flake, the aurora borealis and a rainbow, and lo! the thought has taken a form that is beautiful, impressive, immortal.

"Pleasures are like poppies spread,
You seize the flower, its bloom is shed;
Or like the snow-flake in the river,
A moment white—then lost forever;
Or like the borealis race,
That flits ere you can point the place;
Or like the rainbow's lovely form,
Evanishing amid the storm."

Was a thought ever given a more splendid setting of diamonds and gems? And where did he get the gems and diamonds? Out of the heart of Nature—that Nature which he loved, that Nature with which he had communed at the morning sunrise and the evening sunset, at his toil in the fields by day, and in his walks under the silent stars by night.

Take a song like "Auld Lang Syne,"[44] and how much of its charm comes from his inimitable bits of description of the scenes of childhood:

"We twa hae run about the braes,
And pu'd the gowans fine.
We twa hae paidl'd in the burn,
Frae morning sun till dine;
But seas between us braid hae roar'd
Sin' auld lang syne."[45]

Take the song, "The Banks of Doon" and the nature element is still more important.

"Ye banks and braes o' bonnie Doon,[46]
How can ye bloom so fresh and fair,

42. "Unco Guid"—uncommon good.
43. "Kirk's Alarm"—Church's Alarm.

44. "Auld Lang Syne"—Long Ago.
45. Translation:
We two have run about the hills,
And picked the mountain daisies fine,
We two have paddled in the brook,
From morning sun till dinner,
But seas between us both have roared,
Since days of long ago.
46. "Ye banks and braes o' bonnie Doon"—Ye banks and hills of beautiful Doon.

How can ye chant, ye little birds,
And I sae weary, fu' o'[47] care!
Thou'lt break my heart, thou warbling bird,
That wantons thro' the flowering thorn:
Thou minds me of departed joys,
Departed—never to return.

Oft hae[48] I roved by bonnie Doon,
To see the rose and woodbine twine;
And ilka[49] bird sang o' its love,
And fondly sae did I o' mine.
Wi' lightsome heart I pu'd[50] a rose,
Fu' sweet upon its thorny tree;
But my fause[51] lover stole my rose,
But ah! he left the thorn wi' me."

Is it possible to conceive of lines more full of rarest gems of nature-allusion? And yet nothing is artificial or far-fetched. Everything is simple, natural, as much an essential part of the song as the blossoms of an apple tree in May are an essential part of the tree.

Even in the case of those songs and poems which were most personal, and were the expressions of his deepest, tenderest and most earnest feelings, allusions to nature run through them just the same, showing that this love of nature was a part of his very being. That exquisitely tender poem, "To Mary in Heaven," you remember, begins:—

"Thou lingering star, with lessening ray,
That lov'st to greet the early morn,
Again thou usherest in the day
When Mary from my soul was torn."

And the tender lines to his dead child are not less rich with nature-imagery.

"Here lies a rose, a budding rose,
Blasted before its bloom;
Whose innocence did sweets disclose
Beyond that flower's perfume.

To those who for her loss are grieved,
This consolation's given—
She's from a world of woe relieved,
And blooms a rose in heaven."

Such are a few almost random illustrations of Burn's love of nature, and the profound and happy influence which that love exercised upon his writings as a poet. We may say that his love of nature was a part of his genius—a part of his high endowment. Without it he would have been a bird robbed of its wings. Without it he would have been a painter deprived of his finest colors. Not only the beauty but the perennial freshness of his poems and songs come largely from the nature-element that is in them. They are full of mornings and evenings, bright springs and glorious autumns, stars a[illegible] moons, warbling birds, nibbling sheep, th[illegible] and braes not only of bonnie Doon, [illegible] many another bonnie stream. None o[illegible] things ever grows old. We tire of b[illegible] cages, but not of birds in the hawthorn [illegible] meadow grass. We weary of shaven la[illegible] artificial gardens and parks; but we [illegible] weary of nature's hills and valleys and s[illegible] Book poets, artificial poets, grow old and [illegible] and pass away. But nature-poets [illegible] Burns saw nature in the light of a s[illegible] genius, and loved her with all his great [illegible] ate heart. And out of this genius and th[illegible] he sang. The result was, songs which w[illegible] and be loved forever.

Burns wrote poems of many kinds. "Tam o' Shanter" has all the qualities [illegible] epic, save its length. He has numerous de[illegible] tive pieces. He has epistles, elegies, h[illegible] epigrams, and many poems which it is h[illegible] classify. But his genius is preeminently [illegible] Above everything else he is a song-writer. [illegible] songs number more than 200; and nothing [illegible] he has given the world is quite so fine [illegible] songs.

Those who do not know the histo[illegible] Scotland are apt to think of Scotch son[illegible] having been born with Burns. But no m[illegible] could be greater. Burns does not stand [illegible] beginning of Scotch song, but far on dow[illegible] stream. For hundreds of years before B[illegible] Scotland had been rich in folk songs, both [illegible] and words. Perhaps no country in the [illegible] was richer. The whole air, among the co[illegible] people, was redolent with them.

"You heard the milk maid singing some old [illegible] as she milked the cows in the byre or the field; the [illegible] wife went about her work or span at her wheel [illegible] lilt upon her lips. In the Highland Glen you mig[illegible] some solitary reaper singing, like her whom Wor[illegible] has immortalized; in the lowland field, now on[illegible] another, of the reapers taking up an old melody, an[illegible] the whole band breaking out into some well-known [illegible] The plowman, too, as he turned his furrow, begui[illegible] time by humming or whistling a tune; even the [illegible] as he clashed his shuttle between the threads, m[illegible] the harsh sound with a song. In former days so[illegible] the great amusement of the peasantry as they of a [illegible] night met for a hamlet-gathering by each others' fi[illegible] This was the usage in Scotland for centuries."

In general it may be said that the [illegible] were older than the words. Nearly all [illegible] tunes had had two or three sets of wo[illegible] earlier and later.

Into such an environment Robert B[illegible] was born. To such a heritage was he b[illegible] he, then, create Scotch song? He no more [illegible] it than Shakespeare created the English d[illegible] He no more created it than Homer created [illegible]

47. "Fu' o'"—full of.
48. "Hae"—have.
49. "Ilka"—every.
50. "Pu'd"—pulled.
51. "Fause"—false.

eek epic. Shakespeare found the drama in hands of the people, where it had en for centuries. He took it up, and rried it forward to a height which body had dreamed of, by impressing his lendid genius upon it. Homer found poetical les everywhere among the people of Greece. e gathered up the best, remoulded them, ssed them through the crucible of his own let-soul, and lo! the world had an Iliad and dyssey.

In the same way Burns, not created, but rried forward, lifted up, crowned by his own comparable genius the rich song products of otland. Many old songs he rewrote. Many hich we think of as his have in them verses lines of older songs. Part of the material old, but the present completed form and the nius are his. Others are wholly new. What ppened was that the stream of Scotch song hich had been flowing for centuries rose to s flood in Robert Burns. The plant which d been growing and blossoming for generans, burst, in him, into such a splendor of oom as it had never known before. Scotch ng did not begin in him; it culminated in him; t its culmination was so glorious that it drew e eyes and awoke the admiration of the world.

Another thing Burns did for Scotch song. e greatly purified it. We complain of him at not all the songs that come from his hands e as high morally as we could wish. Some them praise strong drink. Here and there e deals with love in ways that are unworthy. r this we are tempted severely to condemn m. But wait! Let us see what is really the uation. The popular songs of Scotland were gely re-written by Burns. We know that he t them vastly finer as literary productions an he found them. How about their moral uality? Did he leave that injured, or improved. He left it vastly improved. He urged away much of the Bacchanalian ement; he purged away very much of e unworthy love-element and the low orality. This we should not forget. We may ish he had gone farther in his good work. he wonder is that he went so far, when we member the times in which he lived and the stoms prevailing around him. Scotland should eal gently with Robert Burns. She should member how great a debt she owes him for orally improving and purifying the popular ngs of her people.

It only remains to me now to make some rther inquiry concerning the religion of Burns. o one can understand the attitude of Robert urns toward religion who does not bear in mind the general religious conditions prevailing in Scotland at the time he lived.

Ever since the time of John Knox, Scotland had been the home of Calvinism, and Calvinism in its severest form.

Calvinism appears in history under two aspects—theological and ecclesiastical. On its ecclesiastical side—or perhaps it would be better to say on its side of church government—it has been nearly always the friend and promoter of human liberty, particularly political liberty. In the struggles of Europe between the people and tyrants who have oppressed them in state or in church, the Calvinistic and Presbyterian churches have generally been on the side of the people. This must forever be said in their praise. Calvin rejected the Papal hierarchy, with its pope, cardinals, archbishops, bishops and priests, who ruled churches from outside and from above downward; and he located ecclesiastical authority in representative bodies known as presbyters or elders chosen by the churches from among themselves. Thus he did more than perhaps any other man to lay the foundations of representative government, both ecclesiastical and civil, in the modern world. This is a great service to have rendered to mankind. When John Knox carried Calvinism into Scotland, he carried with it the Presbyterian or representative system of church government. It had a battle to fight to establish itself, and several times since it has had battles to wage to maintain itself. But it has always been successful. And the spirit of liberty which has been so strong in Scotland has ever found a staunch ally in the Presbyterian churches.

But of the other side of Calvinism—the theological—it is impossible to speak in so high praise. The Scotch mind is naturally logical, and in the iron of its Calvinistic theological doctrines it has had a chance to exercise its logic to the full. But the awful assumptions of Calvinism have always been shocking to many minds. That God could elect a part of the human race to be saved, and a part to be lost through no fault of their own; that men today can be guilty for the sin of Adam, committed thousands of years before they were born; that God so planned things that there should be at the very beginning of human history a world catastrophe of such appalling magnitude as to involve the eternal ruin of a vast majority of mankind, that human nature is totally depraved, having no good in it; that God with all power in his hands can have created a devil and a hell of endless torments even for a single soul—to say nothing of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

countless millions whom the Calvinistic system condemns to its flames,—this view has always seemed to many thoughtful, earnest and devout souls, too shocking and too unreasonable to be believed.

It was exactly in this way that these things seemed to Robert Burns. This explains much of his poetry. Many poems which at first sight seem irreverent, and which might appear to be attacks upon religion, are really not attacks on religion at all, but only deep fiery protests against views of God which he believed to be untrue, unworthy, and calculated in their nature to hurt and degrade religion and God.

Perhaps none of the poems of Burns bearing on theology are more startling than his "Holy Willie's Prayer."

"O Thou, wha in the heavens dost dwell,
Wha, as it pleases best Thysel',
Sends ane[52] to heaven, and ten to hell—
A' for Thy glory,
And no for ony[53] guid[54] or ill
They've done afore Thee."

Severe as these lines are we are wrong if we call them an attack on religion. They are an attack on doctrines which Burns believed drive men away from religion. This awful irony is really a plea for views of religion and of God which shall be more sweet, more reasonable and more true. Burns would have religion and the Church purified. It is the best that is in him that speaks, not the worst.

"I own 'twas rash, an' rather hardy,
That I, a simple, countra[55] bardie,[56]
Shou'd meddle wi' a pack sae sturdy
Wha, if they ken me,[57]
Can easy, wi' a single wordie,
Lowse[58] hell upon me.

But I gae[59] mad at their grimaces,
Their sighin', cantin', grace-proud faces,
Their three-mile prayers, an' hauf-mile[60] graces,
Their raxin' conscience,
Whase greed, revenge, an' pride disgraces
Waur nor their nonsense.[61]

All hail, Religion! maid divine!
Pardon a Muse sae mean as mine,
Who in her rough imperfect line,
Thus daurs[62] to name thee;
To stigmatize fause freends[63] o' thine
Can ne'er defame thee."

Yes, here we have it. To B... Religion is something divine, in whose ... he stands with head uncovered, hardly ... to take her holy name upon his lips. ... is trying to do is to defend her from ... believes to be "fause freends." So ... may at least admit that his motives are ... even if he be too severe sometimes ... methods.

In the "Cotters Saturday Night" ... a picture of the kind of religion that ... Burns believed in and loved.

"From scenes like these old Scotia's grandeur
That makes her lov'd at home, rever'd a...
Princes and lords are but the breath of k...
An honest man's the noblest work of G...

Burns had many faults. Nobody ... this better than he. Nobody confessed ... frankly or with more sincere regret a... and penitence. What heart that is hum... not feel the force of his plea, as regards ... and all the rest of us, when he writes,—

"Oh gently scan your brother man,
Still gentler sister woman;
Tho' they may gang a kinnin wrang,[64]
To step aside is human.
Who made the heart, 'tis He alone
Decidedly can try us:
He knows each cord—its various tone;
Each spring—its various bias:
Then at the balance let's be mute,
We never can adjust it;
What's done we partly can compute,
But know not what's resisted."

A vast change has come over the ... of Scotland since Burns' time. And ... beneficent as it is vast. The old Calv... largely gone. The dark and awful ... which were such a weight of lead u... loving heart of Burns, have been larg... away. And in their place has come, ... more and more coming, a sweeter, ... tenderer, more man-loving and God-... faith.

What has wrought this happy, this ... change? Many influences have wro... Many men have wrought it. THE HOLY BODY

By MAUD MacCARTHY

(NOTE. Hindu classical dance recognizes two main phases—the *tandava* or masculine phase, and the *lasya* or feminine phase. Miss Maud MacCarthy, in her poetry, keeps consistently on the feminine side of the metaphysical line between the two phases. By and by, when a sufficient quantity of her poetry is available, some speculative student of the mystery of creative expression will make a study of it in contrast with the poetry of Rabindranath, in which the *lasya* spirit is expressed by a poet habiting the *tandava* form. Meanwhile, it is helpful to know what Miss MacCarthy herself thinks of the poetical aspect of her many-sided expressiveness—for she has the rare capacity of moving between creative absorption and critical awareness. "I have always felt," she says, that in poetic expression one should be utterly simple, bold, and, as it were, naked." Poetry, she says, "a vent, a psychological explosion, which reveals the true individual." She deprecates the reticence by which women add a false allurement to sex. "This reticence is a subtle form of sensuality; but so curiously twisted has the human mind become that it is almost universally extolled as a shining virtue!" She asserts that "until woman cuts this unhealthy reticence out of her art, or her reactions to life, and all her judgments thereon, life will continue complex, essentially barbarous, and true civilization will remain a dream." These are challenging statements: they have important implications, which, however, cannot be developed in an introductory note; not the least significant implication being that, in her prose, Miss MacCarthy shows that the *tandava* energy can express itself through a *lasya* embodiment!

The following poem, "The Holy Body," is a sequel in 1932 to the previous poem, "A Young Woman Thinks on Mahadev," written in 1909. In the interval between them Miss MacCarthy developed her studies in yoga and her creative expression in art. These two lines of experience come together in "The Holy Body," which expresses the yogic attainment in the terms of the artist. It would be an error, however, to regard the language of the poem as entirely figurative. Like certain of the modern Indian painters, who have told me that they only paint what they have "seen" (referring thus to their paintings of the Gods and Goddesses), Miss MacCarthy here, as in other poems, chants of a more complete experience than just that of the imagination. The poem is a transcript of events participated in by the seeress in a London boarding-house. Hindu readers will see that, though the poetess uses the name of Christ, as was natural in a Christian environment, the reality behind the expression can be called by any name whereby humanity has denominated the *Purusha* or Divine Being at the core of the individual and universal life.

JAMES H. COUSINS)

I carry Thine Image in my heart.

I see before me the body of the Great Yogi—
Body as God made it, without pollution of man's thought.
The small, lean Image—
Perfect feet, slender legs and arms,
Thin shoulders, straightened back—
Body as God made it, unpolluted by man's thought!

Seeming frail,
Strong with the strength of Him,
I see this Body, sitting cross-legged in space.
Ascetic, full of love's effulgence, free,
Naked and pure.

Skin like petals of an olive rose—
That Body, quiet and poised,
Alert as the leopard,
Light, invincible and penetrating—
I carry that Image within my heart.

In infinite space It takes shape:
Out of the ineffable and formless
This Form takes birth, Self-born.
This is the Form of Christ—*
The Body of all mankind—
The End and the Beginning.

It is small,
It is as nothing

* The Form of Krishna, Buddha—Man Divine.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

It penetrates all things—
It lives in all—
It swallows life—
It lives, Thine Image, in my heart!

I see the little Form suspended in infinite space,
Which Thou didst make, Thou Lover of men,
Out of Thy thought unpolluted—
Out of Thy breath, Thy harmony!

When the lungs move, it is Thy breathing—
The heart, Thy pulsing;
Every organ
Each sense
Each faculty
Thine own complete unfolding.

From each part of this Body there flows all the beauty and perfection of limitless Perfection to mankind.
Into each part of this Body there enters all the agony, the grief and the black sorrow of ignoring multitudes—of death, and of longing.

Ah! I carry this Image in my heart—
This pure, piercing, tender Image—
This mighty One,
This Yogi—
Here, is my Redeemer!

Behold!
One strand of His hair will fortify all the hosts of angels.
The seraphic company dwells upon His temples.
(There, the lines of sorrow are as rivers of compassion).
When He speaks,
I shall hear the crying voices of the children of men,
The song of the Divine Mother,
And the thunders of the destruction of all iniquity.
When He raises His hand the worlds are moved.
I bend my forehead to the soles of His feet.
It is the holy, mystic Body of the Lord.
It is more real than Reality and more present than life itself—
Within and without my heart
Here is Thy Body!

* * * * * *

One night
I lay down to sleep.
In my sleep
The Holy Body lay beside me—
Eyes upon mine eyes—limbs upon my limbs—
Knee to knee, shoulder to shoulder,
Heart to heart—
Touching, without Sense,
Possessing, without Person.

He said:
"Lay thy head upon My shoulder."
I replied:
"Lord! I am not worthy!"

Then the dream became reality.

He laid His head upon my shoulder the
And said :
"I love you and I will come to you—
I need you and you are My comforting

And so I put my hands all unworthy O
About Thy Divine Body
And all my love O so small and impure
Fled out to Thee,
And I pressed
That small spare Form
With utter tenderness
Gently
Slowly
Over and over.
With all my poor love,
I clasped Thee
Over and over
To my poor human heart.

Small, frail, Thou wert!
Mighty, invincible, Thou wert!
Body of the Divine Yogi,
Cleansing me by Thyself!

My love surged:
I worshipped Thee in spirit, flesh and bone
I bowed my being to Thee
Whilst Thou
As Child of Man,
Lay, Thy head upon my shoulder,
Asking me for rest.
Lord! I gave myself to Thee without giv
And in that moment my flesh was redeeme

Thou art the Lover and the Redeemer!

My tears wash away my follies
As I think
Again and again
Upon that time when Thou, God of Gods,
Whole
Real
Lay upon my heart.

Thy Body is everywhere
Thou supreme Lover!

ou art the only Beloved of each body and each soul.
ved art Thou, thus,
et is there no division, no sorrow, and no jealousy.

speak of that which is—the Body of Christ).
carry this Image and my heart is redeemed.

* * * * * *

Holy Yogi!
What shall I do to take Thy Body to the children of the world?
What offer
That this feast may be spread before them?
Where shall I go to find a word which shall awaken
And a power which shall shatter
Their slumbers?

cannot show Thee to them—
Yet Thou art everywhere.

cannot hold Thee within the prison of my mind—
cannot make these unreal words paint the Real.

The form is a prison,
But Thy Form has set me free!
Unlock their prison doors,
Yogi, Liberator,
And set them free!
Only Thou art the Desired One,
The Lover and the Liberator—
Only Thine Image within their hearts shall break their bonds.

* * * * * *

I will carry Thee on my heart,
I will carry Thee in my arms,
I will lay Thee down before them—
Supreme Lover Crucified.

How shall they perceive Thee,
The blind, the suffering ones?

I will paint Thy lines—
Thy shape shall be my Image!
I will sing Thy beauty—
Thy Voice shall be my Music!
I will mould Thy Form—
Thy Flesh shall be my Clay!
I will portray Thy Grace—
Thy Movements shall be my Dance!

I will show this Thy glorious Body
Which I carry in my heart
Which they carry in their hearts
Which lies before them, the suffering ones
Forever and ever.

* * * * * *

What do I hear?
They tell me that Thine Image is not!
But I carry Thee in my heart
And Thou appearest before mine eyes
Forever.

Can the blind see and the mute speak?
Blind and mute are they—
But I carry Thee in my heart
Forever and ever.

THE GOLD COAST: WEST AFRICA

By C. F. ANDREWS

I

During a recent visit to West Africa for the purpose of giving some lectures at Achimota near Accra on the Gold Coast I had abundant opportunities of learning about the primitive West African religious beliefs and their spiritual background. To my great surprise I found myself continually meeting with ideas of the spirit-world which I had already known in rural India. About these I shall write later on in this article.

It needs to be understood that this part of Africa is far more intelligent and imaginative than anything which I have met on previous visits to Africa along the East Coast. Their life seems never to have become crushed and depressed by continual tyranny from outside nations, as has happened in East Africa. On the West Coast, the worst forms of slavery, which were continued for more than three hundred years, might have been expected to produce the same result. But the pure African race, which inhabits these regions, was so virile that, in spite of the millions of young men and young women carried off into slavery, the race itself never lost its vigour, and it is remarkably healthy today.

On the Gold coast, where I stayed for nearly two months, there are different tribes. The Ashanti has been the dominant tribe for more than half a century. Their capital has always been at Kumasi, a place in the interior, 250 miles from the coast, remarkably suited to be the capital of the whole country in the years to come. At present Accra, on the sea-coast itself, is the seat of Government. But it is neither a good port for shipping, nor is it well placed as a metropolis.

When the large expansion of gold mining in the interior takes place, as it is sure to do, Kumasi will become the centre both of trade and Government. While I was in the country the gold boom had reached its height. Two extra steamers had to be chartered from Elder, Dempster Co., to bring out engineers and miners along with machinery. I was told that the new gold reef, which had been discovered in the interior, was 150 miles in length and contained a high percentage of gold per ton of quartz, compared with the Transvaal. Some who were experts told me that there were possibilities of gold mining in Ashanti than those on the main reef that runs Johannesburg. They also told me gold-bearing soil was nearer to the surf

II

Two things have prevented the full ing of this reef before:

(*a*) The coast is so shallow and harb that it was impossible to tranship and up-country the heavy machinery need crushing the quartz and extracting the g

(*b*) The cost of European engi labour was almost prohibitive in such a h unhealthy country, so near the eq Health conditions for the European had b bad that the country had been called white Man's Grave."

Now, however, owing to the formati the deep-water harbour at Takoradi an building of a railway from this part to K the difficulty of heavy transport has been come. The further difficulty of health labour costs has been overcome also ow better sanitation and the rise in the pr gold. Only two years ago, gold was sell half the price which it is now fetching world market. This has made gold profitable, even though the cost of Eur labour is still high.

Those who have lived longest on the Coast and have learnt to love the African very doubtful whether this gold mining will really help the country. They are that it will bring some of the worst ele from Europe and increase drunkenness the Africans themselves. Thus the last of the Gold Coast may be worse than the even though money may pour in, as it is pouring into the Transvaal. For money, quickly made and quickly spent, has a te power of corruption.

III

Another danger that may come, if g care is not taken, is that of deforestation. gold mining industry is at present using as fuel, and the railways use wood-fuel. This means an immense consumption of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

There is already a danger of what is called "letting in the desert" from the north. For the great Sahara desert is not far distant and the whole northern territory of the Gold Coast is becoming more and more dry every year. If the great forest belt is broken through by the sandstorms, which come down from the Sahara, the damage done might be quite irreparable. Indeed, in some parts along this West African Coast the danger of the Sahara coming through has been imminent. A few years may work havoc in this direction. To show how near the danger is, let me relate that at Achimota itself, which is eight miles from the sea coast, a wind blows everyday from the Sahara, called "Hamadan," which often carries very fine articles of sand with it, though the amount is very small. The heat and dryness of this wind is quite perceptible as compared with the sea breeze which is moist and cool.

IV

In future, when this vast gold-field about which I have written is developed, Kumasi, the capital of the Ashanti territory, is likely to become by far the greatest city in this part of West Africa. All the labourers who come from the Northern Territory pass through Kumasi. They undergo vaccination at the Depot and are passed by the medical officers before they can proceed. While the health conditions of the gold mines are kept up to the mark by strict medical provisions, the continual exodus of thousands of men from the northern villages, who leave their wives behind, creates a grave moral danger. This is likely to be no less serious than that which has already made such havoc in the Transvaal. If in the next few years the number of labourers goes on increasing at its present rate, the evil conditions of the villages may become so serious, owing to the diseases brought back from the mines, that depopulation may become very rapid.

The Ashanti tribesmen themselves are aristocrats in labour matters. They refuse to undertake this labour in the mines. They have tribal possession of the fertile land which is now becoming more and more valuable owing to the rapid development of the mining industry around them. They can also use the land for cocoa which is a very profitable product in the British market.

V

Altogether the population of the Gold Coast is between 3,000,000 and 4,000,000 in number. These form a compact body of virile people who have a strong sense of independence. They are going through a political development which is not unlike that of India itself. Already the claim for Swaraj is being raised. On the whole, the race and colour prejudices are not very noticeable along the West Coast. The number of Europeans is very small indeed, and this gives to the African the opportunity of developing on his own lines. While I was there, I met the Attorney-General and other members of the Government who were Africans. They received the same standing at social functions as Europeans. The standard of English education is high and at Achimota School and College even the small boys and girls could speak English with considerable fluency. One of the teachers, Dr. Aggrey, who rose to be Vice-Principal, had received the highest education possible in America. He was a man of such sterling character that he would have been made Principal of the whole Institution if he had lived, but unfortunately he died at the height of his power and left no immediate successor. There are other teachers who are rapidly advancing in sense of responsibility and power of maintaining discipline, and the hope was often expressed to me that in the end Achimota would have its own African Principal and its own African staff.

All this that I am relating represents an advance far ahead of anything I have known hitherto on the East Coast. In time, no doubt, both in Uganda and also in Zululand, as far south as Natal, such development will occur (possibly within a generation) but Achimota quite obviously leads the way at the present time.

VI

Practically, all the people of the Gold Coast, who are educated and advanced, belong to the Christian community. The whole country is covered with churches and the pagan tribes are rapidly becoming Christian. Islam fully maintains its own position in the north and also towards the east where Nigeria stands out prominently as a Muhammadan country, but from the Gold Coast right on to Sierra Leone Christianity prevails.

Certainly the Christian religion has had a powerful and beneficial effect on the West African people. They have taken to Christianity with great eagerness and have not found that it is a foreign religion to them. Indeed they have blended with their Christian faith many of their old customs and the whole tribal system bodily within the Christian church.

To give a single example of this, King Prempeh, the Paramount Ruler of the great

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Ashanti tribe, sent to me a message when I spoke at the church service at 9 o'clock on one Sunday morning at Kumasi. He sent word that he greatly regretted that he was unable to be present because there was a meeting of chiefs on that morning over which he had to preside. He sent me a present of a very large brass bowl full of eggs which he asked me to accept by way of hospitality. I found on enquiry that he had already been to the church that morning at 6 o'clock to the Communion Service and that it was his custom to do so on every Sunday. The church, when I gave my address at 9 o'clock, was crowded to the doors with men and women and I spoke with an interpreter standing by me who gave a very powerful effect to my words.

VII

In this very town of Kumasi, not many years ago, human sacrifices in large numbers were offered and often the sickening sight of human skulls displayed on poles was visible. During the last century the number of men thus murdered must have been immense. Travellers who passed through the place spoke of the decapitated bodies lying about unburied and also told the story how at the death of some chief hundreds of slaves would be sacrificed till the streets ran with blood. All this is now entirely a thing of the past.

Only in some of the dances, accompanied by the incessant beating of the drums, can one realize what the horror must have been in the old days when human sacrifices were common and internecine war between the tribes hardly ever ceased. This dancing in harmony with the drum-beats and the singing which accompanies it are weird in the extreme. They have lost their terror; but the feeling of something awful remains, while the drum-music is being played.

Some of the missionaries have wished to put an end to this dancing and drum-music altogether, but wiser counsels have prevailed, and it is being gradually sublimated instead. It possibly expresses deep primitive instincts in the people which ought not to be ruthlessly repressed. Just as the old Greek tragedies, with their chorus, took the place of the old Dionysiac revelries, so these weird performances take the place of the old war dances which ended in cruelty and bloodshed.

VIII

While I was at Achimota, the students who came from different tribes gave to me an exhibition of their drum-beating and dancing. A large bonfire was lighted which sent up its flames to the sky. They danced in the the flames and their bodies seemed to they leapt in the air and the drums bea Each tribe had its own special dance a its own special war chant. One could see how maddened with war passion they have been in the old pagan days when it not a mere play or performance, but a li death reality leading on to bloodshed. reminded one of those famous lines of Col *Kubla Khan* where the poet says:

> And, mid that tumult, Kubla heard from fa
> Ancestral voices prophesying war.

One could almost hear these an voices as the music grew louder and loude the dancing became more and more ex Each tribe in time tried to rival the ot dramatic effect and the whole audience th present swayed to the beating of the drum the chanting of the music. It quite carri away by its strange effect.

IX

If it be asked whether it is wise to tinue these old customs in the new atmos of peace which Christianity has brought wi we can point in other lands to the harm has been done by the sudden removal o that was emotional in the old pagan life ever the Christian missionary was a Pr in his aim and purpose. In some islands Pacific, for example, whole tribes have die because life itself lost its own interest an came deadly dull under the new re There is no danger of this on the Gold C for the people those, who have become Chri seem to be more full of the zest and enjoy of life than before. They certainly enjoy singing in the churches and the processions music in the streets, with the Christian ba flying and the drums beating. Every Chri body finds itself obliged to take its own in this.

X

A few more sentences may be added cerning the primitive beliefs of the A tribesmen on the West Coast before they came Christian. Many of these beliefs been taken over into the Christian church then transformed and given a new Chri value. One of the most interesting of the a ceremony which often takes place at bap After the child is baptized, the father o baby takes his own child in his arms and puts water on the child's lips and says time that he does so: "Remember, my

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

this is water. When you grow up, remember this is water." The father repeats this each time that he touches the child's lips with the water.

When I asked the meaning of this strange ceremony, I was told that the infant, when it was born, still remained half in the world of spirit and half in the objective world of concrete things. The father told the child that it would soon come out of the dream-world of spirit and enter the world of outside, objective things, when it did so, it would realize the objectivity of the natural elements such as water.

Whether this is the real meaning of this symbolic act or not, there is clearly among these African people a vivid, consciousness of the spirit-world while they are young. The well-known words of the poet Wordsworth give the picture of what the Ashanti child thinks:

> Our birth is but a sleep and a forgetting:
> The Soul that rises with us, our life's star,
> Hath had elsewhere its setting,
> And cometh from afar:
> Not in entire forgetfulness,
> And not in utter nakedness,
> But trailing clouds of glory do we come from God, who is our home:
> Heaven lies about us in our infancy!

These words, with their mystical implication, are somewhat strange and unintelligible to the English schoolboy. But they do not seem difficult at all either to the Indian or the African child. For with both of these the subjective world is intensely real in early days and the "shades of the prison-house," about which Wordsworth speaks, come very slowly over the lives of the children of the East. This ceremony after baptism, therefore, appears to me to be the symbol of the awakening consciousness to outward things which human life involves.

XI

Another ceremony which is near to the Hindu idea of the spirit-world is that of offering food and drink to the departed spirit sometime after death. This symbolism went to such extreme lengths that human beings were sacrificed in order that their spirits might accompany and serve the spirits of the dead chiefs Thus a king's death was often the cause of an awful slaughter of human lives, and the greater the monarch the greater would be the slaughter.

In relation to the same belief in the spirit-world, the new-born child in the king's household was regarded by the Ashanti as the reincarnation of one of the departed tribal ancestors. In a special chamber, the different seats or stools,—often covered with gold,—whereon the kingly ancestors sat, were treasured and stored. The new-born child of the king was brought into this chamber where these different stools were placed. It was supposed that the spirit of each ancestor resided in his own stool. When the child had thus been brought into this dark chamber where the spirits of the departed kings were supposed to dwell, the father and relatives of the child consulted together as to which of the ancestors had come to birth again in the new-born baby. Usually there would be (so I was told) a remarkable unanimity of choice. Then the child would be given the name of the kingly ancestor who was chosen and it would be announced to all the tribe as the child's relatives came out of the dark chamber, that this special ancestor had now come back to the earth.

The theory of reincarnation thus plays a vital part in West African beliefs and children are said to remember scenes which had happened long ago. This is regarded as a proof of their previous existence on earth.

Whether these ideas, which run parallel to many ancient Hindu ideas, were received in pre-historic times from the East or developed in West Africa spontaneously is difficult to prove. It must be left uncertain. When, however, I was speaking with the children at Achimota School and College and one child said to me, "Do you believe in reincarnation?" and another said, "Do you believe in spirits?" I seemed to be back in India once more, among Indian children.

THUS SING THE COUNTRYWOMEN IN THE PUNJAB

By Prof. DEVENDRA SATYARTHI

II

A Set of Wedding-songs

The tradition of wedding-songs is almost as old as the history of marriage itself. That these songs must have an auspicious influence on the happy couple's marital life is the belief of the countrywomen in the Punjab, and this lends a new colour to their love for these songs, which are numerous and have the charm of variety.

The two main types of wedding-songs, generally sung in chorus, are *Suhag* and *Ghorian*. As regards tune and subject-matter, these types stand apart from each other: the former are sung in the bride's house and the latter at the bridegroom's place. All the women of the locality assemble daily at night and sing these songs for hours together. This assemblage begins to gather a few weeks prior to the wedding-day. Besides *Suhag* and *Ghorian* songs, almost all the types are actually sung in accompaniment of marriage-rituals.

Here is a *Suhag:*

Make me a bride, papa, and marry me in a family,
Where the mother-in-law is honourable,
And the father-in-law is a *Sirdar;*
Where the mother-in-law gets invitations from her sisters,
And the father-in-law is a judge.
A charitable deed will it be on thy part, dear papa,
An auspicious fame will be thy share, dear papa.

Make me a bride, papa, and marry me in a family,
Where the mother-in-law is lucky
And is the mother of many a son;
Her sons' betrothals and weddings, I would perform
And would see the days of joy and charm.
A charitable deed will it be on thy part, dear papa,
An auspicious fame will be thy share, dear papa.

Make me a bride, papa, and marry me in a family,
Where they keep sixty she-buffaloes, both dark and brown,
In constant milking and butter-making, I'll be busy;
Where fortunate enough is thy daughter,
And always takes plenty of butter.
A charitable deed will it be on thy part, dear papa,
An auspicious fame will be thy share, dear papa.

Make me a bride, papa, and marry me in a family,
Where the goldsmith is at hand to serve me,
Turn by turn I'll wear ornaments, so many;
Where fortunate is thy daughter, of course,
And keeps many ornaments, arranged in a box,
A charitable deed will it be on thy part, dear papa,
An auspicious fame will be thy share, dear papa.

Here are two *Ghorian* songs:

They may say whatever they like, but the mother, it makes no difference in the expression of her filial love:

'So dark, so dark is thy son,' they say;
'My son knows seven lores,' breaks forth the mother,
Thy mare is ready, ride dear bridegroom.
'Faulty, faulty is thy son,' they say;
'My son is the light of our family,' breaks forth the mother.
Thy mare is ready, ride dear bridegroom.
'Thy son is a scandal-monger,' they say;
'My son is reviving herb to our fomily,' breaks forth the mother.
Thy mare is ready, ride dear bridegroom.

The sister has her own *Ghorian*—the [illegible] of sisterly love. Here is one:

'Who made a demand for the mare and who sent it?
Who is the trader who hath fetched it?
For my brother, so blessed.'
'The son made a demand, the father sent it
My brother hath fetched it,
He is the trader, so blessed.'

'How many lacs of rupees is the *Tejan* mare worth
And to what comes its cost price?
O my parents' son, so blessed.'
'Rupees one lac is the *Tejan* mare worth
And to two lacs comes its cost price,*
O my parents' daughter, so blessed.'

'A queenly couch will I offer to my mother,
When I bring my bride here,
O my parents' daughter, so blessed.'
'My wealth will I offer to thy bride,
For thee I'll sacrifice my life and pride,
O my parents' son, so blessed.'
'A kingly couch will I offer to my father,
When God blesses me to bring my bride here,
O my parents' daughter, so blessed.'
'My wealth will I offer to thy bride,
For thee I'll sacrifice my life and pride
O my parents' son, so blessed.'
'I'll fix thy wedding and will get thee married, dear,
When God blesses me to bring my bride here,
O my parents' daughter, so blessed.'

* The underlying idea is that in the ecstasy of wedding-joy the bridegroom cannot prove to be a businessman; he likes to get the best specimen of mare from the market, no matter if he is to buy it at the double price.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

'My wealth will I offer to thy bride,
For thee I'll sacrifice my life and pride.
O my parents' son, so blessed.'

Deep and lasting is the pathos of the hour hen according to the tradition the bride is ked to take her seat in a *Doli* (lit. palanquin), hich carries her to the place where the arriage-party is lodged. It is the time when e women begin the farewell songs, known as *oli-De-Git* in the native terminology. The ride, too, is naturally moved and is over-owered by the predominating pathos of eparture from the parental nest to her new ouse.

In some of these songs we see the bride peaking for herself.

Sixty fellow-maidens wait for me at our door, dear papa!
My heart so sad goes to none of them, dear papa!
Every one smiles with rapture, dear papa!
Into a river (of tears), flows my heart, dear papa!

A splendid palanquin waits for me at our door, dear papa!
My heart so sad goes not to it, dear papa!
Every one smiles with rapture, dear papa!
Into a river (of tears) flows my heart, dear papa!

To the niches full of dolls have I bid adieu, dear papa!
My heart so sad is not inclined to play, dear papa!
Every one smiles with rapture, dear papa,
Into a river (of tears) flows my heart, dear papa!

Too narrow have turned thy broad streets for me, dear papa!
Where many a sweet moment delighted me, dear papa!
Every one smiles with rapture, dear papa!
Into a river (of tears) flows my heart, dear papa!

My mamma weeps and lo! her garment turns wet, dear papa!
Tears from thine eyes flow into a river, dear papa!*
Everyone smiles with rapture, dear papa!
Into a river (of tears) flows my heart, dear papa!

No more, impressive than those of the strangers are my brothers' tears, dear papa!
Their wives are glad (because of my withdrawal) dear papa!
Every one smiles with rapture, dear papa!
Into a river (of tears) flows my heart, dear papa.

"The girls are like the sparrows" is a popular proverb. Its motif is well-realized when the girls, as soon as they are married, fly away to their new nests. They have introduced this theme in many farewell songs.

We are a flight of sparrows and will fly away, dear dad!
Long is our journey and to a strange land we'll fly away, dear dad!

A town-bred Punjabi girl

Many of her relations may be residing in the interior; at times she goes there to see them. Especially during the wedding-festivities such a daughter of contemporary Punjab is often seen among so many countrywomen who put their songs to purely indigenous tunes with an unruffled devotion and child-like simplicity.

Here is a colloquy between the departing bride and her father :

'O who'll care to clean thy utensils after me, dear dad!
Lo! my mamma is seen shedding tears in her compartment, dear dad!'
'I'll send for thee soon and thou wilt come to see thy mamma,
Pray, darling, now leave for thy new home.'
'My dolls—my dolls are lying so uncared for
In the niches of thy palace, dear dad!'
'My sons' daughters will play with thy dolls,
Pray, darling, now leave for thy new home.'
'Who'll finish—who'll finish my half-finished embroidery
That lies in the palace, dear dad!'

* The father is, of course, a strong man not usually given to a show of weakness. But he is completely overcome by the thought of his impending separation from his daughter.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

'My sons' daughters will do it,
Pray, darling, now leave for thy new home.'
'My palanquin—my palanquin can not pass
Through the door of thy palace, dear dad!'
'I'll dismantle a part of the door to make the way,
Pray, darling, now leave for thy new home.'
'My palanquin—my palanquin can not pass
Through the narrow path of thy garden, dear dad!'
'I'll lop a big branch of the tree to make the way,
Pray, darling, now leave for thy new home.'
'Thy daughter—thy daughter will be thirsty,
In the stages of the journey through thy estate, dear dad!'
'I'll construct a few wells,
Pray, darling, now go to thy new home.'

* * * *

When They Sing of New-born Sons

Song-feasts are held for days together when a new son appears on the scene. All women from the locality assemble on this auspicious occasion with hearts rejuvenated with the spirit of song. They are attired gaudily as butterflies: some are newly married brides, radiant with lovely looks and smiles: they look like blossomed jessamines: some of them look every inch a nymph: others are mothers: all enjoy the native wit; spontaneously it flows and the whole atmosphere is surcharged with gaiety and joy. They then soar in the realm of national music, which reveals a golden world where no woman is childless. *Holar* is the term for the new-born babe, and the songs sung on the occasion are called *Holar* songs.

A country girl. She sings as she churns the curds

The description of the physical pain and travail as well as the joy and hope of the mother, of the period immediately before the arrival of the great moment, is the constant theme in these songs. The new-born babe often figures as Krishna.

How blessed is my first travail!
Wake up, O mother-in-law, wake up,
Wake up to cheer me in my agony, and
pain.
The travail rises and travels straight to my
This *Sundh* and *Sandhola** I wouldn't take!
This powder of *Lwang*† I wouldn't take!
Why did I ever carry a child in my womb?

How blessed in my second travail!
Wake up, O elder sister-in-law, wake up.
Wake up to cheer me in my agony, and
pain.
The travail rises and travels straight to my
This *Sundh* and *Sandhola* I wouldn't take!
This powder of *Lwang* I wouldn't take!
Why did I ever carry a child in my womb?

How blessed is my third travail!
Wake up, younger sister-in-law, wake up,
Wake up to cheer me in my agony, and
pain.
The travail rises and travels straight to my
This *Sundh* and *Sandhola* I wouldn't take!
This powder of *Lwang* I wouldn't take!
Why did I ever carry a child in my womb?

How blessed is my fourth travail!
Wake up, sisters of my yard, wake up.
Wake up to cheer me in my agony, and
pain.
The travail rises and travels straight to my
This *Sundh* and *Sandhola* I wouldn't take!
This powder of *Lwang* I wouldn't take!
Why did I ever carry a child in my womb?

How blessed is my fifth travail!

Wake up to cheer me in my agony, and
pain.
Now no travail travels straight to my heart,
This *Sundh* and *Sandhola* I must take,
This powder of *Lwang* I must take,
How happy am I that I carried the child
womb.

bear, the mother quite naturally breaks
'Why did I ever carry a child in my
But the anticipated joy of the coming
is no less, and she instantaneously bless
pain. Ideas of decency differ: the tow
woman cares more for an outward sh
decency, the countrywoman for its
aspect, with the result that the tow
woman is formal, reserved, but sugge
while the countrywoman is outspoken,
but alluring.

Here is something more:

Lo! we see a room above a room,
O who hath built it, my love?
Lo! we see a room above a room,
O Lord Rama hath built it, my love.
Lo! we see a garden over and above, a gard
The gardner hath adorned it with *Champa* flo
my love.

* *Sundh* is a native drug given to the mothe
when mixed with *Gur* (sugar) it is known as S
† *Lwang* is one of the spices.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Lo! we see a son over and above a son,
The proud bride is blessed with it, my love.

Thou art engaged in tending the cows,
O come home and cheer me in my agony, my love.

A happy couple after the honey-moon.

Soon came the husband in his wife's apartment and exclaimed:
'Where didst thou feel the travail, my love?'
'O, the travail I feel in my heart,
Make haste and send for my mother-in-law, my love.'

'O the travail I feel in my heart,
Make haste and send for the mid-wife, O mother-in-law.'

A body-guard is behind him and two servants are seen in front,
The husband rides on horse and leaves for the mid-wife's house.

'O which is the mid-wife's house?'
In various streets he enquires;
Lo! some one exclaims in a street,
'That is the mid-wife's, where a little child frolics and *Champa* blossoms.'

'What wilst thou award to the mid-wife,
If God, with a new son, blesses thee?'
'Rupees five in cash and a splendid head-wear
Promptly will I award to thee.'
'What will be the mid-wife's share?
If it is a daughter, and sadness prevails on thee and thy family.'
'A rupee in cash and a second-hand head-wear
Will I then award to thee."

The husband rides on his horse,
For the mid-wife is arranged a splendid palanquin.

The village-bride: her mother sends for her during the rains

Lo! here arrives the mid-wife,
The drummers attend their drums and invoke auspicious chants.

'A little oil I'll apply on thy belly and a son will just appear,
Come and recline on the couch, O thou the woman in delicate state.'

'Let thy husband give me my remuneration and discharge me soon,
Send for him, O thou the mother of a new-born son.'

'What hast thou done for me, O mid-wife?
My wife underwent a series of travails, and God blessed me with a son.'

'Let us give rupees five in cash to the mid-wife
And also a send-off, to the auspicious rhythm of the drums.'

As the custom goes, it is the duty of the father to send ghee and other viands to the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

daughter when she is at her father-in-law's. Here and there may be seen a reference to it in the realm of *Holar* songs, which is traditionally considered to be as auspicious as the new-born babe itself, and is, in fact, an exact window into the personality of the Punjab mother.

Listen, listen, O thou the father
Of my new-born son—my tiny offspring,
Listen, listen, the demands of thy queen,
Get her *Sundh*, *Sathva*, and fresh green *Moong*,
Get her a cauldron from Mandi or Suket state,
And a spoon direct from the city of Multan.
Get her ghee of cow's milk, a thing so auspicious,
A lot of good it will do to her.
'Have ghee from thy father, my dearv.
Let me supply thee (immense) dry-fruits,'
'My father is the King of Delhi and the suburbs,
And too young is my brother to come over here.'
'Then dispatch letter after letter to thy father, my darling;
Tell him that his daughter hath got a son.'

Village-children: song-feasts are held for days together whenever a new son appears on the scene

'Immense nutritious food as well as a pot full of ghee,
On elephants and carts, dear daughter, I'll supply thee.'

Arrange for a couch, my new babe's father,
The queen-mother of the new babe, thy love, will recline and rest on it.
Arrange for a feast of Holar songs on the top floor,
Let it be declared that here appears a new son,
Get thy yard adorned with pearls,
Thy love, the queen-mother of a new babe will walk here with delicate steps.
Let me have the favour of thy sister and thy mother
Sundh Panjiri should they prepare now for the new son's mother.
Adorn me, my sweet heart, with ornaments and grace,
Just I'll unveil to thee thy new son's face.

Songs during the Rains

The rainy season comes with its ow and tradition has taught the country respond to it. There is much of life and in these seasonal songs. The enchanting to which these songs are originally pu an aesthetic joy to all. There is a current among countrywomen to se married daughters in the month of S (pronounced as *Savan* by the Punjabis). are the days when *Tian* festivities ap with an ever-new charm and grace. Th who had been friends during their maide get a chance to see one another. Their felt joy is evident as they swing and sin songs come as easy to them as cooings to Besides swinging and singing, there is, of an appropriate place for the *Gidha* dance lends an additional colour to the *Tian* fest

One of the most popular themes songs, generally sung during the rains, unfortunate girl, passing the days of S her father-in-law's as she is not yet invi her parents.

Spread out the *Hena* leaves in the sun, dear m
How sad turns the colour of these leaves, d mamma!
Let us sing the song of *Savan*, dear mam
Send thy sons' brides to their parents, dear m
And forget not to invite thy married daughter mamma!
Let us sing the song of *Savan*, dear mam
Here do I stand on the river-bank and on y bank I see thy face, dear mamma!
Alas! I am helpless to see my papa's land mamma!
Let us sing the song of *Savan*, dear mam
The smoke in the kitchen brings forth water eyes, dear mamma!
Always yearns my heart for my papa's land mamma!
Let us sing the song of *Savan*, dear mam
Hard am I to labour here on the grinding-ston very painful are the bruises on my hands mamma!
Always yearns my heart for thy home so swee mamma!
Let us sing the song of *Savan*, dear mam

Several songs describe the brides hav talk with the rain-cloud:

'Pour down first on my papa's land, O rain-c
Then shower on my father-in-law's fields.'
'I've watered thy papa's land, O *Bibi!**
And have also showered on thy father-in-law's

Or :

What refreshing repose hast thou brought, O cloud!
All men and women have gone into raptures, O cloud!

* *Bibi* is a popular form of address to wom the Punjab, and is as polite as 'madam.'

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Then we see something else, in no way less interesting:

The peacocks are dancing;
Look at the clouds of *Savan*, lo! it rains in torrents.

The village-well

A set of Dirges

Siapa is the Punjabi word for the typical expression of grief and lamentation whenever the cruel hand of Death succeeds in snatching away some one from the scene. The women

The rapture of the holiday-spirit
These young girls—the happy progeny the country-women—imbibe the true spirit of national song.

of the locality assemble to mourn for hours together at the house of the deceased. The fixed period for the *Siapa* assemblage is, as a rule, of seventeen days but it is prolonged to any number of days when only the relations of the deceased sit for mourning. The key-note of *Siapa* lamentation is, of course, the harmonious process of the women's beating of their breasts

A village-beauty: how she awaits her sweetheart—no less than a moon to her—when she sings:
O moon, rise and spread the light
In counting the stars have I passed the night.
Lo, here appears the moon, dear fellows,
Here appears the moon.

and cheeks and thighs with their hands. Besides *Siapa*, the women burst into a variety of dirges, known as *Kerane* or *Vaina* in the native terminology. Some of the dirges have come down from mouth to mouth, while the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

others are sung extempore. Almost all the dirges, old and new, are expressive of the innermost pathetic feelings of countrywomen. Such are the dirges—spontaneous and perennial. The women seem to suppose that the more they burst forth into pathetic songs, the more the departed soul goes towards heavenly bliss. The

Let me swing first

kinswomen of the deceased repeat the process, beating parts of their body so severely that the blood readily simmers; and when the swollen and ached parts are to be mercilessly beaten day after day, the ladies of poor constitution cannot stand the strain. The women of the locality, who join the *Siapa*, cannot be expected to feel so much as the relations of the deceased are apt to do, but they, too, liking it or not, pretend to apppear in the same role. Of course, some people call it a barbarous survival of social life. They earnestly believe that it is all conventional and ridiculous, and is in no way a sincere expression of grief.

But how can the original significance of the dirge be ignored? If the tradition of *Siapa* is to be veritably abolished for the good of the country, let us hope that the great minds who come forward for the reform, will do so with every care to save the tradition of the dirge, which comes as easy to the countrywo tears appear in their eyes.

Here is a set of dirges :—

A mother laments for her deceased da

Alas for thee, my *Koel* of gardens, alas fo Ah me, thou hast now gone to sleep in the Death! No one brings thy news! Alas fo my *Koel* of gardens, alas for thee!

A thorough search have I made in various and hills, but, ah me, nowhere can I find Now I remember thy sweet songs which I ca forget!

A daughter laments for her deceased fa

Alas for thee, my papa, alas for thee! M my good luck, in fact, is due to thee. O th like a *Subedar* to me. Alas for thee, my alas for thee!

Thy name served me as a pass-port; wit could move in all the directions, and none check me from doing so. Alas for thee, my alas for thee!

Thou wert like a rain-cloud to me. How ful! How far hast thou gone! Alas for the papa, alas for thee!

A sister laments for the deceased bro

Alas for thee, dear mamma's son, alas for O wilt thou ever appear on the scene as my b in another life? O when shall we again meet ther? Alas for thee, dear mamma's son, al thee!

Once separated, we'll never meet again? O t such a tragedy! Alas for thee, dear mamma's alas for thee!

O my prince brother, thou looked like a fr of *Shisham* wood. Thou wert like a pie sandal, highly polished. Alas for thee, dear mam son, alas for thee!

O my prince brother, when wilt thou turn my door as a guest? O when should I sta expectation of thee? Alas for thee, dear mam son, alas for thee!

O my prince brother, thy unfortunate sweet is now a widow! She was no less than a que thee. Into a river flow her tears now! Alas thee, dear mamma's son, alas for thee!

A wife laments for the deceased husba

Alas for thee, my father-in-law's son, alas for I was afraid of none when thou wert by my Ah me *Kal Yug*, the dark age, hath come in thy death! Alas for thee, my father-in-law's alas for thee! Even the ground, a widow upon takes fire! Everyone abuses a widow! thing touched by her hand is polluted! Alas thee, my father-in-law's son, alas for thee!

I well realized the charm of thy fair face, bridegroom, I well understood the language dreamy eyes. Alas for thee, my father-in-law's alas for thee!

O it was predestined—who could check it? Death makes no difference. It has been snatch away many a *Pir*, *Pegamber*, and *Aulia*. Alas thee my father-in-law's son, alas for thee!

A daughter-in-law laments for her husba deceased father :

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Alas for thee, my kingly father-in-law, alas for thee! It was due to thee that I was wedded to thy son. Thou wert like a lock to our family. Alas for thee, my kingly father-in-law, alas for thee!

How majestic was thy speech! I was under its spell. Who could surpass thee? Alas for thee, my kingly father-in-law!

A countrywoman bringing fuel: she may just burst into song as she walks

A minstrel's wife laments for a well-to-do man, who dies in ripe old age :

Alas for thee, O king, alas for thee! Numerous minstrels and Brahmins are seen at thy door. All are singing thy praises. Alas for thee, O king, alas for thee!

Gold and silver didst thou give in charity. Now thy sons carry thee to the burial ground and thy family is seen following the procession. Alas for thee, O king, alas for thee!

There are so many steeds, chariots, and bullock-carts in thy house. Before thy door are seen thy elephants, moving so majestically. Alas for thee, O king, alas for thee!

The peasant women in the author's village Bhadour, Patiala State
They have their own songs

Everyone carried out thy orders. Thy yard is adorned with pearls. How (large-heartedly) didst thou give away many a milch-cow and steed in charity! How (munificently) didst thou give away immense gold and silver in charity! Alas for thee, O king, alas for thee!

Thus sing the countrywomen in the Punjab. As in expression, so in substance, their songs are simple and direct and bring before us a vast gallery of pictures covering a wide range.*

---

* The first explorer of Punjabi folk-lore was probably the late Sir R. C. Temple, who published his monumental work, *The Legends of the Punjab,* in 1885. It was perhaps published in more than two parts. But Sir R. C. Temple devoted his attention to those songs only which were somehow or other connected with the legends and romances, current throughout the length and breadth of the the Punjab; again these songs are here and there intermingled with semi-classical songs which are not folk-songs in the strict sense of the word. Next to Sir R. C. Temple comes the name of Mr. C. F. Usborn, who published his *Punjabi Lyrics and Proverbs,* in 1905. But it is only a booklet and covers a few patterns of Punjabi folk-songs only. A little collection of Punjabi folk-songs may be seen in Mr. J. Wilson's *Grammer and Dictionary of Western Punjabi with Proverbs, Sayings and Verses.* I do not know if there are other publications of the Punjabi folk-songs in English. I shall be grateful if some generous persons can procure the aforesaid books for me. Anybody kind enough to do so should address me C/o *The Modern Review.*

This article was written during August, September, October and November, 1935, while I stayed at my village Bhadour, Patiala State. My cordial thanks are due to my dear friends, St. Atma Singh, Pandit Yog Raj Sharma, and Mr. Karm Chand Jaidka and also to S. Harnarayan Singh and S. Gurdev Sing, the chiefs of our villages, who have been very kindly co-operating with me in my mission.

PROSPECTS OF COTTON MILLS IN BENGAL

By A. B. GUHA

Though the first Cotton Mill in India, *viz.*, the Bowreah Cotton Mill, was erected near Calcutta in 1830,[1] Bengal, today, stands almost last amongst the provinces in the production of cotton goods. At the beginning of the industry, Bengal did not lag far behind Bombay, for, the first mill there, *viz.*, the Bombay Spinning and Weaving Mill, commenced work in 1856,[2] and in 1873 there were 28 mills in Bombay as against 15 in Bengal. Later on, except during the Swadeshi Movement, Bengal slipped back; so that in 1931, there were 73 mills working in Bombay island as against 13 in Bengal. Since 1932, however, eight new cotton mills have been established, some of which are equipped with the most up-to-date machinery and are now approaching or actually have begun the production stage.[3]

TABLE 1[4]

Indian Production of Piecegoods (percentage of total yardage)
(*All sorts*)

	1926-27	1927-28	1928-29	1929-30	1930-31	1931-32
Bombay Island ..	50	49	28	37	38	41
Ahmedabad ..	23	22	31	27	27	26
Bombay (other centres) ..	6	7	9	8	7	6
Delhi and Ajmir ..	2	2	3	3	3	3
C. P. and Berar ..	3	3	4	3	3	3
Indian States ..	9	9	14	12	12	11
United Province ..	3	4	5	5	5	6
Bengal ..	1	1	2	3	3	3
Madras ..	3	3	3	3	2	2

The table given above clearly demonstrates the relative position of Bengal in the production of piecegoods of all sorts. The approximate annual consumption of cotton piecegoods in Bengal will be worth about 14 crores, of which foreign imports account for about Rs. 2½ crores and the rest of India 10 crores; so that Bengal's domestic production is not worth more than 1½ crores or 10% of her demand[5] *i.e.*, about 36 days' consumption only.

It must be abundantly clear from the above that a vast internal market exists for mills, in Bengal. Though this considerati an important bearing, by itself it is ce not a sufficient justification for the pro of cotton mills in Bengal. For, wh immediate self-interest might dictate, we in inter-provincial trade based upon ine of natural resources and other conditions less there are compelling reasons, ec forces should be allowed to have free pla no attempt should be made to distur natural distribution of industries by pro It may be urged, and not without great that since the cotton mill industry is concentrated in Bombay and Ahmedab attempt should be made to develop it elsew for, that would entail a loss of the interna external economics of localization. As Bombay island, this contention has no much force. At one time Bombay was be to be the natural seat of the cotton mill ind on account of its climate, proximity to ma and the most important cotton producing and other reasons. Though cotton is g more or less, in many provinces, nearly sev five per cent of the total crop is raise Bombay, Central Provinces and Berar Hyderabad State. But, in spite of advantages, the Bombay industry has re since 1908 from about fifty per cent of the Indian production to forty per cent, due to development of other centres like Ahmeda Sholapur, Madras, Delhi, Cawnpur. It is our purpose here to discuss the relative adv ages of these different centres, but we wa emphasize that the recent tendency has bee a wider distribution of cotton mills, in spi the geographical and other advantages Bombay and then Ahmedabad. A similar has been observed in Europe and the U. S America as in India. In the life history o Industry centralisation has undoubted adv ages, but as time goes on, it becomes a hand Wherever an industry is massed together, re taxes and cost of living go up; trade un form; the machinery become old and obso and inevitably new centres of production sp up, excessive concentration of population limited areas also give rise to difficult prob of sanitation and housing, and produces a

equilibrium between agriculture and industry the country as a whole. The spreading out industry would not only avoid these dangers but also provide employment for the surplus agricultural population and the wandering mass of *Bhadralok* youths. This last is a weighty consideration in Bengal. A cotton mill of medium size engages about three thousand persons. If decent quarters are provided in a healthy locality and proper surroundings, and if labourers are humanely treated, our young men of the middle class will certainly flock in large numbers as labourers. To give one example, at the Dhakeswari Cotton Mills, there are about four hundred men of the *Bhadralok* class working as common operatives, most of whom are matriculates or have read up to the higher classes of English Schools.

That certain condition in Bengal are encouraging for the establishment of cotton mills is amply demonstrated by the success of mills already working and the number of mills in process of erection. Even in the present acute depression, the working results of Bengal mills are generally found to be better than in Bombay. Of course, success has not been uniform, but in most of these cases the poor results will be found to be due to faulty organization in the widest sense of the term.

To ensure success mills in Bengal should be planned to supply the domestic requirements. Further, the wasteful methods of marketing generally adopted by Bombay and Ahmedabad should be avoided. We have already seen the immense possibilities of such a market, and a mill situated at its door can be reasonably expected to pay more attention to local needs and make direct sales. The marketing side of the business is as much important as the technical side and a mill can ill afford to neglect it. In Cawnpur, several mills besides placing a part of their production through selling brokers, run shops and have mail order business. Much of the penetration of German and Japanese goods in the Eastern markets has been due to their establishing direct contact with the consumer.

In addition to the presence of a huge market at the door Bengal mills would enjoy other advantages as well.

Being a deltaic country intersected by big rivers, the temperature is lower than centres like Ahmedabad, Cawnpur, Delhi, and the atmosphere is more humid. Of course, to a great extent, modern inventions can manufacture suitable atmospheric conditions within the factory, but the advantage of a gift of nature cannot be gainsaid.

In the supply of motive power, Bengal has natural superiority over all other centres excepting those where cheap Hydro-electricity is available. The freight charges from Jharia and Raniganj to the other centres are very much higher than the corresponding charges to Calcutta and Dacca.

As for labour, the average Bengalee does not like to work as a factory labourer and in consequence the mills round about Calcutta work with Madrasi or Behari, Uriya or C. P. labourers. The Dhakeswari Cotton Mills, however, is working exclusively with Bengalee labourers recruited from the neighbouring villages. This demonstrates, not that the Bengalee dislike factory work so much, but that he refuses to submit to the housing, sanitary and social conditions of labour in the Calcutta area. Moreover, he cannot stand aloof from factory employment much longer. In respect of population Bengal is the largest province in India, in area she occupies the ninth place among them. The average density of population in Bengal is greater than that of the other provinces and foreign countries as well. The average holding for an agricultural worker is a little above 2½ acres of land. The pressure of population on the soil is so great in some of the Eastern Bengal districts that it is being relieved somewhat by emigration to Assam and Burma. If industries are established in suitable places there is no reason why the surplus population should not move to them. A factor very much in favour of Bengalee labour is that he is more intelligent, though physically a bit poorer, than outside labourers. Workers, in cotton mills, however, do not require very strong physique, because, the operations are such as to require a sensitiveness of touch and flexibility of fingers more than physical exertion. Moreover, Bengal mills in suitable rural areas will have a definite advantage in that they will not have to pay wages at the higher scales prevailing in the city. Though city labourers usually get higher money wages, their real income is not necessarily higher.

In point of labour efficiency, a new centre of cotton mills will be at a disadvantage during initial period of apprenticeship. But in these days of specialised machinery it does not take a long time to acquire the necessary skill. In the experience of the Dhakeswari Cotton Mills, in course of eight years spinning efficiency has reached almost India's maximum and it is confidently expected that within a year or two

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the maximum will be reached in the weaving section as well. So that, the disadvantage on this account is not of a permanent or inherent nature, but such that can be removed by training and experience.

While discussing the suitability of Bengal for cotton mills, we are not oblivious of at least one of her disadvantages, *viz.*, the supply of raw cotton. In the purchase of Broach, Surat, Punjab, or American, the additional cost on account of freight charges is so great that very little of these staples are used in Bengal. In the purchase of cotton from the Madras side the disadvantage is not greater than that of the other centres. As for East African cotton, every centre other than Bombay is at a considerable disadvantage. Ahmedabad mills, which largely engage in producing *dhutis* of finer counts, the principal market for which is Bengal, have to receive Uganda and American cotton through the port of Bombay. The disadvantage of Bengal in this respect can be reduced if proper fumigating arrangements are made at the port of Calcutta, so that, Bengal mills could make direct import of their requirements of foreign cotton. Further, attempts should be made to grow long-staple cotton in Bengal. Proper investigations and experiments should be undertaken by the Government in co-operation with the Indian Central Cotton Committee, to determine the area and suitability of long-staple cotton in Bengal. We cannot take for granted the sweeping condemnation of Bengal in this respect unless a proper trial has been given. The famous *Photee* cotton from which Muslins used to be made was successfully grown round about Dacca. In the days of the bullock cart, certainly Bengal was self-sufficient in the supply of her requirements of raw cotton. The decline of cotton cultivation in Bengal had probably been due to the expansion of quick and cheap means of communication and the rise of jute, oil seeds etc. In the competition for land, the less valuable crop is constantly being replaced by the more valuable, and ordinarily jute and sugar-cane are more paying than cotton. If Bengal does not grow any cotton today, that is more because she finds it more profitable to specilize in those crops in which her efficiency is still greater and import the less valuable cotton crop from outside. So long as jute sells at a moderately high price, there is little chance of growing cotton in Bengal on any extensive scale; but, now that the Government has adopted the policy of Jute restriction, which can never succeed as sound and economic unless substitute or alternative crops have been evolved, the Governme with profit investigate the possibility expansion of cotton.

Even if the cultivation of cotton uneconomic in Bengal, the difficulty need considered as insupperable, for does not import raw cotton from India and also finished goods back to India, pay cost of transportation and yet undersell mills? In China, there were thirty-three mills in 1916, and today the number one hundred and twenty. This rapid pr competent observers say, has been due proximity of the market and up-to machinery. We admit that cotton mil Bengal will be at a disadvantage of conside magnitude in the supply of raw cotton along with this it is to be considered that of freight paid on cotton is largely compen by saving in freight of finished goods. over we want to emphasize that one factor does not decide the fate of an industry balance of advantages are overwhelming favour of establishing cotton mills in Beng

In promoting mills in Bengal, to possible disappointment and reproaches, tion should be paid to the following guards:

(1) A mill should be of the proper econ size. In our view, the minimum size of a ought to be 500 looms and 17500 spin Too small units are at a disadvantage in purchase of raw materials, stores and sa finished goods. Small mills are bound t inefficient, as they cannot maintain a pro trained highly paid technical staff. A big can pay any price for brains, for it gets many times more than it pays. It is we remember that competition, both internal external, is very keen in the cotton industr

(2) A merely spinning or weaving will not be a paying proposition. At one mills in Bombay specialized in spinning but now almost all of them have added wea departments. The cotton mills in Bengal the Managing Agency of Messrs. Kettle Bullen & Co. have been forced to do the thing. Yarns constitute a raw material for hand-loom weavers and hence it cannot subjected to anything more than a rev duty. So competition in the yarn market very severe and it is difficult to make any p

On the other hand, a purely weaving is under the handicap of buying its yarns thus pay a profit to others which increases of production of the finished goods.

We want to specially emphasize this fac

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

promoters in Bengal often commit the mis-
ke in the expectation of adding the other
partment later on out of prospective profits.

In planning a mill, special attention should given to the character of the market. A mill ill be at an advantage if it produces goods hich are in wide demand. Market for goods hich have a restricted or special demand will t be so steady.

(3) Great care should be taken in select- g and appointing the right kind of men in arge of the departments. There is a dearth f suitable technical men in India. What is anted is that these men should have both eoretical and practical knowledge and long anding experience, both Indian and foreign of high order. Men of this type are always stly; but a mill that is enlightened enough make such a selection is sure to reap the vantage in the form of lower cost of produc- n per unit. Most of the present depart- ental heads have risen from the bottom.

They may be very good in the particular , but they cannot see very much beyond eir own orbit. Such men are apt to become tremely conservative, suspicious of all changes d lacking in all form of initiative. The dian youths who go abroad do not lack in e preliminary education, but they commit the stake of going in for degrees, while they ght really to pick up practical experience in e factory. On returning home they expect me fat salary and the chance of bossing over.

(4) In organizing a mill, or in drawing ans and specifications and in daily manage- ent, of course, technical experts must be given eir due importance, but the complete scheme ould get the final approval of persons who ve fair technical knowledge coupled with a orough study of the commercial side.

In the determination of the location of a factory, the initial cost of land is no guiding factor. The general considerations that are to guide us in this matter are as follows:

If any kind of electricity is used, then the factory is to be near the generating plant. In Bengal, in the absence of Hydro-Electric works, there is no scope for the use of electricity as a motive power, except in the Calcutta area served by the Calcutta Electric Supply Co. Ltd. In the case of steam turbines nearness to plentiful supply of good soft water is necessary. In the matter of coal Bengal has a natural advantage over other centres. Even then the factory should be so located as to have some advantage over the nearest competing mills elsewhere. Easy and cheap inland and outward transport facilities, low cost of living, satisfactory climate and sanitary conditions are some of the other conditions to be fulfilled. Nearness to skilled labour is another important condition. Local labourers lead a more responsible life, they have their responsibilities to the family as well as responsibilities to the community to which they belong; this consciousness exercises a beneficial influence on their life and therefore upon their daily work. In factories where the operatives are recruited from outside an entirely artificial condition of life and work is created. An extensive and ready market for the finished goods ought to be nearby. Perhaps, in this respect, we ought to be guided by the location of already existing or now extinct important centres of production and distribution.

If the above safeguards and considerations are adequately attended to, there is no reason why a cotton mill in Bengal should not achieve a reasonable measure of success.

THE CONCEPT OF FEDERATION

By Sirdar D. K. SEN, M.A., B.C.L. (Oxon.), LL.B. (Dublin),
Barrister-at-Law.

The distinction between unitary States and composite States constitutes the basis of a well-recognized classification in the domain of jurisprudence and politics. In a unitary State the totality of sovereign power over the entire territory and population is vested in a central authority. A composite State, on the other hand, necessarily implies the association, more or less complete and more or less durable, of several States under a common government or a common Ruler.[1] Laband classifies the associations of States into two different and distinct categories:

1. Association of States founded exclusively on agreement or treaty (*d'indole contrattuale*).
2. Association of States of a corporate character.[2] Confederation falls under the first category, while Federation furnishes an interesting example of the second.

The existing Federations are:

1. The United States of America
2. The United States of Mexico
3. The United States of Venezuela
4. The United States of Brazil
5. The Republic of Argentine
6. The German Reich
7. The "Swiss Confederation"
8. The Republic of Austria
9. The Union of Soviet Republics

It has been argued that the Soviet Union is not a Federation. Durand, for instance, says:

> "Their constitutional rules are founded upon a political situation of a revolutionary character, not only in their origin but also in their permanent nature. Such a situation is incompatible with the notion of juristic powers subject to positive rules in regard to their scope and mode of exercise."[3]

It is no doubt true that the Russian jurists of today have discarded the orthodox theories of State, and hold that the State is not a rule of law but the expression of a dictatorship of a non-juristic character. Says Gourvitch,

> "The economic interests of the dominant class are the active force and the fundamental law State."[4]

This new conception finds expression Constitution of the Republic of the U Article I of this Constitution declares:

> "The Socialist Republic of the Soviets Ukraine is an organization of the dictatorship exploited, labouring masses of the proletari of the poor peasantry against their ancient op and exploiters, the capitalists and large land-

This novel doctrine of State has neces produced a striking feature in the consti of the Soviet Union. It is the authority has been conferred on a particular cl section of society to the exclusion of the body of other classes. The Soviet organi ensures the predominance of the proletari deprives the bourgeois of franchise and e lity. The consequence of this principle is the electorates exercise unrestricted control their representatives. In the first place deputy elected by the proletariat is und obligation to render account to his elect his activities in the Soviet within three after the close of each session. He is bound to discuss with his electors all que on the agenda of the Soviet before the op of each session. Further, the electorate h right to revoke the election of a deputy be proved that he has not carried ou directions.[5]

The other outstanding feature which d entiates the Soviet organization from ort parliamentary institutions is the fact tha Soviet Constitution has totally abandone theory of separation of powers, and has secrated a new conception which has described as the theory of "dimension of po According to this theory, each institution i hierarchy of the Soviet organization exe within the compass allotted to it all the p of governance, whether legislative, executiv judicial. Apart from these two distin features, the Constitution of the Soviet U is not opposed to the structural organizati a Federation. It is, therefore, clear that contention advanced by Durand cannot re

accepted. If a Constitution possesses the essential elements of a Federation, it cannot justly be excluded from the federal category merely because it is founded on political doctrines of a revolutionary character.

There is another class of existing Federations which may be designated as subordinate Federations. These must be distinguished from the first group inasmuch as they do not enjoy full and complete sovereignty but are subordinate to another superior authority. This class comprises:

1. The Commonwealth of Australia
2. The Dominion of Canada
3. The Federation of India, as proposed in the Government of India Act, 1935.

Durand contends that the Dominion of Canada is not a Federation since the power to amend the constitution is vested in the Imperial Parliament. He says:

> *"Au Canada, au contraire, la constitution du Dominion ne peut etre modifiee que par une loi du Parlement Anglais; l'assentiment du Parlement canadien est en fait necessaire et c'est meme de lui que vient l'initative, mais sa decision ne suffit pas. La situation ne se presente donc pas pour le Canada comme pour les Etats federaux."*[6]

This contention cannot, however, be accepted. One might just as well argue that the Commonwealth of Australia is not a federal union because certain powers of legislative sovereignty are vested in the Parliament of the United Kingdom.

It has been asserted by a recent writer that there does not exist any distinctive mark of Federation. It has been urged that "once a general name is given to a number of particular things in order to distinguish them from others, these things acquire a reputation for a distinction they do not in fact possess."[7] Prailaune puts forward the view that "between the Confederation of States, the Federal State, and the unitary State which corresponds to a precise but arbitary, academic classification, there exists a whole series of intermediate combinations.[8] It would, however, appear that these criticisms cannot fully be substantiated. It is no doubt true that there are certain features which are to be found both in Federations and Confederations of States; nevertheless a close and critical study of Federal Constitutions and an analysis of the theory of Federation conclusively prove that a federal union of States possesses certain characteristic marks which differentiate it from other forms of State organizations. As Borel has rightly pointed out,

> *"L'historien et le juriste ont deux domaines distincts et poursuivent deux buts absolument differents. Le premier cherche avant tout a etablir cette continuite irresistible des faits que revele un development de plusieurs siecles; le second par contre, doit dans cette evolution quelquefois imperceptible, distinguer le moment precis ou les deux notions, essentiellement distinctes, de la confederation d'etats et de l'etat federatif, se touchant et ou elles se separent."*[9]

Further, the theory of "floating frontiers" (*flissende Grenzen*) cannot be sustained in law. Every legal classification must be clear and precise. We shall therefore proceed to analyse the constituent elements of a Federation which distinguish it from other forms of association of States.

A Confederation of States is an association of sovereign States in which there exists a central power possessing organizations of a permanent character. It is founded essentially on a treaty concluded amongst States which are and continue to be sovereign. It is in reality *"una somma di attribuzione e di poteri fondati sul libero accordo degli stati particolari e reuniti per essere esercitati in commune."*[10] A Confederation does not, therefore, possess either sovereignty or the character of State, the confederating States preserving their sovereign and independent existence subject to agreed restrictions. It, therefore, follows that a Confederation is not a State, but merely a *vinculum juris, ein Rechtsverhaltniss*, founded exclusively on

---

6. Durand, op. cit. p. 55.

In Canada, on the contrary, the Dominion constitution could not be modified but by a law of the British Parliament, the assent of the Canadian Parliament is no doubt necessary and more so, the initiative rests therein, but its decision is not sufficient. Therefore the position of federal states and of Canada is not the same.

7. Finer, *The Theory and Practice of Modern Government*, Vol. I, at p. 244. See also Orloff, *Le Vice Fondamental de la Classification Dominante des Etats*, p. 6. He says: "En realite, aucune question dans la theorie generale de l'Etat, ne se trouve dans une situation aussi deplorable que celle de la classification des Etats . . . . Toute le monde accepte la theorie traditionelle."

In reality, no question in the general theory of the State, is so lamentable, as that of the classification of the States . . . . Everyone accepts the traditional theory.

8. Prailaune, *L'unitarisme et le federalisme dans la Constitution Allemande du ll aout 1919.*

9. Borel, *Etude sur la Souverainete dans l'Etat Federatif*. P. 150.

The historian and the jurist have two distinct domains and pursue two absolutely different objects. The first seeks above all, to establish that irresistible continuity of facts which reveal a development of several centuries; the second, on the contrary; must distinguish, in that evolution sometimes imperceptible, the precise moment when the two notions, essentially different, of the Confederation of States and of the Federal State touch and separate from one another.

10. Brunialti, *Unioni e Combinazioni fra gli Stati*: "A sum of attributes and powers founded on the free consent of the individual States united for their exercise in common."

agreement or treaty. For instance, in the Swiss Confederation of 1815 the Federal Act was invariably construed as a *vertrag* or treaty and not as a Statute or Constitution. The German Confederation (*Deutsche Bund*) created by the *Wiener Schlusseaete* of 1820 was also a union of sovereign States founded upon a series of treaties. Similarly, the American Confederation of 1781 was only a "firm league of friendship" between States which retained their sovereignty, freedom and independence. (Articles 2 and 3 of the Articles of Confederation, 1781-88).

A Federation, on the other hand, is not only an association of States but also a State. As Brie rightly points out,

> "*Der Bundesstaat ist zugleich Bund und Staat; er ist also, ... einerseits ein aus Staaten zusammengesetztes, foderativ organisiertes, Gemeinwesen, und andererseits ein aus Menschen zusammengesetztes Gemeininwesen mit einer principiell alle Zwecke des menschlichen Lebens umfassenden Aufgabe und Zustandigkeit.*"[11]

It follows, therefore, that a Federation is, on the one hand, a unity, and possesses all the features of an organic union *par excellence*, whereas a Confederation is always to be distinguished by "*la mancanza di coesione psicologica interne.*"[12] This is then the *fundamentum divisionis* between a Federation and a Confederation. On the other hand, a Federation is also an association of States, and differs from unitary States which cannot at the same time be a union of constituent States.

This is then the *fundamentum divisionis* between a Federation and a Confederation. On the other hand, a Federation is also an association of States, and differs from unitary States which cannot at the same time be a union of constituent States.

There are several results of the constitutional unity of the federal association of States. In the first place, it is inevitable that the central government in a Federation should enjoy and exercise all rights and powers of external sovereignty. It is the Federation alone which possesses international personality and is consequently the sole representative of the federating units in International Law.[13] For instance, under the constitution of the United States of America it is the Federal Government which exercises all powers of sovereignty in regard to international matters, and the federating units have no personality or authority from the point of view of International Law. Article 1 of the Soviet Constitution similarly states that the representation of the Union in all international affairs, the conduct of diplomatic relations, the conclusion of treaties with foreign powers belong exclusively to the competence of the Union. This view, however, has been severely criticised by Le Fur who holds that it is incorrect to say that under a Federation it is the Federal Government alone which possesses international personality.[14] He cites the instance of the German Federation of 1815 which the States constituting the Federation did enjoy certain powers in regard to International affairs, as, for instance, the right of diplomatic intercourse with foreign States. This, however, does not mean that the constituent States of the German Federation were considered as persons in International Law. Le Fur is, therefore, clearly wrong when he says that the constituent elements of a Federation also possess international character. It is undoubt true that in a Federal Constitution the units may be entitled to exercise certain rights as rights of legation but this does not confer on them any international character, nor does it transform them into sovereigns from the point of view of International Law. Further, it cannot for a moment be disputed that in cases of conflict with foreign powers it is the Federation, and the Federation alone, which is responsible in the eyes of International Law even where the units enjoy and exercise certain powers of external sovereignty.[15]

The second consequence of the organic unity of a Federation is that in all Federal Constitutions Federal laws over-ride the laws of the constituent units in cases of conflict. As Jellinek remarks, *Bundesrecht bricht Landesrecht.* Provisions to this effect are sometimes expressly incorporated in the Constitutions. For instance, Article 13 of the German Constitution of 1919 provides: "The law of the Reich prevails over the law of the Landes."[16] Article 2 of the transitory provisions of the Swiss Constitution is to the same effect. Similar provisions

11. Brie, *Theorie der Staatenverbindungen*: "A Federal State is at the same time an association and a State; . . . . it is also, on the one hand, a federally organized community composed of States, and, on the other, a community of people whose chief duty and competence embrace the needs of human beings."

ve also been incorporated in Article 31 of the gentine Constitution, and Article 126 of the onstitution of Mexico. The corresponding use of the Constitution of the Common- alth of Australia runs thus:

"When the law of a State is in conflict with the Law of the Commonwealth the latter shall prevail, and the former shall, to the extent of the inconsistency, be invalid."

Section 107 of the Government of India ct is as follows:

"If any provision of a Provincial law is repugnant to any provision of a Federal Law which the Federal Legislature is competent to enact or to any provision of an existing Indian Law with respect to one of the matters enumerated in the Concurrent Legislative List, then, subject to the provisions of this section, the Federal Law, whether passed before or after the Provincial law, or, as the case may be, the existing Indian Law, shall prevail and the Provincial law shall, to the extent of the repugnancy, be void."

It would, however, appear that this ay not necessarily be a distinctive feature a Federal Constitution. It is possible conceive a Confederation of States in hich it might be expressly provided that the gulations or decrees of the common government of the Confederation shall, within the mited scope of the legislative authority allotted the central organ, abrogate the laws and gulations of the constituent States. Whether a particular case the laws of a Confederation ossess such exclusive and authoritative aracter will depend entirely on the terms and rovisions of the convention creating the Confederation. The mere fact that the Constitution a Confederation expressly provides that all entral decrees or resolutions shall over-ride the aws and regulations of the States in regard to ertain specified matters, does not necessarily ransform the Confederation into a Federal State.

Another consequence of the constitutional nity of a Federation is that in cases of conflict between the constituent units or between a onstituent unit and the Federation, the Federal Constitution invariably provides for the settlement of disputes by a Federal authority. For nstance, Article 110 of the Swiss Constitution tates:

"*Le Tribunal federal connait des differents de droit civil: 1. Entre la confederation et les cantons; 2. Entre la confederation, d'une part, et les corporations . . . . , 3. Entre cantons.*" *

* The federal Tribunal knows the different sorts of Civil Law: (1) Between the Confederation and the Cantons, (2) Between the Confederation and the Corporations, (3) Between the Cantons.

Similar provisions are to be found in Article 76 of the German Constitution of 1871, Article 105 of the Mexican Constitution, Article 100 of the Argentine Constitution, Article 59 of the Constitution of Brazil, Article 120 of the Constitution of Venezuela of 1931, and Article 43 of the Treaty of Union of the Socialist Soviet Republics. On the other hand, we find that in all Confederations the pact of association has always provided for arbitration in cases of dispute. This again cannot be regarded as a fundamental characteristic of a Federation since express provision for the settlement of disputes by a central authority and not by arbitration does not necessarily abrogate the essential feature of a Confederation that it is an association and not a State.

Several other points of difference between a Confederation and a Federation have been urged by eminent jurists of different countries. It is therefore necessary for us to examine how far their arguments can be sustained. In the first place, it has been urged that a distinctive characteristic of a Confederation is that the powers of the central organ are specifically and definitely enumerated, whereas in a Federal Constitution the rights of the component States are expressly declared, leaving the remainder of sovereign authority in the hands of the Federal Government. A cursory study of Federal Constitutions will, however, show that this argument is not sound either in theory or in practice. From the theoretical point of view it may be urged that the mere enumeration of the rights of the Federal Government does not necessarily conflict with the fundamental character of a Federation. The view is also clearly opposed to facts. For instance, under the American Constitution the residuary powers of sovereignty are vested in the constituent States. Indeed, this is true of all Federal Constitutions except that of Canada. Further, as Le Fur points out, the difference is purely quantitative and not of the least significance in practice.[17]

According to Bluntshli, "the real difference between a Confederation of States and a Federal State lies in the different organisations of the two forms of union."[18] He argues that in a Confederation there is only one organ, a Diet, a sort of Congress of diplomats (*Gesandtencongress*); whereas in a Federal Constitution the organisation of government is complete from the triple point of view of the legislature, the judiciary and the executive. This view, however, will not bear scrutiny. In the first place,

it does not take actual facts into consideration. For instance, the legislative and the executive organisations were highly developed in the Confederation of the United Provinces of the Netherlands. There was, however, no organisation of the judiciary under this Constitution. On the other hand, even under the German Federation of 1871 there was no central organisation of judiciary until the *Gerichtsverfassungsgesetz* (Judicature Act) of January, 1877. It is clear from these instances that differences in organization do not necessarily differentiate a Federation from a Confederation of States.

It has been argued that the real and fundamental difference between a Federation and a Confederation lies in the fact that under a Confederation the constituent units stand on an absolutely equal footing, whereas under a Federation equality of the States is neither absolute nor indispensable.[19] This theory was propounded by Von Holst on the basis of the Confederal Constitution of the United States of America and is not in accord with other Federal and Confederal Constitutions. For instance, under the German Confederation prior to the Act of 1871 all the constituent units were not equal in point of law. Bavaria, Wurtemberg and Saxony had special rights and powers which were not enjoyed by other States.

Laband, on the contrary, holds that equality of the constituent units is an essential characteristic of Federal Constitutions. He says:

> "A Federal State is a Republic of which the States themselves are citizens and in which the sovereign power is exercised by the collectivity of the States considered as a unity. Thus the German Empire, for example, is neither an Empire of forty million subjects nor a democracy of forty million citizens; it is a Republic of twenty-five members which collectively exercise the supreme power."[20]

There is no doubt a certain element of truth in this contention. The Venezuelan Constitution, for instance, expressly provides that "the States which comprise the United States of Venezuela are autonomous and equal amongst themselves as political entities." In other Federal Constitutions equality of the constituent units is to be found in the matter of representation in the Federal Legislature. For instance, equality of representation in the Upper House of the Federal Legislature is a cardinal feature of the Federal Constitutions of Switzerland, the United States of America, Mexico, Venezuela, Argentine and Brazil. In all these cases each federating State is entitled to two seats in the Upper [illegible] except in Brazil and Venezuela where [illegible] seats have been allotted to each constitu[illegible] It is clear that in all these cases neither [illegible] population has been considered to be a [illegible] factor in determining the *quantum* of rep[illegible]tion. The presence of this feature [illegible] majority of the existing Federal Cons[illegible] does not however mean that equality [illegible] federating States is an essential chara[illegible] of Federation. On the contrary, in [illegible] Constitutions representation in the [illegible] Legislatures may be determined according [illegible] size, population, and political importance [illegible] constituent units, as in the case of Germ[illegible] Canada. Under the Indian Federati[illegible] presentation in the Upper House has bee[illegible] on several factors such as population, size [illegible] of guns, etc. For instance, the State of H[illegible]bad has five seats in the Upper House, [illegible] the States of Udaipur, Jaipur, and J[illegible] have each been allotted two seats.

Bryce has argued that the superim[illegible] of a central government over the author[illegible] the individual States is a fundamental [illegible]teristic of a Federation, which distingui[illegible] from a Confederation of States.

He says:

> "The acceptance of the Constitution [illegible] made the American people a nation. It [illegible] what had been a league of States into a Feder[illegible] by giving it a National Government with [illegible] authority over all citizens."[21]

There is an element of truth in this [illegible]tion, but the point of difference is not [illegible] significant character as it is merely a diff[illegible] of degree and not of quality. It is no [illegible] true that the central government in a Con[illegible]tion is not always of a highly org[illegible] character. It is equally true that the [illegible] government in a Federal Constitution em[illegible] every sphere of governmental activity. I[illegible] not, however, follow that if the central g[illegible]ment of a Confederation is fully organised [illegible] every point of view, it necessarily comes [illegible] the category of Federations. Take, for ins[illegible] the case of the Confederation of the So[illegible] States of America which possessed a co[illegible] organization of legislature, executive [illegible] judiciary. This, however, did not bring [illegible] Confederation under the category of F[illegible] States. Further, as Westerkamp remi[illegible] this argument merely points out the grav[illegible]

equent defect of a Confederation that its entral power is incompletely organised, but oes not affect its juristic character.

Closely associated with this view is the rgument that a distinctive feature of a Federa- on lies in the fact that its central government invested with the authority to enforce its ecrees and orders directly against individuals ithout the intervention of the authorities of he federating units. On the other hand, the rinciple of mediatisation obtains in all Con- ederations; in other words, under a Confedera- ion there is no direct connection between the ndividual and the central power[23] Calvo, for nstance, argues that "that the essential haracteristic which distinguishes a Confedera- ion from a Federation of States resides in this hat in the former there does not exist a common xecutive authority which has the right to impose ts decrees in direct relationship with the sub- ects of the States."[24] It is true that a rovision of this character is to be found in ertain Federal Constitutions. In the American ederation, as Bryce points out, "the authority f the National Government over the citizens of very State is direct and immediate, not exerted hrough State organisation, and not requiring he co-operation of the State Government." rticle 7, sub-clause 3, of the Constitution of razil provides:

> "*Les lois de L'Union, les actes et sentences de ses authorites seront executes dans tout le pays par les fonctionnaires federaux.*" *

It is, however, submitted that this eature does not constitute a distinctive haracteristic of a Federation. Under a Federal onstitution the administration of Federal laws ay be left, within a restricted sphere, in the ands of the federating States; in such cases the ederal authorities will not come into direct re- lationship with the individual subjects of the tates. Thus, Article 11 of the Austrian Con- itution of 1929 expressly provides that whereas egislation in regard to certain specified subjects hall be federal, the administration of such ubjects shall vest exclusively in the Government f the units. Further, the central government n a Confederation may be invested with limited powers to act directly upon the subjects of the States, without the intervention of the State authorities. Such provisions will not, however, in any way affect the essential nature of a Confederation.

This leads us to the examination of a theory of Federation which has been enunciated in the judgment of the Privy Council in *The Attorney General for the Commonwealth of Australia* v. *Colonial Sugar Refining Co., Ltd.* (1914 A.C. 237) where Lord Haldane dealing with the question of Canada said:

> "With deference to a great many people who talk on platforms just now of the 'federal system,' in Canada there is no federal system. What happened was this: an Act was passed in 1867 which made a new start and divided certain powers of government, some being given to the Parliament of Canada, and some to the Parliament of the provinces. The provinces were created *de novo*. The provinces did not come together and make a federal arrangement under which they retained their existing powers and parted with certain of them and an Imperial Statute had got to ratify the bargain; on the contrary the whole vitality and ambit of the Canadian Constitution was a surrender, if you like, first, and then devolution. . . . . The meaning of a federal government is that a number of States come together and put certain of their powers into common custody, and that is the federal constitution in Australia, but in Canada not at all. . . . . The British North America Act of 1867 commences with a preamble that the then provinces have expressed their desire to be federally united into one dominion with a constitution similar in principle to that of the United Kingdom. In a looce sense the word 'federal' may be used, as it is there used, to describe any arrangement under which self-contained States agree to delegate their powers to a common government with a view to entirely new constitutions even of the States themselves. But the natural and literal interpretation of the word confines its application to cases in which these States, while agreeing on a measure of delegation, yet in the main continue to preserve their original constitutions."

This pronouncement involves several fallacies. In the first place, it ignores the very important fact that a Federation may come into existence in two different ways. Sovereign and independent States may come together and make a federal arrangement in which they retain certain powers of sovereignty and surrender the rest of them to the newly constituted Federal Government, or, as in the case of the United States of America, they part with specified powers and retain the remainder. There is however another method whereby a unitary State may by virtue of a statute be transformed into a Federal State, as was the case in regard to the federal constitution of Mexico. Lord Haldane is therefore entirely inaccurate when he states that "the meaning of a Federal Government is that a number of States come together

and put certain of their powers into common custody." He is clearly wrong when he propounds the view that the character of Federation depends on the manner and method of distribution of power. His argument is that since under the Canadian Constitution the powers of the constituent units are expressly enumerated, it does not therefore fall under the category of Federation. But as we have already seen, this argument is totally unsound both in theory and practice. Such a method of distribution does not vitiate the essential character of a Federation that it is an association of States which, by the surrender of certain portion of their sovereignty, constitute a new State. It has been already pointed out that Federation is a State as well as an association of States. As long as these characteristics remain unaffected, the method of distribution of power between the Federation and the federating units is of the least significance.

Federations must also be distinguished from decentralised unitary States. The component parts of a unitary State in which a system of decentralization has been adopted, enjoy and exercise certain specific and definite powers of governance but always subject to the control and supervision of the central government. Under a Federal Constitution, on the other hand, the constituent units exercise the powers of sovereignty allotted to them, unrestricted and uncontrolled by the central government, so long as they do not transgress the limitations placed on their competence by the Constitution. As Brunialti rightly remarks, "*nello Stato Federale molti uffici sono lasciati al gli Stati o Cantoni senza controllo, sino a che non escono dai limiti posti d'all constituzione.*" This distinction between decentralised unitary States and Federal States is clearly brought out in the judgment of the Privy Council in *Liquidators of the Maritime Bank of Canada* v. *The Receiver G of New Brunswick* (1892 A.C. at pp. 5 In dealing with the question of the Prov Canada their Lordships say:

> "The object of the British North-America A neither to weld the Provinces into one, nor ordinate Provincial Governments to a centr rity, but to create a Federal Government in they should all be represented, entrusted w exclusive administration of affairs in which th a common interest, each Province retain independence and autonomy. . . . . In so regards those matters which, by Section 9 specially reserved for provincial legislation, th lation of each province continues to be free the control of the Dominion, and as supreme was before the passing of the Act."

It is on this ground that the Union Africa must be classed as a unitary State not as a federation; for, under the Uni South Africa Act, the central legislat supreme, and can always over-ride pr cial ordinances. (*Middleberg Municipal Gertzen*, 1914 A.D. at p. 559).25

The foregoing examination of the prin of Federation leads us to the following co sions : Federation is a State as well as an as tion of States, its distinctive features being

(*a*) that the Federation itself is a stitutional and international and

(*b*) that its component parts retain character of State, and ex powers of sovereignty conferr them by the Constitution, indepe of the control of the Fe Government.

These features distinguish Federations Confederations of States on the one hand from unitary States on the other.

25. The contrary view held by certain Con jurists is not correct. See Durand, *op. cit.* p. 5.

LABOUR IN JAMSHEDPUR—THE OTHER SIDE OF THE PICTURE

By SUBHAS C. BOSE

President, Labour Association, Jamshedpur

The article from the pen of Mr. J. L. Keenan, the General Manager of the Tata Iron and Steel Works of Jamshedpur, in *The Modern Review* for December, 1935, is interesting for more reasons than one. It is interesting for the digressions from steel-making into the domain of historical and sociological research—interesting for the placid self-complacency which inspires the writer—interesting also for the many contradictions in which the article abounds.

A word about historical and sociological matters. When Mr. Keenan talks about steel-production, he is on solid ground and his self-confidence is an asset. When he digresses into the thorny domain of Ancient History or Sociology, his self-confidence becomes a handicap. Says Mr. Keenan:—"He (J. N. Tata) realized that India from the time of Manu was condemned to be a country of capitalists and slaves" (P. 705). It is a truism in economics that capitalism is a recent growth in consequence of the advent of large-scale production. How there could have been a capitalist order at the time of Manu and after, passes my comprehension. Even landlordism as we see it today in India is a recent growth. Further, even the state in ancient times did not amass wealth—the prevalent idea being that the state (whether monarchy or a republic) should give every thing to the people. A typical example of this was King Harshavardhana, who emptied his Royal treasury once in five years. Then Mr. Keenan goes on to say:—"He (Tata) knew that in India before his time the mere name of a labourer must be expressive of contempt" (P. 705). If Mr. Keenan has used the word "labourer" in the sense of artisan, he is mistaken. The artisans in the Indian village economy—whether carpenters or blacksmiths or potters—were never looked upon with contempt. They were indispensable elements of the village economy and their relations with the rest of the village population were perfectly friendly and cordial. Labourers in the sense of industrial proletariat are an excrescence of capitalism and not an Indian phenomenon as such. If labourers (industrial proletariat) are looked down upon in India, similar is the case in other countries. I have heard from Indian apprentices in European factories that the gulf which separates worksmen from officers in European factories is very wide. Mr. Keenan is also wrong when he goes on to say "that a labourer was actually forbidden to accumulate wealth and, though he was a slave, even if his master gave him freedom, he was still a slave" (P. 705). I wonder from where Mr. Keenan culled this valuable piece of information. We know, on the contrary, that in India low-born people often rose to the highest positions by dint of their personal qualities. If we investigate the past history of some of the present Maharajas and landed aristocrats, useful information can be collected in this connection. I may also point to examples like that of the alleged Kaivarta Kings of Bengal, who came from a so-called low stratum of society.

The distinction, between "Labour of Necessity" and "Labour of Progress" which Mr. Keenan has drawn is artificial and if I may say so, fantastic. Even in ancient times, all labour was not labour of necessity. People did not work only for hunger nor did they always get starvation wages. Most people worked partly because of hunger and partly because of the pleasure in working, and it is too much to say that labour in the good old days was always sweated. The huge monuments of art that still live—Mohenjodaro, Harappa, Taj Mahal, Madura, Kanarak—do they not represent labour of progress as well? It is true that industries in the old days did not pay huge dividends as they sometimes do now. But we have to remember that huge dividends are exclusively the product of the industrial revolution—that is of large-scale production. Moreover, this phenomenon of huge dividends can hardly be called an advantage or an achievement. Thinking men everywhere are now coming to admit that the evils resulting from industrial capitalism are due largely to the accumulation of wealth in the hands of a few and to abnormally large dividends which are gathered either at the cost of sweated labour or at the cost of the exploited consumer in colonial or semi-colonial countries.

Mr. Keenan transgresses the limits of decency when he refers to President Roosevelt "assisted by a group of asinine Professors" trying to find a way out of the present depression. I do not hold any brief for President Roosevelt nor does the noble President stand in need of it. But is there anyone who can deny that the biggest experiment to end unemployment and depression that is going on in the world today outside Russia is in the U. S. A.? I would refer the writer to the excellent treaties written by Mr. H. G. Wells, *The New America, in New World,* in which he discusses the American experiment and compares it with the Russian. Incidentally Mr. Wells refers therein to the question as to why President Roosevelt sought the help of some Professors, whom Mr. Keenan in his self-complacency calls "asinine." Possibly what has annoyed Mr. Keenan is that President Roosevelt is laying his hands on the large dividends with a view to dividing them, in part at least, among the exploited proletariat and that he (President Roosevelt) maintains that the employers should recognise organized trade-unions and treat them as equals.

Mr. Keenan is not only self-complacent, he is more. He says that "as far as making steel in India is concerned that Company (Tatas) has ended the depression in that trade and I think that Company should be proud of this fact" (P. 707). But let me ask Mr. Keenan what after all ending depression under a capitalist system means. It means finding more markets and also sufficient capital to keep a concern going until more markets are found. The huge bounties given by the Indian people through the Government of India in the lean years helped the Company to keep going until more markets or orders could be found. That the Company today is able to make more profits is due to two factors; firstly, the duties imposed on foreign—specially continental—steel which make it possible for the people to patronise Tatas and secondly the orders directly placed by the Government

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of India with the Tata Iron and Steel Company. It is therefore the people and the Government of India who are really responsible for ending the depression in the steel trade—if really it has ended. Mr. Keenan has not a word of thanks for either of them, though he congratulates the Company, and therefore himself, for the recent improvement.

I happen to know something about Tatas since September, 1928, and I should like to enquire if the Tata Iron and Steel Company would have been alive today but for the heavy state-bounties which kept the Company going during the lean years and provided the fat salaries for the covenanted officers at a time when thousands of workmen were thrown into the streets, without unemployment dole or insurance benefit. I should also like to enquire if the Company would have been able to end the depression, as the General Manager claims it has done, without the aid of the heavy duties levied on imported steel and without the sympathy and support of the public and the Government of India.

The confusion of thought which the writer shows in some places is pathetic and makes one wish that he would devote more attention to the study of economics than to history and sociology Here is a specimen of his reasoning :—"In 1929 and in 1930, our monthly staff with the exception of a few whom you could count on the fingers of two hands, were 'labourers of progress.' The Steel Company earned dividends last year and this Steel Company, rightly, paid their 'labourers of progress' a reward for their extra effort which they had put forth" (P. 707). A perusal of the above would lead one to think that the financial improvement of the Company was due to improvement in the work put forth by the employees in 1931 and after. The fact is that the financial improvement was due solely to the larger orders secured by Tatas as explained in the previous paragraph. If one were to go round and examine one employee after another, one would not find any difference between his work in 1929-30 and his work in 1931-33. I clearly remember that in 1929 and 1930 the General Manager used to complain of lack of orders which forced him to reduce wages—to order sweeping retrenchment and to shut down certain departments of the Tata Iron and Steel Company in Jamshedpur.

The writer remarks in one place as follows :—"At the present time, in my opinion, due to economic factors, the entire labour of the steel world, with the exception of the labour in the Tata Iron and Steel Company Ltd. have forgotten that they are 'Labour of Progress' and they are 'Labour of Necessity.' . . . . There is nobody in the United States of America today, in my opinion, at least in the ranks of labour, who are attempting to get out of the category of 'Labour of Necessity.' . . . . There is no doubt that each and everyone of us realise that we have had a depression from 1928 until 1933 in India. The same depression exists in other countries. The Tata Iron and Steel Company, in my estimation, is the only company in the steel trade which has advanced. . . . ." (Pp. 706-7).

The above statements would lead one to expect that Jamshedpur has become a paradise for steel-workers—an object lesson for steel companies in other parts of the world. But what are the facts? Earlier in the article the writer states that American steel workers are the best paid in the world. Quoting a report of the American Iron and Steel Institute dated the 30th January, 1935, the writer says :—"American workers . . . . earned an average of 64.7 cents an hour in November 1934. . . . . The Japanese wage rate was 9.7 cents per hour and in India 8.6 cents per hour in 1933." (The figures for European countries are in the neighbourhood of [illegible] per hour). If the average for India is one-eighth [illegible] of the United States for America and if the Tata [illegible] and Steel Company is by far the biggest steel [illegible] in India, I think the General Manager of Tatas [illegible] hang his head down in shame instead of indulging [illegible] meaningless bragging. That the writer was conscious [illegible] his Company's shortcomings when he first sat [illegible] write is clear from the following remarks on [illegible] "We think we are doing good work; we brag a[illegible] hospitals; we boast about our wages paid, but [illegible] stop to think and make a comparison between [illegible] Europe or America? I certainly can state that [illegible] not. . . . . We must compare the emoluments [illegible] our workmen with the wages that are paid in [illegible]

I shall now come to the more serious charges [illegible] can be levelled against the Tata Iron and Steel Co[illegible] These charges are under the following heads:

(1) Their attitude towards Indianisation [illegible]
(2) Their inefficiency in the matter of [illegible] wastage
(3) Their attitude towards Labour.

I should preface my remarks under the above [illegible] heads with the statement that the Directors of [illegible] always claim that theirs is a "national" industry [illegible] this ground they have taken the fullest advantage [illegible] sympathy of the unsophisticated public. But [illegible] presently show that Tatas' concern in Jamshed[illegible] much less "national" than even the texitile mill[illegible] Indian industrial magnates for whom "nationalis[illegible] "patriotism" is often a convenient excuse for [illegible] the public.

When the Steel Company was first started a[illegible] years ago, a large number of foreigners, mostly Am[illegible] and Britons, were appointed to the higher posts [illegible] covenant. They were given princely salaries [illegible] equally princely bonus—and I know of cases in [illegible] the bonus was even higher than the salary a[illegible] independent of production or profit. If I mista[illegible] the General Manager himself draws Rs. 10,000/- a[illegible] —equal to what the Governors of the major provi[illegible] India get. The public were given to understand [illegible] soon as a sufficient number of Indians would be [illegible] they would take the place of the covenanted [illegible] This promise has not been redeemed. Between [illegible] and 1931, we made repeated requests for Indian[illegible] but without much success. The position today is [illegible] many departments Indians are doing the same w[illegible] covenanted foreigners but at half or one-third th[illegible] emoluments enjoyed by the latter. Moreover, durin[illegible] period, when I was in close contact with the G[illegible] Manager, I complained that the contracts of [illegible] covenanted officers were being renewed for a [illegible] period, though there were competent Indians to tak[illegible] place—but to no purpose. If an impartial inves[illegible] were made today into the number of foreigners e[illegible] at Jamshedpur and the emoluments they draw—th[illegible] Iron and Steel Company would stand condemned.

Tata Iron and Steel Company is undoubtedly [illegible] big concern and therefore there should be very [illegible] supervision in order to prevent wastage. But [illegible] point, too, the situation is far from satisfactory [illegible] Directors are all absentees and have very little kn[illegible] of the inner working of the concern. They are a[illegible] men with several irons in their fire and have no [illegible] the desire or leisure to know more of the working [illegible] Jamshedpur machinery. The result is that the [illegible] working of the vast machinery is left in the ha[illegible] foreigners who have no responsibility to anyone [illegible] the absentee Board which is entirely under their [illegible]

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

first realized the helplessness of the Board when I had discuss the terms of settlement on behalf of the strikers September, 1928. If on any point the General Manager id "yes," the Board would nod consent. If, on the ntrary, the General Manager said "no"—it was also no" for the Board. That a settlement did take place ter all was due to the fact that the then General anager, Mr. Alexander, felt disposed to welcome it. Not ng after this settlement, I once suggested to the Chairman f the Board of Directors that he and the Board should ave more contact with the workmen and for that purpose, would be good for him to go round the works without eing chaperoned by the Company's officials. The Chairman seemed agreeable to my proposal but my suggestion ould not be given effect to, because the General Manager was opposed to it. Nevertheless, the Board began to ealise their position, I think, because not long after hat, they sent one of the Directors to Jamshedpur—nd later on to Calcutta—to act as a liaison-officer etween the Board and the Management. Since his ppointment, there has been some administrative tightening-up in Jamshedpur. And in Calcutta and elsewhere most of the papers have been won over with the help of advertisements, with the result that today one finds very little criticism of Tata Iron and Steel Company in he nationalist press. But the real trouble—*viz.*, Wastage nd inefficiency—continues. The above-mentioned Director s an ex-I.C.S. and an able administrator—but he lacks echnical knowledge without which it is impossible to orce the hands of the Management. One of the results f this is that in the matter of Indianisation the progress o far made has been unsatisfactory. There are any umber of covenanted officers whose places could easily e filled up by competent Indians, at a much lower rate f pay. I have quoted above the average Indian wage-ate as being 8.6 cents per hour for the year 1933. But f we exclude the highly paid foreigners, there can be no oubt that the average would fall much lower.

The top-heavy administration represents, however, a mall item in the wastage that has been going on in amshedpur. If one would go over the stores department nd see the amount of capital lying uselessly idle there nd would also examine the annual orders that are sent ut for machinery, spare parts, etc., one would have some dea of the wastage that goes on in Jamshedpur. About 7 or 8 years ago, the services of the Indian Chief Electrical Engineer—one of the most popular officers of the Company—were suddenly dispensed with and a foreigner was imported in his place. Then followed a period during which wastage took place in the Electrical Department owing to faulty and unscientific methods of handling. Fuel-consumption is another important source of wastage. For a huge concern like Tata Iron and Steel Company, it is absolutely necessary to make use of the latest scientific devices for reducing fuel-consumption and also to carry on continuous research in this matter. But Tata Iron and Steel Company are backward in this respect. It is because of wastage combined with top-heavy administration that the Tata Iron and Steel Company cannot stand on its own legs and must always depend on the state for either bounties or protective duties. In a country where labour is so cheap, any well-organized steel concern should be able to maintain itself without being spoon-fed by the state. There are independent concerns in Jamshedpur which buy raw materials like scrap-iron (or electrical power) from Tatas and make a profit out of their products, only because they avoid wastage and top-heavy administration.

The last—and to our purpose the most important point to which I shall refer is the attitude of the Tata Iron and Steel Company towards labour. The first trade union was organized in Jamshedpur in 1920 and by that time so many grievances had accumulated that the years 1921-22 witnessed serious labour-trouble there. About this time, the late Deshbandhu C. R. Das's sympathy was drawn towards the Jamshedpur workers and as long as he was alive, he gave them the fullest support. But this support was of no avail until the Swaraj Party emerged as the most powerful element in the Indian Legislative Assembly in the 1923 elections. Deshbandhu Das was joined by Mahatma Gandhi and Pandit Motilal Nehru and Tatas then found it necessary to come to terms with these nationalist leaders because the Assembly would soon consider the question of a state-bounty for Tata Iron and Steel Company. Tatas then agreed to recognize the trade union (called the Labour Association), to collect the union subscription on pay-day and generally to ameliorate the condition of the workers. For some time, the position of the workers saw a decided improvement but after the death of the Deshbandhu, things began to grow worse again. Deshbandhu's place was taken by Mr. C. F. Andrews who kept the flag flying with the moral support of the Congress Party in the Assembly—but the unsympathetic and callous behaviour of the Company's officials led to a serious strike in 1928. Since then the Company's attitude towards labour has been one which would be worthy not of a "national" industry but of the worst bureaucratic Government. My connection with Jamshedpur labour began in August 1928, when the strikers and their leader, Mr. Homi, put irressistible pressure on me to espouse their cause. When the Company found themselves in a very difficult situation as a result of my joining the strikers, they agreed to accept the demand of the workers but only on condition that the Company did not have to negotiate with Mr. Homi, against whom personally they said they had many grievances. Mr. Homi at first agreed to stand out if a settlement helpful to the workers could be arrived at thereby. But when the settlement was actually drawn up and ratified by the workers at a mass-meeting, he changed his mind and set up a new organization to oppose the settlement. Soon after the settlement the Company refused to give effect to some of the important terms, as a result of which a large number of the workers went over to Mr. Homi's party. For a few months the Company refused to recognize Mr. Homi's organization but one fine morning their tactics were changed. Their erstwhile enemy Mr. Homi was invited by the General Manager and his organization was recognized. The old organization, Labour Association, was ignored and those who had drawn up the settlement and had stood loyally by it were left alone. After some time the scene changed once again. Prosecution was launched against Mr. Homi under various charges, and he found himself in prison. With the disappearance of Mr. Homi, his organization became a shut-up shop. The withdrawal of the Congress Party from the Assembly in January, 1930, led to a definite stiffening of the Company's attitude towards the workers. After Mr. Homi's imprisonment, whenever a worker's meeting was held, a band of goondas armed with sticks and other weapons would appear on the scene and break up the meeting by force. In 1931, I was presiding at such a meeting which was broken up in this way and I can therefore speak from personal experience. This situation continued for some years and even in 1934, things were so bad in Jamshedpur that during a visit to that town, Mahatma Gandhi was constrained to remark in a public meeting that he was "grieved to learn that the issues between the employers and the employed were being settled at the point of the lathi." It can be alleged on behalf of the workers that

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

since 1930, the Company has been following a ruthless policy towards them. Recognition was withdrawn from both the workers' organizations—the collection of subscriptions on pay-day was discontinued and employees connected with the trade-union movement were either victimised or transferred to places far away from Jamshedpur. In January, 1934, when the local Government officials in Jamshedpur prosecuted a gang of about 40 goondas, high officials of Tatas were found to take interest in the affair for settling the matter out of court. The climax was reached in 1935, when the Company served a notice on the Labour Association demanding arrears of rent for 4 years for the premises used by the Secretary and by the office—though 4 years ago, a clear understanding had been arrived at between me and the Managing Director, Mr. Dalal, that the Company would waive their claim for rent. The Company thought that the Association would not be able to pay and could thereupon be ejected and since all the houses in Jamshedpur are virtually owned by the Company, the Association would cease to exist for want of a habitation. The Secretary of the Association went so far as to offer to pay rent in future and also to pay the arrears by instalments—but the Company refused to accept any compromise, proving thereby that what they really wanted was not rent, but the liquidation of the trade-union organization in Jamshedpur.

The Company were going on merrily with their game when suddenly the Congress Party decided once again to enter the Indian Legislative Assembly. The Company knew from experience that two or three M. L. A.s were in the habit of raising inconvenient questions about their treatment of labour and they felt it advisable to change their tactics once again. A new group called the Metal Workers' Union, thereupon came into existence under the Company's patronage and the workmen in the factories were advised by the officials to join this group. This group is still in the good books of the Company, and one of its principal activities is to give tea-parties to Government and Company officials and to wait on deputation on the General Manager. The object of this new policy on the part of the Company is to show to critics in the Assembly and elsewhere that Tata Iron and Steel Company do not suppress all trade-union activity.

I have dealt at length on the attitude of the Company towards organized labour and shall now say a few words about their treatment of the individual workers. I have before me a printed copy of the memorandum submitted by the Metal Workers' Union (which in Jamshedpur is called a "'Company's Union") to the General Manager which contains the following remarks:

"The service conditions of the majority of the workers employed in the Tata Iron and Steel Company are not sound as many of them are given notices of discharge, compulsory leave etc., without sufficient consideration. For example, the workers of the old Rolling Mills who have long service with the Company and who have contributed towards bringing the Company to the present position it occupies among its sister industries . . . . are laid off on compulsory leave. . . . .

The Company recently started a policy of employing men "temporary" and it is interesting to note that this "temporary" has no limited period. Cases of such men who have put in more than two years of service are not uncommon. By this, the Company is able to save a good deal by non-payment of bonuses and non-extension of privileges according to Works Service Rules, Provident Fund, etc., which can be enjoyed only by permanent employees. . . . .

Suspension of a worker from his duty extending to weeks is common. In spite of several rul[illegible] Management to afford a chance to the worker [illegible] a charge brought against him, the rules are [illegible] followed in several cases or prompt attenti[illegible] paid to the explanation submited by the pa[illegible] Similar remarks would apply to such other [illegible] punishments such as reduction of salaries. . . .

There is no regular system by which emp[illegible] get promotions and increments in their wages. [illegible] time past it has become a policy of the Co[illegible] abolish as far as practicable higher rated p[illegible] vacant and lower rated men are made to und[illegible] extra work without adequate compensation. . . .

While we appreciate the spirit of enc[illegible] underlying the Bonus schemes, we feel it [illegible] restricted only to some workers. Then again a [illegible] has been made between Operating and Ma[illegible] Department in respect of Departmental bonuses. [illegible]

The system of weekly paid labour was i[illegible] when the Company was in need of men to [illegible] seasonal work. But for some time past we fin[illegible] labour is employed in permanent force in certai[illegible] ments whose total number at Jamshedpur comes [illegible] 5000 (including both male and female labour) th[illegible] ing about 20 per cent of the total number of e[illegible] Most of such employees have already put in [illegible] over 5 years. *Most of such weekly paid labo[illegible] rates varying from 5 annas to 8 annas per day.* [illegible] ing to the following statistics showing the mini[illegible] expenditure for a family of 5 members as show[illegible] Report of the Royal Commission on Labour, it [illegible] clear that the cost of living at Jamshedpur is [illegible] higher than that of the two places quoted—Shol[illegible] Ahmedabad. . . . ." (Then follows the statistics [illegible] that the monthly expenses in Sholapur come [illegible] Rs. 37-13-11 and in Ahmedabad to Rs. 39-5-8. B[illegible] Jamshedpur workers get a daily wage varyi[illegible] 5 annas to 8 annas).

In view of the above statements made—not [illegible] headed agitators—but by a loyal "Company's [illegible] may I ask Mr. Keenan how many "labourers of p[illegible] there are in Jamshedpur? I am afraid that e[illegible] the General Manager and the covenanted offic[illegible] few Indian employees could be classified as "la[illegible] of progress."

The only portion of the article for which I fee[illegible] ful is where the writer refers to the appalling c[illegible] of the workers in the Tata Mines. I do hope th[illegible] the sympathy of Mrs. Keenan behind him, the [illegible] Manager will be able to bring about an increase [illegible] wages of the poor mine-workers.

The writer has evidently referred to the [illegible] mines only. But what about the coal mines? [illegible] years ago when I was working as the President [illegible] Tata Collieries Labour Association I happened [illegible] into the conditions in the Tata coal mines. [illegible] time some mines were being closed down and th[illegible] of workers were being thrown out of employme[illegible] naturally wanted the mines to continue working. [illegible] arguments were urged by the Company in oppo[illegible] our demand—firstly, that the Company had [illegible] contracts with some collieries and after taking this [illegible] the Company did not require an additional supp[illegible] their own mines and secondly, that the cost of [illegible] tion in the Company's mines was rather higher [illegible] pared with the prevailing market-rate. It is diffi[illegible] an outsider to understand why the Company w[illegible] for long-term unprofitable contracts and at the sa[illegible] invested capital in buying collieries. Firstly, it was [illegible] to go in for long-term unprofitable contracts. Se[illegible]

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

they did go in for them, they should not have bought y collieries. Thirdly, once they started working these llieries, they should not have shut down—because it sts a lot of money to keep mines in proper order when ey are not working. Fourthly, there is no reason why ey should have had a top-heavy administration in the ollieries Department also—and thereby put up the cost production. The result of all this inefficiency is that e people and the state have to pay for the sins of the ompany and the Indian workers have to be content ith low wages.

If Tata's employees at Jamshedpur are to become "Labourers of Progress" then the top-heavy administration has to be rectified, the covenanted officers have to be got rid of and wastage and inefficiency have to be eliminated. The paltry bonus thrown at a section of the ill-paid Indian employees for their last year's work does not appreciably alter the position of the workers in Jamshedpur nor does it entitle the Company to claim that they are better employers of labour than any other company in India.

Vienna, 31st Dec., 1935.

SUFISM IN SIND

By T. L. MANGHERMALANI

HE greatest poet of Sind, Shah Abdul Latif, as a Sufi. The famous Hindu poet of the untry, Bhai Dalpatrai, was a Sufi. The reatest King of mediaeval India, Akbar, was Sufi and was born in Sind. His chief advisers, aizi and Abul Fazl, were Sindis and Sufis. ufism has appealed powerfully to both the indu and the Muslim of the province, and hy?

Sufism is mysticism, and germs of mysticism ere latent in Islam. They rapidly developed the two centuries following the Prophet's eath, and by the middle of the tenth century D. Sufism was fast becoming an organized ystem. During the next two hundred years arious manuals of Sufi theory and practice ere compiled. It only remained to provide ufism with a metaphysical basis and to recon- ile it with orthodox Islam, and this was done y Ghazali.

What is its scripture? It condemns harisaism and lip-worship in religion, sanctimonious mummery and hypocritical observances. t rejects forms, fossilised piety and stereotyped irtue, and is "against that mental and moral isease which kills the *spirit* of the *letter* and eeds on the dry husks of doctrine." It inculcates purity of heart and purity of action, aughs at propitiatory bribes, ridicules the retensions of the priesthood, and exposes their ices. So far the Sufi is simply a moralist, but e goes further. He attempts to enunciate a ysticism which should satisfy 'blank misgivings' and gropings in the dark after the bsolute, and his method to secure it is *Shareeat, areekat, Hakeekat* and *Mairfat, i.e.,* abiding y the law, walking in the ways of God, living n God, and knowing God. But how is God to be known? By faith and ecstacy. And how is ecstasy to be obtained? By Music, by adoration of Beauty, by Dialectic, by Prayer, and by Love. True human love leads to the realization of the Divine Bliss, and there is a beautiful story to illustrate it.

> The Shah (Shah Abdul Lalif), while wandering one day in a jungle, came across a comely but pale and emaciated *Fakir*, who kept on uttering, "*Jhal Fakir, Hal Fakir*" (Take it, Oh *Fakir*, and go, Oh *Fakir*). The Shah inquired what these mysterious words meant. But the *Fakir* refused to answer unless the Shah promised to assist him in the fruition of his object. "If you help me," said he, "to accomplish my end, I shall get you a *Burat*" (a letter of salvation). The Shah gave the requisite promise and then the *Fakir* told him that several months ago some people had encamped in that jungle for a few days, that whenever he went to beg from them a beautiful girl, all innocence, purity and modesty, used to come out with a handful of flour and utter the words which had excited the Shah's curiosity, that after some days these people moved their camp, and that ever afterwards he was perfectly disconsolate and thought of nothing but his sweet almoner and the dear words with which she used to greet him. The Shah, touched by this story, took the *Fakir* with him and having an extraordinary knowledge of nomad tribes, succeeded in tracing the little party to which the girl belonged. Fortunately these people were very warm admirers of his poetry and vied with one another in offering him their hospitality and their services. The Shah simply asked for a little hut and desired her father to send her alone to wait on him. The Shah was a *Sayed* and a saint and . . . . the request was unhesitatingly complied with. The girl was accordingly sent to the Shah, but as soon as she entered the hut her eyes met those of the *Fakir*, a magnetic glance seemed to pass between them, the long choked passion asserted its mastery, and in its flow exhausted the vitality of both.

Death restored them to the Great Unity. Did the Shah get the promised *Burat?* He says he did.

This is Sufism.

That the creed should flourish in Sind, and probably more in it than in any other part of India, is due to a variety of causes. It is not opposed to Islam and seventy-five per cent of the population belong to that faith. It also owes in no little way its support from that community to the presence in it of a strong Arab element. The Arab conquered Sind, the rest of India was conquered by the Turk. For nearly three hundred years Sind remained subject to the Arab Caliphs before it came under the control of Delhi. And it was not the Arab, who believed in the Sufic virtue of toleration, but the Turk, a cruel fanatic, who became responsible for the Sindi Hindu's subsequent degrading thraldom. There is yet another reason why the Muslim kept alive his Sufic sympathy and that was his active connection with the Persian literature. That portion of it which is associated with the names of Shams Tabreez, Jalal-ud-din Rumi, Nasir-ud-din Toosi, Attar, Hafiz and Hatif represented Sufism in its highest and grandest quality, and it could not fail to leave permanent effect on the minds of its readers.

How did the Hindu come to admire it? It has often been remarked that Sufism is based on the *Vedanta* philosophy, but there is no evidence for it. There is however enough evidence to establish that the ideas and similes of Sufism agree in no small degree with the ideas and similes of *Yogic* doctrine and discipline. Is it on account of the influence of Buddhism on Sufism? Influences outside Islam made themselves felt in the evolution of Sufism and its use of rosaries, its doctrine of *fana*, and its system of 'stations' (*maqamat*) on the road thereto, are Buddhistic in origin. Buddhism in Sufism must also have been brought to active life when it came into contact with Buddhism in Sind, for the country had accepted that religion Asoka, 272-232 B.C. And Buddhi Hinduism have much in common betwee

Other considerations to explain the are:—

1. The Hindu mind is essentially tive and idealistic and the Sufi's "movin in worlds not realized" has great attrac him.

2. Hindu Sind during the Muslim was not a citadel of orthodoxy. They a homogeneous collection of people, the not indigenous to the soil—practically natives had been won over to the religion ruler—they were a racial mixture compo immigrants from the adjoining province left their homes in search of employment escape the persecution of the later M Nor were the differences only ethnological were also separated by social, linguisti religious divisions. Consequently their could have none of the tenacity of o Hinduism and a characteristic of its dec the valley of the Indus was complete ign of the Sind Hindus of Sanskrit, the k accessibility to their sacred lore. Moreov precarious position they held in a s where they could be tolerated only in p tion to their acceding to the custom of masters also necessitated trimming of ecclesiastical rigidity.

3. Lastly, to count the effect upon the H of *Nanakism*, *Darya-Panth* and other creeds that, in the absence of a conser spiritual exercise, captured his mind and his higher life, these movements like S saw no distinction between a Muslim a Hindu and sought to establish a close re between them.

ADVENTURES OF INDIAN PHILOSOPHY IN AMERICA

By B. K. BAGCHI, Ph.D.

Nations like individuals play in the hands of forces which we are often unsuccessful in tracing to their dim beginning or following to their final sweep. We note incidents but not the underlying causes. Psychological and biological needs and urges are buried out of sight, and history becomes just a concatenation of events and personal biases in regard to them. India and America which have no direct political tie between them have nevertheless been for the last forty years or more unofficially exchanging conceptual salutes or verbal brick-bats. Is it possible to make a fact-finding, unprejudiced study of the contact of these two nations, their thoughts, and their personalities? To untangle the complexities of contacts of these two diametrically opposite national units with a view to recommending social or political reform is beyond the purview of this article. We will only inquire about the strong impact of the Eastern thought upon America and its result.

Background

When Anquetil Duperron first introduced the *Upanishads* into Europe in 1775 he did not know that he was blazing a trail which many were to follow. A long line of philosophers and scholars from Schopenhauer to Maxmuller were engaged for about a century in puzzling out the religious philosophies of India, and in some instances adopting their concepts. But this did not mean anything to the common man in Europe or in America. America was too busy setting her own house in order and pioneering over the prairies and arid lands of the middle west and the west. People were satisfied with denominationalism and puritanical traditions, and to them India was just a country in the world atlas.

Intellectual placidity first of Europe and then of America was disturbed by Darwin's *Origin of Species* in 1859 and *Descent of Man* in 1871. His doctrine of evolution, which revealed the cogency of the idea of gradual growth and traced human ancestry to lower species, was a veritable lightning. Lightning shocks and gives light. The theory of evolution shocked the ecclesiastics and gave light to the liberal intellectuals, who welcomed the genetic study as an open sesame to numerous scientific problems. There were thunderous protests from every side, and gradually there was a regular downpour from geology, archæology, comparative anatomy and physiology, piling up evidences in favour of some phases of Darwin's theory. Thus a doubt was cast on the Biblical idea of creation of man occurring one fine morning. The common folks were confused but not yet upset. They had other compensations and consolations from Christianity.

About this time another leaven from another direction was contributing its strength to the intellectual ferment in the few. Emerson, the head of the New England School of Transcendentalism, who absorbed more than any other man in America the spirit of Indian philosophy, sought common grounds for Greek and Indian thought. His mysticism and liberalism were too much for the church, so he gracefully withdrew from it. He translated verses and incorporated thoughts from the *Gita*, and his emphasis was on the values of life and his Over-soul was no other than the Indian Brahma. Hawthorne, Thoreau and an insignificant minority followed him, but not the masses. For the masses the school made no pragmatic gesture; it was too deep.

As decades flew by science and industrialism were slowly doing their work and Transcendentalism was adding its quota. There was an unrest with the old and a reaching out for the new. This is an embryo out of which liberalism is often hatched. People were gradually waking up to the fact that science and the church were not getting along very well. The conflicts between them in the last quarter of the nineteenth century were creating intellectual, emotional and practical confusion. Out of this confusion arose many cults.

Christian Science and Spiritualism

One of such cults was Christian Science. A child of Mrs. Eddy who borrowed heavily from Vedantic thought and forgot later on to acknowledge her debt, it was in its swaddling clothes at that time, being organized in 1879. Christian Science emphasized the spiritual healing of the sick which the church neglected and denied matter which the doctors strongly affirmed. Today Christian Science is one of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the most prosperous churches. The secret of its power lies in the strength of its organization and the practice of spiritual healing. Then there was Spiritualism. It was gaining followers by the hundreds in the last half of the nineteenth century. It was born in America of the Fox sisters but its umbilical cord stretched away out in the Near and Far East. Spiritualism gave consolatory evidence of life after death which the church only assumed and enlisted several great scientists' allegiance which the scientific world could not understand. There was a fog in the air. Some sort of light was welcome. America was ready to receive India. Was the orthodox church or the semi-orthodox cults right?

Swami Vivekananda

At this time was held the Parliament of Religions in Chicago in 1893, organized by persons of denominational thinking with a dash of democracy and liberalism. Protap Chandra Mazoomdar of the *Brahma Samaj* came and gave his brilliant papers. Swami Vivekananda also came there and astounded the Parliament with his tolerance and breadth of knowledge. He spoke before enthusiastic audiences in various parts of America. The average American admired the man but did not understand much of what he was talking about. His philosophy was brilliant but totally new to them. His personality was over-powering but other-worldly. American intellectuals bowed to his logic and to Indian philosophies and the Indian mind. Chairs in Sanskrit and oriental philosophy sprang up in several American universities. Josiah Royce of Harvard delivered his well-known lectures at Edinburgh (1900-1901) on *The World and the Individual* and gave quite a space to the *Upanishads*. William James also delivered his famous Gifford lectures (1901-1902), later published under the title of *Varieties of Religious Experience*, the first systematic work of the psychology of religion, in which he treated of Vivekananda's philosophy and Indian mysticism. His *Pragmatism* also contains references to Vivekananda.

Vivekananda threw out hints that revealed directly or indirectly to the confused thinking minds of America the stand of true India on certain philosophic and religious questions. Emersonian transcendentalism is right; practical realization of the divinity of man is possible; reincarnation is logical; without renunciation peace is impossible; orthodoxy is dangerous; hell-fire religion is insulting to man and God; religion does not bar science but reason is subordinate to intuition; evolution occurs w lowering man's dignity or God's greatne evolution is a spiritual process, it is the r of involution and a gradual manifestati the formless Spirit first through simple through higher forms and species; salvati proxy is unthinkable; it is self-illumin Yoga and meditation are necessary; ma *maya*, an appearance, though not empi non-existent; search for consolation th spiritualistic phenomena is a make- Vivekananda came as a meteor and went meteor. He gave no inflexible method no sparkling panacea. American intellig rejoiced to see the pure form of mys from India. It was a wave that brought sort of release to a few tradition-b American minds. The rest of the populace left untouched. Christian Science, Spiritu and every kind of 'ism' flourished a millions to their membership and ho meetings and seances for "demonstration" spirit return. Of course there was also orthodox Christianity.

As years rolled on people turned to I for what they wanted out of Indian philos Swami Abhedananda and others followed S Vivekananda and had appreciative audie Today there are a few Ramkrishna mi Swamis here and there in America prea renunciation to several dozen followers practicing aloofness and monasticism. T universal religion with their prophet-wor ping emphasis does nobody serious harm rather brings consolation and intelle liberation to those who understand it. Bu religious and social problems of America teachings do not touch. They cannot m nor are they supposed to be in any kin business, according to their teachings. Mar and economics, two pressing questions America, they cannot advise on, except indi ly and philosophically. The service ele of the Indian Ramkrishna mission is practi non-existent in America. Certain "es mechanism" that is present in some phas Indian religion is unintentionally impo The Vedanta does not receive its modern I pretation or modern emphasis. It is not naturalized in the American soil. (Isn't n alization possible without the sacrifice essence?) The latest discoveries of science Indian contribution to it, past or present no astute critic or interpreter among the Swa The religion of the monastery has subordin the religion of active life of men among Nevertheless people claim they derive spir and philosophical benefit from the organiz

and its many publications, and they admire its non-commercial character.

As far as the average American is concerned the *Adwaita Vedanta* is at a disadvantage. It talks of no cure or consolation, but of self-realization and communion. Its appeal is intellectual, its discipline soldierly. It exacts a price that the masses are not yet temperamentally or traditionally ready to pay. So when they grow somewhat weary of personalistic emphasis and salvation blueprints of existing religions they lean towards cure schemes of cults in case of their ill-health or otherwise dabble in the abstract if it looks radiant, soothing, and non-demanding. As for "mystic communion" it is only recently that it is coming back on all fours to the Protestant church through the concept of "religious experience" partly as a consequence of cultus pressure. And in the offing there are many writers who have not aligned themselves with either of the above disciplines but who are using a great deal of eastern themes and literature material, not exactly Vedantic.

New Thought

Now that India is open to America, we find that another class of Americans is working Indian thought to a sweat. New Thoughters and Unity followers who evidently number millions and count amongst them many a brilliant man, have found their spiritual legacies from Emerson, Christian Science, R. V. Trine, liberal Christianity, India and individual leaders. They read an *adhyatmic* meaning into every corner of the Christian Bible. They meditate on the soul and the Over-soul to attract money, health, and happiness. They have what they call prosperity meetings by the thousand all over the country where they sit and visualize prosperity in the "cosmic," and millions of absent treatments per week for healing are sent out through the air. They like to harness and goad the Soul to run errands for them. The Indian idea of the divinity of man fits in pretty well with the demands of American individualism. Thus the self-culture phase of Indian thought is almost cast in the shade. Yet New Thoughters and Unity men are happy-go-lucky, hard-working beings whom William James would call "tender minded." They are optimistic, devout, and liberal in their way.

Theosophy

Many of those who do not regard Krishnamurti as a Messiah nevertheless admire his courage for breaking away from Theosophic institutionalism and for teaching a type of philosophy that has the simplicity of early Buddhistic religion, transcendentalism of Vedanta without its terminology and quiet iconoclasm of religious forms and formulas. It is an emphasis on individual growth, typical of Indian philosophy, and inspite of its evasiveness and negativism it is bringing a point home to many of the occultism-ridden Theosophists. It is the point of self-purification without institutional mechanics or methodology. The followers of Theosophy, a mixture of eastern and western thought, are many, and notwithstanding the difference of opinion over Krishnamurti's inauguration as the World Teacher, the memory of the strength and sincerity of that grand old woman, Mrs. Besant, is treasured alike in the hearts of Theosophists and non-Theosophists.

Yogi Liberators

Turning now to another phase of the inquiry we notice that certain post-war adventures of Indian thought in America have a distinct stamp of post-war hysterics and are creating quite a problem. It is not entirely the fault of the Hindus. Americans and Hindus have disturbing problems arising out of their contact. We will confine ourselves only to the one that is connected with the religious situation. This situation, resented by the Americans themselves, especially the better type of Americans, ought to make the thoughtful Hindus hang their heads in shame. Indians in India become elated over the world-evangelizing power of Hinduism, but they often do not know who the Hindu evangels are in this country and how they are evangelizing.

A great many Americans have gone wild over three things, (1) techniques that are supposed to control or predict one's destiny, (2) short-cut mental therapeutics, (3) physical and beauty culture. All these are pragmatically important. These are the by-products of a civilization that produces too much tenseness, too much haste, and too much leisure, that resents human and natural handicaps and wants to accomplish and conquer. Here are tied up in a knot psychological and biological urges and momenta. And it is here that the Hindus have recently brought their so-called religious aid.

In every city of America with over fifty to one hundred thousand people (probably excluding some sections of the South) there are dozens, even hundreds, of weird-looking, soft-tongued palmists, fortune-tellers, psychics, occultists who claim their philosophical and occult heritage from the Far East and the Near East, especially India, through the medium of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

translated books or mystics or so-called Swamis or Yogis parading in this country. These psychics, Hindus or non-Hindus, ply a brisk trade in shady booths, comfortable salons or show places capitalizing particularly on the name of India. The report of the missionaries who preach hell-fire and call India a land of heathenism, snake-charming and mystery-mongering seems to be corroborated in the missionaries' own land by the vulgarity of the whole affair, if not by the particular acts and pretensions of these psychics. Americans with sense do not, of course, fall for them; they do wonder what can be done about it. Is this India? They already have enough paganism to battle with in this country.

The greatest tragedy, however, does not come from these psychics but from those whom they consider as older brethren in the trade. They are the Swamis, Yogis, Rishis or free-lance lecturers and liberators at large. They are "intellectuals;" sometimes they have a degree or two from some universities. They have a facile tongue, pretentious idealism, cunning manners, orange robes and sometimes long hair. From the platform they either shriek, swaer and scold, or orate, chant and mystify. If different, they posit just a saintly 'halo.' Probably they represent some tiny religious organization of India; sometimes they are self-styled presidents of their own organization. They have adopted the high-powered salesmanship of American business to boost their course of philosophic and religious teaching to spiritually hungry and nervously sick American men and women, mostly women, using such bait phrases as "marvellous illumination," "instantaneous healing," "God-consciousness," and charging each from 25 to 100 dollars for their courses of lessons. They hire halls at different cities, give free lectures for a week or so lauding their courses to the skies and yet cleverly phrasing their promises so as not to get into legal complications with the government. Then people pay cold cash for one course after another on calisthenic exercises to super-advanced metaphysics, *pranic* physical culture to highest vibratory healing. At the end of a month or a year a few of them revolt for being cheated, a few think they have received benefit because they have paid for it, a few keep quiet for their foolishness, and a few "loyal" souls carry on the banner because they feel they have got what they have been looking for for years. The master Swami (we wonder whence the adjective master sprang) or the liberator after a stay of a month or so moves on to conquer new territory leaving somebody in charge of the old. Their students run from 30 to 1500 in n netting the *guru* from six hundred to tw five thousand dollars in each place. An shrewd American sighs, "Another racket!"

These *gurus* claim they represent the illumined masters of India and have superc powers to bestow miraculous blessings. neurotics or the dissatisfied swallow these whole and worship the Swami as the lord above. The anachronism of guruship is more riduculous by the first subtle and imperious way some of the Swamis exert superiority over their students in a land has a democratic tradition. The students impressed with the necessity for submission obedience if they are to attain God-consc ness and alas! sometimes it is many m before they realize the real significance of injunction.

The Swami has an eager eye for news publicity but he would rather not take co such mundane matters himself. He lets advance agent do that for him when a territory is invaded. Of course, lesser Sw cannot afford the luxury of a five to thousand-dollar-a-year advance agent. T agents procure a list of wealthy men and wo especially widows, and the Swami worms way into their confidences to relieve the their earthly treasure in exchange for spi blessings. Sometimes his students in famous personages, such as symphony orch conductors, opera singers, society matrons doctors from whom he manages to get monials when the lessons are fresh and li their minds because of the magic presence the divine savant. A few of these he se for closer association, and let none be so spiritual as to think that this association anything to do with soaking up their pres The testimonials are printed in the free li ture and the magazine of the Swamis, and unenquiring Indian and American public claims, "What a man!" The truth of matter is that Americans are, as a rule, sportsmen, they are noble, they admire In philosophies, especially if they are pres by charming, magnetic personalities in forceful manner, but they are too busy enquire into the subtleties of these per alities. And the Indian people, ruled and pressed by a foreign nation, and not kno the truth about these preachers of philos from a distance, gets a compensatory satis tion when members of another foreign n lend even half an ear to their philosophy impart it as much as a faint shadow recognition.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Some one may inquire, aren't these people ng some good? Yes, but that depends upon questioner's viewpoint, and upon whether not he likes to see cultural values deliber- ly mangled by them in the process. In the me of Indian teachings, in the name of found- big organizations for the glory of the Hindu e and adapting Indian philosophy to erican life (which some of these teachers unt as their chief motives in life) Indian ilosophy is certainly vulgarized and dragged the mud. Privately some of the lesser Yogis d teachers—especially those who have passed e stage of fooling themselves—are perfectly nk about it. But they say, "What can we ? Americans have shut off all sources of come from us beyond the level of unskilled bour—and even that is often inaccessible— cause we are foreigners. We have to live!" hus economics enter into religion.

From Tagore to a certain Swami was an cruciating contrast and disappointment to ose Americans who have heard and known th. Their souls sank, so they remained ent. Tagore through his writing and his per- nality, through his philosphic æstheticism and rical expression, through his quiet independ- ce, broad vision and deep humanity has been shrined in the hearts of lovers of letters and ekers of freedom. His books have been an spiration to thousands and thousands of those o are looking for a non-sectarian philosophy life. There may be assumptions in it with hich the Westerners may not be familiar, but s sublimity and delicate beauty have lifted em high from the commonplace. Tagore ould not make any concession to the jangling the American pragmatic instinct of the street. o a powerful Swami had to do it and give a gh finish to the job of bringing the East and he West together—

> "'"And every body praised the duke
> Who this great fight did win."
> "But what good came of it at last?"
> Quoth little Peterkin.
> "Why, that I cannot tell," said he
> "But 'twas a famous victory."'"

Outcome

What is the ultimate outcome of Indian contact with America? It is too early to answer this question adequately. Only about half a century has elapsed since America discovered India. Nevertheless it is certain that America cannot or will not take anything from India that will not fit in with her genius or answer her needs. Her needs are many. Which of them are going to be satisfied? American vitality and independence, and the pride and selectiveness that grow out of both will forbid wholesale importation of Indian thought. The Indian picture has to fit the American frame, and in time both the frame and the picture will undergo changes. The day of assimilation has not arrived; materials good, bad, indifferent are just now being dumped on the American soil. Further, it is often asked, why the greatness of Indian thought does not square with her present national and social status. America has not discarded everything that Miss Mayo said. Is it the fault of the thought, or the people, or both? To cast all the blame on a foreign nation does not convince any shrewd questioner. Mahatma Gandhi's non-violent independence programme raised for a while the average American's respect for Indian thought. America will wait to see the future of India, violent or non-violent, before she fully makes up her mind. In the meantime something is happening. Notwithstanding all the vagaries and sparkles of the religious situation and American individualism, there is very slowly emerging here and there in America, a type of rational, social religion which is neither western nor eastern, Christian nor Hindu, though sometimes maintaining denominational tags, a religion of life and fullness, with an unconscious emphasis on the best principles of all religions that are thought to favour her growth and her adjustment to the values of life that she considers paramount. Any Hindu coming to this country to make converts to Hinduism should take serious thought of this emerging type of religion. Can India's mystic universality help in the right way? Or is it going to take the shape of another narrow sect?

DR. SIR BRAJENDRA NATH SEAL: AN APPRECIATION

By Prof. K. B. MADHAVA
Mysore University

By appointment I was to meet Prof. Mahalanobis on Thursday, December 19, at 2.30 p.m., but his peon led me to the Senate House where a large gathering had assembled and was celebrating Brajendra-Jayanti. True, chance had led me there, but it was a life's opportunity to me when Mr. Mahalanobis suggested and arranged that I should speak on the occasion. Persons senior to me in age and in understanding, had honoured and worshipped Sir Brajendra, and I can only lay at the feet of my Master my humble but earnest, formal but devout, tribute of gratitude and appreciation. Some previous speaker had said that Dr. Seal had inflicted a loss on Calcutta in leaving the King George V chair of philosophy, but I can assert that it was certainly a gain to the Mysore University and indirectly to others, including Calcutta also. University reorganization, with which he was so closely associated in Calcutta, was of course the subject nearest to his heart. "If Mysore has been *primus in Indis*, first in India, in respect of a full-fledged unitary Teaching University, we must be *primus in Indis* in taking other big steps," was his constant thought. In Mysore he made the study of philosophy more living by placing it *en rapport* with the most recent advances of contemporary thought and science on the one hand and the priceless inherited culture of India on the other. He made History more concrete and realistic by linking it with culture, archaeology and documentary study. To Economics he devised statistical and mathematical appendages, and he was instrumental in adding mathematics and experimental psychology as Key Sciences to the humanistic studies on the Arts side and removing the "light-proof" compartments between physico-mathematical and biological sciences. He had naturally innumerable difficulties to encounter and his own introductory speech on the Report of University Reorganization must for ever remain an inspiration.

It is but natural that this meeting should recall Dr. Seal's rich philosophical heritage. I have already referred to the Syllabus he drafted for philosophical studies in Mysore University, at whose length, italic printing and Sanskrit headlines I even now gaze with awe and bewilderment. He could discuss Riemann's Function, Mathematical theory of evol referendum, hydro-electric problems and sition from prescientific medicine to scie medicine with the grace and ability of a l of All Faculties. But it is apt to be forg that in Mysore his early work was the pr tion of a Report on "Constitutional Refor Mysore" which in some respects would the India Act, 1935. He was also memb the Mysore Economic Conference which with problems as varied as sericulture, s oil, soap-making and *shanbogs'* (village offic sense. He was for over a year Educati Advisor and extra Member, and sat in Executive Council of the State's Administra He outlined and carried through an educati survey of the state, and was presiden Committees dealing with Trade Union Leg tion and Financing of Cottage and s industries, in all of which it was my priv to be associated. His plans for compulsory free education (July 1926) and his outline the 6 types of levels of vocational trai (September 1927) and numerous others that are reports completed long before ot whose assistance he sought had produced t suggestions. The great loyalty and esteem had for his Ruler he tendered in public on occasion of the Silver Jubilee of His High the Maharaja of Mysore (August 1927). appreciation and confidence that he in turn always enjoyed were manifested in the *Kh* along with the distinction *Rajtantra-Pra* which His Highness awarded him.

It is possible for me to speak at len about his manifold services but his great asset was his simplicity and his human and affection to younger men which was overflowing as his own pure and spotless sil beard. If Architecture has its nine lam youth has its *panchapradipas*, which Dr. S adumbrated in his Convocation to the Bomb University (August 1926). To youth's fres ness of outlook he introduced stories of the r mind of India, her genius and traditions, a to youth's love of adventure he recount accomplished discoveries of Atreya, Kum Shiras, Marichi, Susruta and Charaka, and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

t of names like that, all of which he strung ether one evening when he put forth a rous plea for revival of National Vitality the occasion of the Visit of Delegates r. Madsen and Dr. Shiga) of the Far Eastern sociation of Tropical Medicines. His child- e love and simplicity was manifested when received people individually, and it was my vilege to have that of him from his hands a larger measure than perhaps most of my leagues in the University. I was selected for g drives in his motor car, for long discourses his working cot (for on his cot he worked files more often than he did before his bles) and for the most intimate conversation d confidences in his sick room. I have met m at practically all hours of the day, long short, and on station platforms whether at sore or Bangalore or Madras or Waltair or ragpur to read printer's proofs, or to use myself with his theories on "grace, rity and compensation" in approving of derated results of examinations, or may be in e mere frivolities of "True Story Magazine" d of Aldous Huxley. I met him continuously ile he was ill, and somebody had added derneath the poster on the doorway to his kbed "No visitors allowed," the words "except M(adhava) and N(urse)." On the sick bed too, Dr. Seal revealed remarkable powers of forbearance and submission, and it was sad to contemplate such a mighty mind lying so seemingly prostrate. It was only seemingly prostrate, for when he spoke, he spoke treasured wisdom more truthful than flowery knowledge. He had to be removed to the Hospital at Bangalore for the greater facilities that that hospital could provide. His own personal purity and sturdy constitution put him up better and when he was well enough to undertake the journey he moved to Calcutta. My leave-taking was simple, as both of us were too sad to indulge in formalities. I have met him more than once since that day but his memory, which is supposed to fail in proper names, never played him false in my case. Today is a most sacred day to me, as I can tender offerings to him who has been as much the architect of my own personal advancement as he is doubtless the architect of the prestige of Mysore University.

(From a speech delivered by Prof. K. B. Madhava, Mysore University, on the occasion of the celebration of the 70th Jayanti by the Calcutta Philosophical Association on 19th December, 1935)

GURU GOBIND SINGH

By BALWANT SINGH, M.A.

THINK of the Guru and you involuntarily all to your mind the incidents of Anandpur, amkaur, Sarhand and Nander or 'Abchal-nagar,' as the Sikhs prefer to call it.

Anandpur! Guru Tegh Bahadur's 'Town Bliss'! The Sutlej flows on one side, the lls rise high all around. The natural scenery superb. It was founded by the Ninth Guru. It was here that the Pandits of Kashmir pproached Guru Tegh Bahadur for succour gainst Aurangzeb's campaign of religious in- olerance and it was from Anandpur that the uru started for Delhi to sacrifice himself for e cause. It was here that the head of the inth Guru, after his martyrdom at Delhi, was ought and cremated in the presence of Guru obind Singh and his mother. It was here that uru Gobind Singh's four heroic sons were orn. It was here that the Guru baptised the ve 'Pyaras' ("Beloved ones"), including "untouchables," and then received his baptism at *their* hands. It was here in the historic building of Kesgarh that the Guru exhorted the Sikhs to keep their locks unshorn. It was here again, that the Guru was besieged by the allied forces of the Moghuls and the Hill Rajas. At first sight this alliance strikes one as something unnatural. The fact of the matter was that the Guru's non-observance of the caste system and the age-old practice of idol-worship and his taking into his fold "untouchables" incensed the caste-proud Hill Rajas. They concocted cock-and-bull stories regarding the designs of the Guru. Aurangzeb was down in the Deccan waging his long, fruitless campaign against the Mahrattas. Had he been at Delhi, he would not have been so easily duped. Somehow, the Rajas convinced the Moghul King that the Guru was busy creating a state within the state. Thus the alliance became an accom-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

plished fact. The allies besieged Anandpur. It was a long, weary, exhausting siege. On receiving an assurance from the allied chiefs that the Guru would be left unmolested, if he only vacated Anandpur, the Guru left the town one dark night. A deluge of rain was pouring down. The Guru rode on a spirited horse. The fiery animal dashed into the tempestuous Sutlej and swam across the river. The Guru reached Chamkaur. The hostile army broke their solemn pledge and pursued the Guru. Chamkaur was besieged. One by one the Sikhs went out and were cut to pieces. The Guru's two elder sons went out and met a similar fate. The Guru watched and smiled. 'Thy will be done,' he smilingly said. The Guru left Chamkaur and started for Malwa. Tarlok Singh, one of the ancestors of His Highness the Maharaja of Patiala, after a long, vigorous search which entailed great personal risk in view of the watchful hostile army of the allies, found out the dead bodies of the two boys of the Guru and cremated them. Thereafter when Tarlok Singh visited the Guru, the latter affectionately embraced him, saying, "Tarlok Singh, hero of heroes, my house is thine, thine mine." ("Tarlok Singh, jang ke lare, mera ghar so tera ghar, tera ghar so mera ghar"). The Guru went up and down Malwa which was then a howling wilderness and received the hospitality and protection of some of the good souls among the Muslims, such as Ghani Khan and Nabi Khan of Machhiwara, who supplied blue garments to him and, to disarm all suspicion, gave it out that he was their 'Pir.' Footsore and weary as he was, they carried him on a *charpoy*.

At Raikot, the Guru received the terrible news of the brutal persecution and entombment of his two innocent children at Sarhand, by the Nawab of Sarhand, in the teeth of vehement protests of two of the forbears of the present ruler of Malerkotla. The Muslim courier recited the story with streaming eyes. The Guru listened to the painful story. He sat on the ground and as the recital ended, he weeded out a bunch of coarse grass near him and said, "Thus are tyrants weeded out. They and their rule must end. They will go, root and branch." Rai Kalla of Raikot, his kindly Muslim host—whose descendants still preserve two of the gifts given by the Guru as their dearly cherished heirlooms—who stood by, gently enquired, "Saintly soul, shall all of us share the same fate?" "No," said the Guru, "Those only who sow the wind will reap the whirlwind."

At Dina, the Guru wrote his great historic epistle (couched in Persian verse) which he called 'Zafar Nama' or 'Epistle of V to Aurangzeb and sent it on to him Deccan, through trusty Sikh messeng the epistle, the Guru reproved the Emperor for his unkingly ways, inasmuch should have comforted his subjects like royal shepherd, while he had caused them Among other things, the Guru compli Aurangzeb as a 'person of angelic attri Indeed, Aurangzeb's personal character austere life had justly earned this ficent tribute. Aurangzeb read it, a halt to hostile measures against the Gur expressed a wish to see the Guru pers The Guru received the message and southward. On his way, he was hosp received by the Ranas of Udaipur, J Bharatpur and others. Before the Guru meet the Moghul Emperor face to face Emperor had already been gathered to his fathers. Bahadur Shah ascended the and offered to the Guru the olive bran peace, which the latter accepted with als On receiving an assurance from the M ruler that condign punishment would be in on the brutal persecutors and butchers innocent children, the Guru bade good-b the Punjab and chose Nander, far away Deccan, as his future abode. And when end came, the Guru according to the time oured practice of the Gurus, made an off of five coppers and a cocoanut before the Granth, made his obeisance, and enjoined the Khalsa to accept the Sacred Book as future guide and Guru.

The Guru as a Poet and a Patron of Learning

At Anandpur, he had with him no less 52 poets and scholars. He sent five Sikhs 'Nirmalas' to Benares to master San classics. On their return, they helped in lating Upnishads, Mahabharat, etc., Punjabi. The Guru's own poetry, and translations were incorporated into what styled as the 'Dasam Granth' or the T Guru's Granth. With this precedent before we Sikhs would do well to encourage the of Sanskrit and Hindi among our co-religion

Among the untold gems of the Guru's stirring, thrilling poetry, there occurs the lowing:

> 'The clean-shaven Sanyasis, the Yogi, the Bra charis, the avowed celebates,
> The Hindus, the Muslims, the Sufis, the Im
> All originate from one common stock,
> As the sparks of fire, assume diverse shapes hues, and ultimately merge into fire,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

As dust particles emanating from dust are ultimately dust unto dust,
As the waves rising over the surface of water ultimately merge into water,
So do millions of shapes and forms appear out of the Infinite,
And will ultimately be one with Him."

THE GURU AS A SAINT

The Ninth Guru passed about 40 years of life in a state of intense 'Tapas' (austerities) in underground chambers at Baba Bakala and Anandpur. At Bhabour, along the bank of the Sutlej, there still exists the solitary cave wherein the Tenth Guru performed 'Tapas' for thirteen months. Not unoften would he sit down in deep 'Samadhi' (trance) and in Divine ecstasy continue chanting 'Tui, Tui, Tui' (Thou, Thou, Thou) for hours together.

The Guru found the Hindus lying prostrate. He raised them and out of them created the Khalsa whose thunder subsequently shook thrones and struck terror into the hearts of the invaders who had time and again swept over the Punjab and carried fire and sword wherever they went, since the days of Raja Jaipal.

Thus toiled and moiled the Guru, at once a spiritual leader, a gifted poet, a saint, a nation-builder and a soldier. He raised the sword, as we raise our hands, to protect our eyes from the glare of the sun, not to strike but to protect oneself.

STALIN: ARCHITECT OF A NEW WORLD

BY NANU

HOWEVER divided opinion might be about the Soviet Union, there is considerable agreement and increasing recognition of it being a factor of immense significance and influence for the movement of world affairs as a whole. The course, wide and rapid, of developments in the area covered by the Soviet Union, encompassing a sixth of the world's land surface (nearly 8,000,000 square miles) and bordering alike Asia and Europe and stretching out to the Pacific with America on the other side, is largely seen, as suited under various extending conditions, to increase this significance and influence. Not long back, the British scholar and writer, Bertrand Russel, himself while retaining much reserve about Soviet Union, stated that the present century is likely to be remembered as that of Lenin. Already the first Five-Year Plan has thrown out many new directions and fields for view and in the wake of it, the possibilities of the future looked upon with greater realism, hold out still wider perspectives. A leading part in the establishment and consolidation of this unit casting such enormous significance—a part the full extent of which is generally not known—has been played by Stalin, who to-day remains in the most responsible position in it, exerting the closest influence on its direction. His life is greatly the story of a weighty movement and as such of much general interest and importance. A connected account of this is supplied in the new book* on him by the well-known French savant, Henri Barbusse. Barbusse makes the limitation of information about Stalin, whom he considers as "the most important of all our contemporaries," the reason for his historic and last study.

Stalin has in recent period figured so much in newspaper headlines, that the average reader at first is likely to be surprised at the description "limitation of information." But it will be conceded, that good amount of what has appeared is of the popular or sensational nature, built on some aspects of controversial issues or some particular characteristics isolated from basic factors, and hence from full background. Barbusse in his book takes a position greatly out and above these of little value for understanding of an historic process and forming estimates of trends and narrates the life and role of Stalin in close relation to an important and dynamic movement of which he furnishes a fairly comprehensive survey. Broadly, his volume may be stated as dealing with—the early life of Stalin who joins the socio-political movement in Russia while very young; association with Lenin and work in the pre-Soviet era; participation in the October Revolution and struggle to safeguard the Soviet State; consolidation of the new State and meeting of some opposition movements with special reference to that associated with the name of Trotsky; and initiation of the new Economic Plans. It ends with a comparative review of bents and tendencies in Soviet Union and outside.

Stalin was born at Gori, a small town in Georgia, in 1897, "in a hovel whose corners and foundations were made of bricks, with timber

* *Stalin.* By Henri Barbusse. (John Lane The Bodley Head: London. 12*sh.* 6*d.*).

walls and a plank roof and with the front door on one side and the cellar door on the other." He did not come of rich parentage. His father worked as a shoemaker in a factory at Tiflis, the

Stalin as a boy

capital of Georgia, where Joseph Vissarionovitch Djugashvili—Stalin was a name adopted later—was first sent to school. The boy joined the revolutionary movement at the age of fifteen. He came soon closely under the influence of Marxian literature. Already by 1897, one is told, that Joseph Vissarionovitch Djugashvili was leading a Marxian circle at the Tiflis Seminary. His activities came to receive the attention of the authorities and before long he was expelled on the ground that he displayed a lack of "political balance". The next year, that is, in 1898, he joined the Tiflis branch of the Russian Social-Democratic Workers' Party. He came to be the prime spirit of the Party in Transcaucasia. Conditions soon initiated him in underground work and led him to move about under various names as, David, Koba, Nijeradze, Tschijikoff, Ivanovitch and Stalin, of which the last remained the one by which he is known today. Under hard and severe circumstances he kept up his work.

Stalin was in prison when in 1903 he [illegible] of the split in the Russian Social Demo[illegible] Party on Lenin's initiative, between the B[illegible] vists who stood for a radical programme an[illegible] Mensheviks who advocated a course of [illegible] formism. Stalin who had extended his s[illegible] of Marxism and gained much contact with s[illegible] conditions in the country, decided quickly [illegible] the Bolsheviks.

> "A moment always arrives at which a m[illegible] action must make a decision of this sort wh[illegible] destined to affect the whole course of his life."

In 1905 Stalin met Lenin for the first t[illegible] though he had come to know of him and [illegible] writings some years earlier. Of that me[illegible] Stalin writes :

> "I met him for the first time in December [illegible] at the Bolshevik Conference of Tammerfors [illegible] Finland). I was expecting to see, in the ea[illegible] our Party, a great man, not great only in the p[illegible] sense, but physically great also, for in my im[illegible] tion I pictured Lenin as a giant, fascinating [illegible] symbolical. What was my surprise then to see b[illegible] me a man of less than middle height, in no [illegible] distinguishable from ordinary human beings!"
>
> "A great man is supposed to arrive late at mee[illegible] so that the assembly may anxiously await his ar[illegible] The appearance of a great man is always heralde[illegible] remarks such as : Sh ! . . . . Silence ! . . [illegible] Here he comes! . But I found that Lenin had ar[illegible] long before the others, and I saw him in a c[illegible] engaged in the most ordinary conversation. He [illegible] quite clearly not behaving according to the acce[illegible] rules."
>
> "This simplicity and modesty of Lenin's, w[illegible] struck me the moment I met him, his desire to [illegible] unnoticed, or at any rate not to emphasize [illegible] superiority, was one of his strongest points as [illegible] new chief of the new masses, the great simple [illegible] profound masses of humanity."

Then followed a period of intimate [illegible] operation between the two that continued [illegible] 1924, when death removed from the field [illegible] great leader of the Bolsheviks, who led [illegible] victorious October Revolution. Between 19[illegible] and 1913 Stalin is active in various centres a[illegible] in various capacities, organizing, attending c[illegible] ferences inside and outside the coun[illegible] developing contacts, editing papers, bringing [illegible] bulletins and seeing to their distribution. [illegible] was in this period arrested several times a[illegible] many times also escaped from confineme[illegible] 1909-1911 was period of exceptional hardship.

> "He had in this period no private life. With[illegible] passport and in disguise he had to change his lodg[illegible] every day. But nothing could stop the work he [illegible] doing to consolidate the Bolshevik Party."

Behind this, it is underlined, remained t[illegible] faith in a mass movement, confidence in respo[illegible] from workers, and strength from trust [illegible] Marxian theory.

In 1913 Stalin was arrested again. This ne he was to remain in Siberia till 1917. In pril 1917 he arrived in Petrograd following the ebruary Revolution. About the same time enin arrived there from Switzerland. In the scussions that followed and lines evolved Stalin ok a very prominent part. In the great ebates preparatory to the decision to strike in ctober, when Trotsky, Kameneff and some ther leaders wavered and were inclined against he line of a sharp strike, fearing conditions as ot well opportune, with doubts about response nd apprehensive of repercussions, along with verdlov,* Stalin took a firm side with Lenin or a course of action. This finds pointed eference also in a short and interesting iography † of Lenin that came out a while ack. Finally, Lenin got his view adopted and ucceeded also in carrying the leaders who had onsiderable hesitation in the Party Committee ith him. The stand of Stalin with his great ontacts and close knowledge of party machinery as of immense importance in the adoption of is decision.

The October Revolution successful in that he old regime was overthrown, by an action that ell brought to light the effect of a sustained ork carried by the Bolsheviks and the value ey placed on discipline, called for new tasks. n nature and extent they were no less hard han those involved in throwing overboard the ormer system. The legacy got was a hard one. he imperialist war of 1914 had cost Russia 0,000,000,000 gold roubles. ‡ The destruction rought by the foreign armies that attacked rom all sides the new State and whose acts ept up greatly hostile movements inside is stimated at 44,000,000,000 roubles. The civil ar represented a loss of 50,000,000,000 roubles. All factories were in ruins and a good part of he public works as well. Administration, ducation and all State services were dislocated. he rank and file under Bolshevik leadership eld out with amazing energy and astounding rust in a state of unparalleled severity. Indicative of the conditions of severity about the eriod is a declaration of Stalin in which he ays :

> "The workers in Petrograd did not receive even a single piece of bread for several weeks at a time. The days on which they received a pound of black bread with half oil-cake, were happy days."

The struggle was long and protracted. In 1920 the Soviet State felt more free to devote itself to internal issues, with warding off, "the invasion of fourteen nations," using the expression of Winston Churchill.

Stalin in his room at the Kremlin in Moscow

A very significant internal problem and one of particular interest to a country like India was the question of minorities. This was a special sphere of Stalin and to this he devoted direct attention, working out a solution, which Barbusse presents as standing, towering against the much repeated assertions of existence of groups with differences of race and language by themselves proving a hindrance to enjoyment by them of independence in a territorial unity.

The death of Lenin in 1924 in some ways intensified certain opposition tendencies. The issues as generally thought did not greatly touch persons, but involved important principles and deductions. The debates turned chiefly round the question whether the Soviet State could hold out and carry out a task of significance in the absence of world revolution or the latter was an essential and pre-condition for the former. Stalin defended the first and carried it through, for the interpretation of Lenin's view, taking

* Sverdlov was a member of the Central Committee of the Bolshevik Party and after the October Revolution Chairman of the Central Executive Committee of the Soviets. He died in Moscow in March, 1919.

into consideration the general situation, the capacity to carry out a far-reaching economic programme in Soviet Union and the effect—the economic programme and advance of Soviet Union will have, in a background outside along with hostility to Soviet Union divided with rivalries among Imperialist Powers.

With great courage and determination in 1927, in which year Soviet Union reached the pre-war economy, Stalin took the lead in initiating the Five-Year Plan. The preparatory work of the Plan, says an authoritative and notable publication* on it, took nearly three years. The scheme abroad was greatly ridiculed. Its failure was asserted. Barbusse gives many quotations, out of which some may be stated here. "It is not a plan, it is a speculation," wrote the *New York Times*. It will mark "complete insolvency" announced the *Daily Telegraph*. "The catastrophe is obvious" commented the Italian *Politica*. *Financial Times* predicted "breakdown of the entire system." Soviet Union, however, resolutely stood to the Plan. In this, Stalin who maintained a very firm attitude, exerted the greatest

The house where Stalin was born at Gori in Georgia

influence. The attitude itself Barbusse indicates as the result of the confidence that follows from knowledge and trust in a theory and its careful interpretation and estimation. In a way it is similar to the attitude that enables a Piccard to decide to mount to the stratosphere and an Erkner to cross in air the Atlantic. Fundamentally the action is based on knowledge which gives courage and confidence.

The first Five-Year Plan ended in four years by an achievement of 93 per cent of its objects. Barbusse gives various interesting facts and many useful figures. Some may be mentioned here :

"National production trebled between 192[illegible] 1934. . . . . From 1928 to 1932 the number of [illegible] men employed increased from 9,500,000 to 13,[illegible] . . . . The national revenue increased during the [illegible] years by 85 per cent. At the end of the Fi[illegible] was more than 45,000,000,000: A year [illegible] 49,000,000,000 roubles. The amount of the w[illegible] and employees' wages rose from 8,000,000,[illegible] 30,000,000,000 roubles. The number of persons [illegible] to read and to write has risen for the whole [illegible] U. S. S. R., from 67 per cent at the end of [illegible] to 90 per cent at the end of 1933. . . . . En[illegible] new centres have risen all over the country. [illegible] In agricultural machinery and locomotive co[illegible] tion the U. S. S. R. today holds the world [illegible] . . . . The U. S. S. R. occupies the second pl[illegible] the world for the production of general mach[illegible] and also for the production of petrol, iron and [illegible] . . . . The Press—In 1929 the daily circulat[illegible] Soveet newspapers was 12,500,000; in 1933 it [illegible] 36,500,000. . . . . The work accomplished in [illegible] country districts was even more important. . . .

In agriculture, collectivization was ca[illegible] in the face of enormous preliminary diffic[illegible] with great energy. Regarding this develop[illegible] the *London Times* correspondent in a le[illegible] article wrote, that it was in many ways a [illegible] important revolution than even the Oc[illegible] Revolution. As an instance of the impo[illegible] position, Barbusse mentions the annulme[illegible] the debts of *kolkhoz* (collective firms) conn[illegible] with advances made to them to the valu[illegible] 435,000,000 roubles and as examples of inc[illegible] in production he states :

"The production of Soviet cotton has leap[illegible] three years from being one-thirtieth of world p[illegible] tion to one-fifteenth, and the cultivation of s[illegible] beet, which in 1929 was one-third of the culti[illegible] in all other countries together, in 1932 was [illegible] than half as much again as the rest of the [illegible] production. . . . ."

And the foreign critics! Barbusse [illegible] gives some quotations. Reference may be [illegible] to some of these. *Le Temps* is mentione[illegible] commenting:

"The Soviet Union has won the first roun[illegible] industrializing itself without the aid of f[illegible] capital."

The Round Table :

"The achievements of the Five-Year Plan c[illegible] tute a surprising phenomenon."

Mr. J. Gibson Jarvie, president of [illegible] United Dominion Trust:

"Russia is advancing at the moment at which [illegible] are retreating. The youth and the workers of R[illegible] have something which we lack, namely, hope."

Forward (Scotland) :

"What England did during the war was a [illegible] bagatelle beside it. The Americans recognize [illegible] even the feverish period of the most intense c[illegible] truction in the Western States could offer no[illegible] comparable to it . . . . a degree of energy [illegible]

* *The Five Year Plan Of The Soviet Union.* By Grinko.

Digitized by Arya Samaj Foundation Chennai and eGangotri

cedented in the history of the world. A brilliant challenge to a hostile capitalist world."

Now Soviet Union has entered on the new, t is, second Five-Year Plan. Under it :

"The key industries will become twice as vast. . . . The manufacture of machine tools and the production of coal and petrol, will be doubled; tractor, locomotive construction, foundries, steel, copper and chemical works will be trebled. The timber industry itself will be nearly doubled. Five times as many trucks and eight times as many motor cars will be manufactured. Electrical energy will attain 38,000,000,000 kilowatts (or 283 per cent more). . . . An increase of more than double in the manufactured goods industries. . . . The increase foreseen—and decided upon—in agricultural production is to be 105 per cent. . . . The number of tractor depots shall be increased from 2,446 (in 1932) to 6,000. . . . For the railways, 3,000 miles electrified, 6,000 miles changed from single to double line, 12,000 miles of lines relaid; 7,000 miles of entirely new lines. . . . The canal between the White Sea and the Volga to be completed, and also those between Moscow and the Volga and the Volga and the Don. . . . 130,000 miles of new roads are to be made. Lines of civil aviation 53,000 miles (instead of 20,000 miles today). . . . . Investment in industry : 69,500,000,000 roubles; in rural economy : 15,200,000,000; in transport services: 26,300,000,000. . . . Illiteracy is to be completely abolished. The total number of pupils in schools and institutes will be 197 per 1,000 of the population, instead of 147 per 1,000 as at present. . . . ."

There is of course an "if." Barbusse touches the issue of war danger. This he admits s a factor to be reckoned. But the capacity of the Soviet Union to defend itself is argued as being now infinitely greater. Other dangers also well enter into the calculations of Powers who may be thinking in terms of an attack on Soviet Union. Time adds to the Uinon's strength. This is well behind Soviet Union's keen interest in peace.

Barbusse ends his book, as already stated, at the beginning, with a comparison or rather a contrast. In connection he refers to the reaction that advances in the cultural and economic spheres in Soviet Union causes on wide sections all over. The developments are also indicated as exerting profound influence on various thinkers and progressive intellectuals, a point elaborated at some length by Mirsky in his new

Stalin's Secret Library. Now in Tiflis Museum

and interesting book,* as expressing in an orienation to Soviet State and its basis. Mirsky himself, one who had fought in Denkin's White Army and son of General Prince Mirsky, a former Minister of Interior in Czarist Russia, is an instance of this reaction, which in degrees can be traced to many other outstanding personalities, including lately, Romain Rolland.

Henri Barbusse's book is not an impersonal study. He writes as one convinced of the value of the Russian Revolution. The volume is that of a believer and not a critic as generally understood. Barbusse writes often with much vehemence and at times with bitter irony. At places he rushes too quickly to his assertions. As a biography he depicts his hero as a leading figure in a big movement thus enhancing the value of the volume and making it a notable contribution to contemporary political literature.

A GREAT INDIAN RULER— AN APPRECIATION

By JABEZ T. SUNDERLAND

I know of no modern ruler who seems to me worthy of more honor than His Highness, the Maharaja Gaekwar of Baroda, the Diamond Jubilee or sixtieth anniversary of whose reign occurs in January, 1936. Not only has his reign been long, but, considering the conditions under which it has existed, its achievements have been remarkable. From his earliest manhood he has been a reformer in his very blood. He has been large-minded. He has been forward-looking. He has shown himself a born leader. He has lived not for himself alone or primarily, but for his State and his People.

He has had the handicap of being under the control of a foreign power. Nevertheless, he has persistently dared to lead his state forward to greater freedom, progress, enlightenment and independence. While in British India, owing to the educational policy of the Government, an appalling illiteracy is still to be seen, the courageous ruler of Baroda has created in his state universal compulsory education for both sexes, with the result that illiteracy there has been greatly reduced.

Nor has he stopped with this great achievement. He has made much provision for all the more important kinds of higher and advanced education. He has waged constant war against the scourge of "untouchability;" and has done much to mitigate the evils of Caste. Besides providing liberal education for women, he has legislated and in various other ways planned to give them a freer and larger life. He has been steadily active in promoting agricultural and industrial improvements, public sanitation and hygiene, creating hospitals and providing enlightened medical service for all classes of the people. With all the rest, he has given his influence steadily against religious superstitions and in favor of religious intelligence, breadth and progress, in support of social reforms, and, so far as permitted, in promotion of political reforms.

Several other rulers of Indian States have advanced far in the directions in which he has moved, following in his footsteps; but he has been the leader, and deserves the honor as such.

The contrast in all these respects which we see between his rule and that of British is a great honor to him and India, and an discredit to British rule.

Writing as I do in America, I take es pleasure in calling attention to certain imp activities of His Highness, in which he associated himself with us. We have in country (or in this country and Englan organization called The World Federatio Faiths, created by two distinguished w for the promotion of international, inter and interreligious, good-will and brotherho one an Indian, Mr. Kedar Nath Das G and the other an American, Mr. Charles Fr Weller. In connection with the recent W Fair in Chicago, this organization, under vigorous leadership of these two men, he great Parliament of Religions, lasting weeks, with 83 notable meetings addresse 199 speakers from nearly all the impo countries of the world and representing all world's important religions. At this G Parliament of Religions, His Highness was Honorary President and gave the Ope Address. In July, 1936, a second similar g Parliament is to be held for two weeks London and Oxford, in which he is to have active and influential part. He is also President of the International Council of World's Fellowship of Faiths which has gen supervision over these Parliaments and c activities.

His Highness has made several visits America in past years, and is well-known highly esteemed here. Plans are made celebrate his Diamond Jubilee in New Y by a public gathering in the Grand Ball R of the Hotel New Yorke on January 2, 19 and by a Banquet at the Hotel Biltmore January 28,—with distinguished speakers both occasions.

Lovers of humanity and believers in hum freedom not only in India and America but all lands, may well unite in celebrating Diamond Jubilee of such a ruler and such man. He belongs to the world. Civilizat is more secure and all nations are richer becau of him.

AGAKHANISM

[We have received three contributions on this subject, hich are published below. The second and third are mewhat abridged. Two of the contributions are from e Bombay Presidency and one from Uganda.—Editor, he *Modern Review*.]

I

By KARIM GOOLAMALI

Secretary, Khoja Reformers' Society

I have read in your November issue Pandit Jawaharl's article on H. H. the Aga Khan. Let me at the utset confess that it is a sad though a correct commentary n what is being passed in some quarters as Islam. Really, it is on account of the pseudo-leaders like the ga Khan that Islam has to suffer and its pristine glory rought to dust. I doubt very much whether any Muslim ader will muster up courage and come forward to 'let e cat out of the bag'. However, I feel I must do my t. I am sure that after giving due consideration to hat I am going to say, there should remain no ground or comment.

The Aga Khan and the tenets and beliefs of his eligious cult, which passes as one of its (Islam) sects, ot at the very root of Islam, as will be seen from the ollowing. Islam, in short, requires: 1. Belief in the ne True God. 2. Belief in the Holy Koran. 3. Prayer o Almighty God. 4. Giving of Zakat (poor-rate). 5. asting and 6. Going on Hadj (pilgrimage). On the ther hand, Aga Khan claims to be god in his person he has employed preachers for that purpose). Again, is followers are told that the Koran is not meant for hem, the prayers being addressed to him as god-incarate. Further it is an open secret that Aga-khanis do ot fast nor go to hadj. A most astounding fact which eems to have escaped the notice of the Muslim public is hat the Aga-khanis have not a single mosque, the one ymbol of Islam. They do have their Jamait-khanas, no doubt.

Sir, from this it will be seen that the Aga Khan and his followers can never be Muslims; and if they had been considered outside the pale of Islam, Pandit Jawarharlal would have been spared the trouble of commenting on the solidarity of Islam. I trust you will please do me the favour of finding space for this in your esteemed magazine, for which I shall be highly obliged.

II

By ISMAIL KASSAM DHANANI

It is not possible to improve upon the learned and scholarly article of Pandit Jawaharlal Nehru on H. H. Aga Khan but I will like to add some details to it as I am Aga Khan's follower by birth.

'Agakhanism' is really a 'last home of mystery,' being an unintelligible jumble of perverted Islam and inverted Hinduism. . . . . The founder of this sect realising that spiritual power was but a stepping stone to political power gathered together and welded in a sect the most ignorant and fanatical inhabitants of Northern Iran and Iraq professing to be a prophet of God. . . . . The bonds of religion, *i.e.*, belief in the Quoran and observance of Muslim ceremonies and prayers were not binding on this sect of heretics or Mulehits as Muslims called them. H. H. Aga Khan claims direct descent from the founder of that sect and his followers also do not believe in the Quoran, offer Namaz, pay Zakat, fast or go on pilgrimage.

The followers of Aga Khan were converted from Hinduism about 700 years ago. As they were originally Vaishnavs or believers in Ten Avtars of Vishnu and believed at the time that eight Avtars of Vishnu had already occurred—the last being of Krishna their converters beguilded them that 9th Avtar was of Buddha and the tenth was of Hazrat Ali the fourth Caliph and prophet Mohamed's son-in-law in Mecca. It should be explained here that Gautama Buddra is not to be taken as the 9th Avtar but this Avtar of Agakhani creation is that of God disguised as Chandal who came to Pandava's Yagna and on whose order according to Puranic stories they had to sacrifice a cow, etc., and from which time Kaliyug is alleged to have begun. These ten Avtars with many more names added after each Avtar is made into a chronology as if they were descended serially and these names are recited in Khoja prayers called 'Duwa' three times a day. Aga Khan is alleged to be 48th descendant of Ali and hence he is also to be believed an Avtar of Vishnu, and Imam or the supreme pontiff of Shia Muslims. All prayers are addressed to and graces are demanded from Aga Khan as God even now. Mark Twain's servant therefore only exhibited his belief by introducing Aga Khan as God to his Master!

There has never been any religion anywhere in the world wherein so numerous and so heavy religious taxes are payable in the name of religion as in Agakhanism. Whereas Muslim Zakat is only 2½ per cent yearly on 'savings,' the Agakhanis have to pay 12½ per cent on their earnings. There are also heavy taxes for marriage, deaths and other ceremonials besides the daily offerings of a portion of the cooked food which is auctioned at exhorbitant rates considering it to possess 'virtue.' There is also a wierd initiation of 'Great Work' for which a fee of Rs. 75, 500, 1200, 2500, and 5000 is payable, the last two grades being lately introduced. On payment of that fee one unintelligible word is assigned by Aga Khan to be daily memorized for a certain time in early morning and warned that anyone disclosing it will go mad. Unfortunately the enormous drain of Rs. 6,000,000 annually goes to Europe for Aga Khan's pleasure and costly stables. The rich, educated and upper strata of the community silently look on to this drain from their ignorant brethren who thus denude themselves by the sweet expectation of 1,25,000 times the return of their wealth in the next world besides the heavenly palaces of 'gold bricks inlaid with musk and supported by silver pillars.'

It is a paradox that followers of so advanced and enlightened a person like H. H. Aga Khan should be enveloped in such crass superstition. . . . . More than half of Aga Khan's followers have seceded from their old faith by becoming orthodox muslims or reconverting to Hinduism particularly in last 35 years. Yet about 60,000 followers yet remain though very few are staunch in their allegiance. Let us hope for their early liberation and deliverance.

III

By "ABDULLAH"

Criticisms expressing or seeking truth are welcome even though they may be touching the most tender subjects. Jawaharlal's critical observations of the Aga Khan as a religious head of the Khoja Ismaily sect and this sect being considered as a heretic sect are in the main based on true facts. These can be supported with written evidences taken from its Dhooa, prayer, and religious firmans of the Aga Khan, collection of which forms its Scripture.

The Khoja Ismaily sect is an alien element in the body of Islam. It can only be regarded as one of the sects in Islam or correctly speaking as inclined towards Islam, simply because it chooses to call itself Muslim.

* * * * *

The Kalima of the Khoja Ismaily sect is in absolute contradiction to the fundamental principles embodied in the Kalima of Islam. It runs "La ilaha ill-Allah Muhammadar-rasul ullah Ali sahi Allah," *i.e.* There is no god but Allah and Muhammed is the Apostle of Allah and Ali is Allah" (see Dhooa book, page II).

The other basic difference is that as a result of the teachings of the Aga Khan his followers do not follow the Holy Quoran. In fact it is decried. . . . . To keep his followers away from the rational influence of Islam, he has made a representation of the Holy-Quoran before his followers, as :—(Gujarati transliteration) "Khalifa Osman-e Qu-ran Sharif manthi ketlok bhag kadhi nakhyo chhe anne ketlok bhag oomeri nakhyo chhe. Asal Qu-ran Sharif hoon ootaroon to chhe varas lagi jay. To pan hoon tamne moklish, to tamne khabar padshe ke shoon kadhi nakhvaman avayoon chhe anne shoon ferfar kari nakhvaman avel chhe, *i.e.*, Khalifa Osman has removed certain portion from the Quoran Sharif and has added certain portion to it. If I were to write down the Original Quoron Sharif then it might take six years. That too I shall send you so that you will come to know what has been removed from it and what changes have been made" (See Bahre Rahmat, page 24 printed in Sindhi script).

Will this statement of the Aga Khan on the Holy Quoran awaken the conscience of the Mussalmans and make them throw overboard the *Muslim* leadership of the Aga Khan?

The above two authoritative citations are enough to put the Aga Khan and his followers the Ismaily Khoja sect outside the pale of Islam. Further in Islam, Zakat or poor rate of 2½ per cent is levied on those who can afford, for the benefit of the poor, the needy, upkeep of mosques and to propagate the ideals of the fraternity. The Zakat funds become the common property of the community and no individual is allowed to spend Zakat funds for his personal gains or ends.

To the followers of the Aga Khan paying of Zakat, what they call Dasond, is making payment to earn the right of entry in Heaven. In their Ghinans, which may be compared to Islamic Hadith, it is said "Dasond deso to svarge jaso," *i.e.*, "If you pay Dasond then only you will go to Heaven." The payable Dasond is 12½ per cent (twelve and a half), but payment of 25 per cent is encouraged, and there are among his followers who pay as much. The Aga Khan is the sole owner of the vast sum accruing from Dasond and other sources such as Wado kam, Dhooa, Memani, Nandi, etc., and he is at absolute liberty to spend this vast cash money.

A follower of the Aga Khan, irrespective of personal conduct and actions, whether good or bad, can enter high and higher spiritual stages by meeting graded payments. The scale of payment to buy higher spiritual stages is Rs. 75, 500, 1,200, 2,000, and of course still higher till the capacity to pay or desire to pay as much money is reached. In what contrast this to the rational preaching of Islam! It says "Surely most honourable of you with Allah is the one of you most careful of his duty" (49:13) and, "And have made everyman's actions cling to his neck and will bring forth to him on the resurrection day a which he will find wide open" (17:13).

The purchasing of higher spiritual stages is Wado Kam, Great Act, and the performers are "Baitul Khyal ja punjebhai" *i.e.*, "Members of House of Contemplation. These punjebhais are "the word" contemplation on which brings enlightenment, provided, of course, the punjebhai upright and regular in the payment of Dasond. Aga Khan issues Khangi, private, firmans to these in-cash' spiritual aspirants. In one of his firmans them he has said "Do not think at all of the life and do not think whether you will get Heaven or the life to come, because Hell and Heaven, all are hands" (See Bahre Rahmat, page 59 printed in script). This introduces the Aga Khan as "Malik yaum-il din," *i.e.*, "Master of the day of requital" the whole world seek refuge in "Him" or beware "His" judgment!

Except in the case of two 'Id prayers the Ismaily Khojas do not follow Islamic prayers. Instead of prayers a day they offer only three prayers, one in the morning, called Ghat pat ji dhooa, and the two in the evening, called Sanji ji dhooa. The language of dhooas is a mixture of Arabic and Sindhi and pat ji dhooa is choke-full of narratives from the of Hindu saints, such as Pahelaj, Harish Chandra. Observance of fast and perfoming of Haj are not not obligatory but are not encouraged. It is a statement that 95 per cent of Ismaily Khojas cannot or recite the Holy Quoran.

From the foregoing version this question can be asked that if such is the case then why like Qadiani sect Khoja Ismaily sect is not expurged from the of Islam, and why the Aga Khan is accepted as a Muslim leader?

* * * * *

The Aga Khan holds that Allah from Heaven weak to control and guide humanity on to true path that is why He must take birth as a man in this and it is so in the person of the Aga Khan. Be it that Godhead descends from father to the son. . . . the way he is the Tenth Naklank Avtar (see Dhooa page 2) so let the Hindus rush to "His" fold for salvation. . . . .

In ordinary schools and Sindhi schools (Ismaily Khoja Maktabs) students are not given religious instruction in Islam. They are not taught to read or recite Holy Quoran. As Khoja Muslims they take advantage of Muslim institutions, but deny the same advantage Muslims of their institutions on the ground that are strictly Khoja Ismaily institutions. The Khoja are not encouraged to join purely Muslim schools they be influenced by Islamic ideals. Socially Khojas mix more with non-Muslims than Muslims. This is the Aga Khan keeps away his followers from the influence of Islam and Muslims but before the outer world poses as the doughty champion of Islam and Muslim rights. . . . .

A general belief is prevalent that the Aga Khan does not claim Divinity, but that it is attributed to by his over zealous followers. This is far from true can be seen from the Kalima of the Khoja Ismaily and the Aga Khan's religious firmans. Inspite of true facts the spread of such a belief is due to the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the Aga Khan, who shoves this on to the shoulders of followers lest the Muslims might take him to task such a claim which is all but Islamic. In fact he able to hold absolute sway over his followers on the is of being an "Incarnation of God," "Naklank Avatar," otherwise his position in the eyes of his followers could be reduced only to the position of a Muslim leader like Sir M. Iqbal, and the vast cash that flows into his coffers might altogether stop.

OPIUM EVIL IN ASSAM

By KULADHAR CHALIHA

FRIENDS who are interested in the opium question of Assam will be able to see the effects of the temperance movement which was started in 1921, when young Assam took the matter up in right earnest, and it received added impetus by the timely visit of Mahatma Ghandi in August, 1921, to our province. There has always been a demand from the Assamese intelligentsia that the opium evil should be extirpated. So far back as 1842, we hear the voice of Moniram Dewan (an Assamese statesman of outstanding merit who was subsequently hanged for political offence) who presented a petition to the Government suggesting that opium evil should be extirpated within a period of twenty years. His petition was printed in the Mills Report in 1853.

The history of the introduction of opium into Assam is somewhat obscure. We find no reference to the opium habit in the Vaishnavic (Hindu Protestant Church) literature of Assam, though its poetry and drama cover a wide field and deal with the customs and habits of the people. When the Assamese kings came into contact with the Mughal Emperors of Delhi, they used to send presents including *afing* (opium) to the Assamese Court. The chronicles of Assam, called *buranjis*, which were written from day to day, contained references to these presents from the Padsha (meaning Emperor of Delhi), which included opium amongst other presents. But nothing is known of how far the opium habit was prevalent then amongst the people. During the eighteenth century the habit was confined to the nobility, who used it as a luxury. Later we find references that a tax of Rs. 12 per poorah ($1\frac{1}{3}$ acre) was levied on lands growing poppy in the eighteenth century, which, considering the purchasing power of money at that time, would be equivalent to about £6 to £8 of our present money. So it was hardly possible for ordinary people to cultivate poppy, much less to indulge in the drug. However that may be, we find that the practice was fairly prevalent in the royal court in 1792. From the report of Captain Welsh's Expedition, we find that King Gourinath Singha was addicted to opium and was unable to attend to public business. During his reign and subsequently, there was internecine war in Assam, and the inevitable results followed. A faction sought help from Burma. The Burmese came and plundered and pillaged the country. Another went over to the East India Company, and ultimately by the treaty of Yandabu, Assam was ceded by the Burmese, who are themselves intruders, to the British in 1826.

From 1826 to 1860 no steps were taken by the British Government to restrict the consumption of opium, as they were busy consolidating their own position during those thrity-four years. Still, in 1835, reports were submitted by the District officers that opium was in excessive use everywhere. In 1850, the District of Nowgong alone contained 2500 acres under poppy cultivation, and on the basis of this calculation, it was estimated that in the six districts of Assam about 12,500 acres were under poppy cultivation.

In 1860, the home cultivation of poppy was stopped, and the system of issuing opium from the treasury was introduced and licenses were granted to all "respectable" persons to sell opium. We find as many as 5070 shops with a consumption of 1856 mds. 32 seers in 1873-74, in which year the system of granting licenses was first introduced on a yearly fee of Rs. 12 per shop.

In 1877, the mahal system was introduced, and in 1883-84 we find 1318 shops with a consumption of 1404 mds. 9 srs. 7 ch.

In 1892-93, there were 866 shops with a consumption of 1333 mds. 29 seers 2 ch. The price was steadily raised from Rs. 16 per seer in 1860 to Rs. 20 in 1862, Rs. 23 in 1873 and Rs. 37 in 1890. (1914 : Rs. 45; 1924 : Rs. 60).

Thereafter on the recommendations of the Royal Commission in 1894 certain steps were

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

taken by the Government and the principle of minimum consumption and maximum of revenue was practically adopted and followed till 1925. That this principle absolutely failed to achieve its purpose will be apparent from the following facts.

The consumption of opium in 1873-74 was 1856 mds. 32 seers and the price was Rs. 26 per seer, yielding a revenue of Rs. 11,71,816. The consumption fluctuated according to the prosperity or adversity of the people. But after 46 years of working of the policy in 1918-19, we find that the consumption stood at 1748 mds. with a revenue of Rs. 38 lakhs and odd though the retail price was in the neighbourhood of Rs. 50 per seer. This clearly shews that the policy was a mistaken one, and the enhancement of price had little effect on the consumption. During these years there was agitation in Assam for the suppression of the evil, but without effect. In 1921 came the non-cooperation movement with its temperance activities. Young Assam put its heart and soul into the movement and within twenty-four months the consumption fell to 884 mds. (in 1923-24) from 1784 mds. in 1918-19. For achieving this 1100 workers had to go to the prison, but their sacrifice has not gone in vain. In 1923 the Swarajists, including the writer, entered the Assam Council and the party began steadily to press for the adoption of the policy of total abolition within a period of ten years. They had in their effort the support of other parties in the Council. In spite of the unwillingness of the Government to adopt the policy and renounce its large revenue from this source, in 1927 the Council carried by a big majority a resolution adopting the wholesome policy of reducing the consumption by 10 p.c. each year. The Government adopted the policy and declared that they were prepared to sacrifice the revenue from this source. The policy continued till 1929, but in 1930, when the Swarajists left the Council, indications were made in the Excise Reports of the Assam Government that the limit of reduction had been reached and a Committee was appointed to enquire into the working of the 10 p.c. reduction and to open anew the register of consumers. The Committee agreed with the views of the Government and recommanded accordingly, but the Council rejected its recommendation and the policy of 10 p.c. reduction was reaffirmed.

The Government in adopting this policy of ten per cent reduction per annum only followed the downward course which consumption naturally took from 1921. In 1931-32 the consumption fell to 422 mds. 25 seers from 512 mds. 14 seers in the previous year, and in 1932-33 it fell to 355 mds. 24 seers. percentage of decrease in 1932-33 in the districts is shown below. It will be seen the actual decrease in consumption far the reduction of supply.

1.	Khasia Jaintia Hills	
2.	Nowgong	36.7 p.c.
3.	Goalpara	25.5 "
4.	Kamrup	19.4 "
5.	Darrang	19.3 "
6.	Lakhimpur	16.8 "
7.	Sadiya Frontier Tract	14.0 "
8.	Sibsagar	13.6 "
9.	Sylhet	11.8 "
10.	Cachar	7.4 "
11.	Balipara	5.7 "
		5.0 "

It may be pointed out that Cachar and are the least opium-consuming districts Balipara is a tiny district of the Assam val

But a new danger arises out of the of the Government in admitting new appli for registration who are granted passes consumption. In the report of the Administration for the year 1932-33, we that 1342 new passes were issued and a close of the year there were as many as passes with a monthly ration of 33 mds. 17 11 ch. and the quantity works out at 8 g per diem per consumer, which is equa 240 grains per month and 2880 grains in a per consumer. On the 31st March, 1933 total consumption stands at 355 mds. 24 s and in 1935 it might stand at 291 mds.

The danger is in allowing new addicts come in. A vigilant watch should be kept all temperance workers so that new passes not be issued, otherwise the Government likely to revert to its old policy and unconsciously to drift into old ways to up the loss of revenue.

In Assam it may be safely asserted all parties and shades of opinion are unanim in the matter of eradicating the opium evil the traffic itself should be abolished altoge

However, a shortage of supply from le mate sources is likely to bring in contrab opium deserves careful consideration. sources of supply of illicit opium in Assam not unknown. The Indian States of Rajpu are the danger spots from where the Ma opium is smuggled into Assam, but fortuna it is far away from the country, and in o to prevent this, people are willing to vote the necessary increase of the Excise staff.

There were altogether 27 cases in 1932 for illegal possession of opium and for possess of contraband opium and a certain quantity said to have come from the China sources. this source has always been easily detected

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

smugglers are either Mongolian labourers the Margherita coal mines of Dibrugarh or nese workers or carpenters whose presence easily detected. The real danger is from lwa opium and the matter can only be dled by the Government of India and the stion is a complicated one.

(*a*) The Government of India should be uested to bring such pressure on the Rajput tes as to liquidate the stock of Malwa opium hich was valued by Mr. Alexander at 00,000) so that they may gradually fall in e with the obligations of the British Govern- ent to the League of Nations and absorb the d stock for medicinal purposes as suggested Mr. Alexander in his note on Narcotics in dia and South Asia.

(*b*) That the policy of 10 p.c. reduction nually should be continued as it has the pport of the entire Assamese community. e temperance workers and all those societies o have taken an active interest in the move- nt for the abolition of opium traffic in Assam d eradication of the opium habit, should ntinue to take interest as before and publish e relevant facts and present them before the blic and the League of Nations from time time.

(*c*) That the public should continue to pport the policy of reduction and allow the Government to increase the preventive Excise staff.

(*d*) That new passes should not be granted to any consumer and the medical examination which is at present held should not be a matter of form but should comply in detail with such information as may be prescribed by the League of Nations or such medical body as commands the confidence of the Assamese people and public in general.

Year	Opium shops	Opium consumption Mds.	Seers	Opium revenue	Population.
1873—74	5070	1856	32	11,71,816	4,940,922
1883—84	1318	1404	9	16,48,207	4,881,426
1892—93	866	1333	29	18,73,063	5,433,195
1902—03	767	1274	1	17,79,917	5,759,444
1912—13	402	1557	8	27,38,307	6,221,431
1919—20	315	1748	4	38,37,125	6,221,431
(Non-co-operation movement)—					
1920—21	298	1013	0	38,13,710	7,606,230
1923—24	298	884	20	37,13,860	9,200,000 (Approximately)
1932—33	297	355	24	21,20,944	do.

Assam has done fairly well in the past in restricting the consumption of opium and it (the consumption) is on a downward course as is apparent from the Government reports, and we appeal to all our friends, to help us to extirpate this evil from our unfortunate country, and we trust we shall receive liberal and generous support from our friends all over the world.

BOOK REVIEWS

BOOKS in the principal European and Indian languages are reviewed in THE MODERN REVIEW. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.—Editor, THE MODERN REVIEW.

ENGLISH

WORLD FELLOWSHIP: *Addresses and Messages by Leading Spokesmen of All Faiths, Races and Countries. Edited by Charles Frederick Weller. Liveright Publishing Corporation, New York. 1935.*

Here is a fat book with sixteen sections which contain 242 addresses and messages printed in 986 pages in fairly good type. It is a collection of speeches, talks, impromptu remarks and a few laboriously prepared addresses delivered by 199 spokesmen before 83 meetings of World Fellowship of Faiths held during Chicago's second World's Fair or "Century of Progress," 1933.

Among the Oriental representatives, there were two Chinese, seven Japanese, one Korean, one Persian and at least twenty Indians who took part in the Fellowship of Faiths meetings. There was no Turk on the program. It strikes one that religion is still the major industry of India.

There was at the conference of World Fellowship of Faiths no significant personality like Vivekananda, whose name will always be connected with the philosophic leadership of the Chicago Parliament of Religions in 1893. The Indians who appeared at the 1933 conference did the best they could; but most of their performances were wooden, uninspiring and far from being brilliant.

Was the confab of the Fellowship of Faiths a mark of American religious progress? I doubt it. Admiral Peary, discoverer of the North Pole, asked an Eskimo: "Of what are you thinking?" "I do not have to think," was the answer; "I have plenty of meat."

Abundance of food is often the reason for the absence of thought. Americans, at any rate, have not been famous for deep religious thinking. Are they now, under the black shadow of depression, turning religious?

An old couplet has it:

When the devil was sick, the devil
a saint would be;
But when he got well, a hell of a
saint was he.

A few decades ago it was believed in the West that the Christian sects alone possessed the formula for the salvation of men's souls. Some of the hot-eyed evangelists went even so far as to assert t Orient's only chance to progress would be *via* Christianity. But it is now dawning upon the *sapiens* of Europe and America that in a world there are 2,000 religions and 360 varieties of C sects, no denomination can honestly claim a mo of truth. It is to be hoped, however, that the ga of the Fellowship of Faiths would help in des bigotry and in promoting the spirit of tolerance.

I was pleased to find that the organizers World Fellowship meetings did not confine their p to mere academic discussions of religious pr They also invited consideration of political, ec and social subjects. That was very encou Unfortunately, no paper was presented by any dealing with the modern economic and p problems of India. They would have gone entir default, if it were not for the excellent pa "India in Bondage" by Dr. J. T. Sunderland. P India has to learn once more that religion should concrete in its treatment of day-to-day pro instead of being abstract in its fine-spun theo religion, worth its name, should teach man to two worlds at the same time.

The *World Fellowship* is a massive tom pages offer interesting reading from religions to p from prohibition to sex, from war to peace. in short, a story of human culture and should greatest use to those who wish to promote spiritual understanding among the nations of the

SUDHINDRA B

ARTISTS IN UNIFORM: *a study in lit and bureaucratism. By Max Eastman. Publish George Allen & Unwin Ltd., London. Price 7/6 net.*

The author, an American student of Po Russia, has already published a remarkable *Marx, Lenin and the Science of Revolution* was applauded by the London *Times Literary* *ment* as "a vigorous and clearly written contri to Marxian controversy." From that we guessed Mr. Eastman's criticisms were rather congenial conservative capitalistic world, being *anti-Sov* the volume *Artists in Uniform*, he castigates the entire Stalin regime as anti-intelletual, anti-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

nd deliberately opposing all liberty of expression. hanks to Mr. H. G. Wells and his futile negotiations ith Stalin in establishing a branch of the PEN the world association of writers) in Soviet Russia, we now that the Left side of politics is not necessarily a paradise for literary and artistic persons. Wells may be right when he said bitterly that Stalin appears to share the dubious glory, with Hitler and Mussolini, of curbing spontaneous expressions of thought vital to literature and art. It is a matter of strange coincidence that in Italy, Germany and Soviet Russia of today there reigns a severe censorship and occasional persecution of non-conformist writers many of whom in exile retaliate by hitting back through their mighty pen. But such news of individual or group persecution leaks out very rapidly as we find from this informing though somewhat coloured book of Mr. Eastman. He quotes approvingly Lenin and even Trotsky, but Stalin is an anathema! He hoped passionately (and hence the disillusionment is more bitter) that creative art will thrive with the establishment of the Soviet Union. In the early days of the Revolution we found an association of writers called *Kuznitza* or Forge "with the goal of creating a poletarian literature" with a cosmic or planetary tendencies :

"We will find a new dazzling road for our planet!
We will plant the stars in rows
and put the moon in harness!"

This grand aspiration of Soviet leaders and writers was analysed by the veteran critic Polonsky whose article "Lenin's Views of Art and Culture" is now published by Mr. Eastman in extenso as a *supplement* to the book, a really valuable pendant. After the death of Lenin, Leon Trotsky was ruthlessly persecuted and Stalin's final triumph ushered in an age of unhumiliated, violently disciplined or even driven to artists *in uniform*. How several writers were humiliated, violently disciplined or even driven to suicide,—have been narrated by Mr. Eastman in his harrowing section—"A Literary Inquisition." But Andrey Byelie and Alexei Tolstoy, proscribed two years ago, have been welcomed into the rank of the "great united front of Soviet writers." So Ivan Bunin, Solokov and other writers are gaining world recognition through sheer merit and Maxim Gorky is still shining as the golden link between the pre-war and post-war creators of art and literature in Russia. So we should not merely indulge in bitter criticism but try to pursue the slow and may be imperceptible flow of creative genius in a great nation born to great art through their theatre and dance, novel and poetry as unique in virility as in variety. The Kharkov Congress of uniformed artists may be but a caricature and we should have patience to look beyond, to the creative Russia of all days.

HISTORY OF EUROPE FROM RENAISSANCE TO REVOLUTION AND EUROPE SINCE WATERLOO : *By Prof. Upendranath Ball, M.A., Dyal Singh College, Lahore. 2 Vols. Price Rs. 2/8 & Rs. 3/12.*

The history of a continent is difficult to write and probably more difficult to summarize. Some authors exaggerate the political, others the economic or the military factors, producing a somewhat demoralizing picture of perpetual conflicts and defeats. Prof. Ball has wisely worked out a happy combination of the chronological and cultural narratives, bringing home to the readers the lessons, objectively drawn, of European history. His chapters on the Renaissance, the Reformation, the Industrial Revolution, etc., are human documents, correcting the overemphasis on politics in several books. Europe may take pride in her politics, but it is not the politics of unity and solidarity,—and it will be difficult to share today the opinion of the author that "Europe still stands as the pioneer of civilization"—but of exploitation of weaker humanity rather than of civilization. Hence the general suspicion of European ideas and pretensions in most of the non-European peoples, not excluding those of the New world colonized by Europe. Prof. Ball is nearer to reality when he observes, towards the end of his excellent survey : "It does not seem that they (the Europeans) believe in the principle of equality. It is feared that by their imperialism they may precipitate another catastrophe. But if they do not mend their ways, other nations would march ahead of them and lead the new movement of humanization."

His presentation is clear and convincing and the two volumes would help general readers to form a good idea of Europe, which, for good or for evil, is dominating the world stage for the last few centuries.

KALIDAS NAG

CHRIST FOR US AND IN US : *Campbell N. Moody. Allen and Unwin. Pp. 96. Price 3s. 6d.*

Books on Christianity at the present time, tend to fall into two classes. On the one hand, those emphasising the immanence of God, on the other, those emphasising His transcendence. To the former belong most writers of the Social Christianity school of thought, who often seem to come dangerously near to pantheism. In the other school the influence of Karl Barth is clearly discernible. Dr. Moody has attempted to explain in simple language the importance of Christ's person and His Cross. He realises that there are difficulties for many in the use of the word "substitution" but maintains that by His witness Christ does for men, what they cannot do for themselves. Therefore "Christ for men" is an essential part of the Atonement, and together with "Christ *in* men" make the Atonement comprehensible. It is quite an instructive little book, belonging to the second of the two main modern schools of thought, but in spite of the writer's intentions it is a book for the thoughtful few, and these may well desire to study the problem in more weighty tomes.

A DERELICT AREA : *Thomas Sharp, Day to Day Pamphlets No. 25. Hogarth Press. Pp. 49. Price 1s. 6d.*

The derelict area which the writer has studied is the south-west Durham coalfield. Tye pits remain, but few are working, and the men remain, hoping for nothing, but with nowhere else to go. The derelict areas are monuments to the stupidity of unregulated competition. The pits were worked so as to bring up as much coal as possible in the shortest possible time. The result was that for every ton brought to the surface three tons became permanently lost in the ground. The natural resources of the land were wasted, and together with the natural resources, the inhabitants. With conditions as different as they are between England and India, a great deal of the tragedy of the derelict areas is incomprehensible in India. One is so accustomed to the tragedy of stark poverty in India that one overlooks the difference between poverty which appears natural and unavoidable, and poverty which is the result of plenty being wasted. The more one studies the lesson of the derelict areas in England

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the more one feels the tragedy, namely, that the derelict areas are the result of failings in a system, and that the victims have been, and are helpless, either to remedy their present sufferings, or to prevent their occurring a second time. So far as India is concerned Western civilization should be studied not only to get ideas as to what might be done to remove poverty in India, but still more to learn what dangers to avoid.

CHRISTOPHER ACKROYD

COMMUNALISM AND ITS CURE BY THEOSOPHY: *By Bhagavan Das. Published by the Theosophical Publishing House, Adyar, Madras, India. Pp. 56. Price As. 6.*

This is an Adyar pamphlet in which Dr. Bhagavan Das urges that the only real cure for communalism which is rampant in India is Theosophy. "Since Communalism is an ethical-psychological-religious Disease, it can be cured only by an ethical-psychological-spiritual Remedy, and not by any artificial arithmetical mechanical electoral quack devices." (p. 53). And this spiritual remedy, it is needless to add, is Theosophy. But with all deference to Dr. Das, may not one remind him that men of all religious persuasions think like this and consider their respective religions to be the panacea for all worldly ills? One is tempted to suggest, on the contrary, that *communism* could rather be a better cure for Communalism than a religion however new. Communalism is a mediaeval relic and will disappear not by putting on new religious ideas but by replacing them all with ideas of economic and political interests and by the development of socio-economic consciousness. In Bolshevic Russia, men of all religions can work together for the furtherance of the Bolshevic ideals, simply because religion has been sub-merged by economic and social ideals. The question now sometimes pushes itself to the forefront whether religion has not already out-lived its utility. In that case, Dr. Das's suggested remedy may be found to be somewhat antiquated; for, even though Theosophy be a synthesis of all religions, it is after all one more added to the already heavy list of religions.

U. C. BHATTACHARJEE

ROAD AND RAIL IN FORTY COUNTRIES: *By Dr. Wohl and Prof. Albitreccia. Pp. 455. Oxford University Press. Price 18 shillings.*

This is a brief survey of road and rail conditions in forty leading countries of the world, undertaken at the request of the International Chamber of Commerce, with a view to present in one compendium the problems of road-rail competition in different countries and to provide the necessary data for suggesting possible solutions. In November, 1933 was published the Introductory Report on Road and Rail Transport submitted by the Committee of Independent Experts to the International Chamber of Commerce, and this compendium is a complementary publication to the Introductory Report.

The problem of co-ordination of railway and road Motor Transport is to be examined not only with a view to provide the producer and the consumer to have their goods conveyed in the best possible condition with the least possible expense, but also from the standpoint of the general economic welfare of the community, for the cost of permitting any wasteful or inefficient system must ultimately fall on the community at large. "The International Chamber of Commerce does not, therefore, regard the road and rail question merely as a transport problem, but looks at it from the standpoint of the general economic welfare" of the Society. The present study sequently avoids discussions of too technical and is addressed to the general public who are by and interested in a sound organization of transport system.

The study reveals that although the pr presents special characteristics in every country, to differences in geographical, social, Legislative administrative conditions, yet development has place everywhere almost on similar lines and possible solutions which can be taken into are usually comparable and capable of being internationally.

It is found that railways and Motor Tra each have different technical advantages qual them respectively for certain kinds of traffic, governments are in most cases trying to distr traffic equitably on such a basis.

The studies contained in this book have been according to some uniform plan in order that comparable basis may be found, and the investig have been carried on under two broad heads, viz road and rail situation in various countries, and basis of transport organization, legal, fiscal, social competitive. It has not been possible to bring statistical data on transport development up-to in many cases they only go up to 1931-32, and certain cases reliable data have been difficult to ob Still the authors have undoubtedly presented very ful study, covering no less than forty countries of world, including India, and the book must be reg as a timely and helpful publication for the guid of all students of transport, if not of all Governm that are seriously embarrassed with the question at present time.

INDUSTRIAL ORGANIZATION IN INDI *By Dr. P. S. Lokanathan, M.A., D.Sc. (Ec London. Publishers George Allen & Unwin Museum Street, London. Price 15 Shillings net.*

This work is the thesis of Dr. Lokanathan appro by the London University for degree of Doctor Science and embodies the results of investigati pursued by the author for nearly 5 years in In England, Austria and Germany. As the writer him points out, the book examines the structure efficiency of industrial organization in India. It tr in particular, the origin, evolution, and features of Indian Managing Agency system and as such it de with one of the most burning topics of the day. significant role played by the Managing Agents in development and organization of industry is mar in almost every chapter of this book and the aut arrives at the conclusion that Indian industry, w owes much to the Managing Agency system, has m to gain by curing it of its admitted defects than abolishing it altogether. The author further belie that the methods of floating industrial units in In have on the whole been sound and economical that the system of promoting concerns by Manag Agents has yielded fruitful results. These are bo conclusions and every chapter of the book appears attempt at justification of such assumptions, althou glimpses into the other side of the picture are also entirely wanting. In Chapter IX the author examin the cost and efficiency of the Managing Agency syst and suggests certain methods of improvement. H believes that this system will continue to exist for long time, "most certainly in Bengal," and it c justify itself at least in two important ways, nam in providing an opportunity of co-ordinated a centralized control and economic administration

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

everal firms under one roof, and in supplying ecessary finance and resources for the establishment f such new industries as involve much pioneering ork. Dr. Lokanathan accordingly advocates the aintenance of Managing Agents but proposes certain mprovements in their internal organization. He also uggests that there should be formed an Association of Managing Agents with certain internal rules of conduct nd control, with a view not only to erradicate the ndesirable elements that have crept into this system ut to develop and strengthen those features that ustify its continuance.

We have studied the book carefully. It is one of the most timely publications, particularly because the revision of the Indian Company Law is under contemplation, it undoubtedly contains much useful information and embodies the results of a great deal of abour and research. We have, however, been constrained to feel that the author's studies have been largely conditioned by pre-conceived notions or hasty assumptions. The serious drawbacks of the Managing Agency system have not been properly examined and the problem of second and third generation inefficiency of the Managing Agency system has been entirely ignored. Dr. Lokanathan forgets that the entire field of Indian industry requires thorough reorganization and rationalization in the light of present-day conditions of acute world competition. The permanent load that Indian industries suffer through the Managing Agency system has been a drag on progress and instances are not wanting of several industrial ventures succumbing to the greed of Managing Agents. The fabulous earnings of some managing agents and the provision of their continuity in perpetuity has attracted many irresponsible adventures into the field of joint-stock enterprise, leading to serious loss of the economic and financial resources of the country. Persons with no technical training and with hardly any financial resources of their own have got together a few public men whose names carry some weight to form the Board of Directors, and have literally seduced the unwary public to part with their hard-earned money for ill-thought-out schemes. Most of such adventurous undertakings have not only come to grief but have caused a serious setback to the progress of industrial enterprise in the country. Dr. Lokanathan would at least be less enthusiastic in his support of the Managing Agency system if he had known these facts. At any rate, a scientific treatise as Dr. Lokanathan's present book claims to be, must necessarily remain incomplete if the study is based on inadequate data or with partial notions. It is not expected that such an investigation should be of the nature of an unqualified apologia for a particular set of management as is found on page 352, paragraph 2 of the book. However, we fully appreciate the study undertaken by Dr. Lokanathan and we have no hesitation in commending it to the students of economics as well as to our business men. The get-up and the printing are very satisfactory and the addition of the index leaves hardly anything more to desire.

NALINAKSHA SANYAL

POPULAR HINDUISM, THE RELIGION OF THE MASSES: *By L. S. S. O'Malley. Cambridge University Press, 1935. Pp. VIII+246.*

The present book by Mr. O'Malley is a description of the state of the Hindu religion at the present day. It is divided into eight chapters. *viz.*, Beliefs, Ideals, Moral Influences, Worship and Ceremonies, Godlings and Evil Spirits, Modern Deifications, Brahamans, Priests and Holy Men, Sectarianism and Toleration. In the course of these chapters, the author has tried to give us a picture of Hinduism as it exists principally among the masses; and also, by way of contrast, as it does among the educated section of the Indian people. There are a few minor inaccuracies here and there; while, a bias is also noticeable in favour of Christian standards of morality in certain portions of the book. This prejudices its scientific value to some extent. But apart from this, the descriptions must, on the whole, be pronounced to be fairly accurate, objective and free from any avoidable bias.

One thing which strikes the reader forcibly in the book, is the appalling difference which exists between the two sections of the Indian population today. The educated people are moral and religious, but insular; while the uneducated masses are steeped in fear and ignorance, addicted to strange, and occasionally, immoral practices, and overridden by priests and gurus, who sometimes exert a healthy influence upon their morals and sometimes exploit them for personal profit. Mr. O'Malley thus presents us with a cross-section of the inward life of the Indian people. But like all cross-sections, it has an inevitable defect. Every social phenomenon is in a ceaseless process of transformation. It is therefore difficult for a study mainly confined to a particular period of time, to reveal which way things are moving, whether the healthy aspects of religious life are developing, or whether it is the other way round. In such a case, the reader is apt to be left with a false impression that he is getting a permanent aspect of Hindu society before him. Let us explain more clearly what we mean.

We have already referred to the wide cleavage which exists between the educated and uneducated people of India. When viewed historically, this is found to have been not always so. Formerly educated people used to live in the villages, the priests too were more educated than they are now; and there were various institutions like *katha-katha* or *jatra* which brought culture to the door of the illiterate peasants. But through the spread of Capitalism, the villages have fallen into decay, towns have thrived at their expense; and educated or clever men from all castes have flocked into the towns from their village-homes. The rural population has thus been deprived of the intelligent guidance of their educated brethren, their own social institutions have languished, and they themselves have been degraded into the depths of fear, superstition and helplessness. The cleavage between the masses and the classes is thus a historical growth which is now on the increase. And unless it is described as such, the reader is likely to carry away the impression that it is a permanent feature of Hindu society; and the masses have always been what they are now, while the classes have been always so insular, irresponsible and blind to the degradation of their neighbours.

There are more topics like this which might have been improved by a historical treatment of the case. When a social process is studied in cross-section, it has certain obvious advantages; but it has some serious limitations too. Only the historical point of view can set right the errors which are attendant upon it. If the present book had also been written in that spirit, it would have left the reader's mind, in the end, with more sympathy for India, and certainly given him a more truthful account of the social and religious life of her people.

THE TIMES OF INDIA ANNUAL (1936). *Price Rs. 2.*

This year's annual is still more gorgeous in its get-up and appearance than its predecessors. The reading side has been well catered for, Sir William Foster's "The Cape Route," "Behind the Veil in a Mughal Palace" by B. G. Murdeshwar and St. Nihal Singh's "Legends of Lankas' Uplands" being three outstanding examples. The illustrations are this year exceptionally interesting to the Indian reader, both from their themes and their beautiful rendition in colour. Baglatopulo has given us charming studies of Indian subjects, "An Indian Musician" being the finest of the set.

K. N. C.

THE ETHICAL CONCEPTIONS OF THE GATHA: *By Jatindra Mohan Chatterji, M.A., (Deputy Collector, Bengal). 2nd Edition. Revised and Enlarged with an Introduction by Dr. Bhagwandas. Price Rs. 2-4-0 or Four shillings (Postage extra). Jehangir B. Karani's Sons. 220-22, Bora Bazar, Fort, Bombay.*

The Avestan Gathas are the merest fragments of an once rather decent religious literature of the ancient Iranian people. Even to those scholars who have specialized in the study of Avesta, these fragments are very often entirely unintelligible. The author seems to have found not only coherence but a distinct ethical background in them. The value of his interpretation is, to say the least, entirely conjectural, and as such the work under review has little scientific value. But to the general public such a work is to some extent welcome inasmuch as it deals with a comparative study of religious thoughts, free from sectarianism. A second edition of the work indicates that it has been well received in some quarters at least.

SUKUMAR SEN

FROM WRONG ANGLES: *By Gaganvihari Mehta, pp. xii+180. The Book Co., Ltd., Calcutta. Price Re. 1-8.*

The rich and varied contents of the book can be guessed from the one or two short extracts we quote below; but the reader must read it through and through to appreciate the whole book. With regard to the geometry of the First Round Table Conference, the author says: "The angle of a British Delegate of the Round Table Conference is said to be *acute*. The angle of a British Indian Delegate of the Round Table Conference is said to be *obtuse*. When the angle of the Indian Delegate is in the same line as the angle of the British Delegate, the former angle is called a *right angle*." He has also collected the following flowers of speech:

"As frankly rude as Sir Samuel Hoare," "As hypocritical as Ramsay MacDonald," "As uncertain as Gandhiji's next step," "As regular as anniversary celebrations—in Bengal," "As spineless as a title hunter," "As illusory as popular responsibility in the Hoare Constitution."

Our final advice is "Drink deep." The price is cheap and get up good; and the reader is sure to enjoy many hours of innocent laughter.

J. M. DATTA

REDDIE OF ABBOTSHOLME: *By B. M. Ward. Published by George Allen & Unwin Ltd. Pp. 336. Price 10s. 6d.*

The New Education Movement or the New School Movement with which the educationists in the West are quite familiar is not so well-known in this Yet it has profoundly influenced the educational of our times and hundreds of schools have been in different countries of the world on the ide which the movement is working. It originated fifty years ago from a little school in Dert England. The founder of the school was Cecil (C.R.), and he was the father of this new mo in education. With but £77 in his pocket and by a boundless ambition to be the pioneer of a and more sympathetic system of boys' educatio Reddie in 1889 founded the New School, Abbot Ten years later he was a world-famous figu Abbotsholme became the centre of a new edu revolution. Towards the close of his career had to give up his connection with Abbotsholm he still remained an inspiring figure and the mo which he had once initiated and inspired had gathered sufficient momentum to carry itself without his help.

In this excellent biography Mr. Ward has the story of his life and ideal, of his strugg conquests, his versatility and genius with foibles and frailties. Reddie's was a rem vigorous personality and the biographer has eminently successful in giving a vivid portrait personality. We love C. R. none the less for frailties for he was greater than his work. I a this biography will be read with interest by a are interested in education.

ANATH NATH B

THE NATURE OF MYSTICISM: *B Jinarajadasa, M.A. Theosophical Publishing Adyar, Madras, India. 1934. Bd. Re. 1/-; Re.*

This is the second edition of a pamphlet pub in 1917 on the highly abstruse subject of Mys which Mr. Jinarajadasa's exposition helped to larize. Obviously the centre of interest lies in sophical Mysticism, still in the process of evo and struggling with Krishnamurti's teaching enthusiasm for his subject has not spoilt the w appetite for other food, and it is refreshing to fi thus concluding: "among these many types of ticism there is none first and none last; all are roads to God, and souls tread equally swiftly them all. Nor are these the only roads to Him; ways there are, not even necessarily through mys And new mystic modes too will appear," etc. A attitude towards religion!

P. R. S

BOMBAY IN THE DAYS OF GOERGE *By F. Dawtrey-Smith, being Memoirs of Sir E West, Chief Justice of Recorder's Court, Bombay; some hitherto unpublished documents; Lo Green & Co., London, May, 1935.*

The story takes us back to a India that few know. The merchants from distant Albion ca quest of commerce, but found themselves as of an empire. It was very embarrassing to the Di of the East India Company, but inspite of disinclination the responsibilities grew, mismanag of which led to a series of conflicts with the Crown the Parliament of England. It is generally held Mutiny led to the Crown taking over the govern of India from the Company, but mutiny was merely immediate cause. The great change was the resu long struggle between the ministers of state thoughtful people in England and the great East Company. Each contest resulted in fresh fetters the indignant Directors and the shareholders, till at

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the Mutiny, the Company was glad to hand over the mantle to the representatives of the Crown. This was a natural step, because the Company had outlived its useful days. At the end of the eighteenth century the judicial system in India was very defective. The officers who were sent out to discharge these duties, were in the words of Colebrooke 'veriest dolts.' Not only the districts were very large, but in training and equipment they were far inferior to any civil servant of our days. In 1773 after much opposition from interested quarters, an act for introducing 'Regulations for the better management of the affairs of the Company' was passed by the Parliament. A supreme Court of duly qualified judges, appointed by the Crown, was established in Calcutta, and in 1799 at Madras. A 'Recorder's Court' was also established in Bombay. These steps were vehemently opposed by Anglo-India. The old order of society in India, with its rusty standard of public morality, which considered even the highest born Indian to be socially inferior to an English valet, considered these uncalled for, unwarranted and tyrannical invasion of their private rights by the Parliament. The English judges who were sent out from England, arrived in this country without the bias and prejudice that saturated all the activities of their fellow countrymen long resident in India. They had to take an oath, on assumption of office, that they would administer justice without favour and fear, and in doing so they came in violent collision with the local non-officials (the vested interests of our days) and officials. The story of this period had so long been written from one point of view only, the viewpoint of the Company's officials and the domiciled Europeans. But this book presents us with the other side of the medal. For this the future historian of India would remain extremely grateful to Mr. Dawtrey-Smith.

Sir Edward West was appointed Judge of the Recorder's Court at Bombay, and arrived in India in 1822. In this country he proved himself to be a doughty champion of judicial integrity. But like other Crown Judges sent to India under the Regulating Act, he soon died at his post. His death was followed by that of his wife. Very little of Sir Edward's life in India was known; the *Dictionary of the National Biography* knows him only as a political economist. He wrote an essay on 'Application of Capital to Land.' Besides, he has been mentioned in the Biographies of Elphinstone and Sir John Malcolm, but in these the forces against which he had to work found a preponderant voice. It would be a mistake to regard Mr. D. Smith's work as a biography; he merely places the materials from Lady West's journal and letters written from India to friends, throwing a lurid light in the social and political under-currents of those bygone days. By publishing the second edition of this work, together with some hitherto unpublished materials, the learned author has performed a public duty of highest importance. The work also throws interesting side-lights on the characters of Elphinstone and Sir John Malcolm.

A. C. Banerji

CHINA'S RED ARMY MARCHES: *By Agnes Smedley, International Publishers.*

For over half a decade the Kuomintang has been waging a war of extermination on the so-called "Red bandits" occupying the mountainous regions of Central China. Chiang Kai-shek's sincerity in this respect has never been doubted by the great powers. His resources in men, money and munitions have always been held by experts as more than adequate for the purpose and have been liberally supplemented by foreign loans, foreign military advice, foreign guns, foreign gunboats and foreign bombing planes. Till 1935, five major wars took place between the Kuomintang and the Red forces. Each time the Kuomintang armies were decisively defeated with heavy losses in men and guns. Few greater military puzzles are to be found in history.

Agnes Smedley's book throws a good deal of light on this military puzzle. The chief factor in the situation seems to be the support of the peasant masses which the Red leaders have succeeded in enlisting by means of their war-cries, "land for the peasants," "no debts, no rents and no taxes." The Red Army, now composed of 400,000 regulars and 600,000 irregulars, has grown entirely out of bands of peasant partisans whose fights with the help of clubs, stones, spears and swords are described in purple passages which leave harrowing effects on the reader's mind. Miss Smedley stoutly denies that the Red Army has got its guns from Soviet Russia and passionately affirms that the guns and ammunition of the Red forces have all been captured from the hands of the Kuomintang's soldiers who often desert *en masse* to the side of the enemy. The account ends with the founding of the Chinese Soviet Republic by the First All-China Congress of Soviets in 1931.

Miss Smedley's sympathies are wellknown. Her violent predilictions, romantic temperament and sentimental outbursts spoil, a good deal, the historical value of her writings. There are obvious exaggerations in her narratives of battles which often remind us of the descriptions in the Mahabharat. Yet it is probable that the book is much more faithful to reality than we can imagine from the deliberately lying reports emanating from Nanking and Shanghai. The least that can be said is that Agnes Smedley shows us the other side of the Chinese shield. No student of world affairs can afford to remain ignorant of Soviet China which now claims to occupy one-sixth of China with a population of eighty millions and whose military leaders, Chu Teh, Mai Tse-tung and Peng are among the greatest that the world has known.

X. Y. Z.

THE HISTORY OF THE CONGRESS: *By B. Pattabhi Sitaramayya. Congress Working Committee, Allahabad. Yellow Khaddar Cloth, demy 8vo. Pp. 1038+CIV+XXII, and portraits of the presidents of the Indian National Congress. Price Rs. 2-8.*

Besides the main body of the work, there are an introduction by Babu Rajendra Prasad, the present president of the Congress, and several appendices.

Considering the bulk and importance of the book, the price is very moderate.

The book is divided into several parts, according to the different "eras" into which, according to the author, the fifty years of the life of the Congress may be divided. These periods are, according to him, the era of reforms, 1885-1905, the era of self-government, 1906-1916; the era of home rule, 1917-1920; the era of Swaraj, 1921-1928; the era of complete independence, 1929-1935. Part V describes the era of fight, and Part VI, the era of reorganization.

It is a very useful production.

CONGRESS IN EVOLUTION: BEING A COLLECTION OF CONGRESS RESOLUTION FROM 1885 TO 1934. *Compiled by D. Chakrabarty, M.A. and C. Bhattacharya, Advocate. The Book Company, Ltd., College Square, Calcutta. Demy 8vo., pp. XLVIII+232. Price Rs. 2.*

Mr. Subhas Chandra Bose has written a foreword

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to this useful publication, in the course of which he says :

"Such a publication is certainly a crying need. I felt the need myself when I was engaged in writing "The Indian Struggle" last year—a comprehensive account of our political movement from 1920 to 1934. During my recent stay in Europe several foreigners interested in our political movement have approached me for literature in connection with our political movement, and whenever such a request has been made, I have felt most acutely how backward we are in the matter of literature, as compared with other political movements. In the circumstances, a publication of this sort is bound to prove useful to the student of Indian politics and to the historian as well. I have great pleasure, therefore, in welcoming this publication and in commending it to the general public."

We also commend it to the general public. Besides the resolutions, divided into groups, there is a survey of the history of the Congress covering 36 pages. There are also some useful appendices.

C.

SANSKRIT

SHARADATILAKAM. Part I (Chapters I-VII), Part II (Chapters VIII-XXV) : *Edited by Atalananda Sarasvati. Published for the Agamanusandhana Samiti by the Sanskrit Press Depository, 30, Cornwallis Street, Calcutta.*

The publication of scholarly and beautiful editions of various Tantra texts in different well-known Series of Oriental Publications has supplied sufficient inducement to scholars for an investigation of their contents and has led to the bringing about of a healthy change in the definite unsympathetic outlook of the world of scholars with regard to their aims and ideals. And in this respect special reference should be made to the contributions of the Tantrik Texts Series initiated by Sir John Woodroffe, a Judge of the Calcutta High Court, under the pseudo-name Arthur Avalon, who appears to have been the first to conceive the idea of starting an exclusive Series of Tantra publications. It is these Series of Publications and other writings of Woodroffe that are acknowledged by savants like Winternitz to have enabled scholars 'to form a just judgment and an objective historical idea' of the religion and literature of the Tantras.

Seventeen volumes, so far issued in the Series, contain a number of highly important Tantra texts, some of which have been published here for the first time. The publications in the present Series are not mere mechanical reproductions of defective manuscripts as in the case of earlier editions of Tantra texts, but they embody the results of the collation and comparison of a number of manuscripts by competent scholars entrusted with the task of editing them. Reference should also be made to the excellent printing, paper and general get-up of each of the volumes in the Series. This is a feature that has increased the popularity of the Series as a whole even though works that were previously published elsewhere are found in some cases to have been included here, and has necessitated the issue of second editions in the case of a number of works.

The edition of the work under review, prepared by Atalananda Sarasvati, fully maintains the prestige of the Series, two volumes of which (XVI and XVII) are covered by it. The text of the *Sharadatilaka*, one of the most popular, learned and authoritative Tantra treatises, which has been profusely laid under contribution by innumerable Tantra digests of Northern India, is here accompanied by the well-known commentary of Raghavabhatta. Besides the characteristic features of the Series, *e.g.*, a detailed list of contents and an elaborate introduction, a running summary of the contents of the work, have here an index of the first lines of the verses in the book. This will be of great use in identifying and verifying the numerous quotations made from various other works. Another index of the names of works and authors quoted or referred to in the commentary would have been all the more welcome; it would testify to the vastness of the learning of the commentator and reveal many a name, little known or absolutely unknown in the present days. It is expected that the recent issue of a cheap, one volume edition of the work in the Kashi Sanskrit Series will not in any way minimise the importance of the edition in question, even though the former professes to improve the latter, which, however, is curiously referred to as a publication of the Asiatic Society of Bengal, made under the auspices of the Maharaja of Darbhanga.

CHINTAHARAN CHAKRAVARTI

BENGALI

BANGLA SABDATATVA OR BENGALI PHILOLOGY. *By Rabindranath Tagore. Second edition, enlarged. Crown 8vo, pp. 210+29. Price One Rupee. Visva-bharati Bookshop, 210, Cornwallis Street, Calcutta.*

This book is one out of the many solid proofs of the versatility of the Poet Rabindranath Tagore's genius and talents. It is a collection of papers dealing with the Bengali philological subjects. They were contributed mostly to Bengali periodicals. The first was written 45 years ago and the last, five months ago. Whether the Poet was the first to write on Bengali philology or not, we cannot say; but this we can say that no one has written for so long a period on philological topics and thrown such new light on the subject of Bengali philology. The introduction of 29 pages is an illuminating and enjoyable discourse. Though the book is written on Bengali philological topics, it will be of use to philologists in general, as it is scientific and scholarly.

SIKSHA OR EDUCATION : *By Rabindranath Tagore. Third edition, enlarged. Visva-bharati Bookshop, 210, Cornwallis Street, Calcutta. Crown 8vo. Pp. 286+6. Price Re. 1-8.*

The Poet Rabindranath Tagore is not only an original thinker on the subject of education but is also one who has striven to the limit of his resources to give concrete expression to his thoughts and ideas. First his school at Sanitiniketan, named Brahmacharya Asram, and later his Visva-bharati University are embodiments of his educational ideas.

The first essay in this book was written 44 years ago and the last was written only a few months ago. They were contributed mostly to Bengali periodicals.

The book should be read by all who are interested in the subject of education—students included and the education minister and the director of public instruction not excluded.

Though entitled *Siksha* or education, that word must not be understood in a narrow sense while reading the contents of this book. For, it has papers on literary re-unions and conferences, the main function of libraries, village service, meditative Japan, education and culture and the like.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Both the above works of the author are written in his fascinating style, and shine with the many-coloured lights of his poesy, wit and humour.

The educational system prevalent in India is an imitation of the British educational system and that, too, only so far as it may subserve the ends of the foreign rulers of the country. For this reason, the intelligentsia of India require to read this book as a corrective. Those who do not know Bengali should learn it, if only to read the prose and poetical works of Rabindranath Tagore. It will not be lost labour. It will not do to wait till all his works are translated—perhaps all of them will never be translated. Moreover, not many are the translations of his works which are satisfactory.

BANGIYA SABDAKOSH OR A BENGALI DICTIONARY: *By Hari Charan Bandyapadhyay, Santiniketan. Price of each number Annas eight, postage one anna.*

Number 29 has been published, carrying this biggest of Bengali lexicons to its 920th page and the word *Kula*. We had occasion to notice this valuable work before. It is being compiled, edited and published with as much ability and as well as before.

BANGIYA MAHAKOSH OR ENCYCLOPAEDIA BENGALENSIS. *Chief editor Prof. Amulya Charan Vidyabhushan. Indian Research Institute, 55, Upper Chitpur Road, Calcutta. Number 6. Price of each number Annas eight.*

The chief editor and his colleagues continue to maintain the high standard of their work. The get-up continues to be commendable. The article "Akshara" or script, by the chief editor, deserves particular study.

C.

GUJARATI

GUJARAT AND ITS LITERATURE: *By K. M. Munshi, B.A., LL.B., Advocate (Q.S.), with a Foreward by Mahatma Gandhi. Published by Longmans Green & Co., Ballard Estate, Bombay. Cloth Cover. Pp. 407. With a map of Gujarat. Price Rs. 6-0-0 (1935). Illustrated.*

Mr. Munshi is an outstanding personality in modern Gujarat, both in politics and literature; there is not a branch of the latter to which he has not contributed and contributed handsomely. Novel, drama, history, essay, journalism, research in old Gujarati, have all been handled by him and in a way which would leave a mark behind. A man blessed with dynamic energy and tirelessness, he was thrown on his own resources, while undergoing imprisonment as a Civil Disobedience prisoner in the Bijapur Jail, and the result was this valuable book, which though diffuse and in a great many places, suffering from a lack of sense of proportion, gives a very good picture of the origin and development of Gurajati Literature from the earliest to the present times. It is divided into three parts: Prakrit, Sanskrit and Apabhransha, (A.C. 2007—1297); old Gujarat (1297—1852); Modern Gujarat (1852—1934)). The best part of Mr. Munshi's work lies in the First Part. In about eighty pages, this part gives a connected account of the Land, the People, the Aryan Colonies of the West. Their Language and Literature from which was evolved Old Gujarati, which in its turn gave rise to Modern Gujarati. It betrays an amount of labour and study of scholarly materials which would be praiseworthy under any circumstances but is the more so when one remembers that the study was made in jail, whose reference books and other help could be procured with great difficulty and at least inadequately. The Second Part presented comparatively less difficulty, as the author had already (before going to jail) made a special study of the works of some of the best writers of the period; like Narsing Mehta, Premananda and Dayaram. The Third Part deals with the modern period, and the treatment has met with a chorus of disapproval at the hands of critics. In the one hundred and fifty pages devoted to it, critics have found that thirty have been given to Mr. Munshi, by the writer to whom the work of appreciating his literary worth was entrusted and eight by himself to his wife, who is also a well-known and facile writer. This left about one hundred and ten pages, in which to crowd up the modern period, which is rich in number of writers, and in materials, because Gujarati Literature like all other Modern Vernacular Literatures is passing through times of great activity and output. Parsis are crying out that their best men are ignored, Hindus point out a number of omissions, and they both criticise his mode of criticism and review of the works of those he has reviewed as unfair and hasty. Whatever defects there might be, judging as a whole, the book adheres to be a very creditable performance, and in spite of the fact that in places false values are assessed, and that greater carefulness should have been exercised in the statement of facts, the book will for a long time to come hold the field as a valuable guide to those who are not familiar with the Gujarati language but nevertheless interested in its history and literature. Mr. Munshi's Preface gives in a nutshell the trend and tendency of the contents of the pages to follow, and a Bibliography and an Index at the end, together with a section on the Elements of Gujarati Prosody, add considerably to the usefulness of the book. Copious extracts of the texts in Gujarati, printed in Devnagri characters help the readers of allied vernaculars to understand more fully the points made by the writer.

KETLANK VIVECHANO: *By Navalram J. Trivedi, M.A. Printed at the Suryaprakash Printing Press, Ahmedabad. Cloth cover. Pp. 260. Price Re. 1-8-0 (1934).*

"A few Reviews or Criticisms": This is how Mr. Trivedi modestly characterises his work. On reading the reviews, however, one finds that the work discloses sterling worth. He has treated ten of the most well-known writers of modern Gujarat, novelists, poets, and prose writers. He has reviewed their works, extensively and according to the best canons of criticism. The reviewer is a man of parts, and has kept himself abreast of all the latest movements in Gujarati prose and verse. He writes in a way which makes his language flow easily and though the subject is serious, he has been able to make it attractive.

BHUT KAL NA PADCHHAYA: *Part II, by Gunavanta Rai Acharya, printed at the Jay Swadeshi Printing Press, Ranpur. Cloth bound. Pp. 188.* Price *Re. 1-0-0 (1934).*

"Shadows of the Past," Part II is, in a way better than part I, as the eleven stories told in it, are more vigorously told and range over wider subjects. The style has certainly been successful in visualising to the reader the past glory of Kathiawad, glory that has vanished.

INDIANS TO PROVE THEIR CAPACITY TO BRITISHERS!

By RAMANANDA CHATTERJEE

In the course of his reply to the address presented by the Municipal Board of Lucknow on the 28th of November last, Lord Willingdon, the Viceroy and Governor-General of India, said that "the coming reforms" "throw open a wide avenue by which the people of India can show the measure of their capacity and progress." They do not throw open any such wide avenue. On the contrary, they are a great step backward. In commenting on this passage we said in our last December number:

> "Lord Willingdon and other British imperialists do not perhaps understand how galling and insulting the attitude of superiority of the political schoolmaster-examiner assumed by Britishers towards Indians is to the latter. The former should know that Indians are not political babies. They are entitled to rule themselves and quite capable of doing so, if left alone. Besides, if their capacity is to be measured, Englishmen are not in a position to measure it impartially; because they are interested in prolonging, if not perpetuating, the dominance of themselves and the subjection of Indians. It is not we Indians alone who think that we are capable. Many competent foreigners, including Englishmen, have said so. It makes us ashamed whenever we have to quote their testimony. But we shall do so again in some future issue....."

We proceed to do so accordingly; but not for convincing British imperialists, but for helping those Indians who labour under the inferiority complex to get rid of it. For, though there have been and are just and impartial Englishmen, the British nation as a whole, being deeply interested in maintaining British rule in India, cannot be convinced by any amount of writing that we are fit to rule ourselves. As the late Mr. John Page Hopps, editor of *The Coming Day*, London, wrote in *The Modern Review* for June, 1907:

> "Who say the people of India are not fit for home rule? We, Englishmen, who profit by ruling them; we, who do not want to surrender power; who in our egotism think we are the best and the ablest rulers in the world. But it is an old cry. It was raised against the middle class in our own England; it was raised against the mechanics of our great towns; it was raised against our country farmers; it has been raised against our women; and in every case it has been raised, not for reasons of justice, but by the people in possession of power who did not want to lose their power."

Capacity includes intellectual power and moral fitness. So the testimonies we shall quote will relate to both intellect and character, both thought and action. For, human personal not divided into mutually unrelated air compartments.

Lord Curzon said in his address as Vi in the big Delhi Durbar in 1901:

> "Powerful Empires existed and flourished here Englishmen were still wandering painted in woods, and while the British colonies were wilderness and a jungle. India has left a mark upon the history, the philosophy, an religion of mankind, than any other terrestri in the universe."

These empires were empires ruled, no foreigners, but by persons who had their b in India alone. Hence the existence of empires connoted the possession of n capacity and administrative ability by Ind India has left the deepest mark upon history, the philosophy and the religion mankind because of the spiritual, moral intellectual capacity of her children.

Says Max Muller, the eminent orientali his book, "What India has to teach us":

> "If I were asked under what sky the mind has most fully developed some of its ch gifts, has most deeply pondered on the gre problems of life, and has found solutions of of them which will deserve the attention even those who have studied Plato and Kant, I sh point to India. If I were to ask myself from literature we here in Europe may draw the co tive which is most wanted in order to make our life more perfect, more universal, in fact more human, again I should point to India."

British imperialists of the extreme declare that it is Britishers who have India. Let us, therefore, see what sort of Britishers found when they began to rule country. Sir Thomas Munro, a distingui governor of Madras, said in the course statement made by him before a Comm of the British House of Commons in ("Hansard's Debates," April 12):

> "If a good system of agriculture, unriv manufacturing skill, a capacity to produce wh contribute to convenience or luxury; sch established in every village for teaching rea writing and arithmetic; the general practice hospitality and charity among each other, above all a treatment of the female sex, full confidence, respect and delicacy, are among signs which denote a civilized people, then the H are not inferior to the nations of Europe; and civilization is to become an article of trade betw

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the two countries, I am convinced that this country (Britain) will gain by the import cargo."

Sir John Malcolm, a former governor of mbay, declared late in life that he "looked ck with shame to the days when he had sidered himself the superior of the Indians h whom he was called upon to associate."

But, it will be said, all these testimonies ate to the past; what of the present? We e coming to our own days, though it cannot admitted that a people's past is necessarily related to their present capacity.

As in the existing machinery of the state India the position of Indians in no depart- nt is more humiliating and more indicative British distrust of the capacity of Indians an in the army, navy and air force, we shall gin with the fighting capacity of Indians.

Sir Valentine Chirol writes in his book, India":

"The Indian army has a fine record for gallantry, and is a great fighting engine." P. 277.

In the same book he says that Kaiser ilhelm, the ex-emperor of Germany, once bserved that the Sikhs of India were the only reign troops against whom he feared to put s own German infantry.

Lieutenant-General Sir Ian Hamilton writes "A Staff Officer's Scrap-book during the usso-Japanese War," vol. i. p. 8:

"All this is supposed to be a secret; a thing to be whispered with bated breath, as if every sepoy did not already know who does the rough and dirty work, and who, in the long run, does the hardest fighting. Nevertheless, these very officers who know will sit and solemnly discuss whether our best native troops would, or would not, be capable of meeting a European enemy! Why—there is material in the north of India and in Nepaul sufficient and fit, under good leadership, to shake the artificial society of Europe to its foundations ....."

General Sir James Wilcocks writes in his book, "With the Indians in France," page 182:

"Here was a great country (Britain) with 48,000,000 inhabitants, and yet it was found necessary to summon a few thousands from Asia to defend our cause at our own gates. I have heard it said that the Indian corps was only sent to France to give India a chance of taking her part in our European war: may be that was partly the idea of those who first originated it, but the fact remains that the arrival of the Army corps, just when it did come, was the respite so sadly needed by the brave men who had wrought deeds of almost superhuman devotion, but were then outnumbered and all but overwhelmed by the German hordes."

Here the British General gives as little praise as he could to the Indian troops, reserving all his superlatives for the soldiers of his own country. But the reader can guess at the truth by reading between the lines.

Lord Birkenhead, who too was not a pro-Indian British politician, is quoted thus in Mr. George Lansbury's *Labour's Way with the Commonwealth* (Methuen), p. 51:

"The winter campaign of 1914-15 would have witnessed the loss of the Channel ports but for the stubborn valour of the Indians Corps . . . . . Without India, the war would have been immensely prolonged, if, indeed, without her help it could have been brought to a victorious conclusion."

This is the grudging British imperialistic way of admitting that, but for the fighting qualities of the sepoys, "the German hordes" would have overrun Britain.

It may be objected that Indian soldiers fight well under British officers, but that India cannot produce competent military commanders. But from ancient times down to the days of the East India Company, India has produced great generals. Even in the days of the sepoy rebellion Indian officers commanded British soldiers. It was after that rebellion that Indians were deprived of the opportunity of showing their capacity for leadership in war. But Nepal still has her own generals. And even so late as the last world war the Indian troops taken to Europe came partly from British India and partly from the Indian States. Those from the latter were commanded by Indian officers. They did not compare unfavourably with British officers. Those sent from British India were commanded by British officers; but when these were killed or disabled, the Indian officers took command, and did so with complete success.

Professor Edward E. Ross of the University of Wisconsin, who is an eminent sociologist, said in an address delivered in New York in 1926 on his return from an extended visit to India:

"I was greatly impressed with the physical beauty of the people of India, and still more with their intellectual ability. Being myself a university professor, I was particularly interested in the students there, of whom I met a large number. The students of India struck me as much more studious and much more serious in their attitude towards life than the students of America. They seemed conscious of the great part they were destined to play in life. I met with universal testimony to the intellectual keenness of the students. Once I asked an American missionary, 'What do you think of the intellectual capacity of the Indian people as a whole?' He answered: 'There is no question that it is equal to that of the American people.' I think it is even greater."

The late Mr. W. W. Pearson, M.A. (Cantab), who spent long years in India and knew the people intimately, says in his book, "For India," published in 1927:

"How can it be argued that Indians lack ability

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to rule themselves when we find the actual British government in India to-day full of Indians of all ranks, to such an extent that if to-morrow the British rulers of the land should leave India the machinery of administration would continue with very little change of outward form. The chief difference would be, that the Ruling Power . . . . . would have it for its primary object to *benefit India*. . . . ."

Mr. H. M. Hyndman, the distinguished British publicist, writes in "Truths about India," Series I, pp. 8, 9 (New York, 1923) :

"Many hundreds of years before the coming of the English, the nations of India had been a collection of wealthy and highly civilized people, possessed of a great language, with an elaborate code of laws and social regulations, with exquisite artistic taste in architecture and decoration, producing beautiful manufactures of all kinds, and endowed with religious ideas and philosophic and scientific conceptions which have greatly influenced the development of the most progressive races of the West. One of the noblest individual moralists who ever lived, Sakya Muni (Buddha) was a Hindu; the Code of Manu, dating from before the Christian era, is still as essential a study for the jurist as the institutes of Justinian. . . . . And there are in India, in this later age, worthy descendants of the great authors of the Vedas, of the Mahabharata and the Ramayana, of the architects of the Taj Mahal and of such soldiers and statesmen as Baber, Hyder Ali and Runjeet Singh. And yet, nine-tenths of what has been written by the British about India is so expressed that we are made to believe the shameful falsehood that stable and civilized government in Hindustan began only with the rule of the British."

The Bishop of Calcutta preached a sermon, reported in *The Indian Messenger* of April 17, 1921, in which he said :

"Indians have achieved the highest distinction in the varied spheres of human activity and by their success have refuted the charge of racial inferiority. Certain of those qualities which we (British) are apt to think rank highly may be less in evidence among them than among ourselves; but that is merely to say that they are different from ourselves; but difference may exist alongside of perfect equality."

Mr. J. A. Spender, editor for years of the *Westminster Gazette*, writes in his book, "The Changing East," p. 23 :

"There is no Eastern country which has so many talented men in so many walks of life as India."

Then after naming Rabindranath Tagore, Sir J. C. Bose, the late Major B. D. Basu, &c., and observing that they "would be highly distinguished in any European country," he says :

"All of these should be respected and appreciated by us Englishmen and Europeans, as working on a plane of absolute equality with ourselves."

Mr. Spender came to India in 1911 to attend the Delhi Durbar. On his return he wrote in his paper (January 29, 1912) :

"India may impress one as poor, or squalid, as mediaeval, but never for a moment can it strike him as a crude, a barbarous country. Evidences meet him everywhere of art, originality, and [illegible] He will see more beautiful faces in a morning [illegible] in an Indian bazaar than in any European [illegible] he will be charmed by the grace and [illegible] the common folk. It may surprise Englishmen [illegible] it, but many Indians seriously express the [illegible] that the Indian is mentally the superior of [illegible] man."

At the St. Andrews dinner in Calcutta [illegible] Sir Thomas Raleigh, Vice-Chancellor [illegible] Calcutta University, said :

"Masterpieces of thought and language [illegible] duced in this country at a time when our [illegible] as Englishmen were little better than save[illegible] though the age of masterpieces may have [illegible] none of us who come into contact with [illegible] natives of India to-day can doubt that their in[illegible] power is worthy of their ancestry."

General Smuts said in the course [illegible] speech delivered in Johannesburg, Aug[illegible] 1919 :

"I do not look down on Indians; I look [illegible] them. Two with whom I have come into par[illegible] close contact of late, Lord Sinha and the M[illegible] of Bikaner, I regard as among the ablest men [illegible] ever known. There have been Indians who [illegible] been among the greatest men in the history [illegible] world. There have been Indians who have [illegible] among the greatest leaders of the human race. [illegible] shoes I am unworthy to untie. Nor is there [illegible] else here to-night worthy to do that."

He was asked, if commissions in the [illegible] were given to Indians, whether he would [illegible] serve under them. He replied immediately :

"Why not? I would be glad to serve un[illegible] able Indian."

Alfred Webb, president of the tenth I[illegible] National Congress, writes in "The Peo[illegible] India," page 51 :

"In Madras, in 1894, I conversed with a s[illegible] machine agent, who had travelled and done b[illegible] over the globe. His principal trade now was [illegible] Indian tailors, and seamsters—selling machines [illegible] paid for by monthly instalments. I asked the [illegible] portion of bad debts in such business. He s[illegible] had found them as high as ten per cent. in Eng[illegible] 'How high in India?' 'But one per cent., and [illegible] chiefly with Europeans. Practically we have no [illegible] with Indian natives. If it comes that they c[illegible] pay instalments, they will give back the machine [illegible]

"In open crowded bazaars or market-places [illegible] railway platforms in India are money-changers. [illegible] sit at tables upon which are heaps of coins of v[illegible] denominations. Could money be thus expose[illegible] similar gatherings in Europe."

Sir Lepel Griffin, who had spent his w[illegible] official life in India and had held high o[illegible] said as president of a meeting of the East I[illegible] Association held in London in December, 1[illegible]

"The Hindu creed is monotheistic and of [illegible] high ethical value; and when I look back upo[illegible] life in India and the thousands of good frie[illegible] have left there among all classes of the comm[illegible] when I remember those honorable, indus[illegible]

orderly, law-abiding, sober, manly men, I look over England and wonder whether there is anything in Christianity which can give a higher ethical creed than that which is now professed by the large majority of the people of India. I do not see it in London society. I do not see it in the slums of the East End. I do not see it on the London Stock Exchange. I think that the morality of India will compare very favourably with the morality of any country in Western Europe."

Sir Guy Fleetwood Wilson said in the course of a speech made in 1913 when he was retiring from the office of Finance Member of the Government of India :

"I wish to pay a tribute to the Indians whom I know best. The Indian officials, high and low, of my department through the years of my connection with them have proved themselves to be unsparing of service and absolutely trustworthy. When need arose, they have done ungrudgingly a double or triple amount of work. When their advice was sought, they have given it to me fully and frankly. As for their trustworthiness, let me give an instance. Three years ago when it fell to my lot to impose new taxes, it was imperative that their nature should remain secret until they were officially announced. Everybody in the department had to be entrusted with this secret. Any one of these, from high officials to low paid compositors in the Government Press, would have become a millionaire by using that secret improperly. But even under such tremendous temptation not one betrayed his trust. So well was the secret kept that a ship laden with silver in Bombay delayed unnecessarily its unloading for three days and was consequently caught by the new tax."

Colonel Sleeman, who was instrumental in putting down thuggee in India and knew all its ways and conditions of men here, particularly the worst, said :

"I have bad before me hundreds of cases in which a man's property, liberty or life has depended upon his telling a lie, and he has refused to tell it." (Quoted in R. C. Dutt's "Civilization in Ancient India," vol. ii, p. 159).

Sir Michael Sadler, president of the Calcutta University Commission and Vice-Chancellor, Leeds University, said in a lecture delivered in Leeds in 1919 :

"One cannot walk through the streets of any centre of population in India without meeting face after face which is eloquent of thought, of fine feeling, and of insight into the profounder things of life. In a very true sense the people of India are nearer to the spiritual heart of things than we in England are. As for brain power, there is that in India which is comparable with the best in our country."

Earl Winterton, sometime under-secretary of state for India, said in a speech in the British Parliament on July 8, 1927 :

"Owing to a long tenure of my present office, I have become personally acquainted with a larger proportion of the Indians of all parties who are in public life, than any of my predecessors, and I do not hesitate to say that in culture and in education the leading men among them are not behind the public men of any country."

Sir Basil Blackett, when introducing the Indian Budget on March 1, 1926, as Finance Member, said :

"India long ago revolutionized mathematics, and provided the West with the key to the most far-reaching of all the mechanical instruments on which its control of nature has been built, when it presented to Europe through the medium of Arabia the device of the cypher (and the decimal notation) upon which all modern systems of numeration depend. Even so, India to-day or to-morrow, will, I am confident, revolutionize Western doctrines of progress by demonstrating the insufficiency and lack of finality of much of the West's present system of human values."

Sir Valentine Chirol says in his "India" (published 1926), page 6 :

"At all times in her history India has produced some of the finest and most subtle intellects of which the human race is capable; and great men of action as well as profound thinkers."

Mr. A. O. Hume said the following before the Public Service Commission of 1886 :

"The fact is—and this is what I, who claim to have had better opportunities for forming a correct opinion than most men now living, desire to urge—there is no such radical difference between Indians and Britons as it generally flatters these latter to suppose. . . . . If both races be judged impartially, and all pros and cons be fairly set down on both sides, there is very little ground for giving the preference to either. If you compare the highest and best of our Indians with the ordinary run of the rabble in England, these latter seem little better than monkeys besides grand men. If you compare the picked Englishmen we often get in India, trained and elevated by prolonged altruistic labours, and sobered and strengthened by weighty responsibility, with the rabble of India, the former shine out like gods among common mortals. But if you fairly compare the best of both, those in each class would exhibit excellencies and defects less noticeable in the other, and neither can, as a whole, be justly said to be better or worse than the other. . . . . The whole misconception regarding the people of India arises from the habit which Englishmen in India have acquired of regarding only the blackest side of the Indian and the brightest side of the English character, and from their theories as to the capacities of the two races being based on a consideration of the worst specimens of the one and the best specimens of the other." (Proceedings of the Public Service Commission, 1886, vol. vi, section iii, sub-section 6).

Professor J. R. Seeley writes in "The Expansion of England" :

"We are not cleverer than the Hindu: our minds are not richer or larger than his."

Speaking of the most accomplished and highly trained Indian officials in India Lord Morley gave it as his opinion, in an article in the *Nineteenth Century and After*, that they were "as good in every way as the best of the men in Whitehall."

The Earl of Selborne, when Lord Chancellor of Britain, bore the following testimony to the worth of Indian judges from his place in the British Parliament :

> "My lords, for some years I practised in Indian cases before the Judicial Committee of the Privy Council, and during those years there were few cases of any imperial importance in which I was not concerned. I had considerable opportunities of observing the manner in which, in civil cases, the native judges did their duty, and I have no hesitation in saying—and I know this was also the opinion of the judges during that time—that the judgments of the native judges bore most favourable comparison, as a general rule, with the English judges. I should be sorry to say anything in disparagement of English judges, who, as a class, are most anxious carefully to discharge their duty; but I repeat that I have no hesitation in saying that in every instance, in respect of integrity, of learning, of knowledge, of the soundness and satisfactory character of the judgments arrived at, the native judgments were quite as good as those of English judges." (Quoted in Sir Henry Cotton's "New India," p. 140).

The following testimony of Mr. Hodgson Pratt, I.C.S., appeared in the London Weekly *India* on November 10, 1905 :

> "As regards the possible qualities which have delayed the admission of Indians to a larger share in the management of their national affairs, it cannot be said that there is any evidence of moral or intellectual unfitness. When posts of great responsibility, requiring qualities of no mean order, have been filled by Indians, whether in British or Native States, they have evinced high capacity as well as trustworthiness."

Mr. Ben Spoor, speaking in the British House of Commons during the India Debate in 1922, stated :

> "At the present moment over 20,000 political prisoners are in jail in India. They include men of high character, men whose character has never been questioned. They include men of profound culture—of a culture, I submit, probably greatly in excess of that of the average Member of this House of Commons."

The following is from Sir Henry Cotton's "*New India*" (pp. 141-142), which was written many years ago :

> "The natives of India are assumed to be unfit to have charge of districts; it is convenient to assume that all Englishmen are cool and wise in danger, while no natives are so, and that consequently only Englishmen, and no Indians, are competent to be trusted with independent charges. By a process of the grossest self-adulation, we persuade ourselves to believe that natives are only useful as ministerial servants, but that the work of a district, if [illegible] be done at all, demands the supervision of an [illegible] officer. The truth, however, is that the In[illegible] of course they must be, are the backbone [illegible] administration. The burden and heat of the [illegible] already borne by Indian subordinates, and in [illegible] (as occasionally must be the case) of an in[illegible] European being in charge of a district, the [illegible] of the work is done by his Indian depu[illegible] clerks."

Mr. Keir Hardie wrote in the L[illegible] *Labour Leader* for May, 1909, after re[illegible] from an extended tour in India :

> "It cannot be alleged that the Indian pe[illegible] unfit for self-government. The many Nativ[illegible] which are ruling themselves is a proof [illegible] contrary which cannot be gainsaid. A great [illegible] class exists in India which manages univers[illegible] higher grade schools, supplies the coun[illegible] lawyers, professors, newspaper editors, and th[illegible] of great business concerns. Wherever the[illegible] have an opportunity they prove that, whe[illegible] administrators or as legislators, they have [illegible] of a very high order."

Mrs. Annie Besant writes in her "*India A Nation*" :

> "You ask, is India fit for freedom and self-[illegible] ment? I answer, Yes, and they are her right[illegible] India has a right to be free and self-governing [illegible] is fit to be."

Dr. V. H. Rutherford, long a memb[illegible] the British Parliament and a Labour [illegible] writes in his book, "Modern India : Its [illegible] lems and their solution" (pp. 82-84), that [illegible] attending debates in 1926 in the Indian Le[illegible] tive Assembly and the provincial legis[illegible] councils and listening to the speeches o[illegible] English and the Indian members, he "fo[illegible] definite inferiority among the Englishm[illegible] compared with the Indians." He writes :

> "Although I have a natural bias in favour [illegible] own countrymen, truth compels me to state [illegible] these legislative bodies the Indians far surpas[illegible] English rivals in brilliancy, wit, logic, kno[illegible] breadth of vision and ideals of statesmanship.
>
> "What station in life would these (English[illegible] have occupied if they had remained at h[illegible] England instead of coming to India? No m[illegible] one or two per cent. would have risen higher [illegible] first-class clerk in a government office. As a [illegible] of fact, India is governed by first-class clerk[illegible] England, with a few lordlings thrown [illegible] governors. . . . . One truth stands out [illegible] beacon-light, namely, that *Indians are infinitely [illegible] fitted to govern India than are their English [illegible] lords.* In sheer intellectual ability and parliam[illegible] capacity Indians outshine their British adver[illegible]

IMPRESSIONS OF THE ANNUAL CALCUTTA ART EXHIBITIONS, 1935-36

By PULINBIHARI SEN

It has been a commonplace to mark down the artists belonging to what has come to be known as the Bengal School of Painting as mere 'romantic revivalists';—they have, we are told, allowed themselves to be cut off from the main stream from where should come the chief inspiration of all creative work: Life, life around us, our daily work and toils, sorrows and joys of our every-day life. They have, in their enthusiasm for 'reviving' Indian Art, sought beauty only in the myths of the past, totally forgetful of the present; the result is that their work entirely lacks vitality, reality and strength.

Now, these charges hold good only of a few of our artists, some of them self-styled as such. It is indeed true that for some time they sought inspiration in mythology, but it was only natural for them to go back to our heritage in search of a fresh starting point. It will be a mistake, however, to conclude that all of them have stood still, finding delight in romance and mythology alone, without trying to break new paths.

The last Annual Exhibition at the Government School of Art, Calcutta (December 16—21), gave enough evidence of the truth of our contention. Inspite of the many defects and drawbacks which one may naturally look for in students' work, one thing was obvious: the teachers and the students of the school, whether they possess great gifts or not, are no mere romantic revivalists, out 'to reproduce paintings from paintings in the set, stencilized fashion,' 'too superior to know the daily life and surroundings of the people,' 'indifferent to the local environment.' Indeed, the school seems to have freed itself from inglorious copy-work, cheap "studies" and still-life drawings with which it seemed to have satisfied itself for some time in the past, and has entered into a period of real creative work. It is refreshing to find the students eager to explore the possibilities of new mediums and art-crafts, eastern and western, not confined to any scheduled set of subjects to draw upon and receiving inspiration from nature and life around them, the common and the drab not excepted.

The most interesting exhibits in this exhibition were the prints executed in different graphic mediums. The Graphic Arts are a recent introduction in Bengal from the West, but quite a number of our artists seem to be keenly interested in experimenting with them and to have attained a fair degree of success. Of the chromolithographic prints, Susil Sen's "Passenger" was easily the best, executed with considerable feeling and imagination combined with able craftsmanship. Second only to this was Indu Rakhsit's "The Carpenter at his Work" a common scene invested with beauty through the artist's skill. His painting "A Street Scene" may here be mentioned; it looked rather exaggerated and eccentric; nevertheless, the scene was very effectively portrayed. Of the monochrome lithographs, Basudev Roy's "A Village Musician" and Purnendu Bose's "The Mendicant" deserved and attracted attention.

Among the wood-cuts, the prints done by Basudev Roy were the best, showing him to be a keen artist-craftsman, sure of his tools and possessing a good sense of proportion. Tarak Bose's wood-and lino-cuts also deserved notice, but he spoiled some of them by introducing unnecessary details and clumsy lines. In his "Interior of a Film-studio," however, he showed a great deal of cleverness and was successful in creating an atmosphere of mystery.

The specimens of work of the students of the 'Indian Painting Class' next deserved attention. These students have not, indeed, ceased to receive inspiration from Indian Mythology (nor need they do so); but their chief source seemed to be the little daily incidents of the Bengali Home-life and common scenes from Bengal villages and cities. Satyaranjan Mazumdar of this class, in his picture "A Third-class Booking Office," portrayed his subject faithfully and with much sympathy. Maniklal Banerjee's "The Village *Ghat*" was a delightful picture.

The school appeared to have made much progress in artistic commercial drawings and designs.

The Indian Fine Arts Academy, which was started by Atul Bose and others with the avowed

purpose of bringing together the artists belonging to different schools and pursuing different styles, held its Third Annual Exhibition (December 21—January 5) in the Indian Museum Gallery.

The Exhibition authorities selected Jamini Roy's "Mother and Child" as the best painting in the exhibition; this, however, was no new effort but a copy, more or less, of one of his earlier and well-known pictures. This artist, with all his easy proficiency in eastern and western methods, has given them up all and now finds inspiration in the indigenous Bengali style of painting followed by the *patuas*. He exhibited here a number of his paintings done in that style, and without going into the question of the scope and limitations of that style, one easily appreciated two of them, "Mother" and "Reflection." His "Jashoda" naturally suggested a comparison with Nandalal Bose's "Birth of Chaitanya," to the former's disadvantage.

Of the other pictures exhibited here, it is possible to notice here only a few. Ramgopal Vijaybargiya, earnest and careful as he is, seemed to repeat himself and to have developed certain mannerisms which made it difficult to distinguish his pictures one from another. Manindrabhushan Gupta's water-colour sketches, done in bold strokes, were fresh and lively. His careful drawings were, however, not so happy.

L. M. Sen exhibited a number of remarkable oil-paintings, mostly done from scenes of Burmese life, in some of which he showed the play of light with great effect and cleverness. Atul Bose submitted a few portraits and two pleasing landscapes. Abani Sen showed some skill in his crayon sketches.

In the sculpture and modelling section, particular mention should be made of Sudhiranjan Khastgir's exhibits which showed strength and originality, the two e qualities of good art, though, judged by ar tests, minor errors could be traced out in Some of the exhibits in this section were less—pseudo-oriental they might be Some, again, were what might be "photographic," and dull.

The two most notable absentees this in the Exhibition of the Indian Socie Oriental Art were Abanindranath Gaganendranath. Nandalal Bose sub only one picture, "The Golden Pitcher outstanding example of high craftsmans

The teachers and students of the Lu Art School exhibited here a large numb pictures, mainly distinguished for fine manship and gay colours. Of the Lu exhibits, B. N. Jijja's hill-life pictures att greatest attention; beautiful pictures in selves, they looked rather cramped and not faithful to the spirit of life in the hill

The Kalabhavana of Santiniketan w presented by Binodebihari Mukherjee, kinkar Baij, Jamuna Bose, Nivedita G Bisvarup Bose and others. One liked t more of Binodebihari Mukherjee's po efforts. Bisvarup Bose submitted among things a coloured wood-cut reproductio Abanindranath Tagore's "Tear-drop," showed his mastery over this art-craft.

Ramendranath Chakravarti submitte number of pleasant boat-studies in dry and coloured wood-cut, which showed his handling of divergent mediums.

Other notable exhibits here were Bratindranath Tagore, Indubhusan G Kalipada Ghosal, Sudhansu Roy, N Mazumdar and Tarak Bose.

INDIA AND AUSTRIA

By HERRN KOMMERZIALRAT OTTO FALTIS
Managing Vice-President, Indian Central-European Society.

There has always been a great deal of interest in this country (Austria) about India. I remember that when we were at school one of the things we learnt was that India was the cradle of humanity (Wiege der Menschheit). This interest has until recently been centred in the old culture of India. Only after the Great War have the Austrian people come into direct contact with the living modern India. The visits to Europe, and especially to Vienna, of such prominent Indian personalities as the poet Dr. Rabindranath Tagore and the scientist Sir J. C. Bose have been greatly helpful in rousing Austrian interest in modern India. During the last decade Mahatma Gandhi and his movement have done much to stimulate popular interest in India's political aspirations.

Against this background we have had during the last few years visits from two prominent Indians associated with the public life of modern India. Unlike other Indian visitors who have rushed through Austria on their way to the south or to the west, they spent a lot of time in establishing personal contact with Austrians in different walks of life. The result of their personal endeavour has been that today several prominent Austrians can claim intimacy with some prominent representatives of the India of today. I am referring to the late Mr. Vithalbhai J. Patel and Mr. Subhas C. Bose.

Towards the end of 1933 some of us felt that it would be desirable to make an organized attempt to bring India into closer contact with Austria and the other Danubian countries. As a matter of fact, somewhat earlier a Society had been started for this purpose, but owing to reasons into which I need not enter, it was not handled properly on the Indian side, and it thereby forfeited the confidence of the Indians in Vienna. It was the desire of the Indian colony in Vienna to make a further and better attempt to establish closer relations between India and Austria. The Indian students in Vienna have had for some years an organization of their own called the Hindusthan Academical Association and it has been their experience that sympathy and support on the Austrian side has never been lacking. As it was not possible for a body of students to attempt the larger work of establishing contact between India and Austria, the only course left open to us was to start a new Society for the purpose. In 1933 I had long talks with Mr. Subhas C. Bose, followed by an interchange of correspondence, on the question of starting a Society. Ultimately we came to an agreement to have the Society duly registered under the law of the land. There were to be two branches of the Society—cultural and commercial—for developing cultural and commercial relations between our two countries.

Herrn Kommerzialrat Otto Faltis
[At present the Indian Central European Society is being run mainly with his financial support.]

It naturally took some time to do the spade-work and to enlist support on the Austrian side. By April, 1934, the arrangements were completed and in the first week of May, 1934, the Society was formally inaugurated at a meeting held in the premises of the Vienna Chamber of Commerce. The meeting

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

was presided over by the former Federal Minister, Dr. Karl Pesta and was from the beginning assured of influential support.

The announcement regarding the formation of the Society—called the Indian Central-European Society—in the Indian Press brought a large number of enquiries from India, from those who wanted to sell as well as from those who wanted to buy. For a year we kept ourselves busy in following up these enquiries and thereby bringing into touch businessmen in Austria with businessmen in India. Simultaneously we got into touch with the Indian Chambers of Commerce and other public bodies representing the economic and commercial life of India. Our work was considerably furthered through the visits of many prominent Indians to Vienna during the summer of 1934 and 1935.

On the 6th June, 1935, the Indian Central-European Society arranged an *enquete* (conference) at which several prominent Austrians read papers on the different aspects of Indo-Austrian relations. The Conference was presided over by the former Federal Minister Edward Heinl who made constructive suggestions on the improvement of Indo-Austrian trade relations. The following is an extract from his speech:—

> ". . . . If we want to sell more to India we have to buy more from her. This possibility is given if we change our purchasing markets from those raw material supplying countries with which we have no favourable trade balance, in favour of India.
>
> "Looking at the trade figures of the countries framed in this Society, we may optimistically remark that an increase of these figures can be attained if we study carefully the markets in India, and if our industry endeavours to compete in every item with other nations.
>
> "We see for instance that India is buying, on an increasing scale, machinery of every kind of her industrial development. In this regard, Austria and the Danubian countries are capable of supplying every sort of productive goods. . . . ."

He (ex-Minister Heinl) was followed by Mr. Bose who assured sympathy and support on the Indian side and remarked as follows:—

> ". . . . Today once again India wants to resume intimate contact with the outside world. She desires direct intercourse, both cultural and commercial. With this twofold object of developing cultural and commercial relations between India and Central Europe, this Society has been founded.
>
> "Austria today may be a small country, but this small country is one of the pulses of Europe. Is it therefore not natural that we should endeavour to develop closer contact between Austria and India? Therefore we chose also Vienna, the metropolis of Austria, and one of the most prominent international cities in the heart of Central Europe. In the domain of art and culture, Vienna has much to offer. In the matter of commercial intercourse, she has not only a striking position but also wonderful op tunities. . . . ."

One of the other speakers was Hofrat P Dr. Karl Beth who spoke on the questio "What can India offer Central Europe turally?" During his speech he said,

> "Some 125 years ago when the German mind acquainted with the large treasures of Indian cu she was deeply impressed and turned to it eag An oddly vibrating rhythm reached the ear of Middle European, originating from the great l works of art and metaphysics. Never, indeed another nation's rhythm identical with one's but this was similar and complementary and fore engaging and interesting. The Indian m attitude is prospective and this is an impo element in the prospective potency of a nation. own methods of thinking are highly retrospe The practical Indian psychology has an optim character. India has an unparalleled concentr of mind and spirit and therefore India has muc tell us."

Professor Beth was followed by Prof. Hans Eibl who spoke on the question—"W can Central Europe offer India culturally In the course of an interesting speech he said

> "The far Asiatic world steps into the phas the machinery epoch and with it into the wa mechanistic thinking. That comes to Asia as s thing strange and presumptively will cause destruction than it did in Europe. The Occide spirit is attempting now to bridge the onesidedn of the Atomism and Mechanism of the techni epoch by Synthesis and we can already get s of a new world-view. In physics, biology, socio psychology, historical philosophy we can notice breaking through of a new spirit, starting in Cen Europe. We believe that this will be the re-birth Occidental culture and it may be a help to Orie culture as well."

The above Conference was a great succe and it helped to rouse further interest in t work of the Indian Central-European Society

The Annual General Meeting of the Indi Central-European Society was held on the 20 December, 1935, in the Vienna Chamber Commerce buildings with ex-Federal Minis Pesta in the Chair. Prominent among th who attended were:

Hofrat Karl Angermayer
Hofr. Prof. Dr. Karl Beth (Prof. of comparat religion and philosophy)
Rechtsanwaltin Dr. Marianne Beth
Mr. Subhas C. Bose
Prof. Dr. Geiger (Prof. of Sanskrit)
Prof. Dr. Robert Freih. v. Heine-Geldern (Pr of Anthropology)
Ex-Federal Minister Pauer
Altbundesrat Kommerzialrat Hans Rotter
Former Ambassador and Minister Baron v. Seidl
Dr. S. K. Sen } Representing the Hindusth
Mr. A. S. Wimalakirti } Academical Association.
Mr. K. N. Gairola }

As the Managing Vice-President, the report for the year's work was duly placed before the meeting by the writer. It was shown that since its inception the Society had to deal with a large number of enquiries from the Indian as well as from the Austrian side, regarding agencies and regarding goods for purchase as well as for sale. Thus firms in Calcutta inquired for sugar-mill machinery, printing machinery, laboratory equipments and fittings, surgical instruments, heavy and fine chemicals, galvanized wire, paper, brushes, electrical equipments, etc. Firms in Madras enquired for rubber-wares, paper, perfumery, soda-water bottles, etc. Firms in Bombay enquired for glassware, chemicals, medicines, etc. Firms in Delhi, Cawnpur, Karachi, Meerut, Ellore, Tinnevelly, Lyallpur, Colombo and many other places in India and Ceylon made enquiries about wireless accessories, leather-ware, horse-nail machinery, textile machinery, tool machinery, etc. Besides these, a large number of Indian firms wanted to be put in touch with buyers of Indian raw-products, like cocoanuts, cotton, rice, jute, hides, minerals, indigo, spices, fibres, Indian balsams, besides several other articles like bronze-ware, rackets and hockey-sticks, etc. There were also enquiries about monetary regulations, customs, freights, storage, etc. On the whole we feel satisfied that we have been able to bring into contact a large number of businessmen in India and in Central Europe. On the Austrian side, we have had the co-operation of many important and influential personages like Dr. Bouvier, Secretary of the Association of the Chemical and Metallurgical Industry in Austria and Dr. Luger, Secretary of the Association of the paper manufacturing Industry in Austria. Besides this, we have already the co-operation of Dr. Leopold Bermann, the Managing Secretary of the Vienna Chamber of Commerce, who is a member of the Managing Committee of our Society.

So far as the future is concerned, we hope to open branches in other countries in Central Europe. Up till now we have occasionally received enquiries from Poland, Hungary, Roumania and Czechoslovakia.

During the current year we intend devoting more attention to the development of cultural relations between India and Austria. The cultural Committee of our Society has already been enlarged for the purpose. So far as the work in Austria is concerned, we intend arranging a series of lectures on India from prominent Austrians and Indians. In the work of cultural intercourse we have the support of a large number of University Professors and also of the Minister of Education. We have already sent a circular round to a large number of Indian Universities and Colleges placing ourselves at the service of those who intend coming to Austria for further studies or training. Among our latest acquisition is Prof. Koppers, head of the Institute for Volkerkunde (Anthropology) who has kindly offered the use of the rooms of his Institute for the Headquarters and for the meetings of our Cultural Section. This Institute is in the Neue Hofburg, the new palace of the former Austrian Emperor.

While we are endeavouring to push forward the work of the Indo-Austrian friendship to the best of our ability within the means at our disposal, it is but natural that we should look forward to the inauguration of a corresponding Society in India. Since a large number of Indians have returned home during the last few years after a stay in Austria, it should not be difficult to found such a Society in India, if only someone will take the initiative. We need hardly add that the presence in Vienna of Mr. Subhas C. Bose has been a very great help and encouragement to us. His early return to India, which is now inevitable, will be a severe loss to us. At the same time we are not so selfish as to desire to keep him back from his countrymen and his future work. We have no doubt that when he is back in India he will be able to do much on the Indian side in fostering Indo-Austrian cultural and commercial relations. Among other things which we would like to be done in future is an exchange of Professors and of businessmen between our two countries so that our cultural and commercial relations may be placed on a basis of lasting friendship and good-will.

The bureau of the Indian Central-European Society is located at Tuchlauben, 7A/19, Vienna I. The writer will very gladly attend to any enquiries concerning Indo-Austrian relations—cultural and commercial.

Mrs. Iqbalunnisa Hussain, B.A., Dip. Ed. (Leeds.), was invited by the University of Mysore to deliver Extension Lectures on "My Experiences in an English University" in English at Bangalore and Mysore and "Education of Muslim Women" in Urdu at Bangalore and Channapatna.

IMPRESSIONS OF THE TENTH SESSION OF THE ALL-INDIA WOMEN'S CONFERENCE

By RENUKA RAY, B.Sc. (London)

he All-India Women's Conference has just ncluded its Tenth Session, which in many ys has been one of the most eventful and ccessful. Not only has the Conference for e first time in its history met in an Indian ate, but also in one of the most progressive, hich being a land of matriarchal sway, women ve in it an assured status both in social and onomical life. To meet in Travancore, where omen are free from legal disabilities, and where om time immemorial down to the present day, eir rightful position in society has been corded to them, was an inspiration to all the legates, who came from north, south, east d west of the country to this southern-most orner of India to deliberate on problems vital o the women's cause.

Nature is lavish in her generosity to rivandrum—the capital of Travancore and it as in superb surroundings of majestic beauty hat the women of India met this year. The raditional hospitality of this great state was ffered to them. The Reception Committee rovided lavishly for the comfort of their guests nd also arranged a striking variety of social ngagements, which were a pleasant relaxation rom the arduous and ever-increasing work hich the affairs of the conference demand. The Maharani's Garden Party, given in the eautiful environments of the Kudiar Palace, where the colourful saries of her guests mingled with the hues of the magnificent flowers, was a ight worth remembering. It was followed by the performance of the Kathakali play, a survival of the art of ancient India, famous in the South, and seen for the first time by a majority of the Maharani's guests. The picnic arranged at Cape Comorin, about 60 miles away, by the Reception Committee was a very enjoyable occasion. This was on a Sunday, a day of rest for the Conference, when work was forgotten, restraints thrown off and a happy feeling of comradeship prevailed. It is the social side of the Conference where friendships are made and cemented year by year which forms a far more living and indissoluble bond of unity between India's women than pious wishes or paper theories could ever achieve. The dignity of bearing, the flashing intelligence and the charming and inherent simplicity of the women of Travancore won the admiration and respect of all those women who came as their guests. The Maharani, who so ably and so wisely guides her subjects, has not only honoured the guests to her State in a manner befitting her royal house, but also as the elected President of the Conference this year, she showed a remarkable enthusiasm for its cause, and her practical suggestions were a marvel to all.

Every year the opening ceremony of the Conference to which men and women are both invited is an impressive and stately affair but this year, in the atmosphere of an Indian State, with all its splendour and the exquisite artistic nature of the decoration it was unique in its impressiveness. The Presidential Address

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

rendered a clear unmistakable statement of the underlying aims of the Conference and the Annual Report gave a record of achievement which is steadily growing year by year. For

Her Highness Maharani Setu Parvati Bayi of Travancore

the first time this year special visitors came not only from England but from the U. S. A., Japan and China, bringing with them messages of sympathy and goodwill from the women of these countries. This is clearly an unmistakable sign of the growing desire among women of all nationalities to come to a better understanding of each other's aspirations and achievements. "Mere men," as one of their representatives this year called themselves, also have their spokesmen on this first day. As their Annual Report has it, "This is no feminist Organization aggressively reiterating its right but that we work rather for the larger welfare of the country as a whole." This has been true of the Conference from its very beginning. W India have to fight orthodoxy and ig and the apathy born of ignorance. B is in India no bitter and demeaning s and from the days of Raja Rammoh pioneer women have had gallant cham the cause of their liberation and so a suffragistic policy has never been adopte those who do not know Indian conditi have no conceptions of domestic life country, it must be pointed out that W Organizations in India have not the task them to emancipate a set of down-t women, oppressed by husbands but rat enlarge the sphere of activity of the women, to bring her to a proper realiza her duties as a citizen, and to equip her part in public life and embrace activi merely of a domestic but of national impo

The word Conference is in some misnomer and sometimes leads to a misc tion of the nature of its work. This merely an Annual gathering passing reiterating paper resolutions. The work taken by its Standing Committee, which for two or three days before and afte Conference, gives ample proof of this. from drawing up the resolutions and m arrangements for the Annual Session Standing Committee has the far more imp task of reviewing the work and deliberati the problems of its thirty-seven constitu and numerous sub-constituencies througho country and draws up the lines of work fo coming year. Each constituency has representative on the Standing Committee voices its local problems and difficulties a is as an outcome of all local interests th All-India Committee arrives at a pra basis of work, in consonance with its ideals aspirations. Even the resolutions for di sion for the Annual Session are drawn up an exhaustive survey of all those passed a different constituent Conferences, so a guarantee their representative character.

Perhaps the most noteworthy feature o Conference this year is the practical natu its resolutions, and the discussions show little time was wasted over mere bandying s of words, and almost every speaker gave su tions of real utility. Every year has s rapid strides in practical achievement. quicker than those who started the Confer ten years ago could ever have imagined. year the grave need for rural reconstru work was particularly stressed, and many stituencies have already started working in this matter. This year the Confer

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ded that every constituency situated near l areas should take up at least one village do uplift work in all its aspects. In the e way, a growing amount of practical work, as the setting up of Maternity and d Welfare Centres, Rescue Homes, Harijan ools, Adult Education Centres, Nursery ools, Industrial Classes and a multifarious ety of other work is being done, as the ual Reports give evidence. The Conference lizes the immense value of propaganda work has been carrying this on unceasingly to ak down reactionary social customs. It lizes that only by propaganda work carried unabated that a real change of heart can be ained, a far more powerful weapon than the etest and most stringent laws that can ever s the legislatures.

Among the resolutions passed is year the most controversial s the one asking "for the ead of scientific knowledge birth control through the dium of clinics and maternity ntres to those who are in ed of it." Some of the most thusiastic speeches were made this resolution, and after e discussion was over Mrs. argaret Sanger of the Inter-tional Birth Control Centre, e of the special visitors of e Conference this year, gave r own experiences of work. e resolution was carried by majority of eighty-five to enty-four votes. Here it ght be said that the Confer-ce does not believe, as some e deliberately misunderstood, total birth control. It be-eves in birth-spacing and a rtain amount of birth restriction where nditions of health or poverty make it cumbent, and it believes that it is necessary at scientific knowledge should be given in cognized medical establishments, as otherwise uack remedies detrimental to health will gain scendency. The Conference essentially believes glorious motherhood and in the child who is rn to a joyous life, but not in the unwanted ild born to live in misery and die in squalor.

Three new Sub-committees have been pointed this year on the educational side in gard to the spread of mass literacy, a common nguage for India and the school hygiene and edical inspection of children. The Con-erence has for the last two years been agitating for the appointment of a commission to enquire into the legal disabilities of women and to suggest remedies which can be passed into law. In spite of much propaganda and the creation of a real demand they have not been successful in their attempt to prevail on government to appoint the commission. This year it has appointed a special Committee from amongst its members with powers to co-opt lawyers and experts to inquire into the different legal systems and suggest adequate remedies. Branch Committees will also be appointed in each local area where the different interpretations of the laws are in vogue. The Conference is particularly anxious to remove the social and legal disabilities of the women, because it believes that only thus unhampered by restrictions can women be builders of the "Home beautiful" and do their duty both as mothers and responsible citizens. It believes in penalizing polygamy and advocates a rational system of marriage laws, including divorce when it is necessary. This does not mean that it countenances flimsy and temperamental divorces, as often seen in the West and oftener in the U. S. A. It is only on grounds such as cruelty, desertion, adultery and all other reasons which were advocated in the Smritis of ancient India before other influences had crept in, and on the lines of the Divorce Act introduced in modern times in some places such as Baroda.

The Conference has continued to stress the necessity of amending the Sarda Child Marriage Restraint Act so as to make its enforcement

Kaudiar Palace, Trivandrum

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

more effective. The anti-child marriage Sub-committee appointed last year at the Karachi Conference is doing good work. The Conference has also decided about keeping a woman organizer in the Mining Districts to help the women who are being eliminated from underground work. An attempt is being made to raise enough funds for the expenses of the woman organizer. As regards the franchise qualifications for women in the New Constitution the Annual Report and subsequent speeches have made it quite clear that the women of India are deeply disappointed that their demands have been ignored, although they were united from the very beginning. Even though the new powers given to women are so inadequate, they have decided to ask all women to make the fullest use of such powers, as it will give women an opportunity to have experience of public life. They will not rest satisfied, however, until essential changes which are a matter of principle with them are effected. The wifehood qualification given to them as wives of property-owners, and the unjustified division of women's electorates into communities, go against the grain of all women.

Due to the sad lack of funds and the dearth of workers, all that is planned cannot always be achieved. In India paid social service is almost entirely unknown, and all the work that is being done in every constituency is the result of voluntary work. The Conference work is growing heavier year by year and it is often at considerable personal sacrifice, and due to the unbounded enthusiasm of its workers that it is carried on so successfully. This year an appeal has been launched to raise funds for a Central Office and a paid Secretary. To keep up continuity and to cope with the increasing amount of work the need for this is becoming more and more urgent.

Although the All-India Women's Conference is working for practical solutions and is not a merely visionary body, it has sight of its fundamental ideas. The Co claims to be the living embodiment of th of India's women. It wishes above all to its own independent thought and action its very constitution does not enter into politics nor support any one community those who have attended a Session Conference can realize how successful been in maintaining this desire. of all communities, races, religions and women from the Indian States and every province of British India, women from the aristocracy, professional middle classes, Harijans, women of every of opinion—nationalists, moderates, ment officials or members of the Co those who take an active part in public those who work silently for social or educ advance, one and all contribute their Their attitude is relentlessly and fe rationalistic. They believe in a world irrationalities, of blind prejudices, retr customs and religious superstitions. human beings meet, differences of opini only natural, but it is no idle boast although each section of thought has cont its share, the Conference has always bee to maintain a united outlook and has kept its ideals steadfastly before it representatives of the Conference do not in blind imitation of things western, fo are aware of the pitfalls in which some cherished hopes of western civilization danger of falling today. They belie equality of opportunity for all, in freeing from all disabilities which hinder them obtaining their just rights, and contri their due share in the regeneration of country. At the same time they firmly in retaining all that is real and intrin India's culture and tradition and in glor her ancient civilization.

FOREIGN PERIODICALS

Historical Fantasies

Writing in *The Christian Register*, Rayford W. Logan institutes an interesting parallelism between Napoleon and Mussolini on the one hand and Emperor Haile Selassie of Ethiopia and Touissaint Louverture, leader of the Haitian Revolution on the other :

Just as the campaign against Toussaint was launched in the fourteenth year of the French Revolution, just so the attempt to destroy the independence of Ethiopia comes in the fourteenth year of the Fascist Regime.

Substantially the same motives that led Napoleon to seek the recovery of France's richest colony now impel Mussolini to yearn for the allegedly rich territory of Ethiopia. Indeed, the parallel between Napoleon and Mussolini is so striking that M. de la Fouchardiere, writing in *L'Oeuvre* of Paris, has already compiled an imaginary diary that Mussolini keeps after his exile to Saint Helena by the English.

After the administration of President John Adams had aided Toussaint to gain virtual independence, the friendship of Thomas Jefferson for France brought about a change of policy that contributed materially to the temporary victory of the French. Domestic politics and the international situation governed the policy of the United States, just as they today determine the policy of Great Britain and of France. Evidence of this may be seen in the postponing of the embargo on oil to Italy. This postponement was probably due to the establishment by the Japanese of the "autonomous" state of North China. France and Great Britain realize that if war were to ensue between them and Italy the Japanese would surely set up another "autonomous" state that would cover at least the territory down to the Yangtse. Events in North China (and in Egypt) may well determine the fate of Ethiopia, just as events in the United States determined the fate of Toussaint. The murder of a Japanese soldier in Asia may easily result in Italy's continuing to receive enough oil to permit her to "civilize" more thousands of dead Ethiopians.

Haile Selassie should remember, then, the famous words of Wendell Phillips, who attributed Toussaint's downfall to the fact that "he had faith in the white man's word." But Mossolini might also read that portion of Napoleon's writings in which he said : "The expedition against Saint Domingue was the greatest mistake of my life. I should have come to terms with the black chiefs."

Re-allocation of Raw Materials and Markets

The *World Events* publishes the opinions of different authorities on the question of re-allocation of raw materials which has been suggested as a means of removing the causes of war :

The question is, what sort of re-allocation? It is well known that Mr. Lansbury has never been an imperialist, and has always envisaged any redistribution of economic privilege among the nations as based on satisfaction for native colonial peoples. With Mr. Hoare and the usual proponents of this step, there is less reason to be sure.

Dr. Ulrich Noak, of the University of Frankfurt, a specialist in this field, has been urging a peaceful settlement of the colonial issue. But how? By changes that would give the six colonial powers of Europe "an assured future and frictionless solidarity!" What happens to the natives who really own the properties to be distributed?

Another view of the question is that the need of raw materials is not at all related to the demands, say, of Italy, Japan, or Germany. Sir Norman Angell, his eyes glued increasingly on the legal aspects of peace, has asserted that "The bad economic conditions of peoples has very little relation . . . . to lack of necessary raw materials." Mr. P. C. Loftus, a member of Parliament, takes issue with Sir Norman as follows : "Japan in my own lifetime has increased its population from under thirty million to over sixty-five million (the mainland only), and it is now increasing at the rate of nearly a million a year. It has to import (if its population is not to starve) all its wool, cotton, potash, phosphates, nickel, tin, lead and rubber, nearly all its petroleum and a large part of many other essential raw materials . . . . To import increasingly it has to export increasingly, but the nations of the world are combining to limit its export trade. It has an area a little bigger than that of France, but less than one-sixth of the area is suitable for agriculture. Therefore, if it is not allowed to export, it must face starvation or be prepared to fight for territory containing supplies of necessary raw materials."

Mr. Francis Williams, financial editor of the *London Daily Herald*, suggests that there are some reasons to hope that even without any fundamental changes in the economic order, the nations may be induced to act a little less savagely in adjusting their needs and privileges; he cites the international rubber scheme, based on an agreement among the governments of France, the United Kingdom, India, the Netherlands, and Siam; and also the international tin regulation compact. But he adds : "While an inquiry into colonial raw materials might make an excellent approach to the whole problem of international control of such supplies, it can only be regarded as an approach, and not as a solution. Eventually, if we are to remove the struggle for materials as a cause of war, something on a much bigger scale, covering international control of the raw material resources of the whole world, is desirable."

"Although international ownership of essential raw materials," he continues, "is, I believe, the only final and logical solution of this difficulty, it is hardly conceivable that a government which is in the main opposed to public ownership and which is concerned to maintain the system of private ownership for private profit, would go as far as that."

Hitler's New Religion

In the course of an illuminating paper on the decline of the Catholic Church in Germany, contributed to *The Catholic World,* Adolf Schuckelgruber observes :

Hitler knows that men will always need something to adore. Like Mohammed he declares a new religion and makes himself its Savior and Prophet.

This new religion is thoroughly secularized : "God" is Germany, the eternal and superior race. This Diety has approved of the new revelation through a visible blessings on all that Hitler has undertaken, especially in his wonderful, nay miraculous accession to supreme power. "God is with us," says Hitler, and a thousand voices throughout Germany repeat "and he has helped us." "My prophecies have always come true," he trumpets on another occasion. "Communists, Socialists, Catholics and Steelhelmets have all been smashed to pieces after failure. Where are their Gods?" It is the old cry of the Saxons who submitted to Christ, because He overthrew their heathen gods. It is the Jewish philosophy which looks on success and wealth as proofs of election. Germany is God, God is Germany, Hitler is prophet. All German history before Hitler has been a blind errand and a sad dream; the light has come through him.

Is there any doubt that there is no more place for Christ in Germany than in Islam ?

National Socialism is the only faith of new Germany and it comprehends everything. You musn't say "How do you do," or "Good-by," but "Heil Hitler!" You musn't shake hands, but lift up your right arm. You have to think what Hitler thinks and believe what he wants you to believe. Germany is apparently one big mass of workers with the same tastes and the same inclinations, uniformly dressed and uniformly behaved.

The press has already been suppressed. The theater and wireless will gradually follow. Literature is being organized according to the same principles of mass production and with the same slogans used in Russia.

There is no room for special beliefs and individual or group philosophies. Nazidom is the atmosphere which penetrates and permeates everything.

The aim is clear : there shall be no God than the one which is Germany.

Mussolini : Then and Now

The Royal Italian Army invaded Tripoli in 1911 with no more justification than Mussolini had for invading Ethiopia in 1935. The Tripolitan war was opposed by many distinguished Italians, *The New Republic* reproduces a speech then made before a group of Italian working men:

Women, mothers, this is your duty—lie down on the rails and don't let the trains carry your sons to the imperialist massacre!

Have we not misery and slavery enough in our own country? Have we not enough people who do not know how to read or to write? Have we not people starving at home and in the streets?

How can we civilize other peoples? You know that the capitalist government does not care for your welfare.

Thousands of our working-class lives must be sacrificed to the imperialist ambitions of the exploiting class. That is their patriotism!

These words were spoken by a Socialist named Benito Juarez Mussolini. They were taken by his old friend Angelica Balabanov, and were in a recent issue of the People's Press, of Chicago, recommend them to the attention of Il Duce, he has forgotten what he said in 1911.

The Press in Germany

The Living Age relates certain ordinary facts about the condition of the in Germany under Hitler, selected from actual instructions that the Propaganda Ministry hands out to the German papers:

On the 65th birthday of Berta Krupp's husband press was told 'to comment favorably on the man work, and his firm.' The Ethiopian affair has called especially delicate treatment—'*There must be no on Italy* (Italics in original) . . . . The importance League of Nations can be dealt with in a cautious . . . . The way in which the French newspapers writing may be commented upon with gentle irony.' then such curious items as this: 'The report death of the Fuhrer's uncle must not be circu In the light of these restrictions it is hardly surp that the circulation, as well as the number, of the G papers has fallen by leaps and bounds. Between 1933, and March, 1935, the number of newspapers periodicals published in Germany declined from to 8,700, and, since 2,000 of the present crop orig in the past two years, this means that some 4,600 ceased to exist since Hitler's arrival. The numb periodicals sent through the mails each year has d from 1,800,000,000 in 1933 to 1,400,000,000 in Foreign sales of German publications have declin per cent, but the sale of foreign publications in Ge has increased even in the face of prohibitions, se and delays. And of the forty-four really big Ge dailies published in 1933 eleven have gone out existence.

A Soviet Prison

The same journal publishes a Fr journalist's description, quoted below in part a 'Russian Labour commune,' where thousand habitual criminals live, work, manage the whole community:

In Arkadi Ivanovich's office I watched the ar of a newcomer. He was dirty, unshaven, and ra From under his red eyelids, unadorned by a single lash, two black eyes starred at the secretary defiant. '. . . . What are you going to do with him' asked the secretary when he returned to his office.

'Maxim will live with him several days or s weeks, if necessary. He will listen to his rebe talk, will calm him, will show him the commune will explain its rules. He will take him to me and will never leave him alone except during wo hours . . . . For tomorrow he will begin working.'

'But what can he do?'

'Nothing. He will be employed as a common lab But everything here will induce him to specialize become an expert. Just think, a skilled laborer from 300 to 350 rubles a month, whereas an unsk laborer gets only 70; that is to say, just enough to his rent and food.'

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

I expressed my surprise: 'But how can he become specialized worker?'

Arkadi Ivanovich explained, 'The wordshops are open from nine in the morning till four in the afternoon. The rest of the time, a man can attend special courses, given by professors who will teach him the technique of his new trade. Sometimes comrades of ours are sent to Moscow to attend schools of higher learning and obtain their degrees as engineers.'

On that day I asked the secretary a question that had long bothered me: 'I can hardly imagine that among the thousands of men brought into the commune during the past years all have become acclimatized and none has ever tried to escape?'

Arkadi smiled. 'Of course the call of the wild is irresistible to some,' he said.

'And what "sanctions" do you use in such a case?'

'We have only one at our disposal—perpetual exclusion from our communes. You who know what their living conditions are and what awaits them outside will not be surprised to learn that the percentage of escapes is practically non-existent . . . .'

I asked him once more, 'On the other hand, have you, the older ones, and those who have changed the most been able to change your civil status?'

Arkadi arose, opened a file, and showed me a long list of names. 'Here are those who have been reinstated as citizens. They have been able to leave Bolshevo and begin again a free existence in the Soviet Union, with the same rights and privileges that they would enjoy if they had never been convicted.'

'But . . . .'

'Except those who had families, all myself included, have asked to be allowed to remain in the commune, for here we have found a reason for living. a reason for being happy and proud of ourselves.'

Proud Ethiopia

Victor G. Heiser, who had been to Ethiopia on a medical mission, relates in *Asia* the story of an interesting interview with the Emperor of Ethiopia:

In my enthusiasm I was led to remark somewhat jocularly on the backward condition of Ethiopia. The Emperor bore with me in gentlemanly fortitude, then inquired politely, "You are an American, are you not?"

"Yes," I admitted, somewhat puzzled as to the object of his query.

"How many unemployed have you in the United States?"

"About twelve millions, I should imagine."

"Well," he continued blandly, "my government has been in continuous existence for over five thousand years. We have no unemployment; we have never had any. We have no starving. All my people have homes to live in. They have clothes to wear. They are happy."

I could think of no answer. I have not yet been able to think of one.

The Coming of War

The *Unity* makes an illuminating extract on the Coming of War from Mark Twain, the one hundredth anniversary of whose birth was observed last year:

There has never been a just war, never an honorable one—on the part of the instigator of the war. I can see a million years ahead, and this rule will never change in so many as half a dozen instances. The loud little handful, as usual, will shout for war. The pulpit will—warily and cautiously—object—at first. The great, big, dull bulk of the nation will rub its sleepy eyes and try to make out why there should be a war, and will say, earnestly and indignantly, "It is unjust and dishonourable, and there is no necessary for it." Then the handful will shout louder. A few fair men on the other side will argue and reason against the war with speech and pen, and at first will have a hearing and be applauded, but it will not last long. Those others will outshout them, and presently the anti-war audiences will thin out and lose popularity. Before long you will see this curious thing—the speakers stoned from the platform and free speech strangled by hordes of furious men who in their secret hearts are still at one with those stoned speakers, as earlier, but do not dare say so. And now the whole nation, pulpit and all, will take up the war cry, and shout itself hoarse, and mob any honest man who ventures to open his mouth, and presently such mouths will cease to open. Next the statesmen will invent cheap lies, putting the blame on the nation that is being attacked, and every man will be glad of those conscience-shooting falsities, and will diligently study them, and refuse to examine any refutations of them, and thus he will by and by convince himself that the war is just, and will thank God for the better sleep he enjoys after this process of grotesque self-deception.

Mark Twain

The same journal makes the following observations on the claims of Mark Twain as a writer and as a man:

There was a time, not so long ago, when it seemed as though this great writer were passing under a cloud. Van Wyck Brooks, in his *The Ordeal of Mark Twain*, led a movement of thought that Mark Twain was a victim of repressions and complexes, and thus a frustrated genius. Later researches have shown that this idea was largely moonshine, with the result that a literary planet of the first magnitude is restored to its native and pristine glory. What we see today is that Mark Twain ranks with Ralph Waldo Emerson, Henry David Thoreau, and Walt Whitman as one of the supreme cultural geniuses of our American life. His easy and frequently parochial humor has tended to obscure or distort his essential claims to recognition as a writer of the first order of importance. Strange how we think of humor, though associated with such names at those of Shakespeare, Cervantes and Rabelais, as something of basic inferiority! What Mark Twain did was to contribute at least three or four books to the world's great treasure of immortal literature. What American can rival him in this gift? But Mark Twain was more than an author—he was a prophet as well. Never a pessimist, least of all a cynic, he despised injustice, cruelty, oppression, especially the ignoble hypocrisies in which these iniquities are so often disguised, and he blasted them with a scorn which swept the social horizon like a blast of lightning. If Mark Twain appeared at times to be bitter, if he indulged himself on occasion in black prophecies of man's future if he voiced now and then despair and even hate, it was because he had a sense of righteousness which was outraged by the world's spectacle of shame and sham. But his heart was ever touched with pity, and his memory sits in judgment on our times.

The Worship of Isolation

In the course of a paper entitled "Shall America Worship Isolation," contributed to *The Christian Register*, Robert McElroy observes :

The most dangerous life today is that which worships isolation. There has been a strange shifting of the worship of isolation and self-sufficiency, within the memory of living man. Not only in America, but in every land, there are men who are sacrificing common peace, common prosperity, to the idol, isolation. They are intent upon securing separate advantages. They are securing collective defeat. But tariff walls—Chinese in exclusiveness!—every nation is now seeking to hold its own markets, while persistently insisting on its right to enter those of other nations. As a result, they have brought ruin, poverty and misery upon all mankind. When prosperity can lie only in international prosperity, nations dream of only national prosperity; and as the result, not of fate but of bad leadership, international trade is stifled by higher and ever higher tariff walls.

What is the solution? The American statesman of the greatest proved wisdom, Elihu Root, offers this: "The indispensable prerequisite of a lasting peace is the creation of an international mind." Confucius, long ago, anticipated him with the words, "I seek unity all pervasive." If that be true (and I personally believe it to be absolutely true), every educated man and woman, in every land, who is seeking a way out of our vast bog of despair, owes this much at least to the hope of future peace, a vow to think of every question in the largest possible terms. The international mind, when it comes, will not destroy patriotism. It will only glorify it. It will not even commit us to the decapitation of the inoffensive among our national idols, but only to the policy of not seeking to decapitate those of other nations. It is not the mind of submission, but of co-operation, of human sympathy. Without it, we must fight forever, and in the end, if forever can end, have all of our problems left. With it, we may hope to live our lives in peace, and look upon her neighbors as friends, even though they may be friends of a different faith.

A Poetess of Modern Bengal

C. F. Andrews, writing on the poetry of Toru Dutt in the pages of the *Eastern Affairs*, observes :

Sir Richard Jebb, in a famous lecture on Mediæval Europe, uses these words concerning the Renaissance which followed the Middle Ages:—

"The new spirit of the Renaissance differed in two respects from any which the Middle Ages could show. In the first place, excellence of literary form became a direct object of study. The second difference was still more important. Greek and Latin literature were welcomed as disclosing a new conception of life."

If we were to substitute the words 'English literature' for 'Greek and Latin literature' we should have a picture of what happened last century in Bengal when that remarkable Renaissance took place in Bengali literature which made the poetry and prose of Bengal among the richest and noblest in the East. While there was a revolt against English manners and customs, there was a passionate attraction towards Shelley and Keats and the poets of the Revolution. It is noticeable that this appreciation of the 'Poetry of Liberty' of the West was found first of all in Bengal amo countries of the East. Long before China and were attracted by the 'new learning' Bengal wa awake.

One of the most delicate flowers of this Renaissance was a woman, Toru Dutt, who only for a short time and died of tuberculosis while quite young. She might be called the young Ly the Movement, 'dead ere her prime.' If she had she might have reached the highest fame amo great immortals of world literature.

Chinese Art

The International Exhibition of Ch Art now on at the Burlington House, Lo has renewed popular interest in China's ar heritage. Laurence Binyon, who has int tional reputation as an authority on Far Ea Art, writes in the *Asia*:

Painting in China is considered as a branch of writing. The Chinese characters are written with a and to write them well requires a trained mastery as few European painters possess.

Chinese ink is a wonderful substance, capab giving an infinite range of tones from the deepest bla black to faint and silvery gray. The subject of a pi may be merely a bamboo growing on a rock; to our that seems a slight and insignificant motive, but it so to the Chinese. Each painting partakes of the of handwriting : and the close affinity of these two must be grasped, if we are to appreciate Chinese pai to the full. Silk is absorbent, and the strokes mus laid on therefore with swiftness and with complete tainty. The artist must have his picture all in his before he takes up his brush. What the Chinese to feel in a painting, as in a piece of calligraphy, i immediate touch of the brush, so that something of painter's personality is communicated to us directly.

A subject which was painted over and over agai a traditional motive, that of "the Moon over Ri Waves"—illustrates another aspect of Chinese art. western painter, if he took such a subject, w endeavor to give us the actual aspect of the scene, glitter of the crests of dark water, the shadowy hori The Chinese painter does not care so much about external appearance of things as about their esse character; and, in painting the sea, it is the move of the water which he attempts above all else to co nicate to the spectator, the rhythm by which the w are created. He uses a convention of sinuous lines w does not correspond with the visual appearance of w but which emphasizes the continuity and the rhythm their movement.

This is in accordance with Chinese theory. As e as the sixth century a painter who was also a c formulated six canons or standards by which a work art should be judged. The highest excellence was inspiration which confers life. It was recognized the movement of life, when not obstructed by circ stances, is rhythmical. And the true work of art sh embody this ideal rhythm of life.

A profound sense for nature has from time im morial distinguished the Chinese race. I mean not a delight in the pleasant aspects of nature, as they a to the wants or the admiration of men, but that sympathy which can identify itself with the life of th in nature and value non-human existence for its sake. Thus certain early emperor of China ord

ic to be played to the young flowers as they unfolded
is garden.

In the British Museum is a painting which could have a simpler, homelier motive. It is just two geese. ere does this picture get its nobility, its grandeur? artifice is used to heighten the subject. Nothing d be more natural. But what is in a man goes into d he does. Unconsciously the painter reveals to us mind, his manner of looking at the world and life. feel that he has an innate reverence for life, even the life of these geese. It is as if he saw all nature them. Now, if you want to understand the minds of se Sung artists, you can approach it through the poetry Wordsworth. You may be surprised. But in the poems d sayings of Chinese Taoists you will find constant rallels, almost the same turn of phrase.

As Chinese art matured, it gradually invented a tem of spacing which was quite new in the art of the rld. In European art the idea of symmetry has been starting point for composition and decoration. It ives no doubt from the symmetry of the human body. ly Buddhist are based its compositions on symmetry. the Sung genius substituted the principle of balance: as a tree is not symmetrical but is perfect in its poise. d in a picture a small mass of strong tones is balanced a large space of emptiness. It is the unsymmetrical, incomplete, the imperfect, which is insisted on. For, ording to Lao-tzu, completion means the end of growth d therefore death.

Philippine Independence

The inauguration of Manuel Quezon as the st president of the Philippine Commonwealth arks the first step on the road to complete dependence. But the economic consequences this independence, however, have been almost st sight of. How are the Philippine people ing to make a living when cut off from the merican market? *The New Republic* itorially discusses this question:

The three great industries that dominate Philip- e economic life—sugar, coconuts and abaca (Manila mp)—all function as feeders for American factories. great has been the concentration on export crops that Islands are not even self-sufficient in food supply, t must import considerable quantities of grain, meat, getables, dairy products, etc. As for manufactured ticles, it has been cheaper to buy them abroad than make them at home, and protection of infant industries s of course been out of the question. The proceeds the export trade have been used to purchase food d manufactures which the Islands were not equipped to oduce for themselves.

Foreign trade is therefore not a profitable sideline t a vital necessity. And 75 per cent of it—amount- g in normal times to about $200,000,000 a year—is rried on with United States. The economic provisions the Tydings-McDuffie act, by threatening the existence this trade, destroy the rock upon which, through no oice of their own, the economic life of the Filipinos s been built.

The act provides for a transitional system of merican quotas and Philippine export taxes, the pro- eeds of which, incidentally, must be used for retire- ent of the present Philippine public debt, thus protect- g the interests of American bondholders. In 1945 e Philippines will become a foreign country and their products must pay the full duties.

The Filipinos are quite aware of the high price placed upon independence, and their willingness to pay it, if they must, is indicative of the valuation which they set upon this precious commodity. Nevertheless, a vigorous campaign is being carried on for modification of the terms of the Tydings-McDuffie act through establishment of a system of reciprocal tariff concessions by agreement between the United States and Philippine governments.

Failing drastic modification of the independence act, the Philippines are faced with the necessity of recasting their entire economic life under what promise to be highly unfavorable conditions. Already the possibilities of alternative crops and establishment of domestic industries are being intensively explored. If these changes are wisely administered the long-run result may be a sounder and better balanced national economy. But the price will be a long period of excessively painful readjustment.

The League Sanctions

John C. deWilde, observes in the *Foreign Policy Reports*:

Economic sanctions might be much more effective if they were preventive; that is, if they were imposed before, rather than after, the beginning of hostilities. Under the Covenant, League members are obliged to take action only after a state has gone to war in violation of its undertakings. Thus Italy could deliberately and openly prepare its campaign against Ethiopia without danger of restraint by the League. Yet the Covenant does confer on the League the power—although not the obligation—to take preventive measures. If there is a threat of war, the League is authorized by Article XI to "take any action that may be deemed wise and effectual to safeguard the peace of nations." Since last April, when the Council considered Germany's repudiation of the disarmament provisions of the Versailles Treaty, a League committee has been studying what measures might be taken under Article XI against a power threatening to break the peace.

The doubtful effectiveness of economic measures directed against an aggressor has produced many schemes to implement these sanctions by military action. They have taken the form of proposals for a League army or police, and of bilateral and multilateral treaties of mutual assistance. It must be admitted, however, that many obstacles must be surmounted before an international army can become a reality. Probably the only practicable way in which military action can be undertaken against an aggressor is by means of bilateral pacts of mutual assistance such as the Franco-Soviet Treaty of May 2, 1935, or regional multilateral engagements like the organic statute of the Little Entente concluded on February 16, 1933 and the Locarno Treaty of Mutual Guarantee of October 16, 1925. Of these, the bilateral treaties have been considered most objectionable, for even though subordinated to the League Covenant, they tend to develop into alliances of the pre-war type. The multilateral pacts should, as far as possible, not be directed against any particular state outside the group of signatories, but provide the means by which all states within a given region of the world can enter into specific obligations to lend each other assistance in case of attack, no matter from what quarter. Article XVI would thus be strengthened if universal military sanctions of doubtful practicability were replaced by joint action on the part of states definitely interested in preserving security in the area or region of the globe affected by aggression.

INDIAN PERIODICALS

The Rice We Eat

Rabindranath Tagore takes strong exception to the spirit of apathy we show towards the selection of our food. The adoption of polished, in place of *dhenki*-hulled rice, for our daily meals, has resulted in Bengal, he points out in the *Visva-bharati News*, in a serious impairment of our national health:

When a people's diet takes a vicious path of its own improverishment, it causes a graver mischief than any act of cruelty inflicted by an alien power. Such has unfortunately been the case in our province. Rice has been our staple food from which we have for generations received a great part of our health, strength, energy and intelligence. But curiously enough, especially among the upper class of our community, a fatal epidemic of foolishness has become prevalent which allows this principal foodstuff of ours to be depleted of its precious nourishing element. Rice mills are menacingly spreading fast extending throughout the province an unholy alliance with malaria and other flag-bearers of death robbing the whole people of its vitality through a constant weakening of its nourishment. We not only boil away an essential amount of nutrition from our daily ration of rice but also use elaborate machinery to polish off its skin which contains its most vital gift. This is a self-imposed form of famine deliberately welcomed by a people who had already been suffering from the scarcity of milk and that of ghee of a non-poisonous kind. One of the consequent diseases in the form of beri-beri has specially chosen its victims from the Bengalis, who still remain indifferent to its lesson. There had been, I am told, some proposal to check the progress of this fatal evil through the intervention of legislature. I am glad that it failed, for the people must not be treated like eternal babies carefully protected by its appointed nurses from its own utter silliness. It is only for ourselves to exercise our intelligence for choosing our food which must be wholesome and sustaining. It is for the people themselves to realize that in the long run it is not cheaper to substitute the callous force of machinery for the indigenous rice-huller, oil press and grindstone for crushing the wheat. Physical vigour born of healthy meals is valuable, not only for itself but for its power of enhancing one's earning capacity. Then again, we have to take into account the immense importance of our rural economic life whose course has been cruelly obstructed by the iron monster rubbing our village women of some of their natural means of livelihood and the labouring class of its right to gather its simple living out of the gleanings from the people's own green field of life. It has gone on for long, this tampering with the time-honoured irrigation of living, in this country causing large desert tracks of privation in our villages. Would it be too much to expect a body of volunteers in Bengal to form a league whose members should take a solemn vow to use *dhenki*-hulled rice for their meals not allowing it nourishment to be stupidly thrown away by wasteful cooking? Could they not realize that it is the perpetuation of a national calamity to which most of us helping by instituting in our homes an insidious of suicide?

—

The Bengal Agricultural Debtors Bill and After

In an article in the *Landholders'* Satis Chandra Ray Chowdhury, a mem the Legislative Council, criticizes the p of the Bengal Agricultural Debtors Bil has recently been pased into an Act, an measure of its likely effect on the well-b the people. He says:

The first principle that the measure has in in the field of legislation in this country is that fectly legitimate to repudiate all obligations based existing laws on the ground of expediency to pu particular class. This principle, it is feared, wi force as it goes on working till the national mind pletely purged of all traditional ideas and belief can say that this will be an unmixed evil?

The second glaring feature which also runs c the traditional ideas and faiths, is that the God Justice must henceforth cease to sit in her fortified temple hidebound by rules and procedu will now walk abroad unfettered and unhampe smiling on one and now frowning on another pleases dispensing the same kind of justice as h immortalized in the trial of the unfortunate Queen Antoinette by Judge Hermann and on the same evidence. It is idle to expect that Government judicious in the selection of the Board to be c with the working of this odious measure so that working it may become less harmful and less than it appears. No safeguards have been provi that in the Act.

The next noteworthy feature of the measure will make any honest debtor shudder and will make for his ultimate ruin is that any attempt part to bring the provisions of the Act into op in his favour will result in his having to face creditors all at once with the possibility of a ban at the end of the process. Such a composition creditors might be feasible and successful only Government were prepared through some agen advance long-term loans to liquidate all existing But such an obligation the Government is not p to shoulder.

—

Educational Re-construction

In speaking of educational re-constr Syama Prasad Mookerjee, Vice-Chancell the Calcutta University, makes the follo observations in *The Calcutta Review*:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Suggestions are now and again put forth to limit missions to Universities, either directly or indirectly, only with a view to alleviating the increasingly distress-ing problem of unemployment. While as I have said, it is the duty of the State and the people to explore new venues which could absorb our trained young men, I must affirm that it is a retrograde measure to seek to solve the problem by reducing the number of educated men. We must not forget that percentage of University-trained men in our country in relation to our population is deplorably lower than in other civilized lands, and any attempt to reduce still further even this small number will bring about national deterioration. Crude and mediaeval standards of life yet prevail in most villages and in many towns and call for immediate redress at the hands of trained and skilled workers. With the development of electric power, broadcasting, cinema, to mention only a few, scientifically trained men can, with the help of the State, make themselves eminently useful to society. Cultural and political awakening due to the influence of Universities still calls for their services. Educational institutions must not regard themselves as factories for the production of clerks and subordinate officers but they have also to supply the country with the leadership and skill in different branches of activity, economic, commercial and industrial; municipal, provincial and national. India stands in urgent need of University men, animated with the ideals of service, imagination, courage, catholicity of outlook and resilience of nature.

There can be no question of reducing the existing educational facilities on the plea that re-orientation of education is vitally necessary. We do not believe that the present number of schools and colleges is too large for the requirements of the country. Those who urge their reduction on the ground that the education imparted by them is defective, must, in the first instance, secure the foundation of a sufficient number of institutions where the right type of training will be provided for the children of the soil. The schools and colleges of today may be enabled to adapt themselves gradually to the altered demands of the educational reformers. The situation becomes extremely dangerous when a reduction in their number is advocated on the plea of educational reform. Let us not follow the path of destruction so easy of access until the materials for reconstruction and expansion are generously made available to us.

Origins of Indian Culture

It was due to Lord Curzon that excavation was recognized as one of the obligations of the Government when the Archaeological Department was established in 1902. But no Indian monuments worth the name of pre-Asokan period had been discovered upto 1923. The belief that Indian culture was of European or Greek origin, was long cherished by many European scholars. The belief is reflected in the earlier editions of Vincent Smith's "Ancient India" which began with an account of Alexander's invasion. *Science and Culture* has the following in its January issue:

About the beginning of the nineteenth century the most divergent ideas prevailed regarding the origin of Indian culture. The Hindus believed their civilization to be of immense antiquity, as a matter of fact, started by Grand-father Brahma himself, and they ascribed their successive misfortune to be due to their deflection from the principles of Dharma: on the other hand, the Europeans believed Indian culture to be comparatively modern. Some scholars even thought that Sanskrit was an invention of the wily Brahmins and their epics were pale imitations of those of the Greeks and the Romans. They thought that Hindu religious ideas were derived from the Bible and science including medicine and astronomy to be derived from that of the Greek conquerors. But it is well known that a hundred years' patient work started by the Asiatic Society of Bengal and financed by the Government of India has thrown a flood of light on the past of India, and has mostly disproved the old theories of the origin of culture, Indian as well as European. Large forgotten monuments and inscriptions were discovered, and in the seventies of the last century Sir Alexander Cunninghum gave a preliminary description of the former sites of civilization and of the monuments contained in them. The Brahmi script was deciphered by Prinsep and gradually the glorious story of the Buddhistic civilization which had once spread over the whole of Asia and which Hindu India had done its best to forget was recovered. But this civilization, glorious as it was, was all posterior to Alexander's invasion of India. Hence it did not dispel the European belief that the origins of the Indian culture were to be traced to Greek influence.

We are specially indebted to Sir John Marshall for the excellent opportunity which he gave to his colleagues for the "probing of archaic mounds and the excavation of old Indian sites." Harappa was excavated by Rai Bahadur Dayaram Sahni in 1921, and Mohenjo-daro in 1923 by the late Mr. R. D. Banerjee who (Mr. Banerjee) at once recognized, in the seals and objects recovered there, something very different from the remains of Buddhistic India, and had no hesitation in calling the site as 'Indo-Sumerian.' Attention of the archaeologists to the seals and objects discovered at these two sites was called by Sir John Marshall himself in the *Illustrated London News* of the 20th Sept., 1924, and the whole world of archaeologists were roused to the sense that after all many surprises still awaited them under the soil in India. The discovery had a great moral effect inasmuch as it gave the final death blow to the belief cherished by many European savants that Indian culture was of "Hellenic origin." It confirmed the belief of the Indians that their beloved land was after all proved to be one of the "earliest cradles of human civilization."

The Conflict of Cultures

Culture is an expression of the soul of a nation. Different types of culture and systems of civilizations are bound to clash. But a new or an alien civilization, writes Swami Ghanananda in *The Vedanta Kesari*, cannot seriously affect the original culture, of a nation or country, which has struck its roots deep into the soil:

The forms and setting through which a system of culture expresses itself vary. Such variation is seen more in the arts and poetry which are its typical products. Taking music, for example, we find that the Indian music and the music of Wagner differ so much that the songs of one school have no charm for the followers of the other, but both are expressions of the cultural soul of their respective nations. If the genius of a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

language is something which inheres in it and does not lend itself to translation, the genius of a culture is still more inexpressible. Variety is the law of nature and the diversity of the several types of cultures and civilizations, is as inexplicable as the diversity of natural life, of fauna and flora. But behind all this natural diversity a grand unity and commonness of purpose is discernible. All great systems of civilizations contribute to the pleasures and amenities of life, and all great cultures conduce to its refinement. The one improves the objective world and makes nature subservient to man who derives both profits and pleasure from a mastery of her secrets; the other chastens the mind and purifies the soul. They both reflect the yearnings and aspirations of men, their struggles and successes in the march of life.

Culture is like food which we consume not merely for its nutritive value, but also for its agreeability. A system of culture suits the race that has evolved it more than any other, and the forms of its expressions like poetry, music, and other arts appeal less to other races, if at all. It prepares the environments in which the minds of the men belonging to it are able to grow and blossom with ease and vigour. When a person belonging to one type of culture by birth and tradition is under the environments of another system of culture, he shares the fate of the tree that is transplanted from an alien soil and an alien climate. That is why a foreign system of education and culture like the English system is unsuited to a country like India possessing a highly evolved culture from time immemorial. Genius flowers best on its native soil.

Congress : A Retrospect and A Prospect

In a retrospect and a prospect in respect of the evolution of the Congress, Prof. Bhagat Ram Kumar observes in *The Hindustan Review:*

A little thought shows that the radical disease in the body-politic which is at the root of all our ills today is the growing sectarianism of the Congress during the last 15 years or so.

But not only has the Congress suffered as the result of its growing sectarianism: the nation has suffered even more. The Congress was the only factor of co-ordination in our national life. It has aroused the classes, the masses, and the various interests making up the nation. It had aroused the Muslims, the Hindus, the Sikhs, the zamindar, the peasant, the town-dweller and the village-dweller. It had given birth to new aspirations, new longing and new hopes.

If the root-cause of all our ills today can be traced to the sectarian character of the Congress—is it too much to hope that wisdom may yet prevail and that false steps may yet be retraced. The greatness of individuals is judged by the willingness with which they acknowledge mistakes and retrace their actions. In that respect Mahatma Gandhi has never lacked in greatness. And if there is one man more than another who is responsible for the growing sectarianism of the Congress it is he. It is under his guidance that the Congress has been changing its objectives and policies, and methods of work. He sees the results of his policy today on all hands. Is it too much to hope that he may render the country the greatest service of his life by restoring to the Congress its national character to enable it once more to take its place as the leader of India in its efforts at regeneration?

What is needed to be done is merely to free the Congress from being associated with any one party or policy.

Is Congress a Political Party?

C. Rajagopalachar, the well-known C leader, discusses, within a short compa above question in some of its aspects *Indian Review*. He concludes:

The Congress is not one of many politic Every political party in India that works for the interest of this or that group, community community, looks upon the Congress as its opponent, and wishes it were more comp Congress is a "Party" opposed to all parties. soul within the living body, there is a soul for which looks upon the separate aims of groups munities in the nature of fatal temptations of Congress is the functioning of that nation-soul. us hope the Golden Jubilee was a yoga of that occasion for the nation to contemplate its own purity and divine purpose, and rise above the fle

---

The Problem before the Congres

An Inquirer in an article in *The Tw Century* discusses the trend of the Co movement and puts in a plea for the re-o tion of its policy:

Now, as the recent history of the Congr nothing but the story of Mahatma Gandhi, e temporary retirement has become a problem to its and their hope lay in the possibility of his re active politics. While the failure of the Congr in its indefinite attitude towards its own ideal, the of Mahatma Gandhi lies in his attempts to imp own personal ideals on the members of the Congr such a desire of his is to be fulfilled, most of the workers in it would be forced to walk out and it be fast converted into an ashram of limited ac It would cease to represent the country. But such will not happen. It may be possible for the Cong win freedom through strict adherence to the prin non-violence but it is a mere dream to suppose t its members would become equally religious-mind evolve such faith in the doctrine of Ahimsa and U Love. The only possible regulation in this affair be to allow the members to have their own faiths members of the Congress and as representatives people of a nation, they should adhere to the p of non-violence. Faith is a thing which belongs heart and heart is the last thing that will yield exigencies of time. One has a right to try to inspi others the same faith which has grown strong dear heart but others have got an equal right to to follow it. Who does not love to be free in matters?

The Congress should therefore lay more emph the principles which its own collective mind should than on those which its individual members shoul milate. It should describe its own ideology in terms and organize the country on that basis. As as its organization does not include the masses, as as it fails to create a new haven, a brighter fut their hearts, so long it fails to conduct a mass mov For this purpose it is not enough if it awakens in political consciousness but it is social consciousness must be evoked. The Congress should bring in march towards freedom all the members of the which it claims to represent and place before th ideal and a programme which their brains can stand and hearts would not refuse.

The Problems that Challenge Thought

Why should a handful be happy and prosperous, reaping what they sow not? Why should the vast majority be born to suffer till death, reaping not what they sow? Why should genius pine and disdainful wealth rule the earth? According to Sampurnanand these are the problems that challenge thought today. In an article in *The New Call* he grapples with them in the socialist way:

Of the three ways in which these and allied problems may be faced, the third one is the way which the Socialist has chosen for himself. He is as keenly alive as are the others to the forces of evil which seem to have mastery here. He cannot turn his back on the fight; nor, on the other hand, can he counsel consolation, in the hope of a Hereafter. There may or may not be a hereafter, but he is not immediately concerned with it. His domain is the Here and the Now and he is certain that these can be altered. He believes that it is possible so to arrange the affairs of men that all can share in the good things of life, material, aesthetic and intellectual. He feels that the happiness of one man does not necessarily imply the unhappiness of another, much less of a group. And there is an inner urge within him to bring about that happy day. He is the preacher of discontent. The problem is old but he brings to its solution a new technique. As Marx once observed "philosophers have tried in various ways *to interpret* the world; the problem is *to change* it." The preacher of Religion also realises this but he makes an indirect attack on the problem, as it were. He tries to change the world subjectively by changing man's attitude towards it, not so the socialist. He also does effect a change in man's attitude, making it less egocentric, more catholic, but his familiarity lies in the fact that he believes that the world can be changed objectively and what is more, he sets about this business, without caring for the opinions of the timid and the wordly-wise. It will be bad future for the world, if he fails.

Wanted—Social Courage

In *The New Outlook* Shyam Kumari Nehru in an article under the above caption deals with the problem of the division of mankind into smaller communities, castes and sub-castes. She observes:

We are faced with the glaring problem that the society of the future is not going to be divided on the basis of caste, creed or religion. Divisions are natural among humanity—the world is too large to be without them—but the whole of humanity must in future be worked upon as one great family of beings. It is a new social and mental outlook that is needed. Petty reforms to popularise inter-caste marriages (restricting them strictly to the three upper classes of Hindus); or to tell the untouchables that they are also Hindus and to throw temples open to them to worship the same God; or to ask the Mahomedan groups to merge and to be truly Islamic; or to ask the Christians to be one in the name of Christ, will only lead us to another and a greater problem when the whole process of history will repeat itself to evolve a common nation out of these three great religions. Therefore, if there is to be a process of breaking these unnatural barriers between man and man in the name of caste, creed and religion, reformers realize that the process cannot stop midway—and society must be prepared for the ultimate merging of all castes, creeds and religions. Society must be founded on common principles and ideals, common education and economic adjustments. In such a social world there are bound to be individuals who will freely associate in life with each other despite different religious labels, and a society that closes its eyes to such a probability and treats those individuals as outcasts is only showing want of faith in its own ideals of progress. What we need therefore is a wider outlook, far more humane and rational than we possess at present.

Book Selection for Libraries

Book selection for Libraries is always a live topic as it forms one of the first duties of a librarian. In an article on the subject in *The Indian Library Journal*, K. Nagaraja Row, Librarian of the Annamalai University, refers to some of the leading principles in regard to the selection of books for libraries:

The Library has got to be so constituted as to meet the demands of its readers which demands may happen to be either expressed or unexpressed. It must have definite reference to the needs and desires of all its users just as a water-supply scheme of a city is laid for meeting the persistent demands of a locality or a neighbourhood. The Public Librarian must first plan out the volume of demand and assess it, have a standard for fixing the value of demand and by virtue of this standard evaluate the demand, find out the various varieties of demand and finally satisfy them to the best of his ability.

The standard for fixing the value of demand is stated by MacColvin as dependent upon the development of personality of the readers of the library. The chief aim and purpose of the public Librarian is to guard and take care of the intellectual life of his readers, try to develop in them their personality in its intellectual, moral, ethical and spiritual aspects so that the readers may gain from life maximum pleasure and happiness. This is the mission of a Public Librarian. So having this as the test, the books have to be given a value in proportion to the degree in which they will be able to promote the development of readers' personality.

Let us consider in detail the nature of demand. Demand for Library provision has been said to be "the sum total of services which a library can perform and the volume of demand emphasises the extent of this service." Demands again are both expressed and unexpressed. Expressed demands comprise all requests for library services which may or may not be provided for and (2) the use which is made of existing provision.

The Public Librarian having assessed the demand, must take these steps to the expression of demand. (1) Readers must be encouraged to state what exactly they desire. It is often found that a number of readers are too timid to seek the assistance of the staff. These must be encouraged to formulate their needs. (2) Suggestions from readers and users of the library have to be taken into account. (3) The public have to be asked for developments in any possible sphere. (4) And the Public Librarian has to cultivate the acquaintance of experts and men of standing in various branches of knowledge.

Sheep Breeding in Mysore

The following is an excerpt from an article on sheep breeding and sheep rearing in Mysore : Lieut. A. A. Monteiro writes in *The Journal of the Mysore Agricultural and Experimental Union* :

In point of climate, Mysore falls into two main divisions, the region of heavy rainfall known as the malnad, which is mountainous and hilly with a rainfall of about 70 to 300 inches, and maidan which is a less rugged country with a rainfall not exceeding 20 to 35 inches on the average. On account of climatic and ecological factors, and geographical conditions, sheep do not thrive in the malnad parts and are not reared there, but in all maidan parts sheep rearing is an important industry and is done on very haphazard lines, as they are chiefly prized for their manure.

In developing animal husbandry grading up is done by importing sires from foreign countries. The natural herbage which is able to support in health, slower growing native sheep that have evolved on this herbage, is too poor in constructive material to support more rapidly growing animals. The equilibrium between the grazing and the herbage is upset and the resulting mortality is really a natural process tending to the elimination of a type whose rate of growth inherited from the sire is greater than the herbage can support. The flocks of sheep owners possessing cross-bred progeny do not receive any special attention. It is the general law in nutrition that the faster the rate of growth of the animal, the richer must be the food in constructive material required for bone and tissue formation and any method of supplying the deficiencies could only be second best. To add to this, the poor pasture throughout the sheep-rearing tract is highly infested with parasites.

The breeding season in the State begins usually after the showers in April. The whole male stock of the village, whether of breeding age or not, move about throughout the year with the female stock. The facts that a breeding ewe has to maintain her body, grow her wool, provide for the growth and development of the unborn lamb and provide milk for its sustenance after birth, do not worry the sheep rearer in this country. Even a well-to-do landlord has not for his object the rearing of sheep for the production of a commercial commodity and to produce it in such a manner and of such quality and in such quantity that it will allow a reasonable profit over the expenses incurred in producing it.

The Material of Literature

It is always interesting to note what a great litterateur has to say of literature. The most eminent literary man of our time, Rabindra Nath Tagore, defines and describes literature in *The Visva-bharati Quarterly* in the following way:

Ideas that are worthy thus to become everlasting usually differ in many ways from those that serve our every-day needs. Corn gives us annual crops, but we want long-living trees, a different kind of seed to be sown. The seeking of such immortality through literature is an endeavour ever dear to man's heart in spite of the exhortations of our patriotic critics, the production of informative literature, in spite of complaints that novels, plays and poems are flooding the country, writers persist in writing for the expression of their emotions. For, while that which is useful to fulfil some present purpose, that which has no immediate use stands a better chance of permanent survival.

Thus literary expression is seen to be the body of an idea. On the success with which the idea is established in such body, depends the merit of the writer; the quality of its body depends the value of the idea; the extent and endurance of its life in men's minds. These things are necessarily dependent on their bodies, and cannot, like water, be poured from one to another. Idea and life exist together as one and indivisible, to their mutual embellishment.

The idea, the subject-matter, belongs to all. If it does not occur to one, it will, in time, occur to another. But its particular expression belongs to the writer alone. What this expression is in the case of one it cannot be in the case of another. So that the idea lives in his expression, not in the idea or subject that is embodied. A water-reservoir consists of both the earth embankment and the water contained. But the water is not provided by man, it is always there. The merit of the engineer, which is his own, is in keeping it permanently available for the use of man. Similarly a piece of literary work includes both the idea and the form of its expression, more especially the latter, which it is the glory of the writer to have provided as a means of making the former a joy for ever.

So we come to the conclusion that literature proper consists in the appropriation of an idea by the work of genius in such a way as to make it enjoyable by all. Carbon is everywhere, in earth, water and air; the plant by means of its intrinsic power, first incorporates it in itself, and thereupon makes it fit for use by others. So is it the function of literature, first to make special ideas that are general, and then by that very specialization to make them of universal significance and value.

If that be so, then that which belongs to the domain of pure knowledge is of itself excluded from literature proper. For the truths that are to be apprehended by our intellect fight shy of the personal factor,—they must be seen in the dry light of reason, independent of individual predilection. Gravitation cannot mean one thing to you and another to me; different minds and hearts must not be allowed to variegate it with the tincture of their own feelings. It is only those ideas which demand for their expression, colour and tone and suggestiveness from the artist,—which are unable to gain entry into other minds unless so re-created,—that are the material of literature. They can only live when giving a fitting body by language and form and rhythm. They are not discoveries, not copies, but creations. Once they find a body they cannot be transferred into other forms, or conditions of life. The whole of such embodied idea is dependent on each of its parts. To the extent that a written production does not create such body, it is not as literature.

NOTES

His Late Majesty King George V

By the death of His Majesty King George V the British Empire and the world have lost a great king, a great gentleman, and a great lover of world peace. Our heart goes out in respectful sympathy to Her Majesty Queen Mary, His Majesty King Edward VIII and the royal family.

During the late king's reign of more than twenty-five years there have been revolutions and great political changes in many countries of Europe and wars in Asia, America, and Africa. In Britain there has been no revolution or anything like it during this period. This was, no doubt, in great part due to the temperament of the British people and to the fact that they enjoy as great liberty as, if not more liberty than, the inhabitants of any country having a republican form of government. But it cannot be gainsaid that it was also due in some measure to the statesmanship, wisdom, commonsense—in one word—the personality of King George V. He was free from any dynastic or personal ambition, and adhered strictly to the British constitution, never desiring or trying to exceed his powers as a British constitutional monarch. He took the profession of kingship seriously and worked hard to do his duties as a king. He used his power and influence to promote the welfare of his people. His dutifulness, his gentlemanly qualities, his simplicity and his domestic virtues made him highly popular with the British people. All this does not mean that there are no persons in Britain who want a republican form of government. There are communists and some socialists who want to have a republic. But even among those Britishers who consider the existence of a monarchy in a democratic age an obvious anomaly there was a feeling that King George V fulfilled the duties imposed upon him in an admirable manner.

He had an advantage over all his prime ministers and other ministers in this that he had a broader outlook, a wider vision and greater experience than any of them. For they have belonged to this party or that, and could not but adhere to the programme of their parties. But he belonged to no party, or rather, he belonged to all parties and could appreciate the good that there was in the principles and programmes of all parties. There is no means of knowing what passed between him and Conservative, Liberal or Labour ministers in their consultations on state business. But it may be safely inferred that they all profited by his sage counsel.

His Majesty King Edward VIII

His Majesty King Edward VIII succeeds to the throne of his ancestors and is the heir to a great name and a great example. He could not have formed a wiser resolve than the determination to which he has given expression that he would walk in the footsteps of his great father. That is a guarantee that British interests would be safe in his hands.

A Beneficent Forward Policy

The British monthly, *Reconciliation*, has in its January number an article by C. Delisle Burns. In the course of that article the writer says :

> There is an alternative policy . . It is to send . . doctors and agriculturists and men who know something of tribal customs and religious beliefs. C. F. Andrews has pointed out, in the *Manchester Guardian* of November 8th, the importance of the experience of Dr. Pennell who went across the frontier to cure illness, and "could go everywhere among the hills without any real danger. The hill tribesmen would do anything for him." There is also another similar experience which has actually been made the basis for policy.
>
> Not long ago I was talking to Professors of Colonial

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

History and similar subjects in the Dutch University of Leyden. I discussed colonial policy with the great authority on Islam in the East Indies—Professor Suvnck-Hungronje—and he told me of his own experience with barbaric and warlike tribes. The Dutch in the Indies had sent continuous "punitive" expeditions into the hills. It was both expensive and futile. And then Suvnck-Hungronje, who knew tribal customs and religions, offered himself to go up among the hills to find out what the tribesmen really wanted. A little friendly negotiation and some quite simple arrangements brought complete peace. The Dutch scholars rather "pulled my leg" by saying that only a small nation like theirs ought to have colonial dependencies, because great nations had so many domestic worries that they left colonial policy to local officials and did not see how great their own responsibilities were for people who cannot protect themselves! Can we in England not do something to stop the obsolete and futile policy which is called "defence" on the North-West Frontier of India?

The writer proceeds :

The positive policy of friendly advances by men and women who know about medicine and agriculture and tribal customs would probably be well understood by the present Secretary of State for India, Lord Zetland, and also by the ex-Viceroy, Lord Halifax. Such a policy clearly requires at least as much skill in its instruments as is required from military men who undertake "punitive" expeditions. Good will is not enough. If we require training for bombing, we require it also for persuasion: and it would be worse than useless to send on to the frontier men and women with good intentions and no knowledge or adaptability. Above all, a new policy must not be confused by the continuance of the old policy at the same time. There is at present in England a very general condemnation of the Italians for bombing villages in Abyssinia: . . . But the Italians are also using what is called "propaganda"; and they are using as "propaganda" the digging of wells and freeing of slaves. They might have done these things much more effectually—even for their own purposes —without the accompaniment of bombing. Now, however, that we can see the evils of bombing and "punitive defences," we should change our own policy in India: and similar changes could perhaps be introduced in Iraq.

American Achievement in the Philippines

Robert Aura Smith writes in the January number of *Asia* :

"With the inauguration of the Philippine Commonwealth Government the United States concludes in a sense a phase of its relationship to this insular possesion. Although it is true that sovereignty will continue to reside in the United States for a period of ten years, it is equally true that the direct administrative control of domestic affairs in the Philippines has passed from American into Filipino hands. It is, therefore, appropriate to undertake some survey of what has been accomplished in the course of thirty-five years of American occupation. . . ."

The fact should be noted that the Filipinos have obtained full control of internal affairs after thirty-five years of American occupation—not after a century or two, or after even a century—and that they will have contr both domestic and foreign affairs in ten more. Thus they will be free and indepe in less than 50 years.

Mr. Smith writes:

"Three large closely related fields of activity and behavior suggest themselves points at which one can analyze the effect impact of American civilization on the Islands: the fundamental question of living and dying; the question of how one lives in the social that is education, government and culture; question of how one lives in the economic state is, how good a living one gets and how one In all three of these fields the thirty-five ye American rule in the Philippines pre metamorphosis."

Can it be said that thirty-five *ye* of British rule in India present the same of metamorphosis in these three fields thirty-five *years* of American rule do in Philippines? India is, no doubt, a much country than the Philippines with a much population. But India's resources, too, much larger than the resources of Philippines; and Indian civilization and cu of the pre-British period were also far sup to pre-American Filipino civilization culture.

Cholera and bubonic plague have stamped out from the Philippines. Have disappeared from India? In modern plague appeared in India in the nineties last century—before the American occup of the Philippines, but it has not yet stamped out. There is a persistent attack beri-beri and malnutrition going on in Philippines, and it is going to end in victory

". . . . when the Americans landed in Philippines, the average death-rate was 47 thousand. In 1935, it had been reduced to 18 the same time the birth rate had been accele from about 35 to about 50. The spread, then between the two was multiplied."

According to the League of Na "Statistical Year-book," 1933-34, the rate in British India for the latest year (1 available was 24.8 per 1,000, the birth rate the same year being 34.3. So the excess births over deaths in the Philippines is 32 thousand, against 9.5 in India!

As regards infant mortality Mr. S says :

"Most important in this changing picture is conquest of infant mortality. When the corps men with the first American expedition their survey of conditions in the city of Manila time of the occupation, they were horrified that the infant mortality rate was approximate per hundred (800 per thousand). Four out of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

babies died. Today in that same low-lying city the death rate is 60 per thousand (six per hundred). Fourteen out of fifteen Manila babies live. Throughout the archipelago as a whole the infant mortality rate has been cut to 138 per thousand and, wherever supervision and hospitalization are possible, to less than half that figure. This means an actual vital change in the lives of Filipino families. It makes a great deal of difference to a mother if four out of five of her children survive, or if four out of five of them die."

In British India as a whole the deaths under one year per 1000 living births numbered 1 in the year 1930, according to the League of Nations "Statistical Year-book."

Commenting on these vitality statistics the writer in *Asia* observes :

"This particular point of approach gives the spectacular touch to what has been a long laborious story of the introduction of modern conceptions of health and sanitation: quarantine services, control of epidemics, building sewers and digging latrines, spraying for mosquitoes and fighting flies, cleaning up public markets and inspecting fish, persuading superstitious people to eat whole rice instead of polished grain and giving mothers 50,000 bottles a year of rice hull extract to get rid of beri-beri in their children."

It will be noted that Rabindranath Tagore has recently urged the importance of eating whole rice instead of polished grain and of so cooking rice as to keep the rice hull extract in the cooked rice instead of throwing it away. We do not know whether our public health departments give Indian mothers rice hull extract to get rid of beri-beri in their children.

As regards education,

"When Dewey's ship steamed into Manila Bay, 200,000 Filipino children were receiving instruction. In 1935, more than 1,300,000, or one-tenth of the entire population, were enrolled in the public schools of the islands."

According to the "Statesman's Year-book" for 1935, the number of scholars in British India in all educational institutions was 12,853,532 out of a population of 289,491,241, or about 4.5 per cent., against more than 10 per cent. in the Philippines. This after more than 150 years of British rule, before which there was greater literacy in India than now.

The writer observes :

"Throughout the past decade the Philippine Government has spent one-third of its total income on health and education alone."

This cannot be said of the Governments of India and the provinces thereof.

As regards political progress we read :

"Government itself in the Philippines has become both representative and autonomous. A republican democracy has been set up. The national Legislature is chosen through a suffrage limited only by the ability to read and write. An increasing degree of domestic authority has been placed in the hands of the Filipinos until today, except for the retention of sovereignty and the direct fiscalization of economic affairs, the government is free. Politically the Philippines are not yet entirely independent, actually the Filipinos have more freedom of action, more genuine liberty than do the citizens of the country to whom they still owe allegiance."

The political status of the people of India according to the new constitution imposed on her by Britain has been described by Mr. Ramananda Chatterjee in an article entitled "This is not self-government" in the same (January) number of *Asia* from which the foregoing extracts have been taken.

As regards the cultural progress of the Filipinos the writer observes :—

"The impact of western culture has made itself felt not only in this institution of representative democracy and in the achievement of genuine freedom but in a thousand and one minor modifications of the standard of living. Eight million people in the Philippine Islands have put on their first pair of shoes within the past two decades. Newspapers and periodicals which in 1900 had a total circulation of less than 100,000 have jumped to twenty times that number. Every sizable town in the Islands not only has now its hospital, dispensary and high school; it has also its cinemas, public playgrounds, tennis courts and automobiles."

There has been economic improvement also.

"In 1903, the total imports of the Islands were less than 70,000,000 *pesos*. The normal figure now is three times that amount. Back in 1903 the Philippines sold even less than they bought, about 60,000,000 *pesos*. Today they sell four times that amount. A few thousand pounds of badly milled sugar were all the Islands could boast when the Americans came in. Today their production of more than a million tons is so great that their American competitors regard it as a 'menace.'"

Dr. J. T. Sunderland's Christmas Greetings

The Rev. Jabez T. Sunderland, the greatest living foreign friend of India, will complete another year of his long and beneficent life on the 11th of the current month of February. He will, we believe, complete his ninety-fourth year on that day. We convey to him our highest regards and wish him very many returns of his birthday.

He did not—he could not—forget India during Christmas. His Christmas Greetings to friends in India is a beautiful leaflet of some 2,500 words, devoted partly to Ethiopia and mostly to a description of the condition of India by Miss Slade (Mira Ben), daughter of a British admiral, and to his own summing up of India's new constitution.

His Christmas Greetings end with the following words of Christ :

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"He hath sent me to proclaim release to the captive, and liberty to them that are bound;"

and also these other New Testament words:

"Remember them that are in bonds, as bound with them;"

as well as the following lines of the American poet, James Russell Lowell:

"Whenever a wrong is done
To the humblest or the weakest, 'neath the all-beholding sun,
That wrong is done to us, and we are slaves more base
Whose love of right is for ourselves, and not for all the race."

Dr. J. T. Sunderland

Rabindranath Tagore's Appreciation of Folk songs

The Poet, Rabindranath Tagore, has written the following letter to Professor Devendra Satyarthi in appreciation of his articles on the folk songs of different parts of India:

"Dear Satyarthi,

I have read practically all your articles published in *The Modern Review* and congratulate you for their general high standard. They reveal the inner soul of Rural India and it is extremely desirable that they should be known in other parts of the world as well. I am glad to know that *Asia*, which is a favourite of mine, is going to publish some of your articles.

Yours sincerely,
RABINDRANATH TAGORE"

Romain Rolland's 70th Birthday

On the 29th January this year the celebrated French author and idealist M. Romain Rolland completed the 70th year of his life. On this occasion the Bengal branch of the India section of the P. E. N. Club sent him its felicitations through its Secretary Professor Kalidas Nag. In reply M. Rolland has sent the following

Romain Rolland's Latest Portrait

(*Translation*)

Fraternal Greetings to my friends of India:

"May the great century of heroic works in which we are engaged, build a new, more lofty and more large Humanity, with our agonies, struggles and hopes. May that embrace the totality of the human family. May the genius of India be wedded to the genius of the Occident. I see in the Future the semi-divine children to be born of that blessed union. From our troubled Dawn I salute the radiant noon of the Great Day.

January, 1936. (Sd.) ROMAIN ROLLAND."

We give the original French also of his greetings in facsimile, with his latest portrait and that of Maxim Gorky and himself. We wish him many happy returns of his birthday.

The Materials of History

In our last December number we printed a list of presidents of the several sections of the All-India Oriental Conference held at the end of that month at Mysore, as supplied to the press by the "United Press." It was stated therein that the Rev. Henry Heras of Bombay was to be the president of the history section. But we find it reported in *The Hindu* of Madras that Dr. Radha Kumud Mukherji, head of the department of history, Lucknow University, actually presided at the meeting of the history and geography section. That paper has given a summary of his address, in the course of which the professor is reported to have said:

> History has to work under hard conditions and with tough and intractable material. It does not deal with the present or the future but only with accomplished

A mes amis, de l'Inde, mon fraternel salut!

Que puisse le grand siècle de travaux héroïques, où nous sommes engagés, forger, avec nos espoirs, nos efforts et nos peines, une nouvelle, plus haute et plus large humanité! Que celle-ci embrasse l'ensemble de la famille humaine! Que le génie de l'Inde s'y marie avec le génie de l'Occident! — Je vois, dans l'avenir, les enfants demi-dieux, qui naîtront de cette union bénie. De notre aube troublée, je salue le midi radieux de la grande journée.

facts and dead realities. It is also a job to recover the records of the past. The sources of History are of diverse kinds. The earliest life of man is to be found in the traces of the primitive tools, implements and habitation he had used and of cremation or burial then in vogue. Progress in civilization brings up other kinds of evidence of man's expanding life in works of architecture, sculpture and painting, in inscriptions, legends, etc.

Dr. Radha Kumud Mukherji

Three-hundredth Anniversary of Harv University

As far as we are aware the C University was founded for the advance learning. Its Foundation Day was cel last year and this year with sports, r past and refreshments. There was no the celebrations which had anything specifically with learning. Sports, marc and the like are good in their way, b are not the essentials of a university cele Harvard University is going to celebr 300th anniversary this year. The aut of the Calcutta University may compa contrast their programme of anniversar brations with the Harvard plan for its tenary celebration as outlined below extract taken from *Unity* of Chicago.

The President and Fellows of Harvard U have done an amazing thing. They have a a plan for the celebration of the 300th anniv the founding of the College which has some do with education. Not sports, or bail rackets of any kind, but—*mirabile dictu!*— is to be exalted in this festival! First of all autumn of 1936, there is to be gathered in C (U. S. A.), from all countries of the w greatest assemblage of scholars this nation times have ever known. In meetings large a in enormous public conferences and lect seminars, the content of modern knowledge restated by the outstanding authorities of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

That this will be an event of almost overwhelming significance is certain. Secondly, there is to be established, through gifts from graduates and the general public, a 300th Anniversary Fund, for the service of two perpetual purposes, both aimed "to strengthen the intellectual and spiritual life and increase the usefulness of the University." On the one hand, the Fund is to create a number of new professorships, "intended to reinforce teaching and research by affording to teachers and scholars of unusual scope and ability broader opportunities than have heretofore been available in American universities." The idea is to get the best men in the field of learning, and to liberate them for the guidance of youth and the search for truth. On the other hand, the Fund is to establish new "Harvard National Scholarships," intended to "open the door of opportunity for study . . . . to more of the most promising youths from every part of the country." This two-fold project is a thing to kindle the mind and lift the heart. It would have been so easy, and so exciting, to have celebrated this third-century birthday with a great building program of stadia, clock-towers, gymnasia, and halls of learning! But Harvard has put all this aside, to serve and glorify learning itself. Never was there a nobler evidence of Harvard's unshaken and unshakable primacy among the universities of America. And thus early, Conant, whose dream this is, ranks himself with the immortal Charles William Eliot.

Newspapers in Future "Autonomous" Provinces

The Vidya Mandal of Allahabad deserves praise for holding annual All-India Newspaper Exhibitions during the Magh Mela at Allahabad. This year Mr. C. Y. Chintamani inaugurated the third of these annual exhibitions at the Ardha Kumbha Fair grounds. According to an Associated Press message, referring to the condition of newspapers in the future so-called autonomous provinces,

> he asked whether the ministers in office who would necessarily be partisans and have their own supporters and newspapers will suppress opposition papers which would try to subvert and overthrow their ministry and whether they will take advantage of exceptional laws now placed on the statute book by the bureaucratic government. If they made such an attempt to muzzle the opposition press, will the governor come forward with the exercise of reserved powers? He was not free from anxiety how the ministers would utilize their powers that the present government had in anticipation given them.
>
> Mr. Chintamani emphasized that the only remedy on the part of public-spirited men was to intensify public opinion against all forms of bureaucratic government and in favour of constitutional and democratic swaraj.

As a constitutionalist Mr. Chintamani could not possibly have suggested any other remedy than the intensification of public opinion. But it should be remembered that the "exceptional laws" to which he has referred were passed in the teeth of all but unanimous and vehemently expressed public opinion. These so-called laws which could be passed in defiance of public opinion it would not be difficult to enforce in spite of public opinion to the contrary. If it were suggested by those who are temperamentally or on principle not opposed to direct action or revolutionary endeavours that there should be such action or endeavours in case the ministers acted arbitrarily, it would be easy to confront the former with the powers which the new Government of India Act has given to the Governor-General and the Governors to suspend the constitution wholly or in part and exercise power autocratically. The new Act has provided all the devices that human ingenuity could suggest for frustrating the "constitutional" and extra-constitutional efforts of the people to assert themselves. The only hope lies in the historical fact that somehow or other the will of the people has prevailed in various countries and various ages. But there can be no doubt that in whatever way the will of the people may prevail, the strengthening and intensification of public opinion is a *sine qua non.*

> The Hon'ble Prakash Narain Sapru, Chairman of the Reception Committee of the Vidya Mandal, thought that responsible government and a controlled press could not go together, and urged that the various press laws should disappear from the statute book under the autonomous government from the next year.

It is a truism that responsible government and a controlled press cannot go together. And, therefore, according to bureaucratic logic, responsible government can and must wait indefinitely and the Indian-owned and Indian-edited press must be "controlled" for an indefinite period.

A yawning gulf separates "should disappear" from "must disappear" which Indian constitutionalists cannot bridge; nor are Indian direct-actionists in a better position to do so.

Allahabad Public Library

It is seldom that we are able to notice reports of public libraries. We may be excused, however, for a little partiality to the Allahabad Public Library. For, *The Modern Review* was born in Allahabad and owed some of its success to the facilities afforded by that library, not only so long as our offices were situated in Allahabad, but even for years afterwards during the lifetime of our esteemed and dear friend and co-worker, the late Major B. D. Basu, I.M.S.

During the year ending March 31, 1935, its managing committee had the following personnel :

> **Chairman—Sir Tej Bahadur Sapru,**
> **Vice-chairman—Commissioner, Allahabad Division.**

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Members—Pandit Kanhaiya Lal, Professor Dr. Tarachand, Lala Sita Ram, Professor Dr. Prasanna Kumar Acharya, Professor Amarnath Jha, Professor Dr. Meghnad Saha, Professor Dr. Nil Ratan Dhar, Rev. Dr. C. Herbert Rice, Mr. Sarat Chandra Chaudhuri.

Hon. Secretary—Professor Amiya C. Banerji.

The general section of the library contained 27,412 books; oriental section 7,525; and Government publications, magazines and the like 5,328 : total 40,265.

The number of visitors to the Library during the year was 8,965 as against 15,426 in the previous year and 9,236 books were requisitioned by them from the shelves for consultation in the reading room. The decrease in number of visitors was due to the fact that the main hall of the Library had been closed to the public from 27th January, 1934 to 11th October, 1934. The building was seriously damaged by the great earthquake of 15th January, 1934.

It is to be hoped the number of visitors will increase in future years.

During the year under report 12,155 books were lent out to the depositors as against 10,576 in the preceding year under the following subject heads :

Subject heads	Number of books issued
General Section	
General Works	119
Philosophy	533
Religion	370
Sociology	913
Philology	110
Science	991
Useful Arts	363
Fine Arts	206
Literature	1,526
Fiction	1,396
History	1,164
Government Publications	3
Oriental Section	
Sanskrit	173
Hindi	1,983
Arabic and Persian	476
Urdu	674
Bengali	1,155
Total	12,155

It is a pity the Hindu public of Allahabad, forming the majority of its population, has so little use for Sanskrit books.

The Late Mr. Dip Narain Singh's Will

It has been published in the papers that by his last will and testament the late Mr. Dip Narain Singh of Bhagalpur, Bihar, has left his property fetching an income of Rs. 1,50,000 per annum and his palatial residence to a body of trustees. His widow is to receive Rs. 500 per mensem and his daughter Rs. 750 per mensem. The greater portion of the balance of the income has been donated for technical ed[illegible] Three national educational institutions [illegible] receive monthly grants ranging from Rs. [illegible] Rs. 100.

A truly princely and wise benefaction.

Reforms Which May Precede Independe[illegible]

A correspondent asked Mahatma [illegible] to discuss the following question in *Hariji*[illegible]

"Don't you think that it is impossible to [illegible] any great reform without winning politic[illegible] The present economic structure has also [illegible] tackled. No reconstruction is possible [illegible] political reconstruction and I am afraid all [illegible] of polished and unpolished rice, balanced [illegible] so on and so forth is mere moonshine."

Gandhiji's reply begins thus :

I have often heard this argument advance[illegible] excuse for failure to do many things. I adm[illegible] there are certain things which cannot be done [illegible] political power but there are numerous other [illegible] which do not at all depend upon political po[illegible]

The first example which he gives is fre[illegible] of thought—obviously differentiating it [illegible] the freedom of expression of one's thoug[illegible] opinion on some subjects, which depen[illegible] political freedom.

There is certainly no limit or restraint [illegible] freedom of thought. It may be remembered th[illegible] reformers are nowadays laying the greatest e[illegible] on a new ideology. How few of us are going [illegible] any reform in our opinions? Modern scien[illegible] cognize the potency of thought and that is wh[illegible] said that as a man thinks so does he b[illegible] One who always thinks of murder will [illegible] murderer, ... On the contrary, he who [illegible] thinks of truth and non-violence will be truth[illegible] non-violent, and he whose thoughts are fixed o[illegible] will be godly. In this realm of thought p[illegible] power does not come into play at all. Even [illegible] must be obvious that political power or want o[illegible] of no consequence in many of our activities.

Gandhiji then proceeds to make a su[illegible] tion to his correspondent.

Let him make a detailed note of all his [illegible] activities and he is sure to find that many of [illegible] are performed independently of any political p[illegible] Man has to thank himself for his dependence [illegible] can be independent as soon as he wills it.

As regards the question of 'great re[illegible] Mahatmaji observes :

The correspondent has raised the bugbear of [illegible] reform and then fought shy of it. He who [illegible] ready for small reforms will never be ready for [illegible] reforms. He who makes the best of his fa[illegible] will go on augmenting them, and he will fi[illegible] what once seemed to him a great reform was [illegible] a small one. He who orders his life in this [illegible] will lead a truly natural life. One must forg[illegible] political goal in order to realize it. To think [illegible] of the political goal in every matter and at [illegible] step is to raise unnecessary dust. Why worry

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

head over a thing that is inevitable? Why die before one's death?

Thinking as he does, it is natural for ndhiji to do what he has been doing.

That is why I can take the keenest interest in discussing vitamins and leafy vegetables and unpolished rice. That is why it has become a matter of absorbing interest to me to find out how best to clean our latrines, how best to save our people from the heinous sin of fouling Mother Earth every morning.

It was when I was a young man—perhaps ll a student, that I formed the opinion that ll kinds of reform are inter-related and interpendent," and I still harp on it whenever ecessary. It is, therefore, a pleasure to find at Mahatmaji thinks that the questions ferred to by him *have* a political significance though one may not be thinking of politics at ll while interesting himself in the solution of se problems. Says he :

I do not quite see how thinking of these necessary problems and finding a solution for them has no political significance and how an examination of the financial policy of Government has necessarily a political bearing. What I am clear about is that the work I am doing and asking the masses to do is such as can be done by millions of people, whereas the work of examining the policy of our rulers will be beyond them. That it is a few people's business I will not dispute. Let those who are qualified to do so do it as best they can. But until these leaders can bring great changes into being, why should not millions like me use the gifts that God has given them to the best advantage? Why should they not make their bodies fitter instruments of service? Why should not they clear their own doors and environments of dirt and filth? Why should they be always in the grip of disease and incapable of helping themselves or anyone else?

No, I am afraid the correspondent's question betrays his laziness and despair and the depression that has overtaken many of us. I can confidently claim that I yield to none in my passion for freedom. No fatigue or depression has seized me. Many years' experience has convinced me that the activities that absorb my energies and attention are calculated to achieve the nation's freedom, that therein lies the secret of non-violent freedom. That is why I invite everyone, men and women, young and old, to contribute his or her share to the great sacrifice.

The Future of Democracy"

In our last issue in the Note entitled, Philosophers Discuss Democracy," we quoted extract from a newspaper report of Professor N. Banerjee's speech on "The Future of emocracy." That report made him say :

"But the most serious objection against Absolutism is that it produces a most demoralizing effect upon the Government."

It has been pointed out to us that what he ctually said was :

"But the most serious objection against Absolutism is that it produces a most demoralizing effect upon the people."

The Deutsche Akademie Scholarships for Indians

India Institute of the Deutsche Akademie announces the following sixteen scholarships in institutions of higher learning in Germany available for Indian scholars (male or female) of outstanding ability, for the academic year 1936-1937. The scholarships are named after great German and Indian representatives in their field of science or in honour of personalities who supported the cause of Indo-German cultural co-operation

Medicine :
1. Mary K. Das and Taraknath Das—Scholarship (tenable at the University of Munich. Applications from women-students preferred).
2. Robert Koch—Scholarship.

Mathematics :
3. Ashutosh Mukherjee—Scholarship

Indology :
4. Sir Ramkrishna Gopal Bhandarkar—Scholarship (This scholarship is due to a gift from the "Allian and Stuttgarter-Lebensversicherungsbank A.-G., Bln.)

Chemistry :
5. Justus von Liebig—Scholarship
6. Carl Duisberg—Scholarship

Physics :
7. Heinrich Hertz—Scholarship
8. Sir J. C. Bose—Scholarship

German Language and Literature :
9. Jakob Grimm—Scholarship
10. Friedrich Ruckert—Scholarship

Engineering :
11. Oskar von Miller—Scholarship
12. Werner von Siemens—Scholarship

Archaeology :
13. Heinrich Schliemann—Scholarship

Veterinary Science :
14. Wilhelm Ellenberger—Scholarship

Agriculture :
15. Albrecht von Thaer—Scholarship

Mining :
16. Adolf Ledebur—Scholarship (tenable at the University for Mining, Freiberg-Saxony).

All scholarships consist of 500.-Marks (payable in ten monthly instalments of 50.-Marks each) and exemption from the tuition-fees at the University.

Some Rules and Conditions.

The scholarships are tenable for one academic year (10 months beginning by November 1st, 1936, ending by August 31st, 1937).

The selection of successful candidates, which will be determined solely by the qualifications of applicants, is in the hand of the Deutsche Akademie.

Applicants for the stipends must be graduates of recognized Indian Universities, preferably scholars possessing research experience. Applications from non-graduates will be given consideration only if they have recognized literary or scientific achievements to their credit. Every applicant must possess good health.

It is desired that the applicant should have fair knowledge of the German language, as all academic work in Germany is carried on through the medium of German.

Besides it is imperative that a scholarship-holder

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

should arrive at Munich by the 1st of September and stay in this city *at his own cost* till the academic year begins in November, devoting these weeks to intense study of German language in the German language course for foreigners at the University of Munich (arranged by the Deutsche Akademie) where he will be exempted from fees.

As stated above the scholarships are tenable only for one academic year. If the candidate is desirous of acquiring a German degree he must be prepared to stay in Germany *at least* for three (mostly four) terms=1½—2 years. An extension of the scholarship not being sure (though possible if the student proves worthy) the student must possess sufficient means of his own for the second year of study.

Apart from the scholarship the student must be prepared to spend at least 120.-Marks (moderately lived) per month from his own pocket for the necessary expenses not included in the scholarship. Expenses for books have to be counted separately; the fees for examinations, the printing of the thesis (only referring to students who want to take a degree) have to be borne by the student.

THE APPLICATIONS MUST CONTAIN:

1. A survey of the previous academic career,
2. an exact statement of the further study-programme. (*If the student wants to pass the German doctorate, he should mention so*),
3. *copies* of all important certificates (if not in English, translations must be added). The certificates will not be returned. A statement regarding knowledge of German is desirable,
4. specimens of the student's work (printed or in manuscript),
5. recommendational letters from two professors or other well-known personalities,
6. a guarantee by some prominent personality that the applicant is really earnest about his application and will certainly come to Germany before September 1st, 1936, if a scholarship is granted to him,
7. a healh-certificate.

Applications not fulfilling these conditions cannot be taken into consideration.

All applications should reach India Institute of the Deutsche Akademie before April 1st, 1936. Applications reaching India Institute later than this date can no more be placed before the Selection Committee. The successful candidates will be notified by air-mail in the month of June 1936 at the latest.

The Applications must *directly* be sent to the following address:

Dr. Franz Thierfelder,

Hon. Secretary, India Institute of the Deutsche Akademie, Maximilianeum, Munchen 8 (Germany).

Notes That Arrived Too Late

For our last (January) number we sent many Notes from New Delhi where we had gone during Christmas Week. But though we despatched them on dates and hours sufficiently early to reach our office in Calcutta in time to enable our editorial staff to print them in the January number, they arrived too late—we cannot say why. It would not serve any useful purpose to print the majority of these Notes now. A few which may be still found what interesting are printed below.

Christmas Week Functions

[Written for the January number.]

The annual session of the Indian N Congress is no longer held during the las of December. But the annual sessions of other All-India, provincial and local or tions of political, social, educational, and other descriptions continue to be during this week. And during this period have been Congress Jubilee Celebrati over India. These and the sessions Hindu Mahasabha, the National Liberal F tion of India, the All-India Women's C ence, the All-India Educational Conferen other Conferences, it has not been possi us to notice.

Mahatma Gandhi & the Congress

[Written for the January number.]

Mahatma Gandhi's greatest achievem connection with the Congress is that h cherished the faith and hope that freedo be won by non-violent means and has in others also with that faith and hope. T world significance in that this faith, when fied by results, will practically amount discovery of a moral substitute for war.

Congress and Simplification of Life

[Written for the January number.]

There may be, as there has been, diff of opinion regarding the economic v khaddar, but it must be admitted that th of khaddar for clothing, to the extent th has spread, has made for the simple life plain living, and in many cases for high ing also. Plain clothing does not fit in moniously with luxurious living in other tions. Therefore, khaddar has made fo expensive living in general. That means if a man is so minded, what he saves by khaddar and by adopting a standard of in accord with it, he can spend for higher —for deepening and broadening his an family's culture and for the service of s in general.

The use of khaddar has tended to pr a higher result also. It has been a leveller. When the rich man uses the poor khaddar, he voluntarily stands on the same as the poor man. The rich man uncons ceases to think of himself as other than superior to the vast mass of the men and w

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

his country—verily his brothers and sisters, and the poor man is able unconsciously to bridge the gulf between himself and those belonging to higher ranks in society. He no longer stands in awe of those who used formerly to dress themselves in gorgeous attire—the distance between them and himself disappears.

It is greatly to be regretted that the results, outlined above, are less perceptible now than they were a few years back. Nevertheless, what little still remains must continue to indicate what ideal in one direction Congress has striven to realize and what it has actually achieved.

Mrs. Margaret Sanger on Indian Women's Beauty

[Written for the January number.]

BOMBAY, Dec. 26.

"Indian women are the most beautiful among all the races in the world. There is a grace and a charm in their faces, no matter what their status. Even among the poor classes living in 'chawls' I found exceptional beauty."

This was the glowing tribute paid to the Indian women by Dr. Margaret Sanger, giving her impressions of her Indian tour, to a representative of the Press, who interviewed her at the Taj Mahal Hotel.
—United Press.

It is some solace to learn that women can be at least very beautiful, graceful and charming in spite of their being ignorant of contraceptive devices and of their not adopting them.

Revised Rules of Government Servants' Conduct

[Written for the January number.]

The *Gazette of India* publishes revised rules relating to the conduct of Government servants. They fall under several headings, which include gifts, gratuities, rewards, public demonstrations in their honour, lending and borrowing, the buying and selling of houses and other valuable property, holding or acquiring immovable property, the promotion and management of companies, private trade or employment, anonymous publication of documents and communications to the Press, public speeches, etc.

The publication of these rules on the eve of the Congress Jubilee celebrations may not be quite accidental.

On the question of participating in politics and elections, the rules say :

"Subject to any general or special order of the Local Government no Government servant shall take part in, subscribe in aid of or assist in any way any political movement in India or relating to Indian affairs. The expression 'political movement' includes any movement or activities tending directly or indirectly to excite disaffection against or to embarrass Government as by the law established and to promote feelings of hatred or enmity between the different classes of His Majesty's subjects or to disturb the public peace."

Of course, pro-Government or pro-Bureaucracy politics is not politics, the maintenance of British domination in India being an entirely non-political object.

The following rules are also significant :

No Government servant shall, except with the previous sanction of the Local Government, engage in any trade or undertake any employment or work, other than his official duties.

No Government servant shall, except with, and during the continuance of, the previous sanction of the Local Government, own in whole or in part, or conduct or participate in the editing or management of any newspaper or other periodical publication.

May not a government servant have anything to do with a periodical devoted to prehistoric archæology ?

Indian Politics and the Unemployment Problem

[Written for the January number.]

The British rulers of India, when dwelling on the question of the economic advancement of this country, generally advise us not to mix it up with politics. But in no country in the world, and certainly not in India, can economics be entirely separated from its politics. It is no doubt true that even in the present subject condition of India some economic improvement is possible. But it cannot be emphasized too often and too strongly that adequate economic advancement is impossible without self-rule. For that reason, the unemployment problem also cannot be solved to an adequate extent without the attainment of self-rule. Without self-rule, there cannot be a sufficient number of careers in the fields of public service, agriculture, commerce and industries.

On account of foreign rule, numerous posts in the civil and military departments and administration of the country are held by foreigners. These under self-rule would be held by Indians. Foreign employees demand and get exorbitantly high salaries. For the work done by them, competent Indian men can be got on much lower salaries, as in Japan. This change would release considerable sums of money, which could be utilized for the agricultural and industrial advancement of the country. Foreign personnel in the higher ranks of services in all departments necessarily involves the importation from abroad of some goods required by them, which can either be manufactured in India, or dispensed with.

That at least 80 per cent of the revenues are and would remain non-votable, shows that

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

crores upon crores of rupees cannot and would not be available for the direct and indirect economic amelioration of the condition of the country. Exchange, transport, and currency would continue to be manipulated in the interests of Britain to the detriment of India's interests.

And last of all, Chapter III, part V, Sections 111 to 121, of the Government of India Act, 1935, would remain a standing obstacle in the way of our economic progress. These sections are meant to prevent so-called "discrimination" by India against Britain in the spheres of commerce and industry. The prevention of "discrimination" means the prevention of the adoption by India of all those means and measures by which the national Governments of all free civilized countries protect and promote their own national commerce and industry. It is to a great extent by such means and measures that Britain herself built up her commerce and industry and continues to promote them even now whenever necessary. But what is sauce for the British goose cannot be sauce for the Indian gander. For is not India a peculiar country and are not Indians a peculiar people?

Let us by all means fight economic backwardness and unemployment even in our present politically subject condition with all the weapons we can command, but let us never forget that a complete solution of all our economic problems cannot be attempted, far less accomplished, in the absence of self-rule.

U. P. Unemployment Committee's Report

Not having received the report of the United Provinces Unemployment Committee or any summary thereof, we are not in a position to refer to it in detail. But from what has appeared in the papers about it, it appears to be a thoroughgoing and comprehensive document dealing with all aspects of the problem and suggesting remedies of various descriptions. Sir Tej Bahadur Sapru was the chairman of this committee. His great ability and knowledge and experience of public questions and affairs do not require to be described. He ungrudgingly gave much of his precious time and energy to the work of the committee, studied the problem of unemployment in general and its solutions both in India and Europe and bestowed much thought upon them. There was also the co-operation of the members of the committee. The excellence of the report is the natural result.

As there is unemployment all over to a greater or less extent, and as the aspects of the problem are similar all over country, both the governments and the of the provinces outside the provinces and Oudh should also make full use of labours of the Sapru committee. In order they may do so, the Report of that should be made available to them. The ment of India should see to it.

The solution of the problem of middle- unemployment depends to a great extent opening out of new careers in the sphere the public services and commerce, (including agriculture), banking and The civil and military services require thoroughly Indianized. This can be done by the Government of India, or rather master the British Parliament—as things As regards the opening out of careers fields of commerce, industry, banking, and the like, something can be done by Government of India on its own initiative way of development. But that cannot do enough to produce any result. The new Government of India Act the way, and the obstacle can be removed by the British Parliament. But it will not so of its own accord. Great pressure will to be brought to bear upon it. That the people can and must do.

Provincial Governments can, no doubt something to relieve unemployment. But are likely to plead the eternal want of as an excuse for doing nothing, though can and do incur unnecessary expense in directions to gain their own objects. Take U. P. Government, for example. That Government is reported to be going to spend five lakhs of rupees for extending the Council House Lucknow "to provide sufficient accommodation for the secretariat staff removed from Allahabad." Now, Allahabad is still said to be capital of the U. P., though only nominally Why was Lucknow made the real capital by bit, and why was the secretariat removed? In Bengal, by a real expansion primary education, unemployment among educated young men can be relieved to some extent by appointing many of them as teachers inspecting officers. But the Bengal Government is not really going to increase the number primary schools, and the teachers and inspecting officers whom they want to appoint be chosen, not from the ranks of graduates undergraduates, thousands of whom are without any employment, but from those who do know English!

No "Veni, Vidi, Vici"!

"Veni, vidi, vici" ("I came, I saw and conquered"), were the words in which Julius Cæsar announced to the Roman Senate his defeat of Pharnaces, King of Pontus, near Zela, 47 B.C. Though, unlike Julius Cæsar, Mussolini did not lead the Italian forces in person, he expected perhaps that the generalissimo of the Italian expedition sent to Ethiopia would send him a report of his immediate success in the words of Julius Cæsar. But owing to the stubborn resistance of the Ethiopians that expectation has not been fulfilled. Nobody can now prophesy when victory would come and on which side.

"The Oil Sanctions"

If the Emperor and people of Abyssinia had to depend on the League of Nations—that is, practically on Britain and France—instead of on their own love of liberty, valour and strong right arms, their country would by now have become a dependency of Italy. That misfortune has not yet overtaken them because they love their country and know how to defend it at any cost.

"The oil sanctions," if enforced by the League of Nations, could have easily crippled Italy and brought Mussolini to his senses. But the League is still shilly-shallying. We in India know that there are two kinds of committees appointed with two different kinds of objects—committees for solving and committees for shelving problems. Perhaps the committee appointed by the League to consider the question of oil sanctions belongs to the latter category.

Zanzibar Indian Merchants

As a result of the anti-Indian Decrees of the Zanzibar Government, some 150 Indian merchants of Zanzibar have already wound up their business and left the island for good, about 80 others have closed their business but are still there because they do not know where else to go, and some twenty have become insolvent. If ruin has not overtaken more Indian merchants of Zanzibar, it is because their creditors are Indians and have not pressed them hard as yet to pay up. Preferring death to the disgrace of insolvency, one merchant has committed suicide.

The British Secretary of State for the Colonies should not only relieve individual hardships, as he promised to do, but revise the Decrees themselves, because they are ruinous to Indian merchants and injurious to the interests of the inhabitants of Zanzibar as a whole.

The following resolution was passed at the last open session of the National Liberal Federation at Nagpur:

> The Federation, while reiterating its condemnation of the anti-Indian decrees passed by the Zanzibar Government in June 1934, which decrees have resulted in squeezing out Indians from lawful pursuits in the Zanzibar protectorate expresses its apprehension at the extension of the moratorium to July 1936 in clear violation of the Zanzibar Government's promise to settle the debt problem within a year. This Federation records with satisfaction the unanimous report of the Agricultural Indebtedness Commission appointed by the Zanzibar Government, which supports the conclusions of the report submitted by Mr. K. P. S. Menon, I.C.S., to the Government of India, which exposes the one-sided nature of the Bartlett report, on which the said anti-Indian decrees were based and deplores the attitude of the Zanzibar Government in not accepting the Commission's report as well as the views expressed in the memorandum of the Indian National Association of Zanzibar submitted to the Secretary of State for Colonies and the Government of India. In the opinion of this Federation the basis of the said decrees having been shattered by the said commission of the Zanzibar Government presided over by the Chief Justice with an official majority, the Government of India should press for a repeal of the said decrees.
>
> While the Federation appreciates the sympathetic attitude and action of the Government of India it urges on them the advisability of promptly pressing for acceptance of the following demands for relief of the urgent needs of the Indian community, namely,
>
> (1) Amendment of section 19 of the Land Alienation Decree of 1934 with retrospective effect so as not to allow the period of limitation to run against the creditors during the moratorium;
>
> (2) Immediate adoption of the recommendations of the agricultural indebtedness commission by the Government of Zanzibar;
>
> (3) Abolition of the licence fee for the export of cloves;
>
> (4) Abolition of one-sided levy on export of cloves;
>
> (5) Stoppage of purchase and export of cloves by the Clove Growers Association and modification of its other activities. Failing the agreement of the Colonial Office to give effect to these minimum demands this Federation recommends to the Government of India the imposition of an embargo on imports of cloves into India, if such imports originate from the Zanzibar Protectorate.

Asutosh Professor of Sanskrit, Calcutta University

The University of Calcutta is to be congratulated on its appointing Pandit Vidhusekhar Sastri to the chair of Asutosh Professor of Sanskrit.

Better late than never.

The title of "Mahamahopadhyaya" has been recently conferred upon him. On previous occasions, when this title was sought to be bestowed upon him, he expressed unwilling-

ness to receive it. This time, it was done, we understand, without his previous knowledge. He was and is a great scholar. The title has not made him a greater. But recognition of true merit is not unwelcome.

Is Inter-Caste Marriage Un-Hindu?

POONA, Dec. 31.

The Subjects Committee meeting of the Hindu Mahasabha considered till the early hours of the morning Mr. Jayakar's resolution regarding the removal of caste system and untouchability.

After a great deal of discussion, in the course of which several speakers spoke, Pandit Malaviya gave his ruling stating that the problem of inter-caste marriage and inter-caste dinner was outside the scope of the Mahasabha and hence that particular part of the resolution was out of order. Pandit Malaviya, however, said that the removal of untouchability was undoubtedly the first duty of the Mahasabha.

A tough fight is expected over the resolution in the open session this noon.—United Press.

We are unable to understand why the problem of inter-caste marriage and inter-caste dinner was outside the scope of the Hindu Mahasabha. Inter-caste dining has become so prevalent in educated circles in India that it is no longer necessary to discuss it—not in any case in Bengal. As regards inter-caste marriage, instances of such marriages are by no means rare in ancient Sanskrit poetry and drama and mythology and in ancient Indian history, too. It is recognized in Smriti literature as a valid kind of marriage. Not only marriage between a man of a higher caste and a woman of a lower caste (*anuloma* marriage), but also marriage between a woman of a higher caste and a man of a lower caste was recognized as a valid marriage. Inter-caste marriages are still to be found in Nepal and Sikkim and the British Darjeeling district. Not a few such marriages are celebrated every year in Bengal with orthodox Hindu rites. Hindu inter-caste marriages with orthodox rites can be registered as valid marriages under the law of British India. So whatever Pandit Madan Mohan Malaviya may think, inter-caste Hindu marriages were orthodox marriages in ancient times and are still valid Hindu marriages.

It is to be noted that, in spite of Pandit Madan Mohan Malaviya's ruling, a resolution which was passed in the open session of the Hindu Mahasabha sanctions inter-caste marriage by implication.

Abolition of Caste Distinctions Urged

His Holiness the Sankaracharya of Karabir Pith, Dr. Kurtkoti, moved the following resolution in the last session of the Hindu sabha at Poona:

"The Hindu Mahasabha reaffirms its resolutions for giving equal access to all irrespective of their particular caste or cre public amenities and institutions such as wells, tanks, Ghats and other places of water hotels, roads, parks, Dharmshalas and public of worship and burning Ghats and the further affirms its faith that untouchability be regarded as a part of Hindu religion system and recommends to the Hindus for of all distinctions in the Hindu society birth or caste in the spheres of public, so political life in which such distinctions ought no application and are out of place at prese

The mover made an impassioned in supporting the resolution.

Mr. Rasiklal Bishwas, Bengal Harijan seconding the proposition said that Harijans be thankful to the Hindus for the gesture this resolution.

Several speakers including a number of H supported this resolution. Messrs. Lavate and were the only two Sanatanists who oppose resolution.

The resolution was unanimously carried.

Shapurji Saklatwala

The sudden death of Mr. Shapurji Sa wala in London removes from the ran Indian nationalists a stout fighter for fre He was a near relative of the late Mr. Tata, the great industrialist, and began an officer of the firm which bears that Later, he developed communistic proc and had to choose between his principles his job. It does him honour that he a to his principles and gave up his post possessed oratorical gifts of no mean That he was elected a member of the B Parliament was due not a little to his orat powers and skill.

Rudyard Kipling

Rudyard Kipling, who died last mon Britain, was born in India and passed his e years in this country. Some of his literary works, too, were written here. He perhaps the greatest poet of British imperi He was also an effective story-teller in He enriched English literature by his pen was a gifted literary artist.

Lord Reading

Lord Reading, whose death was rep last month, was a self-made man. Rising a humble station in life, he came to occupy highest office in the gift of the British C

oad, namely, that of Governor-General and roy of India, which shows that he was an of great intellectual capacity. So far India is concerned, it cannot be said that pushed her forward towards the goal of raj.

John Woodroffe

The late Sir John Woodroffe began his eer in India as a barrister-at-law and was er appointed a judge of the Calcutta High urt. He was in sympathy with Indian cul- e and wrote books like "Is India civilized?" d "Sakti and Sakta." He made an extensive dy of Sanskrit Tantric literature and tran- ted some of it into English, trying thus to ke Tantric thought accessible to western ples.

ebration of Indian "Independence y"

Non-Indians living outside India should not misled by the expression Indian "Indepen- nce Day." The 4th of July is celebrated by Americans as the day on which the United tes of America won independence. The dian "Independence Day" is celebrated on 26th of January. But that date does not icate the day on which India became free. is a day which was fixed to remind lians of the fact that in December, 1929, at Lahore session of the Congress, Purna araj or Independence was declared as the al of India's struggle for freedom. So the of celebration of "Independence Day" in dia is not a day of rejoicing, but is a reminder at freedom has still to be won. That is a essary reminder, not only for Congressites t also for all other Indians. The day was ebrated this year in all provinces.

pprochement Between Congressites and berals Needed

The Right Hon'ble Mr. V. S. Srinivasa stri, Liberal leader, made a speech in Madras the 5th of January last, defining the attitude the Liberals towards the Congress, in the urse of which he said:

> "We are not new to the Congress. Some of us have been in it longer than outside it. To ask us therefore to come back to its fold is not to give us an unwelcome advice. We should very much like to do so. We will not say 'No' but we can't say 'Yes' as we find it difficult to respond to this appeal."

Proceeding to explain why the Liberals could not enter the Congress fold,

> Mr. Sastri enumerated the fundamental issues on which the Liberals did not see eye to eye with Congressmen, namely, the civil disobedience cult for attaining the goal of Purna Swaraj, insistence on habitual khaddar wearing and manual labour clause in the Congress constitution.
>
> The Congress, continued Mr. Sastri, is a political organization meant to achieve political aims in the political sphere against political obstacles and as such conditions imposed on its membership should be political and not based on considerations of humanity or otherwise.
>
> Nevertheless, mutual understanding between the Congress and the Liberal Party, thought Mr. Sastri, was possible both during and after the coming elections. Although the Congress may not remove these barriers, it is possible for the Congress to throw the doors open in the outer court in order that no element that could be useful to them in their fight could be left out.

Mr. Sastri also explained why it was necessary for the progressive parties in the country to come together.

> Mr Sastri referred to the appeal made by them at the Liberal Federation at Nagpur. "In our resolution," said he, "we referred mainly to the need of progressive parties in the country coming together in order firstly, to keep the anti-national forces in check and secondly, to do what good we can to the country out of this constitution. What we intend by that resolution is, stripped of generalities, that the Congress being an organization most prominent in the field of politics and also most influential and most powerful has cast upon it the duty of gathering all forces in the country that may make for further development of the constitution along healthy and proper lines.
>
> Speaking about the coming elections, Mr. Sastri declared that it would redound to the good of the country in the present circumstances if the results of the coming elections should declare in favour of the Congress. The Congress represents what is progressive in the entire nation. It is therefore our duty to see that it emerges victorious.

Sir Sivaswamy Aiyer, who presided, referring to closer co-operation between Congress and the Liberals, said:

> "We are anxious that the exponents of other schools of politics should seek to enter the councils and we wish all success to those who wish to serve the country. Whichever party may come into power, it must work the constitution to extract the maximum possible out of the reforms, limited as it is in opportunities and responsibilites thrown open to us."
>
> Mr. Venkatarama Sastri, President, Liberal Federation, declared that the Liberals were prepared to co-operate with the Congress on all items on which they agreed.

All this shows that there is a genuine desire on the part of the Liberals to co-operate with the Congress. The Congress attitude is indicated in the following statement issued by Babu Rajendra Prasad:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"I have read with care and respect due to Right Hon'ble Sastri and Mr. Venkatarama Sastri, their speeches at Madras. During the last few weeks I have also received communications from friends suggesting that Congress should take steps to bring about a coalition if not fusion of parties. I have been considering the matter and while it has not been possible for me to consult the Working Committee and my other colleagues and co-workers I may state the position as it strikes me. I very much appreciate Mr. Sastri's reference to Congress and would wish that others who do not agree like him with the present programme and policy of the Congress would recognize that that institution is of great help and service in national struggle for freedom and deserves support even from those who do not see eye to eye with it. But when I come to consider the difficulties he points out in the way of the Liberals joining the Congress and the suggestions that the Congress should remove them, I am faced with the problem which baffles me. An analysis of these difficulties shows that in order to induce the Liberals to join it, the Congress should do four things: (1) It should change its object or creed of Independence; (2) It should declare that it gives up Civil Disobedience as the method as its suspension or withdrawal at present does not satisfy him; (3) It should give up its discipline of manual Labour; and (4) It should give up its uniform of Khaddar.

"As regards the object of Independence even the Government has not insisted upon the Congress giving it up. It was after that creed was adopted at Lahore that the Round Table Conferences were held and the Congress was invited to send representatives to them and the Congress representative was permitted to put it forward on behalf of the Congress at the second Conference. Civil Disobedience is not altogether a new thing in the Congress although it has been actively carried out only recently in 1917. When Mrs. Annie Besant was in internment and Congress was run by those, who subsequently seceded from it nearly two years later, Civil Disobedience was not only talked of but actually recommended by several Provincial Congress Committees and had not to be resorted to because of early release of Mrs. Besant. Earlier than that it had, as passive resistance in South Africa, secured active support of Congress, which sent funds, and it also received the blessing of Gokhale. Since then we have gone through it in this country. I can understand the objection that it is inopportune at particular moment or in particular circumstances but I don't understand how Congress can abjure it once for all and for ever and declare that it shall not resort to it under any circumstances. These two suggestions present insuperable difficulties in the way of the Congress and if the two are equally insuperable for the Liberals, a clear fusion of the Liberal federation and the Congress is impossible. As regards Khaddar I am afraid the question has not received the consideration it deserves and a lot of prejudice has been created round it. Manual Labour franchise was born in an atmosphere of suspicion and unwillingness to give effect to it on the part of even many Congressmen and it has not been able to overcome these. But in spite of what many amongst us consider to be their merits, if the objection was confined to them alone, it would have been possible to find a middle course.

"I have suggested before this that fusion of parties and organizations may not be possible but it should not be impossible to find points of agreement and to work jointly in respect of those matters. Mr. Venkatarama Sastri's speech, I am glad to note, [illegible] this line and he also suggests that avenues [illegible] ment should be explored if joint action is [illegible] and there can be no doubt that it is this [illegible] approach which promises to be more fr[illegible] constructive work in the country and the [illegible] front against encroachment on fundamental [illegible] civil citizens such as liberty of person and [illegible] of press will furnish such avenues of agree[illegible] considerable consensus of opinion regardi[illegible] merits of new Constitution may also pro[illegible] occasion for a joint attack.

"All these may be explored at Lucknow. [illegible] ing the first two, the Congress programme [illegible] attitude are well-known and whatever differe[illegible] be with others, it will probably be a[illegible] emphasis on some particular items and a[illegible] particular methods by which these can be [illegible] With regard to the last, the Congress must [illegible] decide its own line of action at Lucknow [illegible] can take any steps which will be effective."

Mahatma Gandhi has declared th[illegible] would accept and be satisfied with the [illegible] stance of independence." We believe, i[illegible] when he was in London in connection wi[illegible] so-called Round Table Conference that [illegible] so. Now, Dominion status, as interpre[illegible] the light of the Westminster Statute, does [illegible] the substance of independence. That bein[illegible] case, it should not be impossible to dev[illegible] formula which would satisfy both Congre[illegible] and Liberals without either having to gi[illegible] their principles. For our part,—and we d[illegible] belong to any party—though we are fo[illegible] dependence, we do not find it objectiona[illegible] work for Dominion status. But we would [illegible] tainly refuse to support never-ending [illegible] British connection. We have neither the [illegible] or nor the power to bind our successors. [illegible] we old men, though we have only a few [illegible] at the most to live, we do not know wh[illegible] even in the near future there may not be [illegible] opportunity to work for independence ou[illegible]

As regards civil disobedience, Mr. Raje[illegible] Prasad's statement of facts is right. An[illegible] has also quite properly observed:

> I can understand the objection that it i[illegible] opportune at a particular moment and in par[illegible] circumstances but I do not understand how [illegible] Congress can abjure it once for all and for eve[illegible] declare that it shall not resort to it under [illegible] circumstances.

As for the constant wearing of kha[illegible] and regular manual labour, we do not b[illegible] if all members of the Congress really sa[illegible] these requirements. Perhaps even our pens[illegible] have nothing to do by way of manual la[illegible] during some months in the year.

What is most to be valued is the m[illegible] goodwill displayed by both parties.

ficial Anti-Congress Propaganda

The Leader, a very prominent Liberal organ, tes:

We cannot be accused of being partisans of the Congress and have not hesitated to criticise both the organization and some of its leaders whenever, in our opinion, a proper occasion has arisen. But we must protest in the strongest terms against the Department of Public Information of the Government of India converting itself into an anti-Congress propaganda agency. In the official publication entitled "India in 1933-34" poisonous insinuations have been made regarding the expenditure of funds collected for the Harijan cause and also for Bihar earthquake relief. There are many honest patriots who differ from Mahatma Gandhi and Babu Rajendra Prasad in their political ideals and methods of work; but no one has had the audacity to suggest so far that public funds collected for the purposes mentioned above and disbursed under their direction have been misappropriated. Presumably, after the recent exposure of the Bengal Government by the *Manchester Guardian* the writer of "India in 1933-34" realized the necessity for greater circumspection. But to refer, in relation to the Harijan fund, to 'misgivings as to the manner of its expenditure'; and to suggest that 'Information as to the disbursement of the Congress relief fund of Rs. 24 lakhs (collected for Bihar earthquake relief work) was difficult to obtain' is a far worse offence than that committed by the Bengal Government. We can understand though we may not approve of the Department of Public Information defending the policies and actions of the Government of India against criticisms and attacks. We can even make allowance for interested propaganda in favour of the Ottawa Pact. But to utilize an official publication for the purpose of making such accusations against the Congress is, we feel compelled to observe, both discreditable and mean. Let the writer of these offensive passages produce evidence on which he bases his charges, and make them in such a manner as to be capable of a direct challenge. To make foul suggestion and then to run away from its implications is unworthy of a Government. Is it for carrying on propaganda of this kind, we wonder, that the staff of the D. P. I. at Delhi has been strengthened?

Babu Rajendra Prasad has supplied the allies with a crushing rejoinder through the Associated Press." He has quoted extensively from the report of Mr. W. B. Brett, I.C.S., Relief Commissioner, and at present Chief Secretary to the Bihar and Orissa Government, effectively contradict the remarks in India in 1933-34."

Babu Rajendra Prasad's statement concludes as follows:

I do not propose to say anything against the administration of the Viceroy's Relief Fund beyond stating that if I have not said anything about the Government measure it is not because I am ignorant of what has happened or because I approve of all that has been done. I purposely refrained from the controversy, yet our methods are suspected and the writer of "India in 1933-34" can say nothing better than: "The Congress, as a whole, appreciate the opportunity provided by distress over a large area to rehabilitate their prestige not only by a vigorous show of interest locally in Bihar but also by publishing reports tending to minimise the activities of the Government and exaggerate the activities of the Congress." In the opinion of the writer, we needed the earthquake to rehabilitate the Congress prestige! Well may one retort that the Government waited for another earthquake to rehabilitate their prestige by preventing all non-official philanthropic and humanitarian organisations from entering the area where relief was needed against the great catastrophe of Quetta.—*A. P.*

Bengal Government Withdraws Insinuation Against Pandit Jawaharlal

In the Bengal Administration Report for 1933-34 there was an observation that Pandit Jawaharlal Nehru wanted to carry on agitation in furtherance of his "militant" political programme "under the guise of anti-untouchability activities and with the money collected for 'Harijan' work." As even those Indians who do not belong to the Congress party know, the Pandit is incapable of such dishonorable conduct. He protested, some British papers supported him, a question was asked in Parliament, and a report was called for from the Bengal Government. That Government has had to express regret and withdraw the charge. But even in doing so it tried to justify the "inference" drawn by the writer of the Report! It also speaks of its "knowledge that ostensibly non-political movements have in the past been exploited for political ends." By what persons and when such things were done, was not stated —perhaps because the Bengal Government has caught one Tatar in Pandit Jawaharlal and do not want to catch more of them.

The Gaekwad's Jubilee

On the occasion of the Diamond Jubilee celebrations of His Highness the Gaekwad of Baroda's rule, forty-six prisoners have been released and sentences of 646 have been reduced. Remission in land revenue and compulsory education cess to the extent of four lakhs of rupees has been granted.

His Highness delivered a message to his subjects at a Durbar held to receive an address from his people on the completion of his 60 years' reign. The message first announces that a crore of rupees will be set apart for the "Diamond Jubilee Trust" the income from which will be spent in village uplift work—specially for the uplift of the depressed classes.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

His Highness then refers to the introduction of compulsory Primary Education with a view to liquidate illiteracy from the State. He also announces that Village Panchayats and District Panchayats are to be established for constructing feeder roads and wells. His Highness next refers to the legislation made for abolition of social evils like Child Marriage, Caste Tyranny and Untouchability.

During the reign of the present Maharaja Baroda has made progress in all directions.

The creation by His Highness of a trust fund of a crore of rupees for village uplift reminds one of the Government of India's allotment of one crore for the whole of British India for similar work. Baroda has a population of a little more than twenty-four lakhs of people, British India has a population of more than twenty-seven crores of people.

China Between Two Fires

It is not the Japanese alone who cause trouble to China. She has her own communists also. So she is between two fires as it were.

SWATOW, Jan. 29.

Two more Japanese destroyers have arrived in consequence of the Sino-Japanese tension. There are now six Japanese warships in the port.—*Reuter.*

CANTON, Jan. 28.

Thirty thousand communists are marching from Hunan province towards the west into South China, sweeping all before them.

They have now captured Wengan, near Kweiyang, capital of Kweichow. The fall of Kweiting, thirty-five miles east of Kweiyang is now expected. Thousands of civilians and soldiers are hastily building block houses and digging trenches round Kweiyang. All available provincial troops are being rushed to the front.—*Reuter.*

CANTON, Jan. 29.

After fierce fighting with the Government troops at Kweichow, the Communists have now captured Kweiting, only 35 miles east of Kweiyang, capital of the province, where martial law has been proclaimed.

The Communists who number 30,000 have been sweeping all before them despite heavy losses.

—*Reuter.*

TIENTSIN, Jan. 30.

A Communist revolt has broken out in South Hopei, where, it is reported, local Soviets have been established in certain districts.—*Reuter.*

PEIPING, Jan. 30.

British and American Nationals have been advised to evacuate Kweiyang and other adjacent cities owing to the advance of the Communist forces in South China.—*Reuter.*

Unrest in Egypt

Egypt continues to be in a disturb dition.

CAIRO, J

Ignoring the counsels of leaders students e are striking in the morning. No conflicts police have occurred hitherto, but studen School of Applied Arts made a bonfire of Students of Giza University are organizing strations and twelve hundred of them are on to Cairo. Large forces of police have bee on the only available bridge whilst a strong Egyptian cavalry are proceeding to Gi rumoured that Ali Maher Pasha will form the ment under his Premiership.

Five students were wounded when the pol at the demonstrators at Damanhur. Three and fifteen of the police were injured at Nahas Pasha will broadcast a national ap calm.

Clash of British and Egyptian Opinion On Defence of Egypt

It is stated in the *Amrita Bazar Patrika* of the 30th January last that its special correspondent at Cairo has sent it the following telegram on the 29th January:

CAIRO, Jan. 29.

The British High Commissioner for Egypt discussed individually the points of the Treaty of 1930 with all the prominent leaders of Egypt. The main point on which the British and the Egyptian opinions collide is that the British Government wishes to change some of the terms of the Treaty but the Egyptians do not wish to change a slight term. The first condition of the Treaty regarding the military station is that the British forces must be transferred to 32 degrees longitude beyond the eastern side of the Suez Canal and the Egyptian forces must be kept there instead.

The British Government maintains that the present forces must be where they are and more should be added because the forces are not sufficient enough to protect that side. The second point is that the total number of the British forces on the northern desert side of Egypt must be only £8000(?), but the British Government insists that the present number must not be lessened because the military will not be able to defend the frontier of Egypt and the reform of the troops will cost £15,000,000 which the expenditure budget of the war department will not be able to bear.

The Egyptians state: "Leave the defence in our hands and see how ably we manage it. When we spent £5,000,000 on Jubbulu-Awlia Dam which cannot be used before 20 years and £4,000,000 on Thana Dam which cannot be utilised for 50 years, why should we not spend £15,000,000 for the defence of our country? We shall spend all that we have in defending our motherland but we want that her defence should be entrusted to us."—(Copyright to 'Patrika' in India).

Mr. Manohar Lal's Presidential Address

By the courtesy of Prof. D. N. Banerjee, the local secretary, Indian Economic Conference, Dacca, we have received not only the presidential address of Mr. Manohar Lal, but also all the printed papers read or meant to be read at the Conference. We thank him for his kindness. It is not possible for a monthly magazine to make proper use of all of them, but we have kept them for future possible use.

In the course of his very able presidential address Mr. Manohar Lal very rightly observed:

> What is being achieved, if not actually achieved in Japan, should be possible for India. We have an immense population and therefore ready demand for manufactured goods. We have an immense market, a market which the whole world is trying to secure, yet in spite of our unbounded resources we continue hapless victims of world's dumping.

The main reason for Japan's economic progress is that Japan has a national government whose business it is to bring about the prosperity of Japan alone.

Mr. Manohar Lal concluded his address by indicating what the deplorable condition of a mainly agricultural country, as India never was in the pre-British period but has come to be under British rule, may be in the not distant future. Said he:

> What will happen if the forecasts of scientific men come true? Professor J. B. S. Haldane recently remarked that "by 1944 prices of food will fall so much that large numbers of agricultural states would go to ruin." The course of events during the past twenty years warrants the general soundness of this prophecy. Do we realize the import of this fast approaching fate on unhappy India maintaining one of world's largest populations on her own agriculture and struggling to buy manufactured goods from abroad at growing disadvantage?
>
> The economist in India today is worthily engaged in the close study of economic fact and theory. But I venture to think that his most urgent task now is more than ever before, to rouse the conscience of both the people and the government to a consciousness of the peril towards which we are drifting and to the necessity of straining every nerve to reconstruct our economic life. Events are marching with such swiftness, the rest of the world with their alert governments is taking such rapid action, that if we are not up and doing now, aware of the possible dangers ahead and determined on the one course of salvation, our doom may be irretrievably sealed. That is the supreme task of the Indian economist—he is faced by a call which if missed today may never come again.

Sir U. N. Brahmachari's Presidential Address

The presidential address of Sir U. N. Brahmachari, General President, Indian Science Congress, Indore (1936), dealt with the role of science in the recent progress of medicine. It had, therefore, to be somewhat encyclopaedic in its range. He gave a review of the important contributions made towards the advancement of medicine by biochemistry, physiology, genetics, chemistry, physics, geology, psychology, and mathematics.

As Dr. Brahmachari has himself successfully carried out researches which have led to the discovery of very valuable remedies for the treatment of the terrible disease of Kala-azar, that part of his address in which he gave a brief summary of his researches possesses an autobiographical interest. An extract from it is given below from the January number of *Science and Culture.*

> Early in 1921, the speaker discovered an urea antimony compound for the treatment of kala-azar. Its introduction and his other researches on anti-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

monial compounds opened up a new vista in the treatment of the disease in India by means of therapeutic organic antimonials . . . This urea compound was named 'urea stibamine.'

I shall not detain you here with the romance of urea stibamine, however interesting it may be. But I recall with joy the memorable night in the Calcutta Campbell Hospital at Sealdah when after a very hard day's work at about 10 p.m. in a little room with a smoky dimly burning kerosine lamp, the speaker found that the experiments in the preparation of this compound were up to his expectations. The room still remains, but the signs of a laboratory in it have completely disappeared.

The first series of cases treated with this compound were published early in 1922. Soon after this, most remarkable results were obtained with it by Shortt in Shillong to whom the compound was sent for trial. The value of this compound was quickly recognized. It was introduced, soon after a preliminary experimental trial, by the Government of Assam for the treatment and prophylaxis of kala-azar.

Today urea stibamine stands pre-eminent in the treatment of kala-azar in India as a powerful prophylactic against the disease, and it is a matter of supreme satisfaction that this treatment has been the means of saving lives of a vast population of suffering humanity.

The following remarks from the Annual Public Health Report of the Province of Assam for the year 1933 dated 23rd July, 1934, are worth quoting: 'It has to be borne in mind that, when no specific remedy was known for this disease, 98 persons at least out of every 100 were doomed to certain death within a comparatively short space of time. Since 1923, when reliable figures for the disease first became available to the end of the year under report, no less than 328,591 persons have been brought under treatment. It is no exaggeration to say that approximately 3.25 lacs of valuable lives have been saved to the Province.'

Unrest in Syria

BEIRUT, Jan. 29.

After riots lasting for a week, in which four persons were killed at Damascus and two at Alleppo in the course of nationalist agitation against the Government, order has been restored throughout Syria. The gendarmes were hampered in the work of restoring order by the demonstrators holding children in front of them.

Alleppo is now normal and the bazars have reopened. Damascus is also quiet but the central bazars are still closed.

A later message says:—

Riots in Damascus, Alleppo and elsewhere are the outcome of the nationalist agitation against the French mandate in Syria. The nationalists recently intensified anti-government campaign and opened a number of so-called people's political clubs all over the country, from where they issued what are described as threatening manifestoes. A nationalist leader has been arrested and sent to seclusion. Thereupon students took up the cudgels and indulged in a series of violent demonstrations in which the police were powerless. Troops were called out. Two Syrian nationalist leaders are reported to have crossed the border to Palestine during the week-end in order to telegraph a protest to the League Syrio-Palestine Committee at Geneva against the conditions under the French mandate in Syria. British military co... in Palestine are now guarding the Syrian ...

Fresh Trouble in Manchuria

Moscow, Jan. 29.

The report of another sensational incident comes from the Manchurian frontier, where a tense situation has developed between Japan and Manchukuo on the one hand and the Soviet and the protected outer Mongolian Republic on the other.

A fully armed company of over a hundred Manchukuo troops, according to a Khabarovak telegram, entered the Soviet territory in the Grodekovo district and asked for asylum. Their Commander, a Manchu Lieutenant, stated that the company had mutinied against the Japanese authorities and that four Japanese officers had been killed.

The Soviet authorities disarmed and interned the company.—*Reuter.*

Colliery Disaster at Jharia

On the 30th of January last there was an outbreak of fire and an explosion in a colliery at Jharia. It is already definitely known that some Indian and English employees have died in consequence. The full extent of the loss in life and property is not yet known.

Communal Unity Talks Again

His Highness the Aga Khan and Maulana Shaukat Ali have started unity talks again. The majority of political-minded persons of the Hindu community (*i.e.*, of the majority community) want freedom for their country and want that there should be a joint endeavour for obtaining freedom. Anybody is welcome to take part in this joint endeavour. Whether there be "unity" or not, what prevents the Muslims from carrying on even a separate freedom movement of their own? If they work for freedom—it does not matter whether jointly with the Hindus or separately—that will be a proof that they really want unity. The Hindus do not want anything special for themselves. They want that all should have a common and equal citizenship. So, it is the easiest thing in the world to unite with them.

But if the Muslim leaders want that, as a preliminary to their uniting with the Hindus, the latter should accept the Communal Decision No. I, the Communal Decision No. 2 (that relating to the allotment of a fixed excessive proportion of posts in the public services to Muslims and some other minorities), and the like, let us assume that the Hindus accept these Decisions. Will the Muslims then really take part in the fight for India's freedom? Or will some of them make this Hindu acceptance of the Decisions a starting point for fresh bargaining, covert or overt, with the Government and the Hindu public in order to obtain still greater concessions? Will the Muslims refuse to be bought off by British imperialists by the offer of fresh concessions, as they were bought off by Sir Samuel Hoare's announcement of 33 per cent of seats in the Central Legislature and unconditional separation of Sindh? These questions should be as frankly answered as they are here frankly put.

The possibility of the Hindus' accepting the Decisions has been assumed only for the sake of argument. But there is no such possibility of vast numbers of Hindus accepting the Communal Decisions, as they cut at the very root of the existence of Indians as a nation—not to speak of the joint endeavour of Indians as a nation.

Let Muslims work for national freedom and other national ends even separately, and then there will be time enough for renewed unity *talks.*

International Conference of Women

The joint conference of the International Council of Women and the National Council of Women in India which began its sittings in the Calcutta Town Hall on the 30th January last is a unique event. Her Highness the Maharani of Baroda presided and Lady Ezra, Chairwoman of the National Council of Women in India, welcomed the delegates and visitors. Distinguished delegates and visitors from almost all parts of the civilized world attended the conference and the hall was crowded to capacity. On the second day of the conference competent women delegates discoursed on and discussed problems connected with rural reconstruction, education and industries, village continuation school course, village schools, special curriculum for girls' schools, nursery schools, and the cinema.

Height and Weight of School Children

The current (December) number of the two-monthly *Bulletin of the National Council of Women in India* contains an important paper, with graphs and tables, on the height and weight of school children by Dr. Navajivan Banerji, who is known to have been carrying on researches on the subject for some years past. Says he :

> Our observations show that the average heights of both boys and girls are very near standard European heights but the graph shows a big fall in weight, markedly more noticeable in boys than girls. It is more marked in the adolescent period than in earlier years. The average weight of girls up to the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

11th year shows that they are very near standard European weights. This, I think, is due to the fact that those who come to school belong to a better strata of society as compared with boys of the same age. Beyond the age of 12 years there is a very rapid fall in the weight of the girls. This is probably in part due to the defect in education and routine of work of the girls of this age. The physiological changes brought about in the body at this age should be seriously taken into consideration in judging the effect of work, routine and food on the physico-psychical state of the developing girls.

Mahatma Gandhi's Health

It is a pleasure to note that Gandhiji's health has been improving and, though the blood pressure continues, the doctors say there is no cause for anxiety.

Federation of Indian Chambers on Ottawa Pact

The Federation of Indian Chambers of Commerce and Industry has issued a carefully written and finely printed note on the Ottawa scheme of preferences. After examining in detail all the different articles of the import and export trade of India, the Federation has come to the following conclusion, which appears to us to be justified by the facts :

> There are thus a number of factors which will have to be taken into consideration if India is to form a part of the economic block within the British Empire. The Committee of the Federation are, therefore, justified in recommending to the Government of India the termination of the present trade agreement between the United Kingdom and India and further suggest that the Government should open up fresh negotiations for a new trade treaty with the United Kingdom in consultation with the representatives of commerce, agriculture and industry in India.

Subhas Bose Coming Back to India

It is pleasing to note that Mr. Subhas Chandra Bose is coming back to India and left Vienna on January 12 last. He will visit Czechoslovakia and Germany on his way back. At the farewell party given to him at Vienna, great appreciation of his work there was voiced by both Austrians and Indians.

Pandit Jawaharlal Nehru Coming Back

It is encouraging to find that Mrs. K[illegible] Nehru's health was such as to make it po[illegible] for Pandit Jawaharlal Nehru to leave [illegible] the sanatorium for a visit to London. I[illegible] worthy of both Mr. and Mrs. Nehru th[illegible] former would be prepared to return to I[illegible] for the Congress session even if the la[illegible] health does not definitely improve.

LONDON, Jan. [illegible]

Miss Ellen Wilkinson and Mr. Jagger gave a [illegible] tion yesterday in honour of Pandit Jawaharlal N[illegible] The reception was attended by ladies, Mr. M[illegible] Mr. Cocks and other labour members.

Pandit Nehru in a speech declared that the [illegible] act was the grossest insult to India. "We [illegible] interested in ending and not in mending it," [illegible] added. The causes of the present unrest in [illegible] were economic and were summed up in the [illegible] "hunger." The communal issue had little to do [illegible] religion. It was mainly political, economic [illegible] middle-class.

The "News Chronicle" welcomes Pandit N[illegible] assertion that the object of the Congress is to [illegible] its ideals by peaceful means, "But when he [illegible] on to say that the new constitution is a trivial [illegible] from which no serious good can result, he cert[illegible] is not expressing the opinion of Indians as a w[illegible] and we much doubt if he is expressing the view of [illegible] but the left wing in the Congress itself."—*Reu[illegible]*

LONDON, Jan. [illegible]

Pandit Nehru regarded changes in the Indian [illegible] system as a prime necessity. He favoured ending [illegible] capitalist system by letting India produce for [illegible] sumption and not for profit.

He thought that, while "Khaddar" played [illegible] important part in the present economic system [illegible] would not survive ultimately, as India was una[illegible] isolate herself from the rest of the world.

Pandit Nehru considered that Japan was wea[illegible] ing her power despite her present military aggre[illegible]

He said he regarded Russia as a friend of I[illegible] India had suffered in the past on account of Bri[illegible] fear of Russia but at present, in Russia, there was [illegible] political or economic motive which could be consid[illegible] as a menace to India.—*Reuter.*

The pose of superior knowledge of [illegible] "News Chronicle" is ridiculous.

"The Voice of India"

"The Voice of India" which contains [illegible] English and Japanese account of the Cong[illegible] Jubilee celebrations in Japan, with pictures, [illegible] a very fine production.

TALES OF BENGAL

By SANTA DEVI & SITA DEVI

SECOND EDITION

Price Rs. 2. :: Postage extra.

Some Opinions of the Press:

The Bengali satirist does not spare the reformers who dare not live up to their convictions. "The Letter," by Sita Devi, is the story of a youth who wrote books about the remarriage of Hindu widows, but had not the courage to marry one of them. Sita and Santa Chatterjee are young writers of great promise. Their first published novel appeared in 1918. This slim volume of stories, the first of Mr. Humphry Milford's "Eastern Series," will please and interest the Western reader more than Sarat Babu's work. In the first story, "The Happy Bride," one discovers in Santa Devi the ease, spontaneity, and humor of our own practised lady novelists. There is a delicate bite of irony in it, and the pathos is unforced. Tarasundari might have sat for Chaucer or Miss Katherine Mansfield, an ancient, universal type, yet convincingly individual. The scene is in a railway carriage between Burdwan and Calcutta. The test of the story is that every individual in this group of Bengali women, however outlandish they may appear in their several ways, is as clear and distinct to the English reader as if she were one of his own countrywomen. Tarasundari interests herself in the affairs of each in turn.

That quarter of an hour with Tarasundari and the ugly bride in the third-class carriage is worth a score of heavy-doctored romances.

Edmund Candler, in the **Nation and the Athenaeum.**

Referring to the "most wonderful" works of Charles Dickens, the serious motive of which was the remedying of social abuses, the Bishop of Birmingham, speaking at a recent dinner at the Author's Club, said that many social ills "could be better healed by a novel writer than by a Parliamentarian orator. . . . . Books which, while telling a fictional story, expose an actual danger," have again and again led to reforms, otherwise undemanded, through apathy, the fatal offspring of ignorance, and this series will undoubtedly contribute to such desi ends.

"Tales of Bengal" are selections from writings of Santa and Sita Chatterjee, daug of Babu Ramananda Chatterjee, the gifted ed of *Prabasi*, a Bengali monthly, and of *Modern Review* (in English), which might called the Indian *Review of Reviews*.

"Effective criticism of a society co best from those who are members of . . . . it is an immense gain to any na that its society should be seen thro the eyes of its own intellectual coun women; and Indian society in its public asp and activities means Indian men." These w words, from the introduction by E. J. Thomp set forth admirably the great value of th tales for Indian readers. But they should pro hardly less useful to the Anglo-Indian s other students of Indian psychology. The la Mr. J. D. Anderson, a leading authority Bengali literature, thought highly of the w of these gifted sisters . . . It is to be hop that few Indian girls have counsellors as qu tionable as Tara-*didi* in the "Uugly Bride," a that Indian husbands are not often badly deceived as was the poor bridegroo "Loyalty" is a touching and pathetic tale, a "The Wedding Dress" is full of quaint intere

F. R. Scatcherd in the **Asiatic Review**

"Yorkshire Observer" says:—"Mr. E Thompson . . . . . has done the English publ a real service by making easily accessible the examples of contemporary Bengali literatu Apart from the high sociological value wh they possess as accurate pictures of Bengal by natives of Bengal, the works have substant literary merits . . . . . Keen observation, re humour, deep sympathy, and a fierce indi nation against whatever is deplorable in Indi manners and customs characterise these poign little studies of everyday Bengali life . . . "The Ugly Bride" and "The Letter" a perhaps the gems of the collection."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"**Manchester Guardian**" says:—. . . . speak out the very heart of the great country still so strange and dark to us . . . . His daughters' tales, mostly lively in manner, modern in tone, and showing a close acquaintance with that curious hybrid thing, the student life of India to-day, have a serious and quite definite purpose . . . . the humour and the energy of the narrators, in which one feels the rush of the new spirit . . . . "

"**The Times Literary Supplement**" of London says:—"Three remarkable pictures of Bengali life written by the daughters of the independent and critical political journalist, Babu Ramananda Chatterjee, were noticed at some length by us on November 13, 1919, and the half-dozen tales here given, three by each of the sisters, represent the best kind of Bengali literature, picturing Hindu social life with intimate and pathos. The position of women occupies their attention."

Mrs. Margaret E. Cousins, B. Mus., writes in "Stri Dharma:"—They are born story-tellers who have the gift of making us identify ourselves with a character in each story and by the accurate description of details of environment or character-drawing cause us to live in the tale. The writing and style is strikingly good, giving the pleasure of refinement and of mastery of craft to the piled-up sadness of theme after theme. As Mrs. Browning wrote the "Cry of the Children" so the Chatterji sisters have written the "Grief of the Girls." The book is a piece of real literature and will form a salutary antidote to the sentimentality and coarseness which one finds in many of the stories now being written in India on Indian themes. We foresee a great future for these authoresses."

THIRD EDITION OF

RUIN OF INDIAN TRADE AND INDUSTRIES

By MAJOR B. D. BASU, I. M. S.

IN THIS EDITION THE BOOK HAS BEEN ENLARGED
ITS GET-UP HAS BEEN GREATLY IMPROVED
BUT THE PRICE HAS BEEN REDUCED FROM Rs. 2-8 TO Rs. 2 PER COPY
POSTAGE EXTRA.

The Daily Herald writes:
"It is a remarkable book."

The Indian Express writes:
"It is invaluable and deserves being possessed by all patriotic Indians as a reminder of their country's plight and a fillip to further endeavours to get out of it."

The Insurance and Finance Review writes:
"The book presents a forgotten chapter of Indian history, which every true lover of India should know. It deserves to be carefully read by every educated Indian. Every library in the country should provide a copy of this book for its readers."

The Hindu writes:
Th's is the third 'revised and enlarged' edition of Major Basu's well-documented work on the ruin of Indian trade and industries after the advent of the British. Major Basu concludes that "to encourage Indian industries, we have to practise Swadeshi and boycott." There are about a dozen appendices in which the disastrous effects of British rule on a number of Indian industries are dealt with. One appendix is devoted to a scathing criticism of the Government's exchange ratio policy and another makes a fascinating comparison between the situation in America before the War of Independence and the present situation in India.

Also highly praised in AMRITA BAZAR PATRIKA, ADVANCE, THE HINDUSTAN REVIEW, THE MODERN REVIEW, THE BOMBAY SENTINEL, ANANDA BAZAR PATRIKA, FORWARD, RANGOON DAILY NEWS, THE SEARCHLIGHT, ETC.

Buy A Copy at once:

India's Educated Men, Including Students,

Derive their knowledge of the British period of Indian History mostly, if not wholly, from the Works of British Authors.
But these are one-sided and misleading.

A NEW BOOK by Dr. J. T. SUNDERLAND

Evolution and Religion

Prabuddha Bharata writes:

The central theme of the book is to show that evolution is really an ally of religion, that it proclaims the glory of God in a far more effective way than the genesis stories of the orthodox Semitic religions. Every religion has mythology as well as philosophy: there is no harm in that. But danger comes when the one is confounded with the other. And this has been the case with some queer religious-minded people, who have compelled some states of America to pass laws prohibiting the teaching of Evolution in schools. This very clear and convincing exposition of both Evolution and true Religion by Dr. Sunderland ought to be an eye-opener to these people.

The book has a general interest too. Here the readers will find a fine collection of easily understandable data presented beautifully and logically, which are sufficient to convince unbiased minds of the great truth of Evolution—evolution of the world, of man, and of religion, evolution from sim to complexity, from homogeneity to hetero The author has shown too that although th class of evolutionists who find no necessit God for the evolution of the world and ever in it, yet evolution truly understood is not not anti-God but demonstrates the existen vastly wonderful intelligence giving sha things and beings with and for a purpose. Mo he explains "pain and evil" as imperfections process of evolution, which will drop off final stage. He turns the very fact of imperfections—physical, mental, moral, and sp —into cogent arguments for immortality. inconceivable that modern man with his no shortcomings is the ultimate end of such a attuned process of evolution through millen The book has given Evolution the digni Religion, has supplied Religion with a sci basis, and has assured man, the very end of e tion, of his perfection and immortality.

MUSSOLINI AND THE CULT OF ITALIAN YOUT

An exposition based on the speeches of Benito Mussolini

By P. N. ROY, M.A., *Lecturer in Italian at the University of Calcutta*

Prof. Roy is a fine scholar and has interpreted the Italian Superman from a stud of original material. *The Mysore Economic Journal says:*

"A study of Mussolini, the sabre rattling exponent of Fascism, is attempted by Roy on the basis on the dictator's numerous speeches. Whatever Mussolini's failures m be, he rejuvenated Italy which was crumbling to pieces after the agony of a prolonged w His new cult infused confidence and gained the allegiance of Italian patriots who were kee on saving the glory of *Italia* from the dust of imminent and destructive civil warfa This book gives Mussolini's own interpretations of Fascism, which the author has carefu compiled and edited for the benefit of Indian readers who are anxious to learn somethi about the masterful matter of the Italy of to-day. The book is well illustrated with appr priate pictures of the many-sided activities of the *Duce* in his native country."

Profusely Illustrated. **Cloth Gilt with Jacket, Price Rs. 3-8 only** Postage extra.

THE MODERN REVIEW OFFICE, Calcutta Or of Dr. L. M. BASU, 49, Leader Road, Allahabad.

RUSSIA TO-DAY

By NITYA NARAYAN BANERJEE—WHO VISITED RUSSIA LATELY

'Daily Sun' of Bombay: "The writer describes arts, pictures, literature, industrial life and education, government administration and judiciary, marriage and married life, civil life and jails and many other important topics...The author has personally verified the conditions and facts..."

'Leader' of Allahabad: "His narrative is simple and unassuming."

Hindusthan Times of Delhi: "The book is a concrete account of what Russia means today—to the foreigner, to the communist and the non-communist. Our regret on finishing the book—it reads like a novel, was that the author has not given us more...."

A. B. Patrika of Calcutta: "We heartily welcome the book...He sees things with an open mind and describes them plainly and impartially."

Dr. Suniti Chatterji in the Modern Review: "Mr. Banerjee is a clever enough observer and although we note in him plenty of admiration there is no absolute surrender..."

Bombay Sentinel: "It constitutes one of the most well-balanced judgment on a highly controversial subject—the system of the Soviets of Red Russia..."

Strong Cloth bound and with 37 illustrations Rs. 3 (Three only)

HISTORY OF ORISSA

BY R. D. BANERJI

In two volumes of Royal 8vo. format. Printed on the finest antique paper and illustrated by numerous plates

Both Vols. I and II OUT **Price Rs. 20 per Vol.**

Half-Morocco Binding, Rs. 25 Per Volume

This book, which was written by the late MR. R. D. BANERJI just before his death, is the finest history of Orissa yet published. The illustrations are all specially engraved on two-hundred screen plates.

From **The Servant of India** :—

"The second volume of this posthumous work fully maintains the standard of the first. The difficult task of arranging and presenting in a readable form the sordid and disjointed history of a land during its decadence and painful death, has been attempted with considerable success, though the author has had to digress very often to state and explain unused, forgotten or discovered original sources, on which that presentation is based.

"The chapters on Maratha and British administrations afford much food for reflection to the administrators and citizens of India today. Marathas, Oriyas and Bengalis, Indians and Europeans in India, Hindus of different denominations and Muslims, have all poignant lessons to learn, mistakes to avoid, wrongs done to atone for. Appendix V shows the archaeologist Mr. Banerjee to have been an impartial student of modern history as well, and he has rightly drawn attention to the failings of the people of Bengal from the days of Clive to those of Macaulay."

Just Out CANONS OF *Just Out*

ORISSAN ARCHITECTURE

By NIRMAL KUMAR BOSE

Fully Illustrated with 46 Plates.

A scientific study of the forms and engineering methods used by the architects of ancient and mediæval Orissa. Seven rare palm leaf manuscripts have been used in this work. Original texts, English translations and notes.

PRICE Rs. 10. POSTAGE EXTRA.

Opinion of Mr. E. J. Rapson :—

As the author explains in his Introduction, Indian architecture has hitherto been studied chiefly from personal observation and by means of comparison with the forms of Western architecture. In recent years, however, the importance has been more fully recognised of bringing to bear on the subject the information embodied in the Sanskrit *Silpa-Sastras* and the traditional lore which has been handed down from generation in the families of Indian craftsmen.

The object of the author has been to illustrate the existing monuments of Orissa and to describe their characteristic features with the aid of all these three sources of knowledge—observation, technical literature and tradition. He has produced a valuable work of reference. The usefulness of which is enhanced by a Dictionary of architectural terms.

All lovers of history and literature should order their copies straightaway from

Modern Review March 1938

OPEN LETTER TO PARENTS

Dear Sir or Madam,—When your children first arrived they brought with them a wonderful lot of sunshine. Later, you became proud of the intelligence they displayed, but, still later, you became anxious as to what would me of them in the future. Perhaps you were anxious when you visualised them as grown men and women. Even with plenty of money it is not always easy to select the right career, and a parent is sometimes inclined to ask e of some relative, and in ninety-nine cases out of a hundred that relative knows nothing at all about the bilities of employment.

Why not let me relieve you of some of your anxieties? In fact, why not let me be their Father?

We do not profess to act as an employment agency, but the nature of our business compels us to keep an eye upon lass of men and women that are wanted and who wants them.

There are some people who manufacture an article, and put it on the market to sell. We do not do that, we work xactly the opposite direction. We find out what employers want and we train our students to fill those jobs. We to be experts in the matter of employment, progress and prosperity.

If you have any anxieties at all as to what your sons or daughters should be, write to me, or, better still, let them to me personally—Fatherly Advice Department—and tell me their likes and dislikes, and I will give sound tical advice as to the possibilities of a vocation and how to succeed in it.

Yours sincerely,

J. H. Bennett

CARE OF THE EYES.

MIND AND VISION: By Dr. R. S. Agrawal, Eye-specialist, Delhi. Price Rs. 4. This book contains the results of latest scientific investigations showing that Myopia, Hypermetropia Astigmatism and all other errors of refraction are caused by strain and cured by rest and relaxation. The complete method of treatment is described so clearly with numerous illustrations that the reader can himself improve his vision and discard glasses permanently. It teaches how to use the eyes correctly and have perfect vision without glasses by following a few simple and scientific exercises.

"Dr. Agrawal's system of eye-exercises is bound to revolutionise ophthalmology."—*The Indian Medical Journal.*

"I am sure, if his method is practised regularly, it should be useful in restoring eye-sight."—*Major D. R. Ranjit Singh (Late) I.M.S.*

"I can recommend with confidence the treatment, which Dr. Agrawal prescribes, to all who may be suffering from defective eye-sight."—*Mr. Sachchidananda Sinha, Ex-Finance Member, Bihar & Orissa.*

MOTHER INDIA: By Anilbaran Ray. Excellent get-up. Price 8 as. only.

"A great nation which has had that vision can never again be placed under the feet of the conqueror."—*Sri Aurobindo.*

"I have read the book several times and am profoundly impressed."—*Prof. R. C. Majumdar, M.A., Ph.D., Dacca University.*

SIROLIN "ROCHE" IS THE ONLY RELIABLE AND SAFE REMEDY FOR COUGHS, COLDS, BRONCHITIS, INFLUENZA, IN EARLY STAGES OF PULMONARY TUBERCULOSIS, ETC.

Sirolin "Roche" is prescribed by eminent Physicians all over the world. Below we mention a few of the many testimonials recently received.

"I am prescribing Sirolin (Hoffmann-La Roche) for some time past, to my patients suffering from chronic pulmonary and intestinal tuberculosis. It is a palatable preparation of Thiocol in syrup form. I find it an efficacious and strongly antiseptic preparation. It is very palatable, well tolerated by the stomach even during prolonged administration."

Dr. M. A. ANSARI, M.D., M.S. Delhi, May 12, 1934.

"In suspected and early stages of tuberculosis Sirolin 'Roche' will do more good than the best hill-station in the world."

Dr. S. K. BASU, B.Sc., M.B., D.T.M., D.P.H. Calcutta, January 17, 1934.

"For coughs, colds and even early stages of tuberculosis there is all over the world no better medicine than Sirolin 'Roche.'"

Dr. U. P. BANERJEE, M.B., D. P. H. Calcutta, January 19, 1934.

WHOM INDIA SHOULD KNOW

PRICE PER COPY Rs. 3. PER V. P. P. Rs. 3-9.

For Modern Review Subscribers: Rs. 2-8, post free; Per V.P.P. Rs. 2-10.

The Christian Leader writes:

Dr. Sunderland's selections of Americans for his miniature Hall of Fame, and his comments on the men and women selected, are just what we should expect. He has singled out for description and sympathetic interpretation men and women of prophetic power and pioneering spirit, Lincoln, Emerson, Garrison, Lowell, Paine, O. W. Holmes, Channing, Whittier, Lucy Stone, Julia Ward Howe, Horace Greeley, C. A. Eliot, Charles F. Dole, and of the living, Alice Stone Blackwell. Would that we might be understood and judged as a people by such courageous and devoted servants of justice, truth and peace!

The stories of these heralds of a larger faith provide Dr. Sunderland with occasion and material for the service he has for so long been eager to render to the cause of friendship between Indian and American Liberals.

The Christian Register of Boston says:

It would be difficult, if not impossible, to find anywhere else such charming sketches of so many eminent Americans within the covers of one small book. The subjects of these brief sketches seem to come alive under the skilful pen of Dr. Sunderland. The lives of Lincoln, Emerson, Garrison, Lowell, Paine, Longfellow, Holmes, Channing, Lucy Stone, Alice Stone Blackwell, Whittier, Charles F. Dole, Julia Ward Howe, Horace-Greeley and President Eliot of Harvard, most of whom properly may be found in the Hall of Fame, form the substance of the book. Selections from the writings of each person are included, together with the chief events of their lives.

Without exception we may say that these eminent Americans were genuinely interested in the political and personal freedom of all sorts and conditions of men.

The book is a splendid series of vivid essays. It should appeal strongly to American readers, as well as to the people of India for whom it is intended. One of its happiest features is Dr. Sunderland's interpretation of the philosophical and religious viewpoint and the description of the high moral and spiritual character of each individual sketched.

Fredrick Lewis Weis

Also highly praised by—THE HINDU, BOMBAY CHRONICLE, SIND OBSERVER, HINDUSTHAN TIMES, GUARDIAN INDIAN MESSENGER, FORWARD, THE HINDUSTHAN REVIEW, THE UNION MAGAZINE, THE TRIBUNE, THE INDIAN REVIEW, UNITY, THE TWENTIETH CENTURY OF ALLAHABAD, ADVANCE INDIA OF MADRAS, UNITED INDIA AND THE INDIAN STATES, THE SEARCHLIGHT, THE SERVANT OF INDIA, THE LEADER AND MANY OTHERS.

A NEW PUBLICATION ON INDIAN CULTURE

THE ADHAR MOOKHERJEE LECTURES, 1929.

Medieval Mysticism of India

by

Prof. Kshitimohan Sen, Sastri, M.A.

With a Foreword by

Rabindranath Tagore

[Pages Demy 8vo. xxxii+241. Price Rs. 4-8, Foreign 10 shillings.]

In the Foreword Tagore writes :

"The long course, which the stream of India's cherished ideal has followed through the ages, has been traced in these lectures in all its major and minor branches by my esteemed colleague and friend, Professor Kshitimohan Sen. We have seen how deeply is this stream and how essentially it is India's own. The natural genius for *sadhana* which is latent in the Indian people has been discovered in these lectures by Prof. Sen."

THIRD EDITION OF
RUIN OF INDIAN TRADE AND INDUSTRIES

By **MAJOR B. D. BASU, I. M. S.**

IN THIS EDITION THE BOOK HAS BEEN ENLARGED
ITS GET-UP HAS BEEN GREATLY IMPROVED
BUT THE PRICE HAS BEEN REDUCED FROM Rs. 2-8 TO Rs. 2 PER COPY
POSTAGE EXTRA.

The Khalsa Review writes :

".....Even those who now criticize and taunt at the poor standard of Indian labour and Indian industries will have to concede that India was once a great industrial country.....Major Basu's book is replete with facts and figures. Whatever the Major says he supports his assertions from records of contemporary history and official statements....."

The Young Builder writes :

"This is a revised and enlarged edition of the well-known book from the pen of the late Major Basu, whose name is a byword for accuracy of historical facts and figures. It lays down the "ghost" that in the pre-British period India was *only* an agricultural and *not* a manufacturing country. The author tells the tragic tale of the ruin of indigenous trade and industries by a number of penalties, prohibitions and privileges.....India is at the threshold of great political, industrial and economic changes. Major Basu's narrative, dispassionate and documented as it is can serve a twofold purpose at the present time: first, it should serve as a brake on England's natural but not righteous desire to keep the country indefinitely as a special preserve for Lancashire and Manchester, and, secondly, it may be an eye-opener to those who, believing, of course wrongly, that India having been in the past an agricultural country exclusively, should continue to be such in the future.

Also highly praised in AMRITA BAZAR PATRIKA, ADVANCE, THE HINDUSTAN REVIEW, THE MODERN REVIEW, THE BOMBAY SENTINEL, ANANDA BAZAR PATRIKA, FORWARD, RANGOON DAILY NEWS, THE SEARCHLIGHT, THE DAILY HERALD, THE INDIAN EXPRESS, THE INSURANCE & FINANCE REVIEW, THE HINDU, ETC.

THE MODERN REVIEW

MARCH 1936

Vol. LIX., No. 3 Whole No. 351

JOHN TYNDALL

By JABEZ T. SUNDERLAND

John Tyndall was born in a village in Ireland in the year 1820. One account makes him a descendent of William Tyndale, the celebrated translator of the Bible into the English tongue in the early part of the Sixteenth Century, who was put to death as a heretic; and another account states that he was descended from Matthew Tindal, the distinguished writer, sometimes called a deist, who was one of the stoutest defenders of religious liberty in the Seventeenth Century. Whichever account is true leaves him the descendent of an ancestor of great independence of thought and heroism of character, from whom these same traits, found so conspicuously in the great scientist of our generation, may have been derived.

John Tyndall's father was poor, but was a man of much independence of thought and integrity. Though surrounded by Catholics, he was a Protestant. The son's early education was somewhat limited. His early intellectual discipline consisted almost wholly of exercises in theological controversy, on the doctrines of purgatory, transubstantiation, the infallibility of the Catholic Church, the invocation of saints, etc.,—doctrines which his Protestant father very strongly opposed. The boy read extensively the works of the great Protestant divines, Chillingworth, Tillotson, Jeremy Taylor and others. He also read the Bible a great deal, and committed large portions of it to memory. Thus the young mind was fed on strong food.

By the time he was nineteen he had acquired considerable mathematical knowledge, including geometry. With this preparation he was able to obtain a place as "civil assistant" on the Ordnance Survey. Taking hold of this work with energy, he became in turn draughtsman, computer, surveyor, and trigonometrical observer.

At the age of twenty-one, a simple circumstance occurred which seems to have changed his whole future. Up to this time he seems not to have made any large plans, or to have been stirred by any large ambitions. But one day an intelligent gentleman with whom he was working in the Ordnance Survey office in Cork, having taken an interest in him, inquired about his plans, his habits, his manner of spending his leisure time, and so forth, and said to him earnestly, "You have a great opportunity before you; you ought to embrace it. You have five hours a day at your disposal, and this time ought to be devoted to systematic study. Had I," he continued, "when I was your age, had a friend to advise me, as I now advise you, instead of being in my present subordinate position, I should be the Director of this Survey."

The advice was not lost upon Tyndall. Next morning at 5 o'clock he was at his books, and he tells us that for twelve years this hour never failed to find him at his task. In later life, addressing a company of students in London, he recalled some of his experiences in these years with the Survey, and said:

> "It might prevent some of you from considering your fate as specially hard, or from being daunted, by having to start at a very low level to climb a very steep hill, if I should tell you that, on leaving the Ordnance Survey in 1843, my salary was a little under 20 shillings a week (less than

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

$5.00). I have often wondered since at the amount of genuine happiness which a young fellow, of regular habits, not caring for either pipe or glass, may extract even from pay like that."

After remaining on the Ordnance Survey five years, he changed to the business of railway engineering, which took him over to England. In this work he spent three years. It was now that he had what he tells us was his first and last experience in that kind of gambling known as speculating in railway stocks. The time was one of reckless railroad building. Lines were being projected in all directions, and a perfect mania arose and spread all over England for speculating in shares of the different projected lines. Not only the rich but the poor—all who could get together, even by borrowing, a small amount of money, —bought shares; and everywhere, not only in London and Liverpool and Manchester, but in the smallest village, the prevailing talk was about the state of the stock market. Tyndall was smitten by the craze, and invested what little money he could muster. But at once it took away all his peace of mind. He could not sleep or rest. He was haunted day and night by the Stock Exchange. At last, he says, he became so savage with himself that he went to the broker from whom he had bought, and asked him to take back the shares, without either gain or loss, which he did, and thus the accursed thing was gotten rid of. It was a lesson to last him all his life.

After spending three years in railway engineering, he accepted a position as teacher in Queenwood College, a new institution in Hampshire devoted largely to preliminary technical education of agriculturists and engineers. Here he showed that he was a born teacher. The boys, some of whom had been nearly unmanageable under other instructors, became under him eager and enthusiastic in their work.

But he was not satisfied with his imperfect education. He wanted more knowledge. So at the end of a year at Queenwood, in company with a fellow-teacher who afterward became the eminent chemist, Dr. Frankland, he set out for Germany to study in one of her great universities. The fame of the celebrated chemist and physicist, Bunsen, drew him to Marburg, where the two young men were hospitably received and given all possible advantage of the lectures and laboratories. Tyndall was now 28 years old. He had in his pocket about 250 pounds, which he had been able to save from his nine years of hard work. He resolved to take the advice of Benjamin Franklin, "Empty your purse into your young man, and then you will not lose money."

He remained abroad about four years of the time at Marburg, but the last part in Berlin. It was while in Germany that began his original investigations and wrote first two scientific papers,—one a mathematical essay on "Screw Surfaces," and the second paper embodying extended investigations he had made regarding the "Magneto-Properties of Crystals." The latter of papers attracted some attention, and made known in some measure to the scientific

Returning to England he found no opening for a time, and thought seriously of emigrating to America. Indeed he and Huxley, acquaintance he had just formed, together applied for the chairs of Physics and Natural Science, just then vacant, in the University Toronto, in Canada. But neither succeeded securing the coveted chair, and so America and England gained two of the brightest of science in modern times.

The good work that Tyndall had done Germany and the acquaintance which he formed with scientists in Marburg and Berlin opened the way for him in London to acquaintance with Faraday and other leaders in British scientific circles. He was soon elected a member of the Royal Society. This was 1852, when he was 32 years of age. The February he was invited to give a Friday evening discourse before the Royal Society. This was his opportunity. A success before the most learned scientific association in England, would mean a clear future. a great success he made. We are told some of his friends who had secured opportunity for him, were much troubled they had done something which would result in covering them as well as him disgrace. When they reached the hall found that this young Irishman had actually come there to speak before that august without a scrap of paper, they were in consternation. However, there was nothing to do let him go on. Before he had been speaking five minutes their fear was gone. He went straight into the heart of his subject showed such mastery of everything connected with it, his thought was so crystal clear, illustrations were so fresh and apt, language was so well chosen, his speech fluent, and his enthusiasm so artless genuine, that he won the favor of his audience completely, and closed amidst loud applause

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Congratulations were heaped upon him. Next morning the papers reported his great success to the world.

His future was now secure. In four months he was chosen Professor of Natural Philosophy (Physics) in the Royal Institution, a chair which had already been made famous by Sir Humphry Davy and Professor Faraday, and which he himself was to hold for thirty years, adding new lustre to its fame.

He had found at last exactly the right place—that of an original experimenter and investigator, and at the same time that of a popular expounder of science. His natural gifts of exposition and illustration were extraordinary, and, having the advantage from this time on of speaking from the influential lecture platform of the Royal Society, it was not strange that within a very few years he should become the best known and most popular scientific lecturer in Great Britain.

Meanwhile he devoted himself with untiring energy to original investigation, to writing, and to speaking, varying the monotony of his London life by spending his summers usually in the Alps.

In 1883, he resigned the professorship which he had held so long, turned his back upon the noise, the confusion, the dust and the fog of London,—which he always detested,—and built himself a country home in Surrey, beautiful for situation, absolutely unembarrassed in every direction, from which the eye looks forth upon a surging panorama of fifty miles radius, from the South Downs on the one side to the North Downs on the other."

Henceforth he divided his time almost equally between England and Switzerland, spending his summers at the home which for many years he had owned on the Bel Alp, and his winters in Surrey.

> "Both situations afforded that wide outlook upon external nature which he so greatly enjoyed; for his love of scenery came only second to his love of science, with which, indeed, it was inextricably intermingled."

It was his custom during all the laborious years of his London life to rest himself, when he had become worn and weary, by a few days of tramping, among the mountains of Wales, in the Isle of Wight, in the English Lake Region, in the Highlands of Scotland, or, if his need for rest was great and time permitted, amid his beloved Alps.

In the winter of 1872-3 he visited America on a lecture tour. While in this country he visited only the great cities of the East. Wherever he spoke, the largest halls were crowded with the most distinguished scientific and literary people, and his lectures were generally received with the highest favor. Americans remember these lectures with somewhat increased interest because of Professor Tyndall's generosity in devoting the proceeds from them, which amounted to some $23,000 if I remember correctly, to the endowment of scientific research in American colleges.

Professor Tyndall was the author of many books,—books which have been as widely read as those of perhaps any scientist of his day. Among the most important were his *Heat as a Mode of Motion* (1863), his works on *Radiation,* (1865), *Sound* (1865), *Light* (1870), *Forms of Water* (1872), *Transmission of Sound by the Atmosphere* (1874), *Fermentation* (1877), *Contributions to Molecular Physics in the Domain of Radiant Heat, Lessons in Electricity* (1876), and *Essays on the Floating Matter of the Air* (1881). One of his most popular shorter works is that on *The Scientific Use of the Imagination,*—an exceedingly suggestive paper, and one that throws much light upon the structure of Tyndall's own mind; for while no man was a more careful experimenter or a more severe logician, Tyndall was also possessed of an imagination of rare power and vividness which not only aided him in his experimentation but was perhaps the chief secret of his wonderful brilliancy as a lecturer and popular exponent of science.

One of his most attractive and widely read books is his volume on the scientific discoveries of his great predecessor in the Royal Institution, Professor Faraday. The two men loved each other almost as father and son, and the volume which Tyndall wrote in commemoration of Faraday's noble character and great service to science is a thoroughly appreciative tribute.

Perhaps however none of Tyndall's books is more widely known than his *Fragments of Science,* the first volume of which was published in 1871. It was made up mainly of addresses, occasional lectures, and review articles, here gathered together for the first time in book form. Among the number are several of those papers or addresses on religio-scientific subjects such as *Prayer and Natural Law,* and *Miracles and Special Providences,* which provoked much hostile criticism from a large part of the religious world.

A little aside from the main work of Tyndall's life and yet important contributions to science were his books entitled *Glaciers of the Alps,* and *On the Structure and Motion of*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Glaciers, the latter written jointly with Huxley. Out of his sojourns in Switzerland came also two most charming books, *Hours of Exercise in the Alps* and *Vacation Tour*. Every Alpine tourist, and also every arm-chair traveller who would like to be transported to the Alps in imagination and have the picturesqueness and grandeur of those incomparable mountains made so real to him that he will forever afterward more than half believe that he has actually been there, should read these delightful vacation volumes by Professor Tyndall.

The question naturally arises, what is Tyndall's place among the scientists of his century? As an original investigator it seems to be admitted by all who are competent to judge that he did thorough, important and extensive work—and some of it of so high a quality in every way, as to entitle it to be called great. As an expounder of science for the people probably no one of his generation was his superior.

Tyndall was a man of sterling truthfulness, integrity, and honor. He was warm in his affections, sincere in his friendships, quick and ardent, but always genuine and noble in his impulses. His father died with the last parting injunction on his lips: "My son, be just and fear nothing." No son ever carried out a father's dying command more faithfully than did John Tyndall. Near the close of his career, looking back over his past, he said, "Duty has ever been the motive force of my life."

He was a great admirer of Emerson, reading his writings much, committing many of his poems to memory, and taking volumes of his essays with him on his trips to the Alps. He recognized Emerson as one of the loftiest of ethical teachers.

With Carlyle he maintained a long and intimate friendship. Many wondered how he could prize associations with a man whose spirit was so dogmatic, and who habitually treated science with so much contempt. Tyndall has told us that he recognized in Carlyle a great moral force in the modern world.

Professor Tyndall's religious views aroused some bitterness of feeling. It was said that he did not show due respect and reverence for the Bible. It is true he did not believe the Bible to be a supernatural and infallible revelation. In this he stands along-side of nearly every unbiassed scholar and thinker of our day. He does not hesitate to point out the fact that the Bible contains scientific errors, historic mistakes and contradictions, and that parts of the Old Testament portray the morality of an early and only pa civilized age. Says he:

> "As an ancient book, claiming the same as other books, the Old Testament is wi rival; but its unnatural exaltation provokes and rejection. Leviticus, for example, when the light of its own age, is full of interes instruction. We see there described the eff the best men then existing to civilize the society around them. Violence is restrai violence medicinally applied. Passion is c truth and justice are extolled, and all in a w suited to a barbarain host. But read in the of our age, its conceptions of deity are seen shockingly mean, and many of its ordinances *Foolishness* is far too weak a word to apply attempt to enforce upon a scientific age the e a Jewish lawgiver. The doom of such an atte sure; and, if the destruction of things really pr should be involved in its failure, the blame justly be ascribed to those who obstinately pe in the attempt."

Another charge made against Prof. Tyndall by the orthodox people of his day that he sought to overthrow belief in mira This charge was doubtless true. But motive he had in mind was very different that which his enemies ascribed to him believed that there is no rational or scien ground for supposing that a miracle happened; he also believed that true rel does not require the support of miracles. the contrary he considered that reliance miracles perpetuates a superstitious elem religion, which prevents it from rising t highest purity and its noblest service to

In 1874, Tyndall gave in Belfast an ad which was bitterly criticized on the ground it presented a purely materialistic conce of the universe. In the light of his writings and utterances, however, it does seem that when he here speaks of matte containing "the promise and potency of form and quality of life", he means to bar from the universe. His purpose was rath enlarge our conception of matter, chang from something inert and dead, to some which in its very nature is charged with pos lities of activity, life, and purpose.

An even more excited controversy that growing out of his Belfast address as a result of what was known as his "P Gage." The circumstances pertaining to were as follows: A gentleman, not perso known to Professor Tyndall, sent him a requesting that he present it to the public his endorsement. Professor Tyndall rea letter; it seemed to him reasonable and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ted to do good; accordingly he prefaced it h a few words of commendation and for-rded it to the *Contemporary Review* for blication. The letter proposed an experiment, ereby a scientific test could be made of the acy of prayer for the sick. It called ention to the fact that special public times prayer are often appointed for the recovery members of the royal family or other dis-guished persons when they are ill, or for n in times of severe drouth, or for the pping of cholera, smallpox, and other serious demics at times of their serious prevalence. also pointed out that prayers were regularly ered in connection with all services of the urch of England, and more or less in nection with those of most other churches, national supremacy, for preservation from tilence, famine and battles, for fertility of soil, for favorable weather, for recovery of sick, and so on. Now, if prayer is so great power for the securing of physical blessings appears to be generally believed, it would m easy to secure tangible and irrefutable oof of it, and such proof, once obtained, uld be the most powerful evidence in support the truth of that form of Christianity whose ayers had thus been answered. The test oposed was a simple one. The patients of e ward of a hospital should be made special jects of prayer by the Christian world for term of three or five years, their care and eatment remaining otherwise unchanged. If e per cent of recoveries in the ward increased ring the time its inmates were the subjects special prayer, it would seem to prove yond question that the prayers offered in eir behalf were efficacious for curative pur-ses.

How was the proposition met? With most universal condemnation on the part of e Christian world. It was stigmatized as reasonable, irreligious, profane, blasphemous. must confess that I, for one, was never able see why it merited any such criticism. If ayer is efficacious for the curing of those who e sick, men ought to know. It is reasonable suppose that God wants them to know. Now ere is a way of proving it to them so that they all know and cannot doubt. But it was harged upon Professor Tyndall that, by sanc-oning this prayer-test, he showed that he did ot believe in prayer and wished to make light it. This he earnestly denied, affirming that it was not his habit to think otherwise of prayer than solemnly. What he did wish to do was to help men to see that the true province of prayer is the moral and the spiritual, not the physical. The true prayer for checking the spread of cholera is quarantine and sanitation. The true prayer for good crops is good agriculture. The true prayer for any physical thiing is the physical effort necessary to secure that thing. But just as physical good is to be secured by physical effort, so moral and spiritual good is to be obtained by moral and spiritual effort, *i.e.*, by desire, by aspiration, by the earnest reaching of the soul toward the good,—which is true prayer. Though Tyndall was criticized and condemned by a large part of the religious world for his suggested prayer-test, yet it is probable that the general conception of prayer entertained in Engiand and America, is a little less superstitious, and a little more worthy and reasonable because of what he did.

That the doctrine of evolution was, to his thought, compatible with belief in God is clear from many passages,—among others this, taken from his *Scientific use of the Imagination*. He writes concerning Evolution:

> "Trust me, its existence as a hypothesis in the mind is quite compatible with the simultaneous existence of all those virtues to which the term Christian has been applied. It (Evolution) does not solve, it does not profess to solve, the ultimate mystery of this universe. It leaves, in fact, that mystery untouched. For, granting the nebula and its potential life, the question, 'Whence came they?' would still remain to baffle and bewilder us. At bottom the hypothesis (of Evolution) does nothing more than 'transport the conception of life's origin to an indefinitely distant past'."

Tyndall was the life-long foe of religious superstition, bigotry, and intolerance; he compelled his generation to think upon the great problems of religion, and to think of them in the light of reason and science. The religious freedom of the modern world has been purchased by the intelligence, the determination, the bravery, and too often the martyrdom of men of this type, who have seen larger truth than their fellows and have dared to be true to it at any cost. We owe John Tyndall a debt, not only for his contributions to scientific investigation but also for his fearless insistence that in no field must men fail to utilize reason and knowledge, not even in the field of religion.

SRI RAMKRISHNA AND THE GOSPEL OF SERVICE

By S. N. GUHA ROY, I.C.S.

To those who can approach the study of the many currents and cross-currents of thought that swept over India during the last one hundred years or so, with that historical imagination, breadth of outlook and depth of understanding, born of genuine culture, it is no more than a commonplace that after 1886, the year of the departure of his Master, Sri Ramkrishna, Swami Vivekananda was spiritually but a continuation of his Master's self and that whatever the latter did or said had its inspiration directly or indirectly in the former. Unlike, however, Sri Ramkrishna who had little or no school education and was accordingly out of touch with western ideas, Vivekananda was a keen student of western philosophy even before he came into contact with Sri Ramkrishna and later travelled over America and Europe. While, therefore, Sri Ramkrishna cannot but be regarded as the purest flower of Hindu spirituality by even the most fastidious Sanatanists, some of the ideas of Vivekananda are likely to be open in those quarters to the suspicion of an alien parentage. Although if those ideas have been really beneficial to the country, it hardly matters whether they were eastern or western in their origin, in the peculiar circumstances of Hindu society, the question whether Swamiji's gospel of service was borrowed from the west is not entirely without importance, there being even now a school of thought which, looking on itself as the sole repository of the wisdom of the ancient sages and as the sole trustee for the preservation of the purity of our religion and society, blushes at the very idea of any western influence having crept into and defiled them. The object of these lines is to show these worthy gentlemen who might still be sceptical regarding the credentials of Swami Vivekananda, to speak to the world and to his own country, in the name of all that is really great and holy in Hindu thought and culture, that they might well spare themselves these blushes, for his message of service, of the worship of Shiva in the poor, the diseased and the weak is based directly on Sri Ramkrishna's life and teachings.

Even shortly after the establishment of the Ramkrishna Mission in May, 1897, some of his brother monks began to suspect in Vivekananda's activities a departure from the teachings of Sri Ramk which they interpreted as recommending of contemplative inaction as a prelimi self-realization. One evening one of the nitely accused him of having "introduc the ecstatic teachings of Sri Ramk western ideas of organization, action service, of which Sri Ramkrishna ha approved." Swamiji's reply to this cr is well worth quoting *in extenso*. I am here the translation of the reply in the E translation of M. Romain Rolland's L *Vivekananda*. The incident is describ detail in Satyendranath Mojumdar's V *nanda Charit* as well. Vivekananda sai

> What do you know? You are an i man. . . . . Your study ended like that of P at seeing the first letter in the Bengali alph for it reminded Prahlada of Krishna and he not proceed further because of the tears th into his eyes. . . . . You are sentimental What do you understand of religion? You a good at praying with folded hands, "O Lor beautiful is your nose! How sweet are your and all such nonsense and you think your s is secured and Sri Ramkrishna will come at th hour and take you by the hand to the highest Study, public preaching and doing huma works are according to you, *Maya*, because h to someone, "Seek and find God first; doing the world is a presumption." As if God is s easy thing to be realized? As if he is such as to make himself a plaything in the hands imbecile. You think you have understood Sri krishna better than myself. You think *Jnana* knowledge to be attained by a desert path, out the tenderest faculties of the heart? Your is sentimental nonsense which makes one im You want to preach Ramkrishna as you have stood him, which is mighty little. Hands off cares for your Ramkrishna? Who cares for *Bhakti* and *Mukti?* Who cares what your Sri say? I will go into a thousand hells cheerf I can rouse my countrymen, immersed in *tam* stand on their own feet and be men inspired the spirit of *Karma Yoga*. I am not a serv Ramkrishna or anyone but of him only who and helps others, without caring for his own and *Mukti*.

The criticism as well as the repl Swamiji thereto are both characteristic, th of the narrow interpretation of God and re that has gone with traditional Hinduism the other of the larger and more comprehe

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

terpretation with which spiritual rebels like uddha, and even Sankara, Nanak and Kabir, manuja and Chaitanya attempted to redirect e attention of the Hindus to the essentials of e truly religious life, each in his own peculiar y. Tradition, more particularly religious dition, dies hard in India and in spite of ese rebels, there gathered round Hinduism, ry largely as the result of the priestly class ing to maintain its privileged position in ciety, a mass of useless and meaningless remonials, so much so that at the beginning the nineteenth century, the light of western tionalism which failed to penetrate beyond ese forms and rituals into the very heart of ndu philosophy, revealed this popular form Hinduism in all its inadequacy for the isfaction of the spiritual cravings of the nking man. But ratiocination, as we under- nd it, is not one of the points stressed by e men who hold the theory that whatever o be found in the Shastras must be accepted good without question, even though the llowing scriptural verse points to the con- ary:

"केवलं शास्त्रमाश्रित्य न कर्त्तव्यो विनिर्णयः ।
युक्तिहीन-विचारे तु धर्म्महानिः प्रजायते ॥"[1]

is some among these men, spiritually d intellectually akin to the monk of the ove incident, who have from time to time nd in the ideal of service which inspired e establishment of the Ramkrishna Mission product of the west or at any rate ybrid product of the eastern and the western stems of thought that met in Swami Viveka- nda. Though it is more than likely that th Sri Ramkrishna and Vivekananda have ce been studied more widely and deeply in dia and have consequently been better under- ood, there must always be in every society, en, for whom, as Rabindranath said as far ck as 1891 in a beautiful passage in his ngali essay, *The Old and the New*, the letter the Scriptures has as much sanctity as the les eaten into them by worms. That there e such men amongst Hindus even now is yond question, but one can confidently say at these wiseacres of Hinduism, for whom dian history has been a blank for nearly two ousand years and who find in their sacred erature, nothing but a reflex of their own nited horizon, no longer represent, far less do ey guide the heart-beats of the New India that has been born in the conflict between the east and the west.

Those who have read the *Life of Sri Ramkrishna* by Devendra Bose are familiar with an incident described[2] therein which throws a flood of light on Sri Ramkrishna's own attitude towards human suffering. Sri Ramkrishna was one of the party accompanying Mathur Babu to Benares. On the way, the party got down at Baidyanath and in a small village close to that, they came across a number of men, reduced to an utter state of misery by hunger, poverty and disease. The sight was too much for Sri Ramkrishna and in tears he asked Mathur Babu to provide each of them with food and clothing. Mathur Babu hesitated and said that if he were to feed and clothe so many men, he would run short of money and would not be able to proceed to Benares. "Then let your Benares be left alone. These men have none to look after them and I shall go and stay with them." With these words, Sri Ramkrishna joined those men and simply refused to leave them till Mathur Babu had made arrangements for feeding and providing each of them with a piece of cloth. This clearly shows how the heart of Sri Ramkrishna bled for the poor and the sick and how when face to face with human suffering, he would deny himself the pleasure of visiting a sacred place, rather than pass by in solemn indifference, as some devout Hindus are apt to do, with philosophical explanations of all evil and suffering being the result of the *karma* of each individual.

Sri Ramkrishna knew fully well that the suffering multitude he saw before him were but symbols of that Divinity, the realization of which is the *summum bonum* of life and one who failed to pay due homage to those manifestations of the Divine, worshipped God in other forms in vain. In this connection, it will not be out of place to quote the following verses of the *Bhagavata-Purana* which exactly echo the sentiments of Sri Ramkrishna:

"अहं सर्व्वेषु भूतेषु भूतात्मावस्थितः सदा ।
तमवज्ञाय मां मर्त्त्यः कुरुतेऽर्चाविड़म्बनम् ॥
यो मां सर्व्वेषु भूतेषु सन्तमात्मानमीश्वरम् ।
हित्वार्चां भजते मौढ्याद्भस्मन्येव जुहोति सः ॥"[3]

1. No decision should be arrived at only on the basis of the scripture (Shastra). Discussion devoid of reasoning entails the loss of virtue.

2. *Paramhansadev* by Devendranath Bose, pp. 135-136.

3. I am in all creatures existent at all times as the Individual Soul. Man goes through the farce of a worship ignoring it. He who through foolishness offers worship leaving Me—the all powerful Individual Soul existent in all creatures—offers oblations into the ashes.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Looked at in the light of these verses, Sri Ramkrishna's refusal to proceed to Benares without first of all trying to do something for the poor men who stood before him was in consonance not only with the dictates of his own higher self, but also with those of the Scriptures and after all, in matters like these, the dictates of the higher self of man are bound to be at one with scriptural injunctions in every age and country, however much his lower self might try to obscure this unity between the two by a variety of make-believe forms and rituals.

Now, as against the incident given above, may be cited a passage from *Kathamrita*,[4] with which those who claim to have understood Sri Ramkrishna better than Swami Vivekananda but who in fact have read only the words without caring to look into their real meaning with reference to the context, seek to support their theory that Vivekananda's gospel of service had not met with the approval of his master. Sambhu Mallik, a well-known rich man of Calcutta, wanted Sri Ramkrishna's blessings in order that he might be able to make a good use of his money by founding schools, hospitals, etc. Sri Ramkrishna replied: "Let it not be your aim in life to found schools and hospitals. Let the realization of God be the end and aim of your existence. *Niskam karma* is only a preliminary to that realization." The emphasis in this passage is on the word *Niskam*. It is not probably always understood that charities are in ninety-nine cases out of a hundred more for fame and self-aggrandizement than for the sake of charity itself and in the case of Sambhu Mallik, there were reasons to suspect that a thirst for fame was the mainspring of his philanthrophy. Though charities, whatever the motive for them, are better than none at all, the way to self-realization or God does not lie through them, for these are after all, mere attempts to glorify that lower ego[5] which has to disappear before the soul can rise to a full realization of the higher ego[6] or the Divinity. This is all that Sri Ramkrishna said to Sambhu Mallik in the above passage. It must be made clear here that neither Sri Ramkrishna nor Vivekananda said anywhere that activity, whatever its form, was an end in itself. The supreme object of life is self-realization and selfless work is one means to that end. The paths should be confused with the goal they lead to.

If what happened on the way to illustrates quite clearly that the saint Ramkrishna did not seek in his saintliness isolation from the suffering masses of hu which marked generations of holy India in the past, there are other in which show equally clearly that in Vivek he found a properly charged medium which to bring succour to the distress the needy. When Narendranath, as V nanda was named by his parents, in his search for God came to him, he at on cognized in him "that eternal sage, Nar in human form, who had reincarnated for the relief of human suffering." That suffering did not mean to Sri Ramk merely spiritual torments would appear his famous saying that religion is n empty bellies. In Mozumdar's admirabl graphy of Vivekananda[7] is described incident which shows beyond any man doubt what it was for which Sri Ramkr claimed the boundless energy of his di One day he asked Vivekananda what he w and the latter replied he wanted to att *nirbikalpa samadhi* in which he coul immersed in the Ocean of Being, Conscio and Joy (*Satchidananda*). "Don't you ashamed to say this again and again?" Sri Ramkrishna. "You are to bring peace happiness to hundreds of men after h developed yourself to your full stature, here you are speaking of your own spi emancipation. Is your ideal so low?" Sri Ramkrishna merely meant that Vi nanda should minister to the spiritual di of men, it is incomprehensible why he s discourage him from attaining to that spiritual experience which is know *nirbikalpa samadhi;* for it is quite possib one to let others have the benefit of one's spiritual illumination, as Ramkrishna h did, even after the attainment of *nirbi samadhi*. From what he himself said the effect of this supreme spiritual exper on the body[8] it is clear that Sri Ramkr wanted Vivekananda not to be physically fitted for the strenuous work that awaited by even one dip into the Ocean of B Anyone familiar with the inner histor

Vivekananda's life knows how, once he could see, as if in a flash, that he was wanted for the regeneration of a people who had forgotten themselves and were for that very reason alone, wallowing in the mire, he continually struggled against the softening influences of *Bhakti*, only in order that the iron will and the tireless energy that were needed for his work, might not leave him. That it was in a flash that Vivekananda saw his life's work figured out for him by a few words of Sri Ramkrishna could appear from the incident described in *Lilaprasanga*.[9] It was in 1884. Sri Ramkrishna was discoursing with his friends and disciples about Vaisnavism, when he happened to say that Vaisnavism asks men to be kind to all creatures in the knowledge that the whole universe belongs to Sri Krishna. He fell into a trance, immediately the words "kindness to all creatures" were uttered by him and a little later, he went on saying to himself in a half-conscious state "kindness to all creatures—kindness to all creatures. Who are you, you fool, you worm of worms, to be kind? No, no—Not kindness to creatures, but service of all created beings in the knowledge that they are Shiva." None of those present realized the meaning of these half-articulated words except Narendranath who came out shortly after and said: "What a light have the words of the teacher thrown today. . . . . If God ever allows, I shall broadcast all over the world the remarkable truth that I have heard today and the learned and the illiterate, the rich and the poor, the Brahmin and the Chandal will hear it with joy." It does not require much imagination to see that in this incident really lies the key to Swamiji's gospel of service. It may be that the sudden gleam of light which showed to Sri Ramkrishna the utter presumptuousness of the feeling that one can do good to others and the necessity of the spirit of service taking the place of kindliness which implies a certain sense of superiority, produced in Vivekananda a reaction such as it could not produce on an ordinary individual, as is clearly exemplified by the fact that the full significance of the words was not realized by any one present except Vivekananda. But this does not mean that Vivekananda was not indebted to his Master for the ennobling conception of service; and, indeed, Vivekananda's own words show that he was, in this as well as the other great things he did, simply the mouthpiece of one far greater than himself, of one who had breathed into him as long as he lived the unquenchable fire of a new life and of one who even after his departure from this world, blazed before his eyes like a beacon and led him on. The seed fell on fertile ground and it is no wonder that in a few years grew up out of it the great institution that bears the

Ramkrishna Paramahansa lost in ecstasy in course of a religious song and dance in the house of Kesab Chandra Sen
[From a picture in *Prabuddha Bharata*]

Master's name. If, in the religion of manliness which Swamiji preached to his degenerate countrymen, the ideal of service, of the worship of the Deity that is in the poor, the oppressed, the sick and the hungry, has played such an all-important part, it is not because he ignored the emotional appeal that the idea of the possibility of communion with the Deity through meditation makes to the ordinary mind, not because he failed to realize that God was the only Truth and the rest mere illusion, but because he felt that in a country where through centuries, the temple of God had been debased to the level of the narrow-minded

9. *Ibid*, Vol. V, pp. 266-269.

intolerance of a dominating caste and God was reconstructed by men in their own image, where hatred and not love, came to be regarded as the foundation of religion, where the essential divinity of man was completely lost sight of in the degrading ritual of a soulless system of taboos, and where, forgetful of their own essential nature, men grovelled in the dust, suffering physically, mentally, morally and spiritually, the supreme need was to produce, out of the poor specimens of humanity that composed the great bulk of his countrymen, real men and women who would be able to stand before the world with their heads erect in the full consciousness of manhood, to deal a death-blow to that inertia of centuries, the *tamas* which enveloped the country from one end to the other and to stimulate in "a nation of dyspeptics, indulging in antics to the accompaniment of *Khol* and *Kartal* and singing *Kirtanas* of sentimental type," a spirit of action or in short, to energize an inert mass, that was his country. If for achieving this, he had on the one hand to dig out of the accumulated debris of ages, the true religion of the Hindus, the religion of the Upanishads, he had on the other to initiate a clear-cut programme of social service to be carried out by the Order he established under the banner of his Master. How the ideal of service that was brought to him in a lightning flash, as it were, by the apparently disjointed words of his Master germinated and took root in him and how this born leader of men overcame, by the force of his own magnetic personality as well as by the grandeur of his conc of worship of the Deity in man, the oppo of brother monks who found it difficult at to rise above the traditions in the mide which they were brought up, are matter history and it is needless to go into th What I have attempted to show is Vivekananda's ideal of service was ins directly by Sri Ramkrishna and that he self was quite correct when he said:

> If there has been anything, achieved by me my thoughts or words or deeds, if from my lips ever fallen one word that has helped anyone in world I lay no claim to it; it was his. . . . that has been weak has been mine, and all that been life-giving, strengthening, pure and holy, been his inspiration, his word and he himself.

Let those who think they are in a posi to challenge this frank acknowledgment Vivekananda of his own debt to his Ma raise themselves, if they can, to the spiri stature of Swamiji, before claiming to und stand better than himself, Sri Ramkrishna, " embodiment of infinite spiritual ideas cap of development in infinite ways, one glance whose gracious eyes could produce a hund thousand Vivekanandas at any instant." these critics first feel, if they can, with all force of their being, as did Swamiji, "that first of all worship is the worship of *Virat*,—of those all around us," and that intellectual affirmation of God by the Hin has been of little avail to them thro centuries of decadence when they fell so as to deny the God that is in Man.

From highest Brahman to the worm,
Even down to the least atom's core,
All things with Love are interfused:
Friend, offer body, mind and soul
In constant service at their feet!

Thy God is here before thee now
Revealed in all these myriad forms;
Rejecting such, where seekest thou
To find Him? Whoso worships these,
Worships almighty God indeed.

MODERN ARCHITECTURE

By J. A. BRINKMAN, F. I. D. I C.,
Architect and Civil Engineer

Being an architect myself I feel very happy to have an opportunity to bring my ideas on modern architecture under the eyes of the Indian interested reader; especially as to me modern architecture is one of the outcomings of that universal idea which is beginning to bind the whole of humanity more and more together. I hope that, when you will have read these few words of mine, which express perhaps very poorly what I mean to say, you will feel this universal human want which is at the bottom of modern architecture and which must be its only motive power. And everywhere, where a universal human need is felt and worked for its appeasement we are touching that side of our life where all men are really one and it brings universal understanding nearer.

Entrance, Meeting Hall, Amsterdam

It is about this basic principle of modern architecture that I wanted to talk with you for a moment.

First of all let us consider the term "modern architecture." It seems badly chosen, for it is neither recent or contemporary architecture nor is it old or antique architecture. In fact, it has nothing to do with any architecture period nor with any geographical longitude or latitude.

We shall see that its fundamental thought is rooted in a thing which is timeless, because —I mentioned it above already—that thing is an ever-existing human want. The real quality which can make architecture modern architecture depends on the spirit, the attitude of mind, of him (the architect) who realizes the building and on how far this architect has been able to express himself in the building materials and their possible applications in his life time.

I say: "can" make! We will see to that presently. But at any rate it will be clear that if this is true, modern architecture has nothing to do with time or place, for it is spiritual. So the thing that counts is that the architect's spirit or mind is a modern mind. What is a modern mind?

Interior of the Meeting Hall, Amsterdam

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

I think he has a modern mind who understands the needs of his own time and perceives a way to appease them; who sees (more or less conscious, for don't forget we are dealing with something as an artist) what is wrong with his time and perceives a way to improve; who knows the feelings of his fellow men and women and has the courage to give his solution for the uplifting and refinement of public taste and who—and this is in my eyes by far the most important quality of a modern mind—always keeps himself at the background is always content to serve and never, not even in the pure aestheical side of his work, forces his person, his self upon others who see his works.

Dining Room in a house, Kral, Plaslaan, Rotterdam

If an architect has this attitude of mind he *can* make, I said, modern architecture. For in all days and countries there have been hundreds of noble men and women who possessed this attitude of mind but only few of them became architects; most of them became doctors, priests, artists, scientific men etc.

There is that other quality which is needed: he must be able to express himself in architectural work. Now we won't consider here what it is that makes a man able to express himself in architectural work. This would lead us far. We therefore will accept that architect has this power and we will see it is that he is doing with it, and more spe what the modern architect who is living in days has to take into account to produ modern building today.

But on closing this part my views I repeat that ar tecture from the old and ol times and most remote pl of the earth can be "mode architecture. Of course it m be seen in its own time and conditions.

But what interests us speci is of course our own t What is the great human w at our time? It is Brotherh The world is getting sick every thing which divides all great or small ambitions well in art and science as economical and political life oppression and pride; the wo is finally beginning to und stand that humanity is fund mentally one, that we are Brothers in one family. Th

This feeling of Brotherhood moves the modern architect of our days to give as much light and sun as is appropriate in the circumstances; it moves him to make the rooms of good and harmonious proportions, to arrange these rooms in such a manner that the least energy is required to work or live in them, understanding that the liberated energy means a greater freedom and a further step to Brotherhood; it moves him to use all the helps and inventions of science, the tremendous improvements of standardized technique because it makes life as a whole more human; in the lay-outs of towns and villages he provides for enough light and air, he keeps the traffic far from the living quarters so that these are quiet and the inhabitants can, as they will so, turn their thoughts after the day's work is done, on the higher principles of life; it makes him

Bank Office—Rotterdam

look for the most economical solution of his building programme, for if he wastes the money on useless adornments and decorations he throws away money of the Brotherhood, money that could be spent on other needs of humanity, whatever they be: private or social.

We could add a still much longer list but this gives you I hope, an idea of what I mean.

But this is not all. If the architect does all these things he is as yet not a architect; he is a builder, not an artist he is on a very good road to artistry. "b is perfect order with pre-eminent lucidity said a great sage in about 400 A.D.

If ever, after Classic architecture, th become true of architecture it is of architecture of our days. This order con with lucidity, we find them in modern ar ture as the simple and clear rhythm harmonious colours so predominant characteristic of modern buildings (a "modern" in the sense of the above synonymous with recent).

Ornament spoils the lucidity very bably and never adds to order. The can be said of superfluous space: it spoil lucidity of the groundplan.

On the other hand: construction al the favourite hobby of many "modernist seldom leads to Beauty. As a picture is than the canvas, the colours and the pa the construction so to say—so a buildi more than a compound of well calculated structions on a well considered groundplan

In both cases it is the idea, the s behind it that counts.

Those who think that a well calcu

South East Corner of a house in Rotterdam

signed construction. One can say the reverse: badly designed structure is never beautiful. at is nearer to the truth. Because then ither perfect order nor lucidity will be there. There has often been said: Modern Archi-ture is truthful. It is.

It gives you a feeling of rest, because you now that what you see is—so to say—the uth of the building; there can be no dis-pointments. It is as with a man who is ain and true in his words and manners; he ves you that joyous feeling of trustfulness d rest. You may more or less like him but cannot give unpleasant surprises. This is part of the psychological side of modern architecture. A friend of mine, a well-known psychologist who is directing an institute for psycho-technic in Holland, once said to me, when we were talking about this psychological side of modern architecture: it nowhere provides a hat-and-coat-stand where I can hang up my thoughts and feelings today to find them there again to-morrow.

This truthfulness will help the world to refind its lost Brotherhood, the greatest human need of the present day.

Oostzeedijk 50, Rotterdam.
Holland.
December 2, 1935.

THE MAKING OF AN INDIAN M. P.

By St. NIHAL SINGH

I

A tap at my study door. By its timidity I recognized the person who had made it. It was the "slavey" employed by the landlady from whom my wife and I rented the apartment in the heart of London and who cooked the victuals we bought and served them. The girl who was thus designated in democratic England even then—January, 1910—was perhaps four-teen or fifteen years of age. She had a thin, stunted figure, pale cheeks and eyes that often looked red, through weeping, we surmised.

"Come in," I called out.

As she opened the door with a hesitant hand and came up to the chair where I was sitting near the fire blazing cheerily in the grate that she kept neatly black-leaded, I wondered at the cause of that disturbance. She had been in only a few moments before to draw the cur-tains, light the gas and put coal on the fire. A murky cloud had prematurely blotted out light and, a little later, it had begun to drizzle, making the evening damp and dismal.

"Two gentlemen to see you, sir," she said, in her whisper of a voice, from the other side of the small table upon which I was writing, fear, no doubt, gripping her heart that I would take it out of her for that interruption to my work.

No cards had been sent up—no names given. I, therefore, concluded that they must be Indians and asked the little maid to bring them up to our sitting room.

Shapurji Saklatvala with his English wife

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

II

Only one of the callers—Mr. Bepin Chandra Pal—was known to me and I had met him but a few days before. He forthwith introduced his companion as Mr. Shapurji Saklatvala, who, I was told, had been eager to meet me.

I thanked that gentleman for his wish, helped him and Mr. Pal to divest themselves of their damp outer garments, drew easy chairs for them near the fire and put aside my writing, not without an inward sigh, for the work interested me and was of topical importance, so that I would have to resume it after they left and would no doubt be kept up half the night in consequence.

Who could the stranger be? What did he do? Why did not Mr. Pal say anything about him that would give me a clue to his calling and his interests? Was there anything to say? Did silence mean that the Bengali leader had wished to have company on the way from his flat in Kensington, miles away from any apartment, and had brought one of his admirers along?

Questions of that kind ran through my mind.

Not for long, however. Polite nothings did not interest Saklatvala. After a little time he tired of playing second-fiddle to Mr. Pal, whose personality and eloquence he greatly admired, as he, at the very outset of our conversation, had taken care to inform me. Within a few minutes the conviction was forced upon my mind that he was an ambitious man, determined to make his mark in life.

He was, I judged, in the middle thirties. He had a trick of running his fingers through his black hair, rumpling it. The way it was brushed back gave him an immense forehead, which, in any case, would have been broad and high. Under the black, arched brows his eyes were alive—afire—ever astir. The cheek bones stood out prominently. Between them was a long, firm nose. The way he screwed up his mouth reinforced the impression that his features in general conveyed of strength of character and fixity of intention.

III

In time I discovered that Saklatvala's ambition and avocation were not one as mine, luckily, were. He was in business and wished to be in Parliament.

An accident had placed him in the City—a term that Britons use to indicate the square mile or so of London where the Bank of England, the head offices of other banking institutions and insurance companies, the Exchange and financial organs of v descriptions are huddled together. Cons nity had caused that accident.

His father, who had built up an imp business in Manchester, where Shapurji some of his early years, had a sister. aunt was married to Jamshedji Nusser Tata, who, by innate genius and personal tion, had acquired considerable wealth established mercantile houses in many which he bequeathed to his sons Dorab Ratan. Shapurji was sucked into this orga tion like a piece of paper in an eddy and easily have been carried to the summi financial success had his own weight persons would call it his perversity) not him down.

As we talked I was impressed with Parsi caller's political ambition. His tho revolved round it. It was a wonder to me it did not set his body on fire—consume ashes.

I welcomed his longing to get into Pa ment. I felt that through carefully fra questions put to the Secretary of State for I and statements made in the course of In debates, an Indian in the Commons woul able to draw attention to matters conne with the administration. As matters were was necessary to seek the good offices of sympathetic British M. P. whenever an In difficulty or grievance had to be aired Parliament.

IV

How was Saklatvala to project himself the House of Commons? Had he the means the influence?

Mr. Dadabhai Naoroji, the first Indian get into that chamber, had an easy mind respect of finance. So, at least, I unders During the many decades he was in Eng he had assiduously courted the Liberal Pa but the British constituency he sought to gave him the cold shoulder and he was n able to enter the Commons a second time.

Sir Mancherjee M. Bhownaggree, who, several years, sat on the Conservative ben in that House, was, if anything, wealthier certainly no less shrewd than Dadabhai Naor He was believed to be in intimate touch w the men who dominated the Tory Party: it was obvious that they had not exerted the selves, otherwise he, too, would not have b out of Parliament at that time.

I reminded Saklatvala that he himself

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

given me to understand that he was not cumbered with a superfluity of this world's goods. I feared, in fact, from what he said, that his means were narrow and he had a growing family.

But the situation did not perplex him at all. He had discovered a ladder by which he could climb into Parliament. Keir Hardie and Ramsay MacDonald had gone up it into the Commons. Why not he?

V

I had my doubts about British Labour permitting an Indian to climb into Parliament over its shoulders. Not so very long before I had come up against the Trades Unions in Canada and found them far from friendly towards our people, whose interests I had been trying to protect.

The trouble our immigrants were having in the Dominion, as also south of the border in the United States of America, had, in fact, been engineered by organized labour in those countries. White workmen looked upon our fellows as intruders.

Our immigrants might have won their title to pin service-medals against their breasts by valour on the battlefields across the Frontier and even beyond the seas. But that title was not recognized when it came to settling in an integral part of the British Empire and obtaining work on the railways or in the timber-yards. It certainly could not secure them free homesteads in the manless wilderness that stretched from almost the margin of the Pacific Ocean to the Great Lakes. Working men of European descent regarded them with hostility and, being closely united, had been able to move the administration to exclude our people all but in name.

VI

Saklatvala was sorry to hear my plaint. He launched into a tirade against the capitalistic system. In the last analysis, he said, that system was responsible for setting one labourer against another. Workers were exploited everywhere—a little more in one country, a little less in another—but exploited everywhere—"even here in England." Their interests were, therefore, the same everywhere. Their objective should be the same. But for the capitalistic machinations, the wage-earners would fraternize, despite differences of race, colour and creed.

These assertions were made with a vehemence that sprang from inner conviction. It displayed to me something of the quality that would endear him to Socialists.

I might, of course, have said that some day the workers in Canada may realize that Indian labourers were in the same boat as themselves and fraternize with them: but, unless I was mistaken, that day was distant. Such a remark would not, however, have carried us any farther. So I contented myself with asking him how matters stood in England, which I was then visiting for the first time.

His experience, he assured me, had been of the pleasantest. He had, for years, been a member of the Independent Labour Party and had come in intimate contact with the leaders of that movement, whom he had found most sympathetic and helpful. He had met the workers and Trades-Union officials in various parts of Britain. They did not know very much about the Indian situation: but he had no doubt that, in their hearts, they were with the common people in India and not with those who lorded over them. Of that he was certain. I could test the accuracy of his statement any day I liked.

VII

Before Saklatvala departed that evening, I gleaned from his talk that he had taken great pains to cultivate the British Labourites. He was, in fact, devoting practically all his leisure—most of the evenings and week-ends—to that purpose. He would travel great distances and, if I remember aright, pay his own expenses, to address Labour audiences.

It was evident from his manner of speech that these perigrinations had done him much good. They had given him confidence in himself and a remarkable ability to marshal facts in a way that, I judged, must have made an irresistible appeal to Britons of the working classes.

Even in my study, he showed an inclination to indulge in monologues. The words poured out of his mouth with the rapidity of shot from a quick-firing Maxim gun. They seemed, moreover, to be charged with fire. They must have scorched any one against whom they were directed.

His propensity for prolixity and "tub-thumping" amused me. So did his inclination to repeat the Socialist catch phrases. I was, however, struck with his earnestness and fixity of purpose. He had an objective to strive for and plenty of grit and industry to enable him to reach it.

For all his international outlook, he was

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

at heart an Indian patriot. That fact was plain to me long before Mr. Pal and he bade me goodbye and departed for their respective homes. I hoped that he would soon obtain his heart's desire and, from his seat in the House of Commons, trounce wrong-doers in India and secure redress for their victims.

VIII

In later years, as I got to know Saklatvala better and came in contact with some of the members of his immediate circle, I realized that he was paying a heavy price for his ambition. By concentrating his thoughts upon politics and doing more or less mechanically the work that gave him his living, he was not only sacrificing his future in the City but also was getting into the bad books of his wealthy kinsmen in India and the men whom they had placed in positions of responsibility at Capel House, Old Broad Street—the London headquarters of Messrs. Tata, Limited.

A worldly-wise person would, on the contrary, have considered himself fortunate in having any kind of footing in a powerful commercial concern with connections spread over three continents. By putting his back as well as his brain into the work allotted to him and winning the approbation of the "higher-ups", he would have pushed his way towards—if not to—the top.

I have known persons with no acuter brain and no greater capacity for application than Shapurji Saklatvala possessed to make great commercial careers for themselves and to acquire considerable wealth and even titles of nobility. Few of them had, in fact, been born and brought up in an atmosphere charged with business as he was, or had quite so good a start as he did.

His inclination, however, lay, at least at that time, in a wholly different direction. So much so, indeed, that business actually bored him. But for undeniable necessity he would have gone away from the City and devoted all his time and talents to politics, which engrossed his mind.

IX

I recall a conversation in this connection that we had when, yielding to pressure, I dropped in upon him in his office in Capel House soon after I settled down in London in the summer of 1911, after an eleven months' tour of India. He looked the picture of misery as he sat at his desk in a small room that, if my memory has not played me false, he shared with Mr. Kaiko Mehta, Sir Pherozshah Mehta's son; possibly the latter may have just happened to be there at the time of my visit.

I remember, in any case, making Mehta's acquaintance. He seemed to be the antithesis of Saklatvala—quiet and unobtrusive—not interested in politics, for which his father possessed a genius that elevated him to a dizzy height. There nevertheless seemed to be a perfect understanding between Shapurji and Kaiko and no small degree of affection.

The more I discussed matters with Saklatvala in that office, the more I was convinced that his heart was not in his work there. Instead of dealing with dry-as-dust affairs in that bee-hive of commerce, he would have liked to be out in the open air, addressing workers whom he understood and who understood him.

It appeared to me that he was not doing justice either to the firm that held him in its or to himself. He was not unlike a man who was hacking away with a sharp axe at the very limb upon which he was seated. The only difference was that Saklatvala, in his spare moments, was attacking the capitalistic system which gave him and his family bread and butter and not any particular unit of that system, much less Messrs. Tata, Limited.

He took my chaffing—or was it chiding—quite coolly. Nearly everyone in the Socialist movement, he declared, suffered from a similar disability. He had to live, like every one else. So long as society rested upon a capitalistic basis, he must inevitably draw his—and his family's—support from capitalism. There was no help for it.

I liked Saklatvala's candidness.

X

The hard-headed men who conducted, from Capel House, business operations upon a scale regarded as respectable even in the City of London, must have looked upon Saklatvala as queer. Except on some occasion when, owing to his thoughts being occupied with socialist propaganda instead of with his work, there was a lapse that got him into trouble, as I have reason to believe some times happened, they tolerated him, more for his family's than for his own sake.

I must hasten to add that if, in the eyes of practical men of the world, Saklatvala, in those days, was a species of lunatic, he was, to say the least, a mild one. They thought that the maggot of socialism had burrowed into his head and honey-combed the grey matter in his brain so that it could not function normally

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

But they knew that he harmed no one except himself and his dependents by making it impossible for him to get on in the only way that the work-a-day world appreciates.

XI

Even persons who were not in sympathy with Saklatvala found him likable. When his jaw was not set like a trap and he was not chewing red hot steel and letting bits fall as they might upon whomsoever happened to be near him, his rugged, olive-complexioned, clean-shaven face was wreathed in smiles. Possessed of a keen sense of humour, his eyes would beam with delight whenever something tickled his fancy. He had a great capacity for laughter and his laughter set others to laughing.

He was fond of visiting his acquaintances and friends, sometimes to the point of making a nuisance of himself. He was generally "packing" one or another of his children along with him.

I recall my wife remonstrating with him on one occasion. The boy he had brought to our house late in the evening was quite small and fractious with sleepiness. She told Saklatvala that it was long past the hour when a child should be in bed. What sort of love was it, she asked, that made him lose sight of his son's comfort and his future welfare?

"That is just it, Mrs. Singh," was his ready reply, a smile playing upon his lips and his eyes gleaming with mischief. "You have hit the nail square on the head. I am thinking of the child's future, otherwise I should not bring him to your house. Some words from your or your husband's lips might fall upon his ears and prove the making of him. The making of him."

That reply was as clever as it was sincere. It disarmed wrath. Mrs. Singh got out of her chair, carried the child in her arms to the sofa in the corner of the drawing room where we were sitting, and laid him there to sleep until his sire was ready to jump to catch a late (or was it the last?) train for the night that would carry him to his home in Twickenham, several miles distant from our house.

XII

Of Saklatvala's sociability I cannot speak too highly. He was particularly keen upon Indians away from the Motherland meeting other Indians likewise exiled. I have a recollection (rather a dim one) that he had a hand in the establishment of the Indian Social Club, of which Sir Mancherjee M. Bhownaggree, who, in politics, was diametrically opposed to Saklatvala, was for years the President. He was, in any case, conspicuous at all the functions of that organization which I was invited to attend.

While he loved to talk in Gujarati whenever he got the opportunity, there was not a trace of sectionalism in him. A Parsi meant no more to him than an Indian who professed Hinduism, Sikhism, Islam or Christianity. He fraternized with all Indians, irrespective of their race, religion or rank.

The hospitable instinct used, in fact, to run away with him. Eating a meal by himself at a restaurant, even during the brief luncheon hour that business men in the City allow themselves, was a misery to him. He would invite friends and even chance acquaintances to meals in town. I doubt if there was ever a Sunday or a holiday when he was not attending or addressing a labour meeting, that he did not insist upon some one having luncheon or tea, usually both, at his home. In this way he frittered away a good deal of money that a less emotional person would have conserved.

He also caused no end of work for his wife—an English girl, nicely brought up, gentle mannered and true as steel. They employed only a general servant—often not a very efficient one, I fear—and entertaining involved back-breaking work for Sehri Saklatvala.

She, too, had very strongly developed social gifts. Whenever my wife or I tried to commiserate with her she made light of the trouble and spoke of the pleasure entertaining gave her. I must say that this was no mere make-believe upon her part.

XIII

Nor did this social socialist lack in æsthetic instinct. That side of his nature was revealed to me on one occasion when he took me from his home in Twickenham, after a hearty luncheon at his home, to Richmond, where his millionaire cousin Sir Ratan Tata, to whom he was deeply attached, had, some years earlier, bought an estate and spent immense sums upon improving the grounds and enlarging, beautifying and furnishing the mansion. As he leisurely conducted me over the house, vacant at the time, his eye lingered over the silk curtains, tapestried chairs and sofas and soft pile carpets. The richness of the stuffs and the exquisite blending of one tone with another delighted him. He spoke in warm terms of Lady Tata's artistic taste, which had found unfettered expression

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

there. He also told me of Sir Ratan's interest in archæology and of his quiet but discriminating charities.

Under the hard crust of realism I discovered there was in Saklatvala love of the beautiful. Had he possessed ampler resources, I felt, he might have created a wholly different environment for himself and may even have not been such a "hot-gospeller" of socialism. Such was not meant to be the case, however, by the Fates that control the destinies of men.

XIV

Shapurji must have been born with a combative faculty that, as he grew older, developed and, in time, dominated his whole nature. I recall his once confiding in me that while he was studying, I believe at St. Xavier's College in Bombay, Mrs. Annie Besant visited that city and delivered an address. Something in her manner or message made him wroth. With the aid of some companions bent upon mischief, he tried to raise an uproar in the meeting.

Saklatvala never got over his dislike of Mrs. Besant. He found her socialism "as weak as water"—questioned the genuineness of her interest in Indian workers' welfare—poked fun at her politics. His ideas had become so fixed in his mind that reasoning was of no avail.

He found fault also with Mahatma Gandhi, chiefly because the Mahatma refused to quarrel with mill-owners while seeking to befriend the workers. Still greater hatred was reserved by him for the men who managed Congress affairs in London. He tried more than once to storm the citadel of the British Committee, but without success.

XV

Saklatvala had started an organization of his own. He called it the "Workers' Welfare League of India." It advocated the making of provision in India for the welfare of the working population "equivalent to if not identical with that granted to the working people of Great Britain."

No one with a spark of humanity could help but admire the ideal. It was, however, beyond the realm of practicability. Conditions in India differed from those in Britain so widely that only a visionary could ask factory owners in Bombay, Ahmedabad and other Indian centres to approximate to British standards either in respect of hours or wages.

Our industrial workers came mostly from the countryside and did not stick to the mill or the factory throughout the year, let alone throughout their lives. They sprang from that, for generations, had been under-fed. little physical strength they possessed they entered the city was drained out of by the work to which they were unused by the insanitary conditions in which they compelled to live and the temptations to many of them succumbed. Their minds steeped in ignorance and they lacked disci of any description. How could any one any sense expect these men and women produce as much yarn or fabric as a "he in Britain?

Saklatvala would not see this aspect of case. Whenever it was brought to his no he would merely assert that even with the *per capita* output, the mill-owners in India battening on the toil of the wage-workers that they could well afford to raise conditi to the British level.

XVI

Again and again Saklatvala pressed me join the League he had started. Each time refused to have anything to do with it. He impatient, sometimes to the point of rude He did not part company with me, howe He kept on coming to our house as befor oftener, if anything. At the back of his br he had an idea that one day he would con me to his doctrine and I would cease to reg the political as the dominating factor in In

In the summer of 1919, I remember, he s one of his British colleagues to reinforce h in the campaign to capture my support. O of his "very common man friends," he cal him in the letter (*) that he sent to introd him to me. Always in a hurry, he wished to see his friend "now."

"You," he wrote in this letter, "mi again charge me with attempting to fo Economic Reform before Political Reforms. is not you or I that decide it (that matter The world has decided that the Politi Reforms that are mere Class advances are no value to human happiness." On the co trary, he argued, "the world's progress dema Mass Political Reforms, and these can only achieved through and within Econo Reforms."

XVII

Saklatvala's appeal to the "democrat circles of Great Britain" to see to it that th

(*) Letter from Shapurji Saklatvala, dated 25, 19 written from the London Headquarters of Messrs. T Ltd .

urs of work in India were scaled down while ges were raised, aroused interest in the minds organized Labour in that Island. This was rticularly the case in Lancashire and other unties that looked with a jealous eye upon e expansion of power industries in Bombay, gpur, Ahmedabad and other Indian centres. e higher the costs of production in these ntres, they argued, the less the Indian com- tition to be feared.

The "general principle that Orientals have laim to human rights similar to those of ccidentals" had, therefore, a dual fascination r the Britons with whom Saklatvala asso- ted. It appealed to their humanitarian in- ncts and at the same time conserved their onomic interests. It provided unction for the ul and cream for the body.

To suggest that this truth had never dawned on Saklatvala would be to underrate his in- ligence. Even persons who regarded him as yward could not take him for a fool.

I will not say, or even imply, however, that adopted that line of agitation merely because knew it would make him solid with the ritish wage-workers who were becoming in- easingly alarmed at India's industrialization. ly contact with him was intimate enough to ake me feel that, in this matter, as in others, e acted from inner conviction. No man— ndian or non-Indian—I have met had the wel- are of Indian labourers—and of Indians in eneral—more at heart than he did.

XVIII

Through the years of our lengthy acquaint- nce Saklatvala was becoming more and more ocal—more and more radical. This was parti- larly the case after the revolution in Russia. he break-down of the capitalistic system in at country he regarded as the beginning of the nd of that system all over the world.

His drift towards Communism might have been tolerated by Messrs. Tata, Limited, had he not been so vocal. The men in command there did not like being associated in the public mind with such doctrines.

The day of parting came. It would have gone hard against Saklatvala and his family had provision for the future not been made. It enabled him to continue to live as he had been doing.

He had hoped that the Labour movement in the land where he had pitched his camp would go communist the way he did. He spoke to me, on more than one occasion, as if his wish were being realized.

He soon found out his mistake. Many of the Britons whom he had regarded as radical proved to be conservative, from his point of view, and refused to plunge into the uncharted ocean of Communism.

Even after his break with life-long associates in the Labour Party, Saklatvala did not lose out with the British workers. To thousands of them he remained the "Good Old Sak" that he was before the great upheaval. They continued to believe in his devotion to the cause of the submerged classes—in his genuine and undying hatred of all economic forms of exploitation.

The Labour element in North Battersea, across the Thames from Westminster, enabled Saklatvala to realize his life's ambition in 1923 by sending him to the Commons. His faith in the British working-man was justified. Re-elected the following year, he remained in that House until the dissolution in 1929.

I cannot speak, from personal knowledge, of the work he did during those years, for they were spent by me away from Britain. I am sure, however, that he used every opportunity he could make to advance India's cause, which, without question, was dear to his heart.

CASTE : SOME CONTRASTS AND PARALLELS

By JOHN CLARK ARCHER, Ph.D.
Hoober Professor of Comparative Religion,
Yale University, U.S.A.

The writer does not mean to be presumptuous, instructing Indians on Caste. Rather, he seeks some better understanding of problems, Indian and Western, which have frequently been linked together by various interpreters as one in essence. That is, certain differentiations in the Western social structure are often made analogous to caste in India. And in India herself Moslems and others among non-Hindus are often classified by a caste arrangement. What, in reality, is caste? How general is *real* caste in India? Has caste existed in the West? The answers offered to these questions by this brief article are more suggestive than exhaustive, so wide is the total field of inquiry.

The field truly is wide and the problem baffling, even with India alone the ground of inquiry. The geographical setting and the element of time are great considerations, although they are by no means final. India's comparative isolation between high mountains and extensive seas throughout many generations was favorable toward the maintenance of character and institutions slowly formed from original and acquired materials. Caste may not be understood merely by a survey of the contemporary situation. Its prevalence might seem to be due to custom and common consent, were it not for the fact that the true explanation is, let us say for the moment, historical, not contemporary.

Mere groupings or classes of men are a common aspect of human history, based upon such factors as race, color, conquest, servitude, title, occupation and property. These factors are, of course, not mutually exclusive. Some are complementary and all are interrelated, more or less. But they are alterable in some measure. Black men have been trusted administrators of whites' affairs. Men of slave descent have sat on thrones. Foreigners, having lost the odor of strangeness, have been admitted to familiarity. Barbarians acquiring culture have raised their social status. Races have intermarried without always rejecting the fruits of union as outcastes. Men have changed occupations freely in this or that society. And so on. Every great state or nation has included social and other classes, whether for g for ill at one time or another. The struggle has figured prominently in world tory, and doubtless will ever continue to in some measure, at least. But "class" to be confused with "caste." Even the "W Man-Negro differentiation" illustrates no than a racial or biological basis for caste. cidentally, we are not yet attempting a definition of "caste" (regardless of the et logy of the word itself). We mean to h appear through a historical description of institution.

Whatever the "pre-Aryan" history of I may be, the problem of caste is not depe on it. Caste is without doubt post-V developing somewhere amidst the tran from Brahamanic priestly theology to cr Upanishadic philosophy. We may not detach the problem of caste from pre-A history, regardless of "Sumerian" culture all. We may even disregard, to some de at least, the problem of Aryan "invasions India in contrast with the view that I European culture sprang from *within* I The chief fact is that caste is Indian. possible Indian irruptions upon the world long since ceased before caste appeared. C is an aspect of the situation which devel in her seclusion from the world, save as fo elements may have been absorbed by I There were no culture contacts at the time w diverted or broke the main trend of In development. Disturbances affecting tra and life in Brahamanic-Upanishadic times all internal. All that is needed for an u standing of caste is Indian.

The first ingredient of caste is (*varna*), with its racial and psychological notations. But there was no such groun "color-consciousness" as is found in the N White association. No Indian stock is N The Rig Veda (particularly the *samhita*) d the "color-line." And several centuries Manu uses *varna* in his classification of peoples within the Hindu social order. S *varna* had lost, by Manu's time (not ea than 200 B.C.), any rigid color-connota

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

here had been a great intermixture of the oples. But Manu is reminiscent of that velopment by which classes were gradually rmed in Indian society. He represents canoni- legislation regarding what had long existed, law" usually thus confirming custom. And term, *varna*, represents in spite of a changing tent something real in the social conscious- ss. It had a history! But other elements, so, had entered into the development.

Marriage may be taken as a test. What- r early distinctions of tribe, clan or class pre- led, whether on a color basis or on some er, intermarriage was inevitable. It actually urred. In marriage, *varna* was not the sole nsideration. An economic factor, also, was olved, as always in early stages of culture; hough it is not possible always in the Indian ne to distinguish between cause and effect th reference to this element. Manu indicates economic penalty for irregular alliances. The n may not rightfully marry beneath him, the woman, by the same token, above her. either should marry off his proper level, the ildren suffer loss in property inherited. But s Manu indicating a movement aimed to ck irregular marriages, a practice long estab- hed? Do his laws, again, represent a cus- mary situation? In any case, it seems clear at a second major factor has appeared in the rmation of caste.

This second ingredient of caste is birth *ati*). No matter whether *jati* be dependent *varna*, or not, the two elements are in many ys distinct. *Jati* represents a new position, new conception. A person might be high, or w, born. Regularity of birth would insure proper status. One irregularly born would se caste." The brahmans stood squarely on gularity of birth, condemning not only mixed arriages but adultery. Brahmans stressed estige of proper birth, high birth, particularly. e color-line grew less important, for differ- ces of color were by that time less conspicu- s in northern India. There were lighter and rker brahmans, and shades in every caste. nd apparently before the time of Buddha there ere outcastes (although, perhaps, without the gma of "untouchability," which seems to have en a south Indian development).

Soon, in our tracing of the institution, we ust cross a faint but significant line. Obvi- usly there is no clear transition. The situa- on is again vague. But that there is transi- on to be accounted for is proven by develop- ents, at least. From somewhere comes the dea of rebirth (*punarjanman*). This is a third ement. Was it "Aryan?" Was it from the *dasyus* (Dravidians?)? Whatever was the source, rebirth was not metempsychosis from the first. Hindu literature itself discloses differentiations. The ground, of course, was a sort of "animistic" system. Man's soul departed from his body when he died. He actually died, it seems. That is, he did not "keep on going" (*cf.* the Hindi *jata rahta*), as in the later phrase of transmigration. But the soul, reposing for a time in this or that object or locality, might return to some other body by passage through another womb.

In time, here a little and there a little, in fact, there comes a new philosophy, a *priestly* interpretation of birth and death and immortality. Not that this was altogether an imposition. The thinking priests organized the fragments, expounded much of what lay in the people's minds, exhibited the growing mood within the social order. A major element was *karma*. It represented continuity, regularity, inevitability. In a somewhat unscientific fashion men conceived a cosmos not unlike the universe of Newton, and the Darwinian species—men living, and the universe rolling round, "by one fixed Law." Such was one effect of *rita*, order, related by the priests to ritual. By *deeds* could destiny be determined. No, putting it in such phrase, implies some human freedom. Rather, man's life was a part of universal movement, and the universe was one and regular. Each deed entailed a consequence in accordance with the law of *karma*, causation, and even the causative deed was itself determined. Whatever differences existed among the many "schools" of thought, whether Jain, Buddhist, Upanishadic, Brahamanic, and so on, there was for all of them a common ground in *karma*. This doctrine focused the attention to all problems. And when, especially in priestly exposition, the "deed" and "rebirth" were united, caste came to be at last established as a fixed and influential institution in the land. Its ingredients were *varna, jati, punarjanman* and *karma*, mixed into a magic portion in the hot cauldron of uneasy minds and times. Both theory and fact, with reference to one's status here and hereafter, were joined in a mutually causal relationship. But "color" tended to give way to "birth" as the caste-indicator. That caste was rooted in something not merely social may be inferred from Buddha's assumption of the system and his effort to have it spiritualized, or spiritually interpreted. Castes seemed to him a demonstration of the universal round of things, including men and gods and all.

It is thus against a background of this *karmic* repetition of life that social classes must

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

be viewed. A man was what he was because of birth. His occupation, for example—and many types are known from Buddhist records alone—, was an illustration of it, and he could not defy *karma* by a change of occupation. He would not *want* to change if he held a high position as a brahman! Only indirectly, therefore, did such a circumstance as occupation determine caste. Ancient China, for example, recognized social classes, such as farmers, artizans, etc., but caste is not a Chinese institution. There was lacking such a religious or metaphysical ingredient as *karma*, whatever other elements were there. And only indirectly, in India, did an economic factor figure. The rich merchant and the powerful chieftain stood lower in the scale than brahmans, even than begging friars.

The history of India for two milleniums has added nothing to caste principles but illustration. Changes which have taken place within the institution—by intermarriage, transfer, change of habitat, promotion, the practice of polygamy, or otherwise—have proved the rule, not broken it. Additions from without to the population of the country, with manners and customs which may have been brought in, have not altered the main structure of the system. On the contrary, as is well known, non-Hindus have felt in time the Indian mood and have allowed themselves to grow caste-conscious, after the manner of caste as an external fact. That is, seeing caste divisions of all sorts, and assuming that they were little more than something practical or hereditary—such as they had known outside India—they offered no resistance and were ultimately caught in the subtle but powerful undercurrent of *karmic* determination. Caste was something more than class.

A comparatively recent, painstaking volume,* illustrates the defective approach to the study of caste. It proceeds from "features" of caste through the "nature" (really descriptive rather than analytical) of caste groups to the story of caste through the ages. A very brief chapter on "origins" fails utterly to account for them on the most important ground, namely, the philosophical. The general method leads the author to include a chapter on "elements of caste outside India," in which false analogies are drawn. This is due to the inadequate approach to Indian caste. The "classes" in ancient Egypt, or among the Sumerians, or the "groups" in mediæval Japan, *etc.*, were not castes merely because they had some of caste's outward forms. In every case the de tive ingredients of caste were lacking. this is not to ignore a *time* factor and the ficance of continuity. Ancient Egyp Sumer were destroyed, not given time interminably fixed institutions. The st India is different. Continuity in China some degree, in Japan, compares favorabl that of India, but time alone did not them what it did for India. And the books of other lands contain no such in tation of social differentiations as may be in the sacred books of the Hindus, esp in the Laws of Manu.

India's attitude today toward Ca worthy of attention. It is related to app ly analogous(?) situations throughout the There is a world interest in human progre "social reform." Perhaps India, however, in caste a more acute and difficult problem any social problem elsewhere in the world evidence of this is the present campaign a untouchability, the width of the gulf be *sanatani* Hindus and outcastes. The latte peculiarly Indian. That there have changes in the Indian social fabric throug centuries has been observed. Changes inevitable over such a vast extent of spac time. One may nowadays appeal to such in a desire for reform. Yet for real re something further must be done. There be a re-examination of caste fundamentals a campaign set afoot to change the very of India. It would seem unwise to t religion for the character of caste and to that irreligion is the cure. Certainly, for to sacrifice religion would mean irreparabl not only to herself but to the whole world. holds treasures new and old which are i pensable. It were unwise to dissociate ethics from the ethics of religion, thus allo the former somehow to lose ultimately vigor and incentive. But Indian religion well become more ethical. Protests by Hi and other Indians against caste might be tained. They have aimed not so much at as a mere social differentiation as at the exorable, fixed form it took, and at the un lying injustice of it. To some extent caste been a Hindu bulwark and has possessed s thing of whatever validity Hinduism has. doctrinal tolerance of indefinite extent, Hi ism might have found it difficult to endure out some system of cohesion. But India never take her highest place among the na without a reconstruction of the pattern of life. And such a reconstruction must of ne sity be a long-drawn-out progression, furthe

increased education and devotion to things uly spiritual,—true knowledge and wisdom, d sincere and loving devotion. In effect, this eans to say, that whatever aid may come to dia from without, she of her own fine char- ter and spiritual insight must, with broaden- ing outlook and a sense of all men's need, work out her own salvation. The parallels and contrasts elsewhere in all the world may help her on her way as caste becomes transformed by nobler ethics of religion.

TRAVELLERS IN THE NIGHT

By SITA DEVI

(1)

is far more common to see the sons of rich thers reduced to penury than to see the sons poor parents raised to wealth and eminence. aktisaran belonged to the latter group.

His childhood and early youth was passed poverty and distress. Then in an auspi- ous moment, he came to Calcutta with an derly relative in search of a job of some kind. is luck turned from that moment. One turn good fortune followed another in quick suc- ession, finally raising him to the pinnacle of uccess. He was, of course, no longer a young an then, being nearly forty years of age at hat time.

Shaktisaran now set his mind to enjoying is wealth, acquired by so many years of toil. e bought a large house, and a great deal of urniture, also two cars. He had been obliged o live very simply, almost poorly, in his early ife and had never been able to gratify any of e desires of his wife and children. He had enied them everything, except the barest neces- ities. He was determined now to make up or all that. He was not the sort, who want o put money by, and he was not likely to equire the habit so late.

Shaktisaran's wife Susangini came from a oor family and the first part of her married ife was passed in chill penury. For many years she was obliged to live in their village ome, apart from her husband, who worked in Calcutta. She was accustomed to this village ife. Her only desire during these early days had been to pass her days somehow on simple or half rations and with most inadequate cloth- ng. When her husband's income became larger, he came over to Calcutta, but even then they had to practise a good deal of economy. Shaktisaran had taken a vow, never to spend a pice unless it was absolutely necessary, until his position was fully assured. He had seen many rich persons going down all of a sudden on account of wasteful habits; he did not want to join their rank. So he waited and waited, until his fortunes were built on sound foundations, but in the meanwhile his youth was past.

Susangini did not grieve over this. A Bengali woman begins to feel old, whatever her actual age, as soon as she gets a few children. She had given birth to three sons and two daughters, one son dying in infancy. The eldest son Nityasaran was nearly twenty now, and read in the Third Year, in the Presidency College. Then came Saroja, the eldest daughter. She was seventeen and had not yet been given away in marriage. Satyasaran, the second son, had just entered college. Niroja, who came after him, was the youngest child of the family. She was having regular quarrels every day with her parents about her studies. It was not decided yet whether she was to join the Convent School or to have an English governess at home.

So it was quite natural that Susangini had ceased to feel like a young woman. She was the mother of grown-up children and was soon expecting to become a mother-in-law. But her husband was an obstinate sort of a man. He wanted not only to become rich, but also to enjoy every kind of luxury that wealth could give. He preferred the Western mode of living. He adopted English dress, giving up the Bengali one. He dismissed the old servants, who knew only indigenous cooking and manners, and engaged Baburchis, Ayahs and Boys in their places. His wife did not put on a gown, of course, but she had to give up a great deal of her former habits, due to her husband's insistence. The girls became ultra-modern, at least in their

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

dresses and manners. Saroja was quite grown up and was past the age of being put to school. She must be given away in marriage pretty soon. So two English governesses were engaged for her to teach her at home. One was to supervise her studies, another was to teach her sewing and music. Shaktisaran wanted his wife to join the daughter in her lessons, but here Susangini became adamant. An old woman, as she thought herself, could not be expected to learn the English alphabet now with a governess. Shaktisaran might have turned mad, but she had not. If he was so keen on the English language, he could easily marry a Mem Sahib and talk English to her, to his heart's content. So Shaktisaran had to give up the idea of educating his wife and turned his attention solely to his children. Nityasaran was sick of the native universities and went off straight to Oxford to finish his education. Shaktisaran had no means of knowing how his studies were progressing. But he soon began to learn to his cost, that the boy was becoming an adept in the art of flinging away money quite in the approved aristocratic style.

Satyasaran, the younger son, was really fond of learning. So instead of rushing off to some foreign University, he continued with his studies in his old college and made up his mind to stick to it till he graduated. But his father fretted over the fact of so little being spent on the boy's education. To satisfy his conscience, he engaged a highly paid private tutor for him, though Satyasaran did not want one. Niroja had all her wishes gratified. She was put into the Convent School and had a governess also, to teach her at home. She tried to cajole her father into engaging a noted German violinist as well, to give her music lessons.

Saroja had completed her eighteenth year and must be given away in marriage without delay. Shaktisaran's relatives began to press him very much. Though he had become rich and a Sahib in his ways and manners, yet he was still one of themselves and could not be permitted to violate the laws of Hindu society. Shaktisaran, too, did not desire to keep his daughter unmarried for long. He had decided to take his family on a foreign tour and then to marry off Saroja to some member of the I. C. S. But his wife made his life miserable with her persistent nagging and he had to look about him in search of a bridegroom. He would start on that Continental tour after the marriage of his daughter, he thought. He would take the newly married couple with him and Niroja. Satyasaran did not want to go now. His mother would look after him in Shaktisaran's absence.

A good bridegroom was soon se though he was not an I. C. S. The young was healthy, good-looking and well-edu His family was high and, though his father not as wealthy as Shaktisaran, yet he was known in Calcutta society. He had lands houses of his own. Shaktisaran liked Akh the boy was called, and decided to accep as a son-in-law.

Shaktisaran's desire to spend money every possible way was fully gratified Saroja's marriage. People understood rich he was and how whimsical, at the same Susangini was too bewildered at first to pro then she began to quarrel with her husband his wastefulness, but failed to check it. week preceding the wedding day was not but a long series of festivals, the house glit all over with festoons of electric lights an band played continually before the h Saroja received everything in the way of d and jewellery that she could name and her father brought in everything else that he in in the market. The bill amounted to amazing figure, which could have easily co the cost of five rich marriages. The b groom received presents, so costly and so m ficent, that even a prince would have been s fied with them. Cars, furniture, mu instruments were bought at random Shaktisaran and presented to the young co Thus at last the marriage of Saroja was sole ized, rendering even the blase townspe thoroughly astonished. On the day after marriage, it is customary for Bengali H parents to send presents to the bridegroo house. Shaktisaran sent over two hun people and two motor buses carrying pres to his son-in-law's house. The people the streets cheered the gay procession, Shaktisaran's new relatives remained o nously silent. They took this to be an in as they had not been able to send half so m men, when it had been their turn to s presents.

But Shaktisaran could not gratify desire of going on a Constinental tour with newly married pair. A sad event followed joyous one. Susangini became seriously Shaktisaran again began to spend money water over her treatment. Allopathic doc nurses, homœopaths and kavirajes drew fortu out of his pocket, but the patient's condi did not seem to improve at all. Saroja c over from her husband's house and Ni

opped going to school. Susangini wanted to e her eldest son, so a wire was sent to him d also money for his passage back. Nityasaran knowledged receipt of the money and wrote say that he was trying to obtain leave for ming over. But he never arrived to the last. ter a month's illness, Susangini passed away, ving her dear family behind.

This terrible blow seemed to turn aktisaran into stone. He gave up the society human beings and shut himself up for days ether in his dead wife's bedroom. He used drink moderately even before, but now he came an inveterate drinker. There was no e in the family who could raise a voice of otest against this. He had to come out of s seclusion on account of his business, but seemed a thoroughly changed man. He cut f all relations with his family. He was to go supplying money and they were to spend such became the order of things hence-rward.

Saroja came to visit him one day and said, Give Niropa in marriage soon, father. It is ot seemly that she should become so thorough-westernized. Since mother's death, she is coming more and more peculiar."

"What's the hurry?" asked Shaktisaran. Let the boys bring in wives first. If I send er away now, who will look after the establish-ent?"

"*Dada** has not returned yet from England and Satya too would not marry until e finishes his education. Is Niroja to remain nmarried all this while? It would be a good atch, if you marry her to my brother-in-law. is mother is looking for a bride for him."

"No, I won't," said Shaktisaran. "These eople are too old-fashioned."

Saroja did not dare to protest against this ough she felt angry at his remark. So Niroja as going to become a full-fledged Mem Sahib, as she? But she would have to marry into Bengali family after all. Then these teach-gs would do her no good. She would have o weep tears of shame over these fashions before ng. Saroja had received some hard lessons ter her marriage. She had not become such Mem Sahib as Niroja was being turned into, ut even what she was, proved to be too much or her husband's family. They had taken her n hand and after a year's hard schooling, she ad become tolerably purified for her new rela-ives. Even now, she had to bear much un-kind criticism from them for her unorthodox conduct.

But Niroja went on gayly with her training and learning and nothing more was heard about her marriage. Satyasaran passed his I. A. and began to study for his B.A. Nityasaran went on receiving his allowance regularly, but he failed to pass his examination.

Shaktisaran began to feel angry now. He sent his son a letter full of rebuke. He even threatened to stop his allowance.

Nityasaran did not answer this letter. The next post brought no letter too. Shaktisaran became anxious and cabled to the University. The reply came, informing him that his son had left Oxford long ago. Shaktisaran was astonished and sent instructions for seeking him out. But before the search was ended, in fact before it had properly begun, Nityasaran appeared in person, without any previous notice. With him came his newly married English wife. So Shaktisaran must be satisfied, not with an English degree won by his son, nor even with an English diploma of some sort, but with an English daughter-in-law!

As there was no mother-in-law to be tackled, no great row was kicked up over the foreign bride. But she was not very cordially received. Shaktisaran prided himself on being an agnostic. He frowned at the well-furnished rooms in the house lying unoccupied. Nityasaran and his wife appropriated some of these and began to live happily. Niroja turned up her pretty nose at first and made contemptuous remarks; then she struck up a friendship with her brother's wife.

There was great commotion in Saroja's husband's family. Saroja was told over and over that she would not again be permitted to visit her father's house, and began to wipe her eyes in the seclusion of her own room. Still her curiosity drove her on. She persuaded her husband to take her side, and on the pretext of going to the cinema, she paid a visit to her English sister-in-law.

Shaktisaran had many faults, but stinginess was not one of them. So the newly married pair did not suffer from any want of money. They began to increase their demands little by little. Shaktisaran had become rather queer after the death of his wife. He went on signing cheques for his son and drank more and more.

Mrs. Nityasaran suddenly took it into her fair head that she would have some cars matching her dresses. Other fair ladies had jewellery matching their dresses, but she was going to beat them all. Nityasaran thought her demand quite legitimate. So, light blue, green, red,

*Elder brother

Digitized by Arya Samaj Foundation Chennai and eGangotri

grey and cream-coloured cars rolled in one after another. The garage had to be extended to accommodate so many new cars. Niroja called her brother a "stupid fool" and wrote a long letter to her sister. Saroja was not permitted to come over, so she could only write a long and abusive letter to Nityasaran. Of course, she got no reply. Shaktisaran laughed loudly at his son's behaviour, then went into his room and called for pegs after pegs. The only person who remained undisturbed was Satyasaran. He was busy with his studies and had no time to attend to his sister-in-law's pranks. He passed the B.A. with credit and began studying for the M.A.

Suddenly a sleeping volcano seemed to come to life. Shaktisaran's home was brought down in a crash. Nityasaran, his wife and Niroja had been to a feast and became ill as they returned. Again doctors and nurses rushed about and money flowed like water. But to no purpose. The patients died, one after the other, at short intervals. Niroja passed off last of all. As the relatives and friends were preparing to start for the cremation ground for the third time, a loud report was heard from the first floor. They all rushed upstairs in consternation, only to find Shaktisaran lying dead with a pistol in his hand.

Satyasaran's heart and brain seemed to have become paralysed. He had cried aloud at the time of his mother's death, but now he could only stare like a fool. The terrible disaster made Akhil's relatives relent, they sent over Saroja and Akhil and themselves followed in their wake. Saroja threw herself down on the floor and cried aloud. She tried her utmost to take Satyasaran away from this house that had become like a tomb in one day, but the boy refused to move. As he could not be left all alone in the house, Akhil and Saroja had to stay with him for a few days at least.

(2)

The Goddess of Fortune had been ushered into the Mitra family by Shaktisaran. Now with his death the fickle goddess deserted his house for ever. After Shaktisaran's death, it was discovered that he had not only thoroughly dissipated his vast fortune, but had also left an enormous amount of debt. He had overdrawn to the amount of four and five lakhs from several banks. The family attorney made Satyasaran apply for insolvency without delay. He left all, and with only a few clothes, came out into the street. He did not have to live in the streets of course, as his brother-in-law took him away at once to his own house. But the atmosphere of this house seemed to suffocate Satyasaran. He understood that he would not be able to stand the place for more than a few days.

The city of Calcutta, as well as the whole of Bengal, seemed hateful like poison to him. Everything connected with his past life had become unbearable. He could not even look at Saroja, who was the sole relative left to him. Friends who called to express their sympathy never had the opportunity to meet him.

Akhil became nervous about Satyasaran. "You must go away for two or three months. You would feel much better in a new place."

"I must walk there, if I am to go to a new place," said Satyasaran. "I am penniless as you know very well."

"That can be arranged," said Akhil. "When your father was alive, he had really given thousands to me whenever I had asked for it. I wish, we all had been more considerate then. But it is useless talking about that now. Take whatever you want from me. It is really your sister's money. So you need not feel any delicacy about accepting it. Give me back whenever you can. Even if you never do so, it would not matter a bit. Only tell me where you want to go."

"It is quite easy to tell that," said Satyasaran. "I had long wanted to see Burma. Let me go over there. My father was well known there on account of his business. If I find luck there, many persons have done so. I don't want thousands, give me about five or six hundred rupees, I will manage somehow with that. As I have slight hopes of paying it back, let the debt be as light as possible."

Saroja pressed him to take some more money, but Satyasaran was adamant. He bought some necessaries and caught the next steamer to Rangoon. He was determined to be as economical as possible. So he went on board as a deck passenger. This was his first sea voyage. So he became sick almost at once. This was fortunate in one way, as it made meals unnecessary and saved expense. Once or twice only he bought some "puris" and ate them.

Shaktisaran had many acquaintances, mostly Bengalees, in Rangoon. Satyasaran had written to one of them, a gentleman of the name of Biswanath Maitra, informing him of his own early arrival. He had also intimated his desire of becoming his guest for the few days. If by any chance he did not

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

at the wharf, Satyasaran would be in a fix. rich man's son, he had never been accusmed to fend for himself. Where would he find shelter in this strange land? However, Biswanath Babu arrived at the wharf to welcome him, thus putting his fears to rest. They got into a hackney carriage and started for Biswanath's home.

The land appeared strange and new to Satyasaran. The people he saw were not Bengalees, their speech was unknown to him and their dresses too were different. Their manners appeared strange to him. The houses he saw on both sides of the road were not built quite in the Indian style. Satyasaran began to hope that he might be able to forget his terrible misfortune in this land, in time, due to this change in his surroundings. This seemed to be a land where joy reigned supreme. The people looked so cheerful, gay and carefree that it appeared difficult to believe that they had ever known trouble or sorrow. If they had, would the entire nation be able to go about so brightly dressed and looking so glad?

"These people are not as poor as the Indians, are they?" he asked Biswanath Babu. "They seem much better off, at least judging by their dresses."

"They dress rather well," admitted his host. "But otherwise they spend very little. Still on the whole they are better off than the Bengalis."

They reached their destination very soon. Biswanath Babu lived all alone here, his family was at home. He could not bear to live in a mess, which was full of young people. He had rented a small flat, where he lived with his Chittagonian servant.

The house stood within a narrow lane. As the carriage stopped, Biswanath Babu got down and shouted, "Kamini, Kamini." A tall and stout man bounded down the stairs in answer, and throwing all the luggage on his shoulder, carried them up quite easily. Satyasaran felt rather amused at hearing the giant's name. The man who had given him the name of "Kamini,"* must have had some sense of humour.

They got up the dark, creaking stairs and entered a room on the first floor. Biswanath understood that his guest was feeling extremely amazed at the sight of his quarters. "You won't get such bright and smart rooms here, as you have in Calcutta," he said with a smile. "Most of the people live in such cages here, which they call rooms by courtesy."

*Lady

Satyasaran sat down in the small and dark room and thought perhaps this was what he needed. If he really wanted to forget that he was a rich man's son, then this violent change would serve his purpose well.

"I must go away leaving you alone, even on the first day," said his host, rather apologetically. "Please don't mind it. You know we are but slaves. I wonder, how you are going to spend the afternoon."

"I shall stroll about a bit," said Satyasaran.

"Do so," said Biswanath Babu. "But be careful not to pick a quarrel with anyone. These people are terrible, they can stab a man for nothing."

"I can never manage to quarrel, even when it is imperative," said Satyasaran. "So I don't think I shall quarrel here."

Biswanath sent his guest to have his bath first, then he had his own, within a couple of minutes. Kamini spread two newspapers on the floor for the gentlemen and brought the water in two glasses of aluminium. The breakfast was served on chipped plates.

The first mouthful he took nearly made Satyasaran cry out in agony. It was so horribly hot! He had never had the good fortune to taste such cooking before. Why was not the fellow named 'Droupadi,'* instead of Kamini, poor Satyasaran wondered. His host understood his plight and asked sympathetically, "Cann't you eat anything? These fellows have given up the plough and taken to cooking all at once. What more could you expect of them? Even if he simply boiled the things, one could eat them. But the idiot is extremely fond of chillies and other condiments. He is unwilling to learn new dishes too. He always refuses to cook anything new, saying that he does not know. Come here, you fool, and bring more "dal" for the gentleman. Is the fish very hot too? I told him to cook well, as a guest was expected and this is the result."

Satyasaran felt rather sorry for the poor giant. Why was he placed in such an unsuitable post? He could have done very well as a soldier. Both his name and his occupation were most ill chosen. In order to comfort the man, he replied, "No, no, the fish is all right. I can eat it."

Kamini rushed into the kitchen, and brought more fish for him. It was positively red, from the amount of pepper used in it. Satyasaran had to pay the penalty for his overpoliteness and swallow the curry, though

*She was famous for her cooking in ancient India.

Digitized by Arya Samaj Foundation Chennai and eGangotri

it was as hot as fire and drew tears of agony to his eyes.

Biswanath Babu left for his office after the meal. Satyasaran rested for a while, then went out. He walked very warily, keeping a sharp look-out, lest he might lose his way in this strange land.

Though Rangoon was the capital of Burma, the Burmese did not preponderate here. For one Burmese, dressed in bright rich silk and head tied up in coloured silk handkerchief, he met two dark Madrasis, who were dressed very shabbily. There were Punjabis, with turbans on, Gujratis, with caps and Anglo-Indians in European costumes. Many Burmese sat squatting on the footpaths and ate "Mohinga," which they had bought from the vendor on the street. This seemed quite natural for them. These vendors were either Chinese or Burmese and they carried their entire stock in two pots, which were placed on charcoal stoves. These stoves were slung on two sides of a pole, which the men carried on their shoulders. They had two sticks in their hands which they beat against each other continually, producing a racket. There were many Burmese women walking along with carefree gait, who carried baskets of fruits or flowers on their heads. Their manner clearly evinced that they had never lived in Oriental seclusion. The vehicular traffic consisted mostly of rickshaws. The rickshaw pullers were all South Indians.

Satyasaran had wandered far away from his host's house by this time. He had hitherto kept to the main roads, now he ventured into a small narrow lane. This must be one of the slums of the city, he thought. The lane was full of filth of every description and on either side of it stood rows of dilapidated huts. The footpaths were full of sleeping humanity, even at this time of the day. Only a few men could be seen sitting up here and there, fanning themselves with dirty pieces of cloths. They all appeared to belong to the coolie class. His ears were assailed by a veritable storm of Tamil and Telugu, as he walked into the lane.

A small shop stood at the extreme end of the lane. About a score of people, both men and women, stood in front of it quarrelling furiously. They gesticulated violently and shouted at the top of their voices. People gathered around them gradually, attracted by the noise. Soon there was a pretty big crowd. Satyasaran's curiosity was roused. He approached them and stood by on one side, looking on.

The people who were quarrelling were South Indians. So much Satyasaran understood from their dress and dialect. A girl sat on the ground, weeping. She wore yellow *sari*, with broad red borders and no ornaments on. She was very pretty. complexion too was fair. A fat, elderly stood in front of her. He had a number heavy gold ornaments on and wore a cloth broad borders. He appeared quite opulent seemed to be in a nasty temper for some reason or other. He was abusing a thin old man sat near him. The old man waved his about and spoke in a shrill voice, trying best to explain something. The fat man the girl by the hand every now and then pulled her towards himself. But the girl away his hand every time and wept loud Questions were showered upon her from crowd, but nobody gave any answer to Everyone was too busy talking.

Satyasaran grew more curious. He see a few Bengalis amongst the crowd. approached an elderly gentleman and asked "What's the matter, sir? What is all this about?"

"Quarrels and fights are the only recreations these people have," the gentleman replied turning to Satyasaran. "They work like beasts of burden, drink like fishes and fight like lunatics. Their last destination is the hospital where they go to die."

"But why is that girl crying?" asked Satyasaran. "And why is that fat fellow putting hands on her?"

"That old man has sold the girl to the fat fellow," said the gentleman. "But the girl does not want to go with him. Hence all this trouble."

Satyasaran was thunderstruck. "Sold! What do you mean, sir?" he cried. "Why the police interfere?"

"Oh, the police never bother about these things," said the gentleman. "Thousands such cases take place every day here. The fellow will take her away today, keep her sometime, then he will sell her to someone else, whenever he is short of money. The people regard women as no better than utensils. The girl is heading for trouble. The fat chap will have his revenge on her, for that weeping."

"How horrible!" cried Satyasaran, now thoroughly excited. "I could never dream such things could happen in a civilized country in the twentieth century. Some one should inform the police."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"What would be the good of that?" asked s new acquaintance. "The police may come d take these two men into custody. But they ould soon obtain their release through judi- ous bribing. But what would happen to the rl? Would anybody give her shelter? Even someone does, he would soon try to sell her ain in his turn."

"But one cannot stand silent, and look on ch a monstrous thing," cried Satyasaran. Isn't there anything that could be done to e her?"

"Of course, there is something," said the ntleman with a laugh. "You can offer a rger sum to the fat fellow and buy the girl om him. But you are making too much of is. These women are accustomed to being d like cattle, they don't think much of that. e is crying so loudly, because the fat man is t to her taste."

Someone cried out from the crowd, "No, , this is the first time she is being sold. She me over only a month ago, she is not even arried."

"I can buy her off," said Satyasaran, pay- g no heed to the crowd. "I don't mind giving way every pice I have. But one cannot look n a fellow mortal, being treated so abomin- bly. But where am I to keep her? I have nded here this very day and have put up at nother's house."

"That can be arranged," said the other. But if you really want to buy her, you must urry up. Things look like coming to a head. hey are going to have recourse to force and nish up quick."

This was true. The fat man suddenly let t a roar and advancing upon the girl, took er by the hair and pulled her up straight. The rowd began to melt away. Nobody paid any tention to the girl's weeping. The old man ho had sold her now took up his bundle and epared to depart.

Satyasaran ran up to the girl and with a iolent push, released her from the clutch of er tormentor. The girl moved away a little nd gazed at him with her large eyes full of ears of gratitude. She appeared a bit sur- rised, too, at being released so unexpectedly. But a storm of words broke out again, which as deafening in its intensity. The elderly entleman rushed to Satyasaran's rescue, and anding by his side, he began to explain some- hing to the crowd in a mixed jargon of Hindi nd Tamil. His efforts seemed to meet with uccess, as the howling around them died down somewhat and the fat man gazed at Satyasaran with a hideous leer on his face.

"What did you say to them?" asked Satyasaran.

"The only argument they will understand," said the gentleman. "I told them that you have liked the girl very much, and want to buy her for yourself. If they give her up, well and good, otherwise the police will be sent for. I have also informed them that you are a relative of the police superintendent."

Satyasaran experienced a shrinking sensation within himself. What a picture of himself was presented to the crowd! But if he could save the girl, everything would be justified. Moreover, he was a stranger here. It did not matter what people thought of him in this strange land.

"How much money does he want?" he asked.

The fat man began waving his arms and shouting again. Satyasaran approached the girl and asked in Hindi "What is your name?"

The girl appeared to know a little bit of Hindi. She looked at Satyasaran and replied, "Kanakamma, Babu."

The gentleman now turned to Satyasaran and said, "He is a greedy thief. He certainly has not paid more than fifty rupees for the girl, but he wants two hundred rupees now."

Satyasaran was in a hurry to finish the ugly affair. "All right," he said. "But I have not got the money with me. I must go back to get it. Will he stop here for me?"

"He may and he may not," said the gentleman. "You cannot be sure of such people. But you may do another thing. I live close-by. I shall take these people with me and make them wait there, while you go and fetch the money. It was a bad day for you. You have got to lose so much money for nothing."

"Well it is something to have saved a human being from such a hideous fate," said Satyasaran.

"You are young and still see the world through rose-coloured glasses," said the gentleman. "But we have become hardened. To us loss of money is loss, pure and simple. The reason does not matter. But come on, the sun is too hot here."

His house was in the next lane and it took them but a minute to reach it. The spectators departed rather disappointed at not being able to see the fun to the end.

The children of the house came out and gazed at the strangers with surprise. The

ladies, too, peeped at them from behind the shutters. The girl Kanakamma stood in a corner, trying to shrink within herself. Her erstwhile owner crouched on the floor, and looked about him. Satyasaran called a shaw and getting into it, raced back to host's house.

CELEBRATION OF GAEKWAR'S JUBILEE IN NEW YORK

For the first time in history, a Hindu ruler's sixty years of sovereignty over a State in India was celebrated by Americans of all faiths. His Highness the Maharaja Gaekwar of Baroda is the International President of the World Fellowship of Faiths which held this unprecedented celebration on Thursday evening, the second of January in the Grand Ballroom of the Hotel New Yorker, New York City.

Dr. Alban G. Widgery of England, who was in the service of the Maharaja Gaekwar for over seven years in India, described His Highness' tireless labor in behalf of his people and especially emphasized his establishment of compulsory free education for all of his two-and-a-half million subjects.

Sri Deva Ram Sukul, a Brahmin teacher of India, exhibited special pictures of the Maharaja and of Baroda and other Indian States. Mirza Ahmad Sohrab of Persia, discussed India's contributions to world civilization as exemplified in the benevolent and progressive rule of the Maharaja Gaekwar. Rabbi B. Leon Hurwitz, Chairman of the Brooklyn Council of the World Fellowship of Faiths, spoke especially of the fact that His Highness came to Chicago in 1933 to deliver the keynote address, "Religion in a Changing World," which opens the recently published book *World Fellowship*, that contains the 242 addresses delivered by 199 spokesmen of all faiths, races and countries in 83 meetings held by the World Fellowship of Faiths during Chicago's Century of Progress World's Fair.

Kedarnath Das Gupta, General Executive of the World Followship of Faiths, recounted his several interviews with His Highness last summer at the latter's English residence, "Aldsworth," former home of Lord Tennyson. When Mr. Das Gupta was expressing his appreciation of the Maharaja Gaekwar's great achievements, His Highness said, "Don't tell me what I have done. Tell me what I can do now."

The Rev. Jabez T. Sunderland, D.D., who has worked for many years in India and America in behalf of Indian progress, sent a special message which was read to the assembly. Sir Francis Younghusband, K.C.S.I., K.C.I.E., Chairman of the British National Council of the World Fellowship of Faiths, wrote expressing his appreciation of the great improvement effected in the State of Baroda under the leadership of His Highness since Sir Francis first visited Baroda more than fifty years ago. Lord Lamington, former Governor of Bombay, now a member of the British National Council of the World Fel of Faiths, expressed his appreciation of the M Gaekwar in a message which was also read t assembly.

Bhupesh Guha of India opened the meeting by ing Hindu music on the *esraj* and on the *bansi*. C Frederick Weller, General Executive of the World F ship of Faiths, presided.

The text of the messages read from Sir F Younghusband and Lord Lamington is given below Sunderland's message was published in *The M Review* for February last.

Message from Sir Francis Younghusband, Ch of the British National Council of the World Fell of Faiths, who was born in India and was a high in the service of the India Government:

"His Highness the Maharaja Gaekwar of Ba one of the great Princes of India who have devoted earnest attention to the advancement of the p committed to their charge. For sixty years he has Baroda; and Baroda today is a very different State what it was when I first visited it fifty-three years The people are better educated, they live under b material conditions, and they are happier. And this been accomplished through the Maharaja keeping f the old Hindu traditions, yet being open to effec necessary modern improvements and all the time b sympathetic with the feelings and ideas of adherent other Faiths than his own."

"May his rule extend to many years yet."

Message from the Right Honourable Lord Lami a member of the British National Council of the W Fellowship of Faiths, who was Governor of Bombay many years:

"In reply to the request to send a message ann gatherings to be held in celebration of the Diam Jubilee of H. H. the Maharaja Gaekwar of Ba have to say that it is very fitting that a tribute s be paid to one who during his sixty years of rule a great State has done so much to make his Faith active means of doing good not only to those of his Faith but also to those of other beliefs.

"Rigid orthodoxy has done much harm, where recognition that others are seeking to approach Almighty by one of his many ways would bring searchers of Truth into a sympathetic and harmo understanding."

EDGAR ALLAN POE'S ORIENTALISM

By KURT F. LEIDECKER, M.A. PH.D.

Poe was born near enough the Concord empyrean, but unfortunate circumstances compelled him to stray from such isles of content. His task was to bring forth exquisite flowers from stony and arid environment.

Such flights into rarified atmosphere as the Concord sage would indulge in habitually, were denied Poe. The "transcendental" capacity was innate in him. He demonstrated his ability along these lines not a few times, and he found the quality of "supernal beauty" at the bottom of fine poetry. All this would indicate that Poe was endowed with an idealistic strain. He felt the true intuitively when it assumed the form of poetry, but he failed to see it when it presented itself in a logical garb, buttressed by prosaic argument. He would undervalue a Kant, a Hegel and even the pensive Goethe. Those who approach the problems of so-called transcendentalism conceptually, he would not follow. But the Orientals—those of the Far East, not those of the Near East—are, above all, "conceptualizers." And thus we have indicated broadly the difference in the Orientalism of a Poe and even men of the type of Thoreau.

There is nothing very striking in Poe's allusions to the Orient. He had never come in contact with the Oriental scene except through books. He may not have met any Orientals. The only vital influence that might be noted are the time in which he lived (1809-1849) and in which falls the general awakening to the reality of the Far East, and, more particularly, the period from 1827 to 1829 which saw him in Europe where the interest in the Orient was keener than in the United States, and where the researches of Egyptology held the attention of the public. That Poe should have stood under that influence is, of course, extremely uncertain as we know nothing of his doings during that period. But the fact that he had a decided bias for Egypt brings such an assumption well within the bounds of the problematic, even though he may have kept in touch with the intellectual world only slightly during that period.

By way of introduction it may be said that Poe shares with many of his contemporary writers the use of certain adjectives, phrases and comments with an Oriental background which we will have to mention in detail. This bears testimony, on the one hand, to the poverty of knowledge and information obtainable then, and, on the other, to the fact that these meagre sources were quite generally read. Poe's reading was confined mainly to *belles-lettres*. He was not even an amateur scientist. Life and history he interpreted in those qualities that point to a region beyond the natural and even imaginary, in the milder sense of the term. If ever a poet made the noumenal his realm it was Poe. The allusions and the references to the literature he perused are, therefore, mere dry leaves when culled from their context. They are the spices in narrative and poem, herbarium specimens when collected.

> "That an American should confine himself to American themes, or even prefer them, is rather a political than a literary idea—and at best is a questionable point. We would do well to bear in mind that 'distance lends enchantment to the view.' *Ceteris paribus*, a foreign theme is, in a strictly literary sense, to be preferred. After all, the world at large is the only legitimate stage for the autorial *histrio*."[1]

More than expressing an opinion on a much discussed topic, Poe seems to be apologizing in these words for his own spiritual rambles that carried him as far as Egypt, Arabia and Palestine and even to the Dutch possessions in the East. Had he lived longer he surely would have stopped in India several times and gone into China and Japan. *There* would have been romance and mystery, enough to tax language to the utmost in making it conform to fancy! Unfortunately, Poe lacked the time to work up a background. The bee-like industry of a Thomas Moore he had, but he would produce, if at all, something novel and original in its entirety. The *Lalla Rookh* he deems good in its individual parts, but in the aggregate "the happiest originalities" weary, and he therefore considered Moore as having "comparatively failed" in this romance[2]. In passing we might mention that this criticism reiterates, in different words, the contention in his *Poetic Principle*.

There are enough indications that Poe

Digitized by Arya Samaj Foundation Chennai and eGangotri

thought of the Orient in terms not dissimilar to the reader of Oriental love and romance stories. The Orient is truly the "Far" East, the out-of-the-way and dark corner of the globe in which the unexpected, the stupefying, the wondrous holds sway. The *MS Found in a Bottle* teems with the portentous. Again, the East breathes voluptuousness and luxury—themes for which our "sex-less" author however cared nothing. It is those subtler forms of sensuality he and the epicure have in common which we meet in his writings. The insinuations of Montesquieu's *Persian Letters*, which he knew, were foreign to him. Stimulating a somewhat identical experience he could, however, acclimatize himself to the opium-heavy atmosphere of the setting of the tales of Scheherazade.

Coming now to the subject-matter of Poe's Orientalism, one treads everywhere on uncertain ground in his names of places and persons. More than any other poet he had the innate tendency to mystify and adapt for the purpose of ridiculing or for the excitement of awe and terror.

At the head of an exposition such as we attempt must stand the reflections of Egypt in Poe's works. Among books we note particularly Stephen's *Incidents of Travel in Egypt, Arabia Petrea*, and *The Holy Land* which, as his unkind literary executor relates, he reviewed in the *New York Review* for October, 1837. Moore's *Alciphron*, dealing mainly with the Egyptian scene, he placed far above his *Lalla Rookh*, for literary and poetic reasons, but, as we suspect, also because the topic appealed to him as such[3].

There is no reason for doubting that Poe read widely, if not deeply, in accounts of Egyptian archaeology, and that he was greatly impressed not so much with what this ancient people achieved as with the results which a comparison of the civilization of his day yields. The distance in time which separates us from the Egyptians should have evolved works of architecture, institutions and traits in human nature that would put us moderns into a favourable light. To show that it did *not* he wrote the half caustic, half humorous *Some words with a Mummy* in which he turned his knowleoge of some phases of Egyptian civilization to good use. It is a sedative for optimism and—though Poe did not intend it for such—a balm for pessimism, and no one would look for accurate or serious material in this outburst of one who was "sick of this life and of the nineteenth century in general." And yet there is a kernel of sound sense in it in that it teaches not to overvalue our own nor belittle the ancient culture which, all, has laboured to give foundation to all n endeavours.

In no other tale did Poe make as cle use of things Egyptian. But the objects of this African country were too good to be looked by him in building up a background the grotesque. The "solemn carvings of Eg the "huge carvings of untutored Egypt gigantic sarcophagi "of black granite, from tombs of the kings over against Luxor, with aged lids full of immemorial sculpture" w remembered as pieces of furniture, or sphinxes of Egypt" as decorations, by reader of *Ligeia* and *The Assignation*. T from Egyptian antiquity are employed sparingly.

The temples and pyramids and obelisks well as the inevitable Nile, Thebes and Ka and a few other sites may be met in Poe's w ings, but never with such frequency as am some other contemporary American auth It would surprise us greatly, however, had cryptogram-solver passed by Champollion's of deciphering the hieroglyphs.

If we can count Libya an Oriental cou at all in virtue of its close association in Po mind with Egypt, we must mention here that thought of it as harboring a sufficiently out-the-way and poorly known region to provide stage-setting for the perhaps weirdest of writings, *Silence—A Fable*. And this leads over into Arabia.

Poe's *The Thousand-and-second Tale Scheherazade* is told in a delightful story-tell style. Not any Western story book, but cycle of the *Arabian Nights* he found suitable a natural medium for relating the truth that stranger than fiction. He purports to give summary of the *Tellmenow Isitsoornot* where the thousand-and-second and last tale of beautiful Scheherazade is laid down and whi details in a mythical way modern discoveries inventions which the stupid king stamps as

Apart from such phrases as he uses, for stance, in describing the beauty of Ligeia being that of the "fabulous Houri of the Turk *i.e.*, the nymph of the Muhammadan paradis or such similes as carrying one's shroud on earth or the "narrow and tottering bridge whi Mussulmans say is the only pathway betwe Time and Eternity"[5] he sees, on a whole, th humorous side of Muhammadan life and thoug or at least employs them for the purpose emphasizing the incongruity of a certain situ

ion. Cases are not numerous, but we mention the *Heaven gives relief*[6] and the Koran motto: "There is *no* error in this book," adduced twice in the *Marginalia*. It is very characteristic that, to take two examples, the Arabian perfume and the beauty of the Arabian landscape, do not answer his needs for infusing into his descriptions all the subtle qualities which his imagination ascribed to a particular aroma or a particular view. The deep, early poem *Israfel* belongs into this general category of writings with an Eastern motif.

Semitic civilization has been mined by Poe for material of still another sort. The history of antiquity yielded him parallels and illustrations such as he needed on occasion. Babylon and Nineveh, Shalmaneser and Sardanapalus, and a small number of other names could be assembled here. But more important are the tales. *Four Beasts in One* is based on the life and times of Antiochus Epiphanes, King of Syria, whose "impious, dastardly, cruel, silly and whimsical achievements which make up the sum total of his private life and reputation" were so much food for Poe's mind ever hungry for the horrible and eccentric, especially if some suggestive facts would support, as it were, the natural appearance of the abnormal. In quite a different vein is written *A Tale of Jerusalem*. Simeon, Abel-Phittim and Buzi-Ben-Levi in the beleaguered city lower a basket with treasure from the temple to the enemy in order that they might receive, in return, a lamb for use at the impending ceremony, but find to their horror a hog in the hoisted basket, which they speedily drop.

Of Poe's religious convictions we shall have to speak in another connection. Here we point to his review of J. T. Headley's *The Sacred Mountains*[7] which is devastating because he detested quackery, especially in theologians who talk about the supernatural in familiar language. Similiarly, though in a much more tolerant manner, he criticized the Rev. George Busch.[8] He could not "admit the imaginary axioms" from which his *Anastasis* starts. Then he also ventured into the field of higher textual criticism. In *Marginal Note CXLI* he discusses Isaiah 34.10 and Ezekiel 35.7, both with a view to discrediting the literal interpretation of prophecy. A letter from the *Griswold Collection*[9] by Professor Charles Anthon addressed to him supplied the technical apparatus for the discussion. Poe here evidently undertook something for which he was not qualified. A similar attempt may be seen in *Marginal Note CXXVIII*.

If Poe had much knowledge of Persia and Persian literature he did not divulge it in his writings. Every reference—and they are sparse enough—seems to disclose a knowledge received at second or third hand. About three references to Persepolitan sculpture, insignificant and obscure mentionings of the Magi and the "Ghebers," and an express reference to "the Persian Saadi in his *Gulistan*" is all that need be called to attention in this place. The *Tale of the Ragged Mountains* introduces us to India itself as Poe reconstructed it from his reading. A certain Mr. Bedloe, an addict to the habit of taking morphine and a patient standing *in rapport* with his private physician, Templeton by name and a firm believer in mesmerism, recounts an experience he had while wandering off into the neighborhood of Charlottesville, *Virginia*. On the hills he suddenly realized that the scenery had changed into a sub-tropical one with an "Eastern-looking city" on the margin of the river. He entered the city and, seeing a band of soldiers engaged in battle with the natives he joined them and was killed by an arrow in his temple. But, "all these things," he said, "I felt—not saw." Templeton, who had listened attentively, produced a watercolour, drawing of an old friend of his, Oldeb, an officer in the army of Warren Hastings who fell, in the manner described by Bedloe during the riots at Benares, in 1780. The implication of the story is, that Bedlo(e) was the reincarnation of Oldeb whom the much older Templeton knew intimately and whose resemblance to Bedloe had caused the physician to attach himself so closely to the latter.

Poe realized keenly the possibility of a dramatic story based on the caste conflict in India; yet such a story would have neither been original nor suitable to his own temperament. India, apart from accounts of British complications, was at that period regarded in the light of metaphysics mainly. Thus we understand why Poe has the letter written on board the balloon "Skylark" in *Mellonta Tauta* signed by "Pundita" (Panditā, we would write now), and why "Pundit" (Pandit) figures in this ramble and scramble with Aristotle, Hogg, Bacon and the rest of philosophers. A lyric picture from Indian lore we reproduce from *Al Aaraaf*:

> And the Nelumbo bud that floats forever
> With Indian Cupid down the holy river—

Fair flowers, and fairy! to whose care is given
To bear the Goddess' song, in odors, up to Heaven.

Some Indian miscellanies need not detain us here, but inasmuch as we dwelled on Egyptian furniture we might also take note of the "ottomans and candelabra, of Eastern figure" and the "Bridal couch, of an Indian model," "sculptured of solid ebony, with a pall-like canopy above," for the Lady of Tremaine. It is rather uncertain whether Poe ever read original translations from the Sanskrit, as did Emerson and Thoreau. We would expect to be able to gather more material if he had really tapped the sources and if he was as "read in Eastern fable" as he seems to imply in one place. Evidence forces us to believe that Thomas Moore, Simms, Lucretia M. Davidson and others were really his authorities.

From the port of Batavia "in the rich and populous island of Java" we do not follow the author of *MS Found in a Bottle* on his adventures in that region, but sail directly to China and Japan. The latter country he remembered only for its slipper manufacture, and thus we can confine ourselves to China merely.

Quoting Davis and Barrow again does not imply that Poe read at all extensively in Chinese literature. In fact, his satire *How to Write a Blackwood-Article* and Miss Zenobia's article itself* may be taken to indicate the truth of this assertion. For he makes fun of those who cite Chinese works, and he promptly invents two titles of novels, *Ju-Kiao-Li* and *Jo-Go-Slow*. Introducing such words would "evince your intimate acquaintance with the language and literature of the Chinese. With the aid of this you may possibly get along without Arabic, or Sanskrit, or Chichasaw." Unintelligibility to him is synonymous with Chinese.† The soliloquies and "asides" in the modern drama appear to him less rational than the performance of Chinese actors, while romance writers might take "a hint from the Chinese, who, in spite of building their houses downwards, have still sense enough *to begin their books at the end.*"[10] He also was to all appearance in sympathy with the Chinese belief that the abdomen is the seat of the soul.

The Chinese love of opium made them his friends. The beauty of Ligeia he likened to the "radiance of an opium dream, and airy and spirit-lifting vision more wildly divine than the phantasies which hover about the sl ing souls of the daughters of Delos." could describe vividly the experiences in d when "in the shackles of the drug," he k the qualities of the "after-dream of the re upon opium."

Returning, however, to more se matters, he at least once characterized C genially as "the simple and enduring." other characterizations[11] are not as h nevertheless, we bring them here: "Assyria architect," "Egypt, the astrologer," "N more crafty than either, the turbulent m of all Arts."

The purpose of our investigation sh be forfeited were we to apply ourselves criticism of all the allusions which Poe m to things Oriental. What he saw was poe reality, not plain pragmatic fact. There indeed, many inaccuracies even where h serious. To disparage Poe on account of peccadillos would be like reproaching a scie for lack of poetic license. We prefer to upon Poe's Orientalism from the point of of appreciation.

In conclusion we must consider s parallels in Poe's thinking to the distinc attitude of the East as it has been eleva into a philosophical system in India. That Poe such conceptualizations *sich nicht l lassen,* does not preclude his having had s conception that may be called identical these. There is no indication throughout writings that he received a definite influe from the Orient in the ideas which we are discuss briefly. The parallelism, in our vi is revelatory of the possibility of similar e periences or thoughts under widely diffe conditions of time and place.

The general proposition prefixed to an o line of Poe's philosophy in a letter by his o hand,[12] dated February 29, 1849: "Beca Nothing was, *therefore* All Things are" sho be compared with some passages from t ancient *Chandogya Upanishad*:

> "In the beginning, ... this world was just be (*sat*), one only, without a second. To be sure, s people say: 'In the beginning this world was p non-being (*a-sat*) . . . . from that non-being be was produced.' But, verily, ... how from n being could being be produced?"[13]

And,

> "All creatures here . . . . have being at their r

have being as their abode, have being as their support."[14]

This is the poet's metaphysics of joyous sent to the reality of all that is and was and ll ever be.

From the universality of the law of gravi- tion Poe, the speculator, derives an "original nity," a "perfect totality" or "*absolute ity*."[15] Compare with this the "one only, thout a second" of the Upanishad and all e mystics. This unity, however, Poe goes on prove to be really nothingness. Matter rings from it, *i.e.*, is created out of it, while ll will eventually return to unity.[16] Now, this pure Vedanta, which, *in nucleo*, is contained the same Upanishad which further proclaims at the finest essence (which is indistinguish- le, perceptually, from nothing) is what this hole world has as its soul, as reality.[17] Moreover, as the rivers all become one in the ean, so all creatures, having come out of eing, shall return to being.[18] Thus, Poe ddenly turned philosopher and in doing so as laid himself open to the charge of being ore abstruse than Hegel even. He is dealing ere with the most recondite problems of metaphysics and epistemology, and we are ratified to know that at heart, though not lways in words, Poe is at one with all great deals of ancient and modern times.

The Word as the fountainhead of all reation Poe speaks of plastically in *The Power of Words*, in the dialogue between Oinos and Agathos. The latter says:

> This wild star . . . . I spoke it—with a few passionate sentences—into birth.

The *logos* idea in this deistic confession is oo much on the surface as to require comment. *Logos* is the Greek counterpart to a very ancient Indian concept, *vac* or speech, which is at the bottom of this created universe. Interdependent with this is the contention that all (motion) is thought whose source is God.[19]

The remainder of this dialogue of the angels is somewhat lacking in depth of reflection, but the definition of God as "The Most Happy" is good—though not for the reason given by Poe—and is in keeping with the Hindu *ananda*, beatitude, as the highest object of realization. The fourth condition of bliss described in the second paragraph of *The Domain of Arnheim* falls again short of the true nature of beatitude. True bliss is not in the acquisition of knowledge, nor is it "the object of unceasing pursuit," however spiritual the object might be. It is in the degree of realization of the oneness of all.

The problem of identity made in such a singular manner the subject-matter of *Morella* has, formulated in this fashion, no exact counterpart in the mystic thought of the East. But it leads us over the sleep-speculation, especially in *Mesmeric Revelation* which again cannot be exactly paralleled, to the problem of rebirth. Poe was, despite himself, an intuitive philosopher who felt the difficulties involved in the rational belief in re-incarnation, and so wavered between this and the belief in a hazy spiritualistic after-existence, as *Marginal Note XCIV* would confirm:

> "It is by no means an irrational fancy that, in a future existence, we shall look upon what we think our present existence, as a dream."

There can be little doubt that Poe, to say the least, had much sympathy with the idea of rebirth. Dr. Snodgrass also made allusion to this inclination of our author. *A Tale of the Ragged Mountains* which raises this problem and portrays it with great clearness, has already been discussed. Different approaches present themselves in *Ligeia*, in *The Colloquy of Monos and Una*, and, in an outspoken form, in *Metzengerstein*. There he quasi offers an apology, justifying his dealing with metempsychosis at all on the ground of precedents. Unmistakable too is this sentence in *Mesmeric Revelation*:

> "What we call 'death' is but the painful metamorphosis. Our present incarnation is progressive, preparatory, temporary. Our future is perfected, ultimate, immortal. The ultimate life is the full design."

This is not re-incarnation as the Hindus teach it. They hold that all those forces which converge to form this present individual will, in due time, after death reassemble themselves to form a new individual, and so on indefinitely. The forces are determined by *karman*, the aggregate of good and evil thoughts and actions during life time. This *karman* will accumulate and thus keep the individual in the round of rebirth until such time as the person realizes to the full his essential and complete oneness with the All. He then merges into it and is liberated. Poe wrestled hard with this problem without arriving at a final

conclusion as to the technique of re-incarnation.

One significant item which alines him with the Eastern thinkers we may be allowed to refer to in conclusion. Though put into the mouth of Allemistakeo, it enunciates a working principle of tolerance and makes God the one and only reality to which all re bow:

> "No Nation upon the face of the earth ha acknowledged more than *one god*. The Sera the Ibis, etc., were with us (as similar creatu been with others) the symbols or *media* th which we offered worship to the Creator too to be more directly approached."

UNIVERSITIES AND RELIGIOUS INSTRUCTION

By S. G. WARTY, M.A.

Since the outbreak of war in 1914 and especially after its effects began to be keenly felt, thinking minds all over the world have been seriously discussing the place of religious instruction in schools and universities. Secular education by itself, it is being said, has been powerless to develop that idea of the solidarity of mankind which needs cultivation if mankind is to attain its proper goal. World unity has therefore to be attempted through the religious approach, and what more necessary in the endeavour than to introduce religious instruction in schools and colleges as an effective preparation for the world to come?

In India as in other parts of the world, many minds have become restless regarding the present conditions of moral life and feeling among the people and have begun to look to religious instruction as the remedy. Perhaps the most recent protest in this respect was voiced by Mr. C. Y. Chintamani, the talented editor of the *Leader of* Allahabad, in his Convocation address to the University of Mysore

Mr. Chintamani frankly confesses that for long he was a convinced advocate of secular education, but finding that the home which is the legitimate place for religious instruction has practically ceased to exercise any such influence in present days, Mr. Chintamani has come to hold the view that such instruction should be imparted in schools and colleges, at least in the broad principles of religion, the most important of which are in his opinion common to all religious systems. Mr. Chintamani is perfectly certain that in this manner it should be possible to avoid all sectarian strife or theological contention.

Practical Difficulties

The well-intentioned proposal of Mr. Chintamani, coming as it does from a man of his eminence in the public life of the co deserves full consideration at our hands far as the theoretical aspect goes, none deny its importance; nor need anybody que the urgency of the purpose which it is n to serve. The evil is real and calls for pro relief, but as Sir Mirza Ismail, the My Dewan, remarked in his recent Convoca address to the Annamalai University, it is idea that is admirable until one seeks to it practical shape". According to Sir M it is definitely impossible to teach religio universities, while the religion of all is not same. At the same time, it is his belief th the teachers are animated each by his own ligion, the students too will find this cur entering into them and their lives.

We may recall at this place that the Ind University Commission of 1882 had devo some pages to the consideration of this ques and the Commission as such proposed compilation of a text book and recommen regular courses of lectures on the duty of m Indian opinion, however, was best represen by the late Mr. Telang's minute of diss which has since come to be quoted as a clas

"There are only two possible mode observed Mr. Telang, "which can be adop in justice and fairness, of practically impart religious instruction. Either you must te the principles common to all religions under name of Natural Religion, or you must te the principles of each religious creed to students whose parents adopt their creed."

"The difficulties of these alternati appear to me to be so great", continued M Telang, "that we must be content to take refu in the remote haven of refuge for educationis the secular system". It was Mr. Telang's firm conviction that meddling with religious instruc tion, would among other mischiefs, yield resu which on the religious side will satisfy nobod

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

nd on the secular side will be distinctly etrograde.

Influence of Intellectual Pursuits

If religious instruction as such is out of the uestion, how is the religious spirit to be maintained in the universities and how is the religious nature to be cultivated among the tudents? "It must come from the strengthening of the will and the emotions," replied Mr. Telang, "by the actual details of academic life, by the elevating contact with good professors and fellow students, by the constant engagement of the attention on the ennobling pursuits of literature, science and philosophy." He strengthened this view by aptly quoting Matthew Arnold's dictum that "conduct was three-fourths of life."

Cardinal Newman, a religious man if ever there was one, has told us that, religious instruction apart, the university studies in themselves have got the power to bring the heart "half-way to Heaven," because they serve to expel the excitements of sense by the introduction of those of the intellect.

"Relgion seems too high or unearthly to be able to exert a continued influence upon us: its effect to rouse the soul and the soul's effort to cooperate, are too violent to last." What we need then, said Dr. Newman, is some expedient or instrument, which at least will obstruct and stave off the approach of our spiritual enemy, and which is sufficiently congenial to maintain a firm hold upon us as against the inducements of sensual gratification.

Personal Example

But the vital thing is that the contact with the professors must be of an elevating character, for which reason the greatest care must be taken to bring into the colleges and the universities, only such professors as are distinguished for their noble lives and high endeavours. Dr. Newman, in an Oxford sermon, once again maintained and illustrated the truth of the proposition that the flow of religious current was in fact dependent upon the personal influence, direct and indirect, of those who are commissioned to preach it.

A high modern British authority, Sir Charles Grant Robertson, writing on *Religion in the Universities*, is no less emphatic on the point. "There is no force so infectious or so enduring as personality," he says, "particularly in the universities and amongst youth." And he further frankly states that the future of religion in the universities depends upon the persons who are active Christians.

His warning, too, is no less pertinent here. He says:—Above all, let us keep clear of "stunts" and "missions," and of organizing a religious renascence as if it were a "Carnival" for the hospitals. The rising tide must come "from below," not from Councils, Senates, Faculties or Vice-Chancellors. The duty of authority today is to know what is going on, to be full of sympathy, to encourage when it can be done personally and efficiently, to give help but only when it is asked for."

Religious Studies

If therefore we are anxious to inculcate the spirit of religion among the university students, not only should the studies be truly liberal and diligently and lovingly pursued, but the University must encourage the employment of such professors in the colleges as have devoted themselves to the pursuit of truth for its own sake and are living a noble and selfless life, and must absolutely prohibit and discontinue the employment of those who are not scrupulously honest and whose conduct is not above reproach. Much of the demoralization that is evident in our universities, has been due to the student's contact with the lesser breed.

In another direction also, the universities may progress. Religious studies as such, pursued on a scientific basis, find no place in the curricula of our universities. Comparative studies of this type must broaden the mind and develop the spirit of toleration. In the London University, Professor Waterhouse writes to me, philosophy and religion are studied separately and together, the former falls under the Faculty of Arts and the latter under the Faculty of Theology. At the same time, theology can be taken as one of the subjects in the B.A. degree, and the philosophy of religion as well as the comparative study of religion is taken in the B.D. degree. Some such grouping of studies should prove acceptable to our universities also.

Lastly, outside the university, the possibilities of a Students' Religious Movement in India on broad lines, may be explored, making it perfectly clear to ourselves that what we have to look to is the growth of the "religious temper" and not the renascence of formal religion "with a parade of church-going."

HINDU-MUSLIM UNITY

Platitudes and its Realities

By DHIRES CHAKRAVRATI, M.A.

Politics has often been condemned as a game of bluff and bluster. This is the attitude not of the disgruntled alone. Mahatma Gandhi can in no way be counted as such. Still his has been the noble mission of spiritualising politics. Chicanery and sophistry and all that generally passes for diplomacy Gandhiji wants to replace by the observance of truth and self-purification. Nevertheless the prevailing notions of morality in public life have hitherto managed successfully to brave Gandhiji's repeated onslaughts. Camouflage still holds its sway there. How else can one possibly account for communalist leaders waxing eloquent on questions of national unity and furthering communal ends all the while. Do we not, in fact, come across prophets of the Islamization *en masse* of the Harijans appearing unabashed in public as messengers of communal peace and amity?

We feel, therefore, not a little amused to find H. H. the Aga Khan and Maulana Shaukut Ali appearing again in the role of peace-makers, preaching anew the gospel of Hindu-Muslim Unity. On the occasion of his recent visit to Calcutta in connection with the Khilafat Conference there, the Maulana is reported to have expressed himself in the course of a press interview on January 4, in the following terms:

> "A humble worker in the cause of peace and good-will, I beg every individual and community to make earnest efforts to come to an understanding honourable to all."

Similarly the Aga Khan, immediately on his return to India, is said to have stated in an interview with the *Associated Press* that "he had always tried for communal settlement and would continue to do so."

Correct Perspective of Unity Efforts

What are after all these periodic talks on unity? Promotion of communal unity at this stage of our political group is no mere sentimentalism but is generally believed to be the *sine qua non* for the attainment of Swaraj. Whether one subscribes to this view or not, there is no gainsaying the fact that in the field of practical politics unity, be it of parties or of communities, is meaningless unless it has in view the attainment of a well-defined goa case communal unity had been an end in the Islamization of the Hindus or the Hind tion of the Mussalmans would then have gested itself as a possible solution. But the existing circumstances a free united can only be a comity of free and non-ag sive races and communities bound togethe common rights and duties of citizenship. plete Independence, again, has been defin India's political goal. The soundness or wise of all unity talks has, therefore, got assessed from this, the only standpoint, whether the proposed solution would acce or retard our national struggle for free Political emancipation is the primary and fu mental issue before us; all other questions their value only in relation to the same.

Congress Attitude

Now that we hear so much from Mu leaders about communal unity and the need organizing a 'united front,' it is worth noticing their attitude in the past towards Congress ideal of national unity. The buil up of a united India has ever been the ob of the Congress. Even at its first session of its objects was defined as the "eradicat by direct friendly personal intercourse, of possible race, creed or provincial prejud amongst all lovers of our country and the fu development and consolidation of . . . . se ments of national unity." Although at the session Mr. Sayani was the single delegate longing to the Muhammadan community, the time of the fourth session the number Muhammadan delegates rose to 221. Bengal, as well, Muhammadans freely joi in public movements. It was under Syed A Ali that his Muhammadan followers helped inauguration of the Indian National Con ence in Calcutta.

But unfortunately a reaction was not l in coming. Such great Muhammadan lead as Sir Syed Ahmed began by urging his religionists to keep out of the Congress It was to counteract this move that M Budruddin Tyabji was made the President

76221

Madras session of the Congress in 1888. In appeal for joint action the President

ared:—

"I, at least, not merely in my individual capacity, but as representing the Anjuman-i-Islam of Bombay, do not consider that there is anything whatever in the position or the relations of the different communities in India . . . . which should induce the leaders of any one community to stand aloof from others in their efforts to obtain those great general reforms, those great general rights which are for the common benefit of us all. . . . . I for one am utterly at a loss to understand why Mussalmans should not work shoulder to shoulder with their fellow countrymen of other races and creeds, for the common benefit of all."

Muslim "Volte-Face"

Nevertheless, as the anti-Congress attitude the Government began manifesting itself, the hammadans preferred since 1890 to remain tically outside of the Congress and for a engaged themselves in promoting the cause ducation among their own community for purpose of consolidating their position under ernment patronage. To this Muslim atti- Sir Samuel Baker thus alluded in the mns of the *Fortnightly Review*.

"If these (Muhammadans) are faithful to our Government there will be no internal danger to shake our rule in India. For some time past special attention has been shown to the wants and aspirations of the Muhammadan community. Educational encouragements have been held out to them and facilities afforded for their employment in public services, and their leaders have loyally met the Government half-way by holding themselves aloof from the so-called National Congress."

Thus ended the first phase of Hindu- slim entente giving rise to Muslim League safeguarding Muslim interests in particular. policy of *divide et impera* had, no doubt, share in undermining the united front. In words of Sir Samuel, this policy was neces- ted lest "Irish feeling of discontent appear- in India in the form of the Indian National ngress . . . . will develop into a National ague."

All-India Muslim Deputation

The communal outlook did, henceforth, come among the Muslim leaders more and re marked till at last in 1906 the ultra- mmunal claims of the All-India Muslim putation made the chances of joint action ween the communities recede farther and ther. This deputation under the leadership the Aga Khan waiting upon His Excellency e Viceroy, Lord Minto, was fittingly char- terized by the late Maulana Mohamed Ali as a 'Command performance,' because it was the Viceroy himself who was believed to have 'started the Muhammadan hare.' The time was particularly chosen because a Committee of the Viceregal Executive Council was then considering the question of constitutional reforms including representation in the legislatures, central as well as provincial.

The Deputation among other things demanded: (*i*) communal electorate for Muslims in the legislatures, in Municipalities and District Boards and the number of Muslims seats being determined by the 'numerical strength, social status, local influence and special requirements' of the community; (*ii*) reservation of Muslim seats in the Senates and Syndicates of Indian Universities. The Viceroy was not slow to take advantage of the situation. His reply to the Deputation was characteristic of him:

"I am fully convinced, as I believe you to be, that any electoral representation in India would be doomed to mischievous failure which aimed at granting a personal enfranchisement regardless of the beliefs and traditions of the communities composing the populations of this continent."

Beginning of Separate Electorates

Nevertheless, speaking at the House of Lords, the Secretary of State, Lord Morley, could not cite the instances of any advanced country but of Cyprus and Bohemia alone for a 'precedent and a parallel for the idea of a separate register.' And the following was Mr. Asquith's half-hearted defence in the House of Commons:

"Undoubtedly, there will be a separate register for Muslims. To us here at first sight it looks an objectionable thing because it discriminates between people and segregates them into classes on basis of religious creeds."

In the Imperial Legislative Council in 1907, Mr. Gokhale raised the voice of protest against this separatist measure on the ground that 'the idea of two water-tight compartments for Hindus and Muslims separately will not promote the best interests of the country . . . . .' The Congress in its Allahabad session in 1910 also condemned this system of representation in legislatures and its extension to self-governing bodies. Speaking in support of the resolution, what Nawab Sadiq Ali said on that occasion holds good even today. 'For the sake of certain paltry gains in the services or in the Councils, do not sacrifice the larger hopes of an ampler day'—was the Nawab's appeal to his community. The Morley-Minto reforms, how-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ever, introduced not only communal electorates, but also secured for the Muslims in their representation to the provincial legislatures (*i*) a franchise lower than that of the non-Muslims; and (*ii*) a few territorial constituencies for their direct representation, over and above their right of indirect voting in the general constituencies.

Communalism and Concessions forming a Vicious Circle

We make no apology for discussing at length the circumstances that led to the introduction of separate electorates. Because it was this form of electorate that constantly loomed large in the communalists' demands; although inevitably, too, did it lead to communalism corrupting our body-politic more and more. For a time this anti-national system of representation made the rupture complete between the communities. In view of 'paltry gains in services or in Councils' the Muhammadan communalists lent themselves readily in driving deep the wedge between communities to the negation of any united front or conjoint action. The importation of religion into the realm of politics, particularly among the half-educated or uneducated masses, can only end by making political interests subserve those of religion, so as to check the growth of common civic consciousness. Nationalism has its growth upon the decay of religious fanaticism. Its undue pampering can only arrest the growth of nationhood.

This made itself apparent by the time the next instalment of reforms became due. Imperialist designs had in the meantime succeeded to perfection. Communalism had raised its hydra-head to the deep dismay of the nationalists. This had come to stay and could no longer be ignored. Hence there began from now the rivalry between the contending nationalist and imperialist forces for winning over the communalists. In wooing them our leaders overlooked the fact that the canker of communalism rather than waning only thrives upon concessions. In their eagerness for unity generous-minded Congress leaders took to the easy path of buying off Muslim opposition by the grant of concessions. As a result of this, Muslim communalism and Hindu concessions together formed a vicious circle to the more and more undoing of the growing nationalism. Indeed, the negotiations for united front furnish a dismal record of ever-inflating Muslim communal claims, every concession gained being made the starting-point for fresh demands.

Lucknow Pact

The Congress was, however, out to the impossible, and the Lucknow Pact was the result. Therein the Muslim L agreed to the acceptance of the Ni Members' Memorandum as the future s of constitutional reforms, provided Mus terests were safeguarded by the grant of heavy weightage to Muslim representati some of the provincial councils. The Fra Committee's (1919) recommendations practically based on this Pact. The foll table shows how excessive had been the w age proposed in the Pact:

Provinces	Muslim Percentage of population	Number of Members in Council in 1917	Number & percentage of sitting Muslim Members in 1917	Percentage of Muslim
Bengal ..	52.6	48	5 or 10.4%	
Bihar & Orissa	10.5	40	4 or 10%	
Bombay ..	20.4	42	4 or 9.5%	
C. P. ..	4.3	24	Nil	
Madras ..	6.5	41	2 or 4.8%	
Punjab ..	54.8	28	No Muslim reservation	
U. P. ..	14.0	47	4 or 8%	

Such extremely liberal measure of we age only showed how far the Congress prepared to go to enlist Muhammadan operation. For that community, however, really mattered was not so much the pol advance of the nation, as a whole, as the re tion of communal representation. That is at the opening of the Imperial Legisl Council in September, 1918, Lord Chelms by way of allaying Muhammadan appre sions stated :

> "We wished indeed to make it clear that in opinion communal electorates were to be depr for the reasons set out in our Report. But i in the main to the method of securing com representation by communal electorates that we exception, and not to communal representation i

Congress Espouses Khilafat

Be that as it may, the Hindu-Muslim u of Lucknow Pact days later on gathered c derable strength from the Indian Nat Congress espousing the Khilafat cause. U Gandhiji's lead the Congress, the Mu League and the Khilafat Conference, for a began moving practically in complete uni Congress Resolutions and Programme fo ready acceptance in the League as well as the Khilafat Conference. Henceforth entente became more and more mar Presiding over the session of the All-I

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Muslim League in December, 1920, Dr. Ansari said in his concluding speech:

"The way in which the Hindus had come forward to help the Mussalmans in their struggle for the Khilafat could not be sufficiently expressed and it was the duty of the Mussalmans to always remember this help. Looked at from every point of view, religious, political, economic and national, it was necessary that they must consolidate Hindu-Muslim unity."

Equally fervent was the appeal of Maulana Hasrat Mohani for a fresh Congress-League Pact. From the Presidential Chair of the Muslim League in 1921 the Maulana declared:

"In my opinion the pressing necessity of Hindusthan is the immediate conclusion of a definite compact between the Congress and League. The Congress should not enter into any negotiations with the Government concerning Swaraj (*i*) until the minimum Muslim demands with regard to the Khilafat are satisfied; (*ii*) on the other hand, the Muslims should definitely bind themselves that even when their demands with regard to the Khilafat are satisfied, the Mussalmans of India will stand to the last by the side of their Hindu brethren for the attainment and preservation of Indian Independence."

Commendable though the Maulana's remarks be, it is significant that in so many words he characterized 'Indian Independence' as an exclusively Hindu cause, as much as 'Khilafat' was that of the Muhammadans. That the Maulana's analysis was too true, soon became manifest at the collapse of the Hindu-Muslim entente, as soon as there came the reversal of the Treaty of Sevres and Kemal Pasha's triumph in Angora.

Bengal Pact and Unity Efforts

The year 1923 saw a definite breakdown of the Hindu-Muslim unity. There set in a definite reaction, the Congress gradually losing its hold upon the Muhammadan mass mind. In no time there also began the orgy of communal riots, throwing the communities more and more apart. Desperate, however, were the efforts made by the leaders to stem the tide of communal conflagration, till at last there began anew Hindu-Muslim negotiations not so much for national, as for communal, purposes. Deshabandhu Das's 'Bengal Pact' was the first of its kind. It provided for communal representation on population basis in the provincial legislature; and in the local bodies in Bengal in the proportion of 60:40 according as either of the communities be in a majority or minority in the districts. It also stipulated for a grant of 55 per cent of Government services to Muhammadans. In this division of spoils there was no mention of any obligation on the part of the Muhammadans to make common cause with the Hindus in enforcing the National Demands.

Communal strifes, however, continued in full swing, assuming serious proportions by 1926 in Calcutta. Separate electorates came to be regarded by the nationalists as the root-cause of this sort of communalism. There began, in consequence, a movement for the introduction of joint electorate in its stead. But the panicky Muslim League in its successive sessions from 1924 onwards went on demanding the retention of communal electorates. In 1926 Mr. Jinnah declared in the Muslim League:

> "There is no escaping from the fact that communalism does exist in the country. By mere time and sentiment it could not be removed. Nationalism could not be created by having mixed electorates."

His Excellency Lord Irwin also stated in reply to an address by the Muhammadans at Poona that "communal representation in some form is likely to be necessary and it is probable that a substantial modification of it must largely depend upon the general consent of all communities." The agreed settlement plea, grown so familiar in connection with the present-day "Communal Award" controversy has, therefore, no newness in it.

Jinnah's Fourteen Points

In March, 1927, Mr. Jinnah sponsored the Delhi proposals relating to communal unity, otherwise known as his "fourteen points." It was proposed that the Muhammadans would consent to the introduction of joint electorate provided the Hindus conceded to the Muhammadans their 13 points of demand, *viz.*, the separation of Sind; N.-W. Frontier Provinces and British Baluchistan being made into Governor's Provinces; one-third representation of the Muhammadans in the Central Legislature; and representation on population basis in the legislatures in Bengal and the Punjab; and the like. It was quite in keeping with its traditions that the Hindu-Muslim unity resolution of the Madras session of the Congress that year decided in favour of joint electorate with reservation of seats on population basis as a temporary measure. The Nehru Committee's Report also urged the very same thing. But the Muslim League at its Calcutta session declared that the "representation of Muslims in the legislatures by separate electorates is inevitable." At Lahore the League, again, characterized joint electorate as being "unacceptable to Indian Muslims on the ground of its being a fruitful source of discord and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

disunion, etc." The All-India Hindu Mahasabha, on the contrary, at its Delhi session in 1928, condemned communal representation as being fundamentally opposed to nationalism.

Muslims at the so-called R. T. C.

So far about the views of the League regarding the crucial question, *viz.*, separate electorates. At the so-called Round Table Conferences also the Muslim attitude remained equally communal. The late Maulana Mohamed Ali was by far the foremost among the accredited Nationalist Muhammadan leaders. Yet in a letter to the Prime Minister in January, 1931, which was circulated to the Minorities Sub-Committee, the Maulana remarked:

> "Freedom for India is not separate electorates, though, being one of the authors of the separate electorates in 1906, I shall be the last to surrender them."

Regarding his attitude towards the Congress fight for freedom, the Maulana had been equally outspoken. For in another part of the letter he wrote:

> "Today some Mussalmans are still taking part in the Congress movement but they are men who are doing it more out of the habit of freedom that we ourselves helped to create ten years ago or out of fashion than otherwise. . . . . It is we, who had to fight the battle practically in every province and to a very large extent indeed we succeeded in keeping the Mussalmans out, because we showed to them that the last movement (Non-co-operation, 1921) was a truly national movement, while in the present movement (Satyagraha, 1931) I regret to have to say in their absence, Gandhiji and Pandit Motilal Nehru have both surrendered for the sake of their popularity to the Hindu Mahasabha."

It is an undeniable fact that the Muhammadans were lukewarm in their support towards the Civil Disobedience movement. It may be due to the activities of the Maulana, as he claimed, or to other contributory causes. But what made two of his illustrious co-workers appear to him no better than Hindu-Sabhaites is more than we can account for. Be that as it may, the fact remains that none of the Muslim Round Tablers could ever rise above the communal outlook. Heroic efforts were made at the Second R. T. C. in London by Mahatma Gandhi, Pandit Madan Mohan Malaviya and Sreemati Sarojini Naidu to come to a settlement on this vaxed question. Muhammadan leaders responded by entering into the infamous "Minorities Pact" at the instance of British die-hards. It is also well-known how the Second R. T. C. practically ended in a deadlock, due to Muhammadan delegates' refusal to participate in discussions on constitutional questions till the satisfaction of their co[illegible] claims.

Communal "Award" Controve[illegible]

The few Muslim Round Tablers' [illegible] however, is by no means an exceptio[illegible] recent Communal "Award" controve[illegible] established beyond a shadow of doubt [illegible] of the Muhammadan leaders can ever [illegible] of the same communal bias. It is, no [illegible] true that not a few of them did at the [illegible] individually condemn the 'Award.' Bu[illegible] on hardly any Muslim, organization or [illegible] dual, could make bold to join the ag[illegible] Hindus in voting for its rejection. W[illegible] unfortunate still, the Nationalist Muham[illegible] leaders did, on the contrary, take full adv[illegible] of their position in the Congress effectiv[illegible] waive any opposition towards the Com[illegible] Decision on the part, either of that [illegible] national institution, or its Parliamentari[illegible] the Legislative Assembly.

This is not, however, the place for [illegible] show how the Congress by its non-pos[illegible] attitude towards the so-called "Award" p[illegible] cally sacrificed the gospel of nationalism [illegible] altar not, as was supposed, of Hindu-M[illegible] unity but of the ogre of communalism. [illegible] ever queer, this attitude had its root i[illegible] newfangled obsession of Hindu-Muslim [illegible] inspiring the Congress leadership in recent [illegible] to the gallant surrender of nationalis[illegible] communalism all along the line. Any way [illegible] Congress has thus been made a party, if [illegible] accepting, at least to acquiescing in the i[illegible] tous and anti-national Communal Dec[illegible] thanks, to the efforts of our Nationalist M[illegible] friends.

What they did not foresee was the Con[illegible] Nationalists' revolt in this regard. [illegible] Nationalists have justified their rebellio[illegible] success at the polls in connection with the [illegible] Assembly election. This does, indeed, look [illegible] a patch of clouds, although no bigger th[illegible] man's hand, threatening to mar the prospect [illegible] glorious day. The much-looked for Comm[illegible] Decision is, no doubt, there with all its pos[illegible] lities. But for the Muslim revivalists full[illegible] enjoy the boon the whining Hindus must [illegible] up their spirit of intransigence and made [illegible] plaisant. The assurance of the Decision, [illegible] that it is a settled fact, must be made do[illegible] sure by enlisting Hindu support to the sam[illegible]

Unity in Fellowship of Suffering

The present-day unity talks of Mus[illegible] leaders seem to originate from no other o[illegible]

derations. The Muslim cry for "united front" had, no doubt, been, in the past, full of appeal to the Hindu heart. But the question arises, the constitutional Reforms being accepted by the Muhammadans—and no more than repelled by the Congress,—what can be the objective of this much-talked-of united front? Unless, of course, it be to make the future reformed government stable. The Hindu mind bears no love towards these sham reforms and makes no secret of the fact of not caring so much as to touch the same with a pair of tongs. His has generally been the pride and privilege to strive for "Independence." In the cause of freedom Hindus have hitherto fought, considering not favour or frown,—and often fought hard with their backs to the wall. Let our Muslim friends make up their minds to give up opportunism and the striving for loaves and fishes—basking in authorities' favour; but take up the Cross in the interests of the nation, as a whole. In the service of the nation and the fellowship of sacrifice lies the sure way to unity. If for this we are unprepared, appeals for "united front" are no more than meaningless "cant" and empty catch-phrases.

THE NEED OF THE HOUR IN OUR POLITICS

By D. D. PINGLAY

It is unfortunate that the number of political parties in India should be ever on the increase. The Congress should be the only political organization in India voicing the political sentiments of the Indians. It would not be out of place here to appeal to the Liberals and others representing various other shades of Indian political opinion to join the Congress, for it is as much open to them as to the present Congressmen to capture the Congress. It is poor statesmanship to keep away from the premier political organization of India, simply because we cannot subscribe to the political principles of one of its parties. The secessionist policy savours not of farsightedness but of a spirit of despondency resulting from the inability of the supporters of the policy to carry conviction to the hearts of Congress members regarding the wisdom of its own political policy and programme. It is idle to grumble that a particular party is monopolising power. The fact is not that the party is monopolising power but that it finds itself in the happy position to continue in power by dint of its superior organizational capacity. Everyone who wants India to be raised to the honourable status of a free nation can and must be a Congressman (a member of the Congress), no matter whether he is a Liberal or a Socialist.

In recent years, the influence of Socialism is noticeable in the Congress. Socialism is becoming more and more popular day by day with the people of India, because of its anti-capitalist idealism which at once casts a spell on the imagination of the poverty-stricken people of India. So long as India is exposed to the rigours of capitalist yoke, everything anti-capitalist or anti-imperialist is bound to find favour with the exploited masses of India. But in our unbounded enthusiasm at having found in Socialism a panacea for our economic ills, we must not let ourselves be deluded into the belief that Socialism is going to solve our economic problem even if we do not achieve complete independence. To my mind, this is the greatest delusion everyone of us must guard himself against, for not until we reach the goal of complete independence, can we destroy the existing economic system based upon an unequal distribution of our national wealth and replace it by a new economic order best suited to the political genius of India. All that the Socialist programme now bids fair to bring about more than any other programme is a nation-wide awakening among the Indian masses which might at some future time stand the country in good stead to set afoot a formidable movement strong enough to get the better of the capitalist forces. Such a movement must come to pass in the near future, because the Socialist appeal is irresistible.

In conclusion, I should like to appeal to all to sink their differences, to stand united and then to declare with one thundering voice to the British Government that nothing short of complete political and economic freedom is going to satisfy the political aspirations of India. The salvation of India lies not in a multiplicity of political parties and the consequent division of our national strength, but in their fusion into one compact and most formidable party, potent enough to bring the national struggle for freedom to a successful conclusion even in the teeth of the strongest opposition by the British Government.

"BITTER-SWEET"

Lover's Poems

By MAUD MacCARTHY

"Tandra Devi"

[Note:—The poems of Maud MacCarthy previously published in *The Modern Review* were written in what is commonly called free verse, that is, verse without specific stanza-structure or rhyme. In the group of short poems published in this number, some are in rhymed and stanzaic form. A dissertation could here be written on the characteristics and usages of strict and free verse, and as to whether the latter gives more pliability to the expression of inner experiences than the former. But this would take us beyond the object of these notes. It is sufficient here to indicate that Maud MacCarthy conveys the same sense of reality of experience by both modes of expression.

The present poems reflect the emotional admixture in human experience; but the spirit of the Bhagavad Gita governs them. The poetess recognises that liberation from the frustrating tests of life can only be achieved through mastery of them—not by futile opposition, or by lazy acquiescence, but by separating the pure gold from the dross in the fire of experience—by spiritual understanding, in which one can "suffer them without a sigh." Some of the shorter pieces might have been sung in Hindi by Rani Mirabai, so congenial are they in their Vaisnavite spirit. "The Lonely Garden" recalls "*Main-ne Chakar Rakhoji.*"

The love-symbolism which pervades these poems is of the same nature, too, as that in the lyrical poetry of Rabindranath. It has no relationship, save by an unavoidable parallelism, with physical desire. It is a human code of super-physical experience, translatable out of transciencies of speech into psychological and spiritual realities. It is not just a thing of passing emotions and fancy. It is as real to the poetess as anything in life can be—more real, indeed, because "nearer than hands and feet" to the degree of inner life on which her consciousness functions when she touches, or is touched by, "that serene and blessed mood," known to Wordsworth, in which poetry is born. Above all, it is real to her because it is the quintessence of her own personal living and loving, sufferings and joys. She refuses to differentiate between human and divine. When the human is touched, instantly it goes out to the divine, sending "its smoke into infinite." Yet, very human is "Pearls Upon Your Feet"—the helplessness of love in face of old age and death. In "Blue Smoke" the poetess sings for a myriad Indian lovers whom the evening fires awaken sacred memories.

Love of country she counts among her "Bitter-Sweet." In "A Solemn Song: England" this Irish-woman identifies herself with England in lines as English in feeling as these others are Indian. She writes: "These lines, together with a song in old English, were received by me from a *deva* of England. It is significant to note that the song and words were published at that time in the magazine of the Headquarters Y. M. C. A. London, together with a detailed account of the manner in which it was received, and of the visitation by the *deva* ('angel'). This is widely read."

The second part of "The Land of Mystery" is in the same mood as a poem of the late Bharati, in Tamil, that I paraphrased into English some eighteen years ago—"A Song," in which Shri Krishna is seen in aspects of nature, and yet not only as a personification, but as a reality, even as the Irish Gods and Goddesses that A. E. felt were real to him.

I mention these affinities in Maud MacCarthy's poetry with the poetry of our Indians, not to suggest any derivativeness in her's (though she is aware, as a footnote shows, of the characteristics of Indian poetry) but to indicate the identity of her experience with theirs, from which identity proceeds a natural similarity of expression though in a different language.

James H. Cousins, D. Litt.]

PEARLS UPON YOUR FEET

Pearls lay upon your feet
And you moved them about;
Yet I would not kiss them, Sweet,
Lest my secret should out!

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

O I would not take your hand
Though you moved it to mine;
Round my heart lay a soft band
But my head was hot with Wine!
O I sighed for a breeze
From the far-off mount to blow,
And I cried, because all these,
Beloved! should pain me so!
Because your loveliness
Must fade away from me,
And death and parting's stress
Must drown us in their sea.
Pearls lay upon your feet,
And pain upon my heart.
Ah! keep your jewels, Sweet,
For remembrance, when we part!

THE DIVINE LOVER

"Brahm, the Singer of Songs"

my Blessedness
ome into my heart!
hat is the song without the singer?—
nd what is the singer, without Thee?
my Blessedness
ome into my heart
nd set its music free!

have wandered too long away from Thee,
y grief and joy!
moment is eternity away from Thee:
ow many eternities? Ah count them not!
ut let them melt in Thee.
my Blessedness
ome into my heart!

hese waves, they say, are singing praise of Thee,
ut seemeth me they moan, away from Thee.
hat bird anigh me singeth sweetly, too;
et in mine ears, O Dearest
he chants of dawn and even
re but as sighs upon Thy lotus feet.

'en tho' I hear the starry melody—
salming of *devas*, saints, all nature's minstrelsy
teeping my sense in deepest ecstasy—
ord! Break these echoes! Come into my heart,
nd *Thou* its music be!

Would that I might not reach Thee in this dream,
But in the living day instead,
My dear, my only One!
Say'st Thou I cannot find Thee so—not yet?—
Then let me sleep, or let me die,
So that I may dream on!
O my Blessedness
Stay within my heart!

THE CASTLE OF ILLUSION

Here charméd sense and mind enspelled
Acquainted are with Beauty's rarest flowers,
Inwrought in tracery of patterned light,
And dulcet tender shades of fancy's bowers.

Here, through the passage of enchanted years,
The lover sits amazéd in his dream,
'Mid echoing laughter and amid soft tears,
Hymning the feet of Beauty where they gleam.

And here Phantasm's opalescent shower—
Ambition blind, and passion's haunting sway;
Glamour of riches, lusts of place and power—
Dazzle and draw and hold him in their play.

Here dragon-forms of horrible intent,
With dull red eyes that will nor close nor die,
Torture the fearful—nor shall they be spent
Until he suffer them without a sigh.

Dim shadow-wings of other worlds, more blest,
Surround the weary soul upon its way;
Happy is he who toiling, yet shall rest,
And find within their folds his hope and stay.

Here shall the hornéd moon
Raise up her peaks in night's pale solitude;
And here deceits assail the 'wildered soul—
Till, conquering by might of God within,
He shall, triumphant, cross the moony beams
To solitudes of peace and not of pain.

THE LONELY GARDEN

My heart is on fire with the love that has stolen into it.
If my Beloved does not speak, I shall endure bitter grief.
I await in my garden the sound of his footsteps—
But the night passes on, and I am alone, alone.

BLUE SMOKE

It is a blue colour, twisting up in a curl of smoke from an unseen fire—
Blue light on black, as the light which shimmered on your hair,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

When the fire of love flamed up in our hearts,
To send its smoke into the Infinite.

HUNGER

The crystal stream of love flows down from heaven.
It is caught in the strands of your hair and breaks over your form in a divine effulgence.
O let me lie upon your feet and catch this radiance as it showers from you,
For I am naked, hungry and forlorn.

Bend your face, so that your tresses touch my lips—
Even the touch of one hair thrills my weary limbs.
I am thinking on that!
I will not raise my eyes to meet your eyes,
But will shrink into the shadows, remembering!

THE CRYSTAL LAND

I cannot sing to you—
For at your coming,
My voice is drowned in songs of many voices
From a quiet crystal land—
A far-off shore—
Where lovers reign forever, whole and joyous,
And shadows are no more.

I cannot weep for you—
For all my tears
Long since have spilled their salt into an ocean,
Where cold glittering waves
Stifle and rend.
You are not there, my sweetest! I have found you
Where tears and laughter end.

I cannot hold you, dear—
For I should lose you,
In the dim mist and stressing of a passion—
In the hot, searing blast
Of a desire!—
And so I leave you free, and ask for nothing
But Love's redeeming fire.

In tearless, silent bliss,
Love! I have tasted—
In prayer have held—embraced you—made you mine!
At the slow tender birth
Of a Vision,
Have seen your soul and worshipped at your shrine!

THE LAND OF MISTS

The woman receives a poem from, or questions her friend about, her lover[1]:

Tell me, darling, is he mocking me?
I have followed him into the Land of Mists,
Whence there is no return.
He sang to me, and I lost my heart;
He looked into my eyes, and I became blind.
Tell me, darling, is he mocking me,
And shall I lose him in the Land of Mists?

The friend answers the woman:

Thou hast not followed Love into the Land of Mists;
'Twas Death beckoned thee and blinded Thy
Thy Love hath never called thee—
Nor sung, nor glanced.
The ripple of the hollow footfall of Death
Resounds in the valley!

Fly from the Land of Mists!
Thy Love is coming to thee on the petal of a blown rose.
His hair is Morning!
His glance, the Evening Star!
He will not speak, nor touch thy hand—
But thou shalt sing for all time in the strength of His Presence,

Whose soft footfall o'ertakes the early dawn
In the sweetness of the ravishing of dawn.
Thine is thy Beloved—
Unknown! Unsought! Unfound!

SWEET DEATH

Glad am I, Death, to hear thy soft speech—
Musical-sounding like tinkling of waters,
Rushing through small beds to ocean's wide reaches.

Grey-white thy garments, like splash of the foaming;
Grey-blue thine eyes are and full of sweet teardrops;
Beautiful rise their soft beams in the gloaming;
Swiftly come, swiftly, with calm measured pacing;
Pass me not by where I, panting, entreat thee—
Press to my heart, Death, and stop its wild racing!

rgid my brain is, life's fevers oppress me;
thou Beloved! No more shall I wrong thee;
w let thine icy-cold fingers possess me!

eathe thy cold breath on my life that is
going;
own deep the darts of its ache and its
stressing;
eeze and annul my heart-blood in its flowing.

nd are thy ways, Death! Thy kind day is
dawning!
rds of my spirit toward thee are flying,
ating their wings 'neath thy dark spangled
awning.

Death, sweet Death!
Take thou my breath!
Take thou my life!
Take all its strife!
Lay it to God,
Deep in the sod!
Rest—rest—
His behest!
Dark—dark—
The body stark—
The spirit free—
Ecstasy!

A SOLEMN SONG OF ENGLAND

(*These lines were made during the darkest days of the Great War in 1917*)

A solemn song of England
My voice shall make today;
A solemn song of England—
A song made from alway—
The song of seas and lands unknown
And brave hearts setting forth—
Of sons no father could disown,
From South, East, West and North.

Praise for these sons of England
Shall fill my heart today;
These quiet sons of England,
Who serve her from alway—
They serve her now in trench and ship,
They serve from shadow land,
Their spirits from the vasty deep
Are speaking through the land.

Dear England, Mother England,
Forget not these today—
The children of thy body,
Who serve thee from alway—
And standing in the Light of Death,
Look out, and say to thee:
"*Our England, Mother England!*
Set all thy children free!"

EDUCATION *VERSUS* BRITH-CONTROL

By Professor C. N. MENON, M.A., Ph.D.

The essential preliminary to the solution of the population problem in India is universal education. Anybody who has had anything to do with vital statistics or economic surveys will agree how hard it is to get reliable figures from the illiterate. It is unsafe to build on such data and propose birth-control as a remedy. The very classes whose multiplication has given rise to alarm will be untouched, while the cultured classes whose birth-rate is already low will readily take to birth-control. Unless education is made free[1] and the knowledge of birth-control treated like a dangerous drug to be dispensed only on medical advice, the interests of the individual will clash with those of the community; and, once race degeneration sets in, nothing will stem the tide. Dr. R. B. Cottell recently suggested that birth-control should be prohibited to the intelligent classes and Professor Bartlett blamed them for not doing their duty in the breeding of the race.[2] In some countries rewards and threats have both failed to persuade parents to beget children. Let us not rashly adopt what is likely to be convenient to the individual and costly to the race.

Education is more than a preliminary. It delivers a frontal attack on the problem itself by increasing the means of subsistence and

1. The Nazi Income-Tax Act of 1934 provides for the remission of income-tax and the payment of allowances for every 'child' at school up to the 25th year.

reducing the birth-rate. 'The habitual acceptance of untrue notions'[3] is the chief cause of the present poverty in plenty, and education is the only remedy. As regards the birth-rate, 'all available evidence goes to support this conclusion, namely, that the higher the social status the lower is the fertility.'[4] Carr Saunders explains this by saying that when education is prolonged marriage is postponed. Compulsory education will emancipate women and put an end to child-labour which, among the poorer classes, is the chief incentive to early marriage. Physical causes like delayed marriage or the practice of birth-control do not, however, account for the declining birth-rate which has affected various countries and classes.[5] A study of the intellectual classes in U. P. and Bihar will illustrate the point. The studies made by Sydenstricker and Perrot for the Milbank Memorial Fund and the researches of James H. Bossard of Pennsylvania revealed that high fertility was associated with inability to find employment and consequent mental stagnation. Mr. Hutton has hit the mark, 'It seems definitely established that intellectual activity acts as a check upon fertility.'[6] Malthus and Darwin studied plants and animals and fancied that war and shortage of food were the only checks; but life in its progress has always shown a capacity for automatic adjustment. Creative energy directed to its legitimate channels—intellectual, aesthetic and ethical effort—sets up what MacDougall calls 'an inhibition through drainage.' Brahmacharya is an ideal to be revived. Birth-control, on the other hand, is an escape from the demand of life.

The current belief that the optimum population is that which yields the highest *per capita* income is wrong. An increase of income does not necessarily mean a higher standard of life. The money-maker, who is himself the product of a Mammon-worshipping society, m money to grab still more money by methods like cut-throat competition, a net result is the destruction of we theory of population which rationalizes will, instead of raising the standard destroy life itself. On a highly mec Saskatchewan farm, according to Sy Russel, there need be only one work square mile of cultivated land. He can the products. If *per capita* income be t test, two per square mile will be overpop But when education substitutes a se values for that of prices, the calculation be based on the needs of men and the pos of supplying them. Two discoveries w be made: firstly that food production is industry and secondly that the true rai standards does not increase the press land. It does not increase the pressure soil to form healthy habits, to build s houses, to learn the civic duties, to p virtue, to hold discussions, to attend pl to compose songs. When the energies are brought into play, the present a towards the growth of population will because 'in order that there may be at there must be several men.'[7] Communic society enables man to grow to his full s

The life-giving property of such munion is generally ignored; but En Economics, and geographical determinism not explain the rise and fall of nations. education which fires the imagination creates life. Education attacks the quant as well as the qualitative problems of p tion by strengthening the will to live and the power to transform environment; but control is a counsel of despair and w mankind be strangled by the python's which has been causing wheet-restrictio starvation to progress side by side.

A CLAY HEAD FROM KALINJAR (BOGRA)

By SARASI KUMAR SARASWATI, M.A.

magnificent head in clay was discovered Kalinjar, a village in the district of Bogra orth Bengal, which roughly corresponds to ndri of ancient times. A tradition recorded ama Taranatha,[1] a claim put forward by Sandhyakara Nandi, a patriotic poet of Varendri,[2] and a verse in the Deopara *prasasti* of king Vijayasena[3] supply unmistakable evidences of a glorious period of art history in North Bengal prior to the Muhammedan occupation of the land. The most convincing proofs of this artistic efflorescence are furnished by the fine sculptures discovered and collected by the

Clay head—Front
(*By Courtesy of the Rajshahi Museum authorities*)

1. A passage in Taranatha's *History of Buddhism dia*, as translated by W. L. Heely from Schiefner's an translation of the Tibetan text, contains reference school of art headed by two famous artists, Dhiman Bitapala—father and son—who flourished in Varendra g the reign of Dharmapala and Devapala (*Ind. Ant.*, IV, p. 102). Another Tibetan work, *Pag-Sam-Zon-*, gives a similar account but substitutes 'Nalendra' Taranatha's 'Varendra.' This and the comparative city of early Pala sculptures from Varendra have to some doubts as to whether there was any such tic upheaval in Varendra in the early Pala period iod of Dharmapala and Devapala). But though gible as compared to the abundance of relics in the land of Buddhism, which is receiving the attention archæologists ever since the time of Cunningham, the specimens of the early period are not at all rare in th Bengal. The reason for the comparative scarcity early Bengal sculpture is to be sought for in the fact that our collections consist chiefly of what we may call chance finds from tanks and ditches of the latest period and from the upper stratum of the ground and not in a paucity of artists or of art products in North Bengal, the homeland of the Pala kings, who were responsible for such an artistic regeneration.

Varendra Research Society, Rajshahi. They are mostly in stone. Metal specimens too are not rare. Clay is particularly the art medium of Bengal and we have found a fair number of terracotta or burnt clay specimens of art from North Bengal. Unburnt clay specimens are however exceedingly rare, perhaps because of the extreme fragility of the material. As such, the present specimen is worth noticing as perhaps the only remnant of a branch of art current, as now, in the pre-Muhammedan period.[4] Art critics should agree that it does not deserve oblivion.

Clay head—Profile
(*By Courtesy of the Rajshahi Museum authorities*)

The head has been modelled, rather hollow, in clay, finished and then coat with a compound (*vajralepa*), whi rendered it quite watertight. A plain nimbus (*prabhamandala*) frames the which is capped by a flat-topped (*kirita*). The soft and delightful curves eyebrows, indicated only lines melting on the fr itself, meet at the root nose and they are balanced by the wide eyelids, which, curiously are not drooping—a cha istic of almost every sculpture. This feature fact that they are not along the full breadth face endow the eyes fresh and bold outlook, free from the brooding prehension of mediæval art. The eyeballs as the pupils are sharply by deep incised lines, mar a little the smoothn the modelling of the whol and are not sunk benea planes of the lids. the contrastingly carved *mukuta*. But while ease and charm are predominant it is not lacking in vigour. It is masculine but serene in dignity, possessing, so to say, much inner determination. It has got great vitality, but at the same time poise and restraint.

AN INDIAN ZOOLOGIST IN PORTUGAL

At the 12th International Zoological Congress, held quite recently at Lisbon (Portugal), the researches of Dr. B. K. Das, D.Sc. (London), a delegate from H. E. H. the Nizam's Government and a Professor of the Osmania University, have been appreciated. Of all the Universities in India Osmania University was the only one which was represented at this Congress, which is held once in every five years. His latest scientific paper on the intestinal respiration of a very interesting Hyderabad fish together with the account of the Hyderabad Fauna in general that was read by him before the International Congress is a piece of work that has won for him much distinction. He also presented to the Museu Bocage (*i.e.*, the Zoological Museum of the Lisbon University) some peculiar living fishes that he carried with great difficulty all the way from Hyderabad and a series of very interesting Hyderabad Zoological specimens, beautiful dissections and skeleton preparations which were accomplished with the help of his colleagues of the Zoology Department here, and these gifts were highly appreciated.

The President of the International Congress, well-known as one of the greatest living master-minds in Zoology, Professor Dr. Arthur Ricardo Jorge, paid a high tribute to Dr. Das's work. Besides, Professor Das also gave an account of the noble work of H. E. H. the Nizam, the aims and objects of the Osmania University and the great success attained in teaching through the medium of Urdu, as well as regarding the Hyderabad State at several evening discourses at many educational centres in Portugal, illustrating his lectures by over a hundred lantern slides. Dr. Das has been given receptions and entertainments all over Portugal, especially at the three University centres, viz., Lisbon, Coimbra and Oporto, and also at other places, such as Setubal, Palmela, Mafra, Sintra, Pena, Estoril, Braga, Curia, Pavoa de Varzim, Alcobaca, Batalha, etc. He has been offered certain valuable presents by the members of the staff of the Faculty of Science of the Lisbon University, including the President himself, Professor and Madam Frade and many others; and many of his friends of the University came to see him off at the Lisbon quay with flowers and a variety of souvenirs. Several Portuguese scientific newspapers, viz., Diario de Noticias, A Avoz, Diario da Manha, Quartafeira O Seculo, Novidades, etc., have made reference to Dr. Das's work in high terms.

What impressed Professor Das most about Portugal was the picturesque nature and the natural beauty of the country, with an assemblage of undulating hills and dales, valleys and the very pretty winding rivers, simulating our hill stations, the big heart and genuineness of the great Portuguese nation, and especially their village folks and village life which present a picture very much Indian-like. Another thing which struck him very much was their gigantic, old, beautiful monasteries and the libraries which have been so well kept and preserved for all these years.

Dr. Basanta Kumar Das

Having finished his work in Lisbon Dr. Das turned out some very useful work at the British Museum. He

President of the Republic of Portugal (*in Military Uniform*), *to his right* Professor Dr. Arthur Ricardo Jorge, President of the International Congress of Zoology

prepared a series of important and delicate anatomical dissections which will now be exhibited in a special show-case being prepared for that purpose.

Professor Das, with the co-operation of the members of his staff, has succeeded in organising one of the best Zoological laboratories in India today.

A PHASE OF VILLAGE UPLIFT WORK

By SATIS CHANDRA DAS GUPTA

For the past decade Atrai has been the centre of the village uplift work of the Bengal Relief Committee. Hitherto the activities were confined mainly to medical relief and Khadi. Khadi work was being conducted by Khadi Pratisthan. Spinning was adding a little to the meagre income of the village women. But spinning was not creating the atmosphere we desired. There was remoteness, rather want of cordiality between us and the villagers. The spinners thought that they were not getting enough return, whereas Khadi manufactured out of their yarn did not pay its way. The urge at this stage was for making the spinners spin for themselves. It was difficult to induce spinners to receive Khadi in return for their spinning wages. Sm. Hemprobha Devi made special efforts last year in this direction and in the end succeeded in inducing a group of women to spin not for wages but for meeting their own family requirements of clothing. The experiment caught the imagination of spinners; for they soon found that, while they spun for wages the money went to the male members on whom they had to depend for supply of cloth, under the altered conditions some families began to be clothed exclusively from their spinning labour. Khadi was being given them in exchange for yarn. Now there is a great eagerness to spin and get their clothes free and more charkhas are in demand in this area.

This one measure brought us in closer and healthier contact with the villages. Besides, it opened up other avenues for serving the villages which hitherto remained unexplored. There were only 8 villages in which self-spinning was introduced. With growing demand for charkha more villages have been taken up.

We now needed more information about the condition of villagers. We got workers from these villages and through them collected statistics. The workers filled in forms which contained information on the following heads,—name of the head of family, caste, number of men, women and children separately, occupation of male and female earning members, land rent, income from land, other income, total income, indebtedness, cattle, cows, bulls, oxen and buffaloes, and calves separately, charkha, dhenki, cotton plants, etc. From these we totalled the figures for each village.

Ordinarily it is difficult to elicit correct answers to queries like above particularly those about income and indebtedness. But the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

workers being intimate with the villagers it was possible to get dependable information. Totals of different villages were compared and checked. We were amazed at the revelations made by the statistics. Neither we nor the workers themselves had any idea of the local conditions as revealed by the statistics. We shall take a single village in order to get a picture of the condition of the people.

A Cotton Plant at Tilabaduri, Rajshahi

Bansberia is a village near Raghurampur which is 5 miles to the north of Atrai and 8 miles to the south of Santahar on the E. B. Ry.

Population: There are 70 families in Bansberia of which 34 are Mussalman and 36 Hindu. There are in all 359 persons of whom children under 10 are 96.

Land: These families own 1121 bighas of agricultural land. Out of this three well-to-do Hindu families own 280 bighas. The Mussalmans on the average own $1\frac{3}{4}$ bighas per head and the Hindus own $2\frac{1}{2}$ bighas. One bigha is about one-third of an acre.

Income: The total income of the village from land and other sources is 9,144 rupees. The Mussalmans have an average annual income of Rs. 15 per head while the Hindus have an annual income of Rs. 28 per head. This is gross income. Out of this the cultivators have to pay rent, tax, etc., and meet all agricultural expenses.

Spinning: Out of 34 Mussalman families 13 own as many charkhas, and of 36 Hindu families 31 own 52 charkhas. Thus out of a total of 70 families 44 families are on the way to self-sufficiency in cloth.

Cotton: Some cotton seeds were distributed in this village years ago. There are 112 tree-cotton plants now. There is a possibility of getting plenty of cotton from this variety of cotton known as Dev or Buri Kapas. Series of experiments were carried on in this area to grow Wardha, Cambodia and other varieties of cotton. But these experiments were hitherto unsuccessful. Only this year we have discovered from experimental fields that good yield may be obtained from Wardha cotton if the plants are allowed to remain on soil and watered and made perennial. The annual varieties get leafy and yield little cotton in the first season. Here in Bansberia the indigenous variety of Kapas is found to be very satisfactory. These plants grow to a good height and individuals covering an area of 9 feet in diameter are not rare. 4,000 pods on one such plant was counted. 40 of these pods yield three tolas of kapas which give one tola of cotton. On this calculation 4,000 pods will yield a hundred tolas or $2\frac{1}{2}$ seers of cotton. This is not a solitary record. From other villages similar figures have been obtained about yield of cotton from well-developed plants.

7 such cotton plants may be grown on a cottah and 140 per bigha, fetching Rs. 140 from

A Cotton Plant at Deula

the ginned cotton. Even if about a third of this yield is obtained in regular cultivation still the income per bigha will come up to, say, Rs. 50 per year, an income which is difficult to obtain from land on any other crop in this locality. This area may produce cotton sufficient for its own needs and leave a surplus for the market. This particular variety of cotton grows everywhere in Bengal. But yield of cotton per plant or per cottah in different districts is not known. If it is as prolific all over Bengal as in this area,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

An old woman at the Spinning wheel at Bansberia, Rajshahi

A Palm Avenue at Atrai

then Bengal can meet all her needs from this very superior variety of cotton. The fibres of this cotton are long, smooth and particularly strong. Finest yarn can be spun out of them.

It has been ascertained from those families who are wholly self-sufficient in Khadi that their requirement is 12 yards per head per year. 12 yards require one-and-a-half seer of cotton. Therefore 1½ seers of cotton per head is the estimate. For Bansberia with a population under 400 the consumption of cotton would be about 600 seers, to be obtained from 300 plants. There are already 112 plants in the village and if 200 more plants are grown, the village ought to be independent of outside supply of cotton. Roughly one plant per head of population would be about enough. For a family of 6 or 7 members as many plants will be required and these may be grown on one cottah of raised land.

Other villages which have been surveyed do not have so many cotton plants. But all have several plants. Seed distribution work has been taken in hand so that with the beginning of rains all the villages within the scheme may raise sufficient cotton plants.

Paddy Husking: Of the 70 families of Bansberia 67 have dhenkies. Every family husks paddy for its own needs. Some earn by husking for the market. But the local demand is not much, outside demand is for paddy and not for rice. Then again earning from husking is very uncertain. It often happens that the price of rice is such as to leave no margin for the huskers. It may so happen that rice is sold at a loss, the cost of paddy even not being covered. The reason is that the price of rice is regulated from Calcutta. If there is a large impor cheap Rangoon rice, the price falls and aff the interior markets.

Attempts are being made by the Ki Pratisthan to have paddy husked by regist huskers and sell the rice produced at Calcu In this way the people may be given ano occupation besides spinning. Dhenki-poun rice is costlier than mill rice. The cost of hu ing one maund of paddy in a mill is less t four annas whereas in hand-pounding the is not less than eight annas. Then there is cost of distribution of paddy and of collecti Dhenki-pounded rice is costlier than mill r But such rice has superior food value. If peo will discard the use of mill rice then towns w be healthier and the villages less poor.

In the new scheme of self-sufficiency of Kh the spinners are to wear Khadi obtained in retu for their spinning wages. The spinner does n supply cotton or pay for the weaver. She pa for these by her spinning labour so that she g more yarn in exchange. As a matter of fact, every three yards of cloth one yard goes to t spinner and two yards have to be sold to oth in order to meet the cost of cotton and weav charges for that one yard. So for every spinn family there must be two buying families. B if cotton is grown by the spinners themsel then for every single yard of cloth taken by spinner in exchange of yarn another yard has be sold to others. Thus in a village growing own cotton, only half the families need be spin ing in order to clothe the whole village, the oth half using the surplus. But this other half s will have to be given some occupation to enab them to buy cloth produced by the self-spinne

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Here paddy-husking fits in nicely. If this non-spinning half will husk paddy then they may be given wages in the form of cloth produced in another section of the village so that only rice has got to be found a market for. Khadi Pratisthan has begun to do exactly this thing in this area. As the spinners are given no wages but simply Khadi, similarly the huskers are given no wages in cash, but are supplied with Khadi and food materials. Shops are being opened in villages which will be mere places of barter, the huskers and spinners obtaining cloth and food materials in exchange for their labour. A small beginning has already been made in this direction.

Crop: Only one crop either paddy or jute is grown in Bansberia and in the neighbouring villages. The villagers do not grow ravi crop. It is not that they do not know its cultivation. They do not grow this second crop because they all let their cattle loose after the paddy is harvested. To grow another crop by single individuals in fields where cattle let loose are roaming about is an impossibility. By united action it might be possible, all agreeing not to let loose the cattle. But such united effort and united action are lacking. Ravi crop fetches higher value than paddy so by growing a second or ravi crop the cultivators' income may be doubled.

A Sickly cow sells at Rs. 2 or Rs. 3

It is possible to grow ravi crop even by individual effort but it will be expensive. In order to demonstrate how their income may be doubled some plots of land have been taken by the Khadi Pratisthan in one of the villages. The condition is that we pay all expenses for growing the crop. On harvesting if there is loss we bear it, if there is profit it goes to the landowner. Any number of fields were available for cultivation under this condition but we took only a few bighas for demonstration. We had to cultivate with hired labour and plough, but the cultivator does not consider this as an expense when he cultivates for himself—his wages being his profit. Wheat was sown and the plants were growing and we were able to protect them from stray cattle roaming about. The cultivators heartened up.

A Scientist at the Spinning Wheel
Sir P. C. Ray at Atrai

We expect a good return in spite of the expenses and hope that this demonstration will have far-reaching effects. Some paddy fields are comparatively lower and after harvesting paddy not much time is left to plough and sow wheat. But then 'Til' or sesamum can be sown much later and yet can be harvested so as to free the land for next sowing of paddy. It has been abundantly clear by these few months' work that by concerted action much can be achieved. We are hopeful that the income of the villagers in this area will be doubled.

There are difficulties to be overcome. The ravi crop is very much dependant upon timely showers as indeed all crops. There are many tanks in the fields in this area, the use of which the cultivators may have without payment of any rent. Probably they were excavated at some remote time for irrigation but are not used. The cultivators here use a form of lift which is cheap and efficient, and provided a source of water is available, labour for irrigation is not much. But there is one difficulty. The fields surrounding a tank have different levels, one is 6 inches high and another 10 inches low, so that water cannot be taken across from field to field. Something cheap has to be devised for providing

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

temporary water channels. Devotion and ingenuity may solve the problem. We have something in hand by way of experiment. If irrigation facilities are secured then it will be a second step forward.

Cattle: There are 250 heads of cattle in Bansberia of which 80 are cows. Some Mussalman cultivators use cows for the plough and these then become no good for milking. Out of these 80 cows only very few give any milk. Full figures have not been collected for this village. But figures from a neighbouring village Tilabaduri are available. Tilabaduri is a big village having a mixed Mahishya and Mussalman population of 955. Children under ten number 253, and there are 170 cows. In November there were 15 cows out of this 170 in lactation. The sum total of their milk comes to 10 lbs. If one attempts to give milk only to the children of the village one will find that it is not possible. How can one divide 160 ounces of milk amongst 253 children?

Villagers with accessories for catching fish

This area is low lying. Quite close to this is the 'Barind' tract of older alluvium. This low lying area is submerged under 10 to 12 feet of water during the rains. The houses therefore are built on mounds out of excavations. Raised land is scarce. All the raised land is full of houses or bamboos and other useful and useless plants. There is hardly any land for growing vegetables. The cows rarely know what green fodder is. During six months of rain the cattle are confined to the yard in the house without any place even to walk about. During the rains the cattle are a useless burden to the cultivator. He cannot take any work out of them, he cannot feed them, and he cannot even use the dung for fuel for during rains dung cannot be d and caked. Fortunately the 'Barind' pe want cattle for the plough at a time w the ploughing season is over in the 'Bhar' a The Barind cultivators take these cattle on l feed them well, utilise them and then re them to the owner after the rains. Some c vators sell off their bullocks with the end ploughing season and buy again in time for next season just for saving the trouble of ke ing them during the rainy months. On acco of these practices that attachment has not gr here for the cattle which is normal in culti tors. The cows are neglected. In their sh sighted economics the cultivators do not seem care much about the bullocks being weak. T soil is very hard and flintlike when dried with a shower of rain all hardness vanish, c become clay and a weak pair can pull the plo through. But cattle are degrading and cruelty inflicted on them here is appalli They are kept continually on starvation. W have found householders who have stacks straw for fodder, the surplus of previous seas On being questioned they say that the ca are always like that, weak and useless and e if they are fed they do not improve. But t fact is that they regularly keep the cattle starvation and what they call enough food not enough.

We brought a cow a mere skeleton to t Atrai centre. It belonged to one of our work We call her Lakshmi. When she came s could hardly walk straight and had a grow up calf which still attempted to suck somethi out of the stone-dry udders. She could n eat—so weak and starved was she. But aft three months of care she began to eat well, a put some flesh on and now is in calf. There no question of improving the breed here present. The problem is to feed them and ke them alive. Bullocks are not used here f pulling carts. Buffalo bullocks are impor from Behar for carts. They do not breed he This is another loss to the locality of which t cultivators seem not to be conscious. If second crop is grown, it will not only doub the income of cultivators, it will provide mo fodder for the cattle and thereby benefit t cultivators twice.

How do they live? Where the ann income is Rs. 15 to Rs. 30 it is a proble requiring solution as to how they manage t live. There is no doubt that there is a goo deal of poverty and suffering yet men are n so starved as the cattle. Men are struggli on but cattle are in a desperate condition.

A herd of sickly cows

out of 170 cows only 15 are in lactation at any time it proves that the cows are so starved that a considerable number have lost their power of procreation. Men are not in such bad straits. How then do they manage with two or three rupees per month?

Their principal food is rice from which they derive all their fuel for energy. The grown-up people take 1½ pounds of rice daily. Dal they take rarely, not more than 8 meals a month include dal. Rice costs them Re. 1 per head per month. Salt, oil, spices, and other things may cost Re. 1 per month. To complete a food some protein is necessary over and above this. The villagers obtain protein from fishes which they catch and have rarely to pay for. During the rains and a few months after they catch fish anywhere. Fishes grow quickly and in abundance in the rice-fields. With the subsidence of water from fields the fishes take shelter in the ponds, tanks and excavations, and are caught from there. Some families have deep tanks and fishes are obtained in dry season from them. Others who have only shallow tanks catch the fishes and keep them alive in small dug-outs filled with water on their yards. These fishes of the hardy variety have tenacious life. The villagers starve them even more than they do the cows. They seem to think that the fishes need nothing but water to live on. They are given no food, simply the water is changed once or twice a week. When I pointed out to some of them how they have been cruel to the fishes and starving them, they realized and agreed that the fishes after some weeks remain living but they become only skin and bone. Anyway the poorest here may get some fish and add the necessary protein to their daily meals.

But some vegetables are necessary otherwise they are likely to suffer from vitamin C deficiency. Those who take dried fish exhibit a remarkable hankering for green vegetables. They pluck small leaves of weeds and satisfy the call. Vegetable is costly here. Those who cannot procure enough vegetables from their own compounds or collect them from other compounds, have to buy them.

They have no fuel expenses. Cowdung, twigs, leaves, and straw serve their fuel needs. So from the two rupees per month supplemented by fishes and vegetables they get their necessary nutrition. But they require at least Rs. 4 worth of clothing per year. We could not fill up this gap from their income. Either they have to borrow or to curtail food to clothe themselves.

Village huts on mounds

The survey has presented to us clues which we have to follow up to serve them. Atrai has a tradition behind and some selfless workers are sticking to the work these fourteen years. With the orientation brought in by the introduction of self-spinning and paddy-husking Atrai centre has a vaster field of service before it. The medical section may be expanded. Villagers may be supplied with cheap medicines and village youth may be trained to obtain some knowledge of physiology, nutrition, diseases and their treatment. This means an elementary medical school at Atrai. Without giving the endeavour an exalted name attempts are being made to train some students in sanitation and medicine.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The young men of the villages have to be kept attracted to the village. The Atrai base proposes to facilitate this work by drawing them in to learn some technical arts. Spinning, weaving, cow-keeping, agriculture, village carpentary, village smithy, tanning, disposal of carcasses are some of the items already taken up or to be taken up in the future. The scheme for training provides for feeding the students free from their own income. There are a few bighas of land attached to the centre. The students are expected to become good cultivators first and then be proficient in any one or more of the subjects mentioned. Agriculture will keep the students busy during the greater part of the year. During slack seasons students will have more time to give to their books or lectures.

A cow at Atrai
She gives three *seers* of milk

Everything is in embryonic stage. It may in future hold up some solution of the problem of unemployment in its widest ranges; it may attract young men to live a healthy, sunny, blissful life and with whatever useful they have learnt before, Atrai may mould them utilizing such knowledge for benefiting villages and not allure them to towns in attempts at seeking service.

CONGRESS JUBILEE CELEBRATION IN VIENNA

The Golden Jubilee of the Indian National Congress was celebrated in Vienna among some other foreign cities. The function was presided over by His Magnificence the Rector (Chancellor) of the Vienna University. We publish here a group photograph taken on the occasion. Among those who took active part in the proceedings was Dr. Adolf Vetter, who was formerly an important official of the Austrian government and, latterly, president of the State theatres. He is a man of wide culture with deep interest in India and India's culture. At the Congress Jubilee Celebration he spoke on behalf of the Austrian guests in reply to the welcome of the Hindusthan Academical Association. In the course of his speech he referred to Mr. Subhas Chandra Bose's departure from Vienna on the way to India in the following terms:

Ladies and gentlemen, may I be permitted to say a few words on behalf of the many friends Mr. Bose has won and leaves now in Vienna.

The personality of Mr. Bose has made a deep impression on them. Although many of them have had already before the arrival of Mr. Bose a lively interest in Indian affairs, this interest has been deepened and enriched wonder-

INDO-BUDDHIST ART IN CHINA

By JATINDRA MOHAN DATTA, M.Sc., B.L.

Buddhism entered China overland by the Central Asiatic caravan routes, and by the sea-route through the Straits of Malacca. The overland Buddhist missonaries of Northern India carried with them the influence of Gandhara art, which is said to have reached its maximum development in the second century A. D. And the Sino-Buddhist art must have drawn its inspiration from this branch of Indian art. The missionaries who followed the sea-route came chiefly from Southern India and carried with them an art little affected by that of Gandhara "but reflecting rather that of the great Maurya dynasty of the third century B. C."

Here are a few examples of Buddhist art in China, executed no doubt by the local Chinese artists, but under Indian art influences. It will be seen from them that even after centuries of acclimitization how little sinicization of art-forms has taken place. It may be due to religious causes or direct contact with India.

[The pictures are from photographs kindly supplied by a Chinese scholar friend of mine.]

Nan-Shin-Ku Sculptures.—One of the Bodhisattvas that accompany the great Buddha at Nan-shin-Ku, is a slim figure, 10 ft. in height with distinct mantle folds that serve to accentuate the reposeful harmony of the whole conception.

The Lung Men Grottoes.—The Great Buddha at Lungmen is the most eloquent example of the very rich and manysided Tang art. The figure must have been over 60 feet in height, but the lower part of the pedestal is now covered with mud. The dais is over 32 feet wide.

The Bronze Lion at Yun-Ho-Kung, Peiping. The pair of stone lions on marble stand, placed in front of Yun-Ho-Kung, Peiping, are marvellous examples of bronze chiselling. They look so vivid that a casual observer would think they'd jump down any minute.

INTERNATIONAL CONFERENCE OF WOMEN

By Mrs. KAMALA CHATTERJEE, B.A. (Oxon.)

A JOINT Conference of the International Women's Council and the National Council of Women in India was held at the Town Hall, Calcutta, from the 30th of January to the 5th of February last.

It was a unique occasion, as this was the first time when a Conference so widely representative had met in India. Delegates from all parts of the world attended the sessions and the subjects discussed were wide in choice.

The International Council was founded in 1888 in the United States with the aim of strengthening and co-ordinating feminist activity by federating the various associations working for the improvement of the position of women and for social progress. It is a federation of women's organizations all over the world and represents women of all races and faiths, working according to their several ideals along the most varied lines of life and thought. The influence of this little group spread steadily until it is now a federation, composed of 40 different National Councils of Women which are themselves composed of National Societies and Local Councils or Branches, to which are again affiliated local associations and institutions. Today the International Council represents more than 40 million women bound together by their desire for peace and social progress. Every five years the Council holds its Quinquennial Meeting when reports are presented, detailing the results obtained in all the various fields of interest and when programmes of work are drawn up. Many organizations which are now working for acknowledged ideals of social progress have originated in these council meetings.

Thus, at the meeting held in Berlin in 1904, the Committee for Equal Moral Standard and against the traffic in women and children was formed and has ever since taken a very active part in the campaign against this evil. The same meeting in Berlin saw the beginning of that International organization now known as the International Alliance of Women for Suffrage and Equal Citizenship.

The main object of the Council is to establish a permanent link between the women's organizations of the different countries, thus making it possible for them to work together for the improvement of the material and position of women. The chief strength Council lies in the fact that it does not to any particular movement. It is becau work of the Council has not been restrict any particular propaganda and becau women, of whatever creed, party, secti class, have been welcomed as members th International Council of Women has strong enough to help forward all that te the good of humanity.

The National Council of Women in In affiliated to the I. C. W., holding the voting privileges as the other countries provincial councils including that of Burm affiliated to the N. C. W. I. These provi councils in their turn are in touch innumerable women's organizations all the country. Hence we find that the w of all organizations affiliated to the nati councils of their countries have an opport for discussing their special problems ultim at the council meetings of the I. C. W.

The meetings of the International Co have been held in the different capitals o world and this year Calcutta was selected the Joint Conference.

The Calcutta Conference was atte by 24 Overseas, 19 Indian and 30 Br delegates, besides many visitors. Of th overseas delegates, Ireland sent 1, Great Br 8, Belgium 1, Roumania 4, Switzerland France 2, Denmark 1, Greece 1, Holland (The Secretary to the I. C. W.), Australia 2, New Zealand 1. China sent one visitor Australia sent two.

On the 30th January the Maharanee Baroda presided over the inaugural meeti the Conference. Before a representative large gathering the Maharanee delivered inaugural speech. She laid special emphasis women's education and their political pos in the new constitution and said, "It is duty to see that they (women) are given training which will fit them to play their in National affairs and at the same time them more efficient mothers." Discuss women's status in Indian politics, the Mahara explained that women's claims had not recei full recognition but the privileges that had

earned by women would make a good beginning and, properly utilized, should ultimately achieve their ideals.

A detailed account of all the sessions of the Conference will be too lengthy for these pages, but the comprehensive nature of the Council's work will be realised fully when we consider the character of the resolutions passed and recommendations made at these meetings. The Conference has framed resolutions in connection with Rural Reconstruction, Girl's Education, Training of the Social Worker, Nursery Schools, Cinema, Medical Inspection of Schools, Food and Health, Legal Disabilities, Franchise, Maternal Mortality and the Traffic in Women and Children.

H. H. The Dowager Maharani Sucharu Devi of Mayurbhanj
Vice-Chairman—National Council of Women in India
Chairman of the Reception Committee

The work based on these resolutions will be carried on as far as practicable by the National Council of Women in India.

Speaking on Rural Reconstruction Pentland gave a description of the Women's Associations in England which prised 64 active societies and suggested similar rural organization, if set up would be able to achieve much in improving life and position of women in India. Nilkanth described the plight of Indian and ascribed their misery to lack of above everything else. This ignorance removed, said Lady Nilkanth, only help of the State.

The N. C. W. I. should see that was more alive to its duty.

Lady Bose spoke on rural education industries in Bengal. She suggested the tion of village societies training of women teachers the villages. She also there was great need for vival of village industries.

Mrs. K. Chattopadhyay phasised the extreme poverty the villagers and the bility of achieving any improvement while the people 80% to 85% of their income rent. Dame Elizabeth who led the British delegation was of opinion that in all for rural reconstruction, the larising of music should important item, as it would village life more attractive England they had for some been stimulating the taste music among school children village folk through the of gramophones and radio now this method is being by forming choirs of which are already in existence. In nection with girl's education P. K. Ray suggested the tion of a special Board for education under the Education Department. This board have the decision of syllabus text-books for girls' schools well as the power to effect provements and to conduct aminations. She also demanded equal expenditure for girls' tion as for boys and the appointment of a special woman officer to be in of girls' education.

The training of the social worker was

ssed at length by several important speakers, ong whom were Dame Elizabeth Cadbury, iss Wingate, Miss Tyan from China and the ell-known social worker Princess Cantacuzene om Roumania. Voluntary untrained service as appreciated by most of the speakers but the nt of trained leadership and of proper rangements for training was also felt keenly y everyone.

While discussing the problem of "women d the press," Miss Zellweger, a journalist from itzerland, said that although women did a lot journalistic work they usually occupied very mble positions as reporters or writers of ecial pages. Important topics concerning omen should receive greater publicity and omen should do more serious writing along ese lines than they have hitherto done.

Maternal mortality which came up for scussion next is a vital problem with us. We e all familiar with the high death-rate among dian women due to motherhood. The Conrence discussed this alarming situation and ggested means for the removal of conditions hich favour the incidence of this preventible ortality. Dr. Jhirad's exposition of this oblem was very instructive.

The last session of the Conference dealt ith traffic in women and children, legal disbilities of women and the Child Marriage ct.

Mrs. S. N. Ray spoke on legal disabilities f women and Dr. Nowrange and Mrs. Menon n the Child Marriage Act.

Miss Shephard, while initiating the debate n Traffic in Women and Children, said that nless there is a revolution in the attitude of ciety towards this evil, all legislation or dical work would be useless. Continuing, iss Shephard said that recently a greater umber of women were taking interest in scue work and if organisations similar to the ll Bengal Women's Union could be started in ach province, much could be achieved. She oncluded by saying that it was still true to ay that the chief rescue agencies were the alvation Army, the various missionary ocieties, the Brahmo Samaj, the Seva Sadan nd the Servants of India Society.

Begum Shah Newaz spoke very ably on his subject. In the course of the discussion, he said that it had been proved from the tatistics laid before the League of Nations, that India was one of the most moral countries in the world.

As the foregoing indicates, the work of the Conference has been heavy and also very varied in its nature. The problems discussed at these meetings may not be new, but the fact that women from so many different countries of the world united with us in demanding the reforms we have been striving for, puts new strength in our endeavour.

The serious work of the Conference was relieved by the various social functions arranged by the Reception Committee. At these social gatherings friendships were made and personalities unfolded. In fact, the social side of the Conference may be expected to yield more permanent results; for the light of friendship shows up the little details of unity of spirit, which engenders a stronger bond of fellowship than all the creed of internationalism. And many such friendships were formed.

Several social engagements had to be cancelled on account of Court Mourning but the few that could be arranged were very successful. During the steamer trip to Belur particularly, all restraint was dropped by the gathering and a genuine spirit of friendship prevailed. The Princess from Roumania was a charming combination of the ardent social reformer and a good friend with whom to enjoy the beauty of nature and simple everyday talk. Her cinema depicting Roumanian peasant life was specially enjoyable and instructive. Her speech on the opening day was also much appreciated.

The Civic Reception given to the delegates and visitors by the Mayor and Aldermen of Calcutta was a fit gesture on this unique occasion. The Mayor welcomed the guests to the City of Calcutta and Dame Elizabeth Cadbury, Princess Cantacuzene and Mrs. Faridoonji replied in behalf of the English, the Continental and the Indian Delegations respectively.

With this reception the Conference came to a close and the delegates departed for their various destinations.

India has been a great centre of International fellowship since a long time. The Poet Rabindranath Tagore's Visva-Bharati was the first centre of International Culture in Modern India which brought us into closer contact with the rest of the world. Hence it was very appropriate that women who have always been the champions of peace and goodwill between nations should hold this meeting in India.

The Conference has been such a great success because the spirit of the gathering has been wholly in keeping with the traditions of our country.

BOOK REVIEWS

BOOKS in the principal European and Indian languages are reviewed in THE MODERN REVIEW. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.—Editor, THE MODERN REVIEW.

ENGLISH

CHRIST AND COMMUNISM: *By E. Stanley Jones, London. Hodder & Stoughton. Price 5/-. p. 318. Can be had from the Association Press, Calcutta.*

In this book Dr. Jones seeks to establish that the Kingdom of God" of Jesus includes a form of communism on earth. He admits the amazing productivity of capitalism in certain directions and the fact that capitalism fails in the equal distribution of the national income, but the suggestion that the capitalists should be intelligent enough to avert disaster does not meet with his approval as he says no amount of individual goodwill can atone for that." He does not tell us how the "Kingdom of God" is to be established without individual effort. His solution for all our ailments in this world is to "accept Christ," whatever that means without individual effort. He forgets God will not move His little finger to help us unless we set about the business ourselves. If this is so then how are we to set about it?

The constructive part of the Soviet programme dealing with Education, Hygiene, Health and other welfare activities receive a warm appreciation but he condemns the soviet communism as its organisation depends on class hatred and violence. It is easy enough to talk about the "good news to the economically disinherited, to the socially and politically disinherited, to the physically disinherited and to the morally and spiritually disinherited"; but it is hard to say "Take up thy bed and walk." Dr. Jones' dynamic is "the resources of the living God." He is unconscious of the fact that God is a great miser and does not distribute His resources freely. He exacts its equivalent from us. How shall we satisfy His demands? If individuals are moved by "the spirit of the Lord" their efforts will count and it will be too bold to say that the leaders of Soviet Russia are not moved by "Spirit of the Lord." It is true that Soviet Russia has generated violence and depends on class hatred but we humans are very human and often infuse our frailties into our altruistic actions. The Spirit of the Lord is often rendered muddy in passing through human channels. We shall have to grant that the motives behind the Russian leaders are pure and lofty though the means adopted by them are often polluted because of their eagerness to get to the goal soon.

The treatment of the theme by Dr. Jones is interesting reading and is more often amusing in the absurdity of his deductions. If a host offers his guests food, Dr. Jones would deduce an injunction to economic distribution of wealth. Here is a sample of what the book abounds in:

When we are inclined to question whether the Gospel has anything to do with the economic life of people it would be well for us to hear again Jesus saying to the disciples in regard to the hungry multitudes "They have no need to go away, give ye them to eat," and "I would not send them away fasting." . . . "most religions would" adds Dr. Jones, and ludicrously paraphrases this into "They need not go away to atheistic communism to find a social order in which their material wants will be met; give ye them to eat." Jesus as an oriental, extended his hospitality and offered his meagre all to his guests but the highly individualistic spirit of America cannot understand this generosity which is found everywhere in the East even today.

If he confined himself to the mutilation of the scriptures we may treat it as amusing, but when he starts mud slinging at other religions—Hinduism in particular—we feel he passes beyond his licence. When dealing with Christianity he would have us forget the lapses of its followers but with Hinduism he feels justified in condemning it because of the malpractices of its devotees. We would like to remind Dr. Jones that though the followers of Christ practised a form of communism in the early years and a certain form of it still lingers in the Roman Catholic priesthood, yet the bulk of the followers of Christ—so-called—have evolved one of the acute forms of private property in the capitalistic system, while let it be said to the credit of Hinduism that it has battled with the evils of private property for milleniums. The relics of the struggle we find today in the joint family system and in the caste system although in the latter we find at present in great relief the evils only emphasised. Dr. Jones is very short-sighted to the achievements of other religions. It would be well for us Christians to have little more of "the spirit of the Lord." Jesus was critical of his own religion but appreciative of the least good wherever found. Let us do likewise.

When a great leader gives directions to particular individuals we are apt to fall into the temptations of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

generalising such tips into rules of conduct for all. In the injunctions given to the disciples we cannot read communism. He was sending them out as sheep amongst wolves and his directions were calculated to make their task easy. Jesus never recommended asceticism as an end or as a part of communistic society he wanted to start but as a means to an end. If we ask a person about to dive to throw off all encumbering garments and put on bathing clothes we do not prescribe such sartorical fashions for all. He asked some of them to leave their productive occupations to follow him. That does indicate that those who have to carry the torch of the mission have to take to the ascetic way of life, but not that all should. We cannot tear passages from their context and build on them structures never contemplated by the architect. Many of Dr. Jones' deductions are far-fetched. Here is an example of rationalising the poetic language of the prophets. He quotes "Make ye ready the way of the Lord, make His paths straight. Every valley shall be filled and every mountain and hill shall be brought low; and the crooked shall be made straight and the rough places smooth; and all flesh shall see the salvation of God." Dr. Jones makes this passage an attack on the competitive order. He says "The valleys have become depressed because the mountains have gone up. That is the tragedy of a competitive order. At the foot of the mountains of financial success you find valleys of financial depression. The creation of one over-rich man usually means the sending of a whole host below the poverty line" etc. etc. We do not need to stretch the scriptures to prove the evils of the competitive order under capitalism and we cannot thereby gather that Jesus was against all individual effort where there was no exploitation. "A workman is worthy of his food," that is to the enjoyment of the fruits of his labour; we may call it a wage, a profit or anything else as long as he has contributed his quota of service. It is difficult to say that Jesus favoured any particular form of social order. He formulated this eternal principle that should guide us in our dealings with our fellowmen and has left us to solve our problems in the light of such fundamentals.

Pooling of resources may be workable in a small homogeneous group but it is not possible to get a heterogeneous mass of people such as a nation to work on that basis. Jesus and his disciples lived on a common purse. So do many groups at the present day. But that system cannot be generalised into a working formula for all. The communism of the early Christians was no doubt one of consumption but to have a communism in production requires a greater urge than mere individual effort as the Russian experiment has shown us. The natural urge for production has always been hunger, that is the satisfaction of one's own needs. This leads us to a pursuit of profit within limits. Society has to safeguard itself against a misuse of this legitimate urge and set up regulations against exploitation of the weak by the strong. We can now see the danger of large combinations for production. Humanity is made up of all sorts and conditions of people in all stages of moral and physical evolution and hence it is not possible to standardise their lives on one model without violence as Russia has more than demonstrated to us. We have to allow each person to work out his own salvation in the light of his evolution in so far as he does not interfere with the rights of his neighbour. We are gregarious, it is true, but not in all things. We may cluster our homes and form towns but each wants his own home. There are limits such as these to be borne in mind if we are to succeed in any social planning. Centralisation has as corollary violence to get people to conform to mould. The only escape is decentralisation in production. Dr. Jones does not go far enough in the practical difficulties in the way of working central plan.

As usual in all his writings, Dr. Jones takes marks of Hindu friends he invites to preside meetings and makes use of the customary pl from the chair to prove the hold of Christi India. The book is published for readers in countries and such statements are gullible enough where. In some passages one wishes Dr. Jones his theme and forgot his evangelical mission while.

J. C. KUMARAP

THE TARIKH-I-MUBARAKSHAHI, TR LATED INTO ENGLISH: *By Prof. K. K. M.A.; Gaekwad's Oriental Series, Vol. LXIII; P*

Tarikh-i-Mubarakshahi was published in 19 the Bibliotheca Indica Series, no. 254. It has be the first time made available in English translati Prof. Basu. This work is not a mere translati the text published in the Bibliotheca Indica S Prof. Basu has utilized a valuable MS. of the Tar Mubarakshahi in possession of Sir Jadunath S and collated the text of it with several other MSS. the British Museum and Bodleian Library. Jadunath in his Foreword says, "The translato afforded every assistance to future workers by ser ously giving the readings of different MSS. in case, as well as extracts from other Persian his on the same points. This is the first critical stud this unique history."

Tarikh-i-Mubarakshahi in its English garb has a gap in the history of the Delhi Sulanate. Th "the source of all our knowledge of the Sayyid Pe and "even for earlier periods of Indo-Muslim his its author, Yahiya gives many little pieces of infor tion not to be found elsewhere." We propose to the interest of the reader to some such little p of information.

Yahiya Sarhindi, author of this history, is desc by Sir Jadunath and other historians as well, as Shia; but it appears doubtful from Yahiya's "In duction" in which he praises and invokes peace the first four Caliphs of Islam. Had Yahiya bee Shia, he would not have under ordinary circumsta even mentioned the first three Caliphs whom S disown and curse. If Yahiya was really a Shia, departure from the tradition of his own sect, can be explained as outward conformity with m reservation to a Sunni custom, as the author was in a Sunni country and also wrote for a Sunni of Delhi. *Tarikh-i-Mubarakshahi* throws some esting sidelight on Sultan Balban's expedition to G According to it Tughral fled to Narkila (Pers. p. 42) and there is no mention of Hajinagar or Jajn (Barni, Pers. text p. 87). It is said that Rai D as a condition of interview with Balban desired the Sultan should receive him standing. A courti Balban suggested a device which should save the S from showing such unusual honour to an infidel at the same time satisfy the demand of Danuj When the Rai entered the darbar the Sultan s up and let fly a hawk from his hand, leaving Rajah and the courtiers of the Sultan free to inte the motive of standing each in his own light. (P. We also learn from *Tarikh-i-Mubarakshahi* the name a hitherto unknown Bengali hero of Bengal, Sahi

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

who commanded the *paiks, i.e.*, infantry of Haji Ilyas against Sultan Firuz in the battle of Ekdala (foot-note 129).

Prof. Basu has executed a difficult task with commendable success. We only regret that he has sometimes departed in the wrong direction in reading proper names which may puzzle the general reader; *Alb Khan* is a place of the familiar Turkish title *Alp Khan* is hardly pardonable. A mis-translation, *dentifrices* (p. 95) for *do misauak* (text p. 94 meaning tooth-sticks) has created great confusion in the story of the poor Hindu convert and the wicked poet Ubaid, (who have been consulted by the Hindu as to how he should simultaneously use two tooth-sticks given to him by his *Pir*, Nizamuddin Auliya) advised the latter that he should put one to his mouth and the other to his.... Ruby-canopy" (p. 76) for *Chatar-i-la'l* (text p. 77; meaning ruby, *i.e.*, red umbrella); "covered with iron" (p. 223) for *covered in* steel"; are perhaps not happy. Geographical names also require further elucidation.

These few things apart, Prof. Basu's work deserves to take its rank with standard translations of Persian histories. Every student of Indo-Muslim history will find this work useful and almost indispensable.

K. R. KANUNGO

WORLD REORGANIZATION ON CORPORATIVE LINES: *By Giuseppe de Michelis. Allen and Unwin, pp. 311, price 10s.*

Rather more than twenty-one years ago Europe, and later on practically the whole world became involved in war. People believed that it was a "war to end war," and that once Prussian militarism was crushed all the nations would live together in peace and amity. To-day many nations seem to be more heavily armed than they were before 1914, and we read that in the different countries patriots are complaining that their armaments are insufficient. Three powers, however, stand out most conspicuously in the re-armament race, Japan, Italy, and Germany. Notoriously the governments of all three countries believe in war, but all alike realize the importance of "persuasion," and therefore employ certain men to state the case for the expansion of their particular country. Such a "persuasive" writer is Senator Giuseppe de Michelis.

The book falls into two parts, first the text, and then the appendix, and of the two the latter is the more worth studying, and it throws a great deal of valuable light on the present division of the world among the colonial powers. The text suffers from grandiloquency, and verbosity. For example, "the luminous fascist experience recommended by her eleven years of economic progress and of civil order, secured for the Italian nation in the midst of the formidable difficulties of the world crisis" (p. 15). What exactly does "luminous" mean?

Senator de Michelis' proposals are simple, in short that Europe is to civilize Africa. He demands equal opportunities for all capitalist countries to send emigrants to the "empty colonial spaces," and to invest capital in "backward" countries to get raw material from them. The four most "civilizing" nations in Europe are Italy, France, Germany, and Great Britain, and the responsibility for "civilizing" Africa is to be shared among them. He demands that with regard to raw materials there should be a "co-ordinated international administration." The future of Africa then would be to be re-distributed "amongst all the European (!) colonial (!) powers, past and present, not for their own benefit, but for the common benefit of all the nations of Europe" (!) (p. 204).

Mussolini is quoted as saying that "the present system of production has released forces which it is no longer in a position to control." This idea is common to both fascism and socialism, and superficially their solutions seem to be alike. Yet there is a fundamental difference between the two; Senator de Michelis aims at an international state capitalism which would preserve the difference between the colonizers and colonized abroad, and between the exploiters and exploited at home. A socialist aims at an international socialism which would abolish the distinctions between colonizing, and colonized nations abroad, and between capitalists and workers at home. The fascist way leads to the deserts of Abyssinia; the socialist to Five-Year Plans.

CHRISTOPHER ACKROYD

THE ATOM: *By E. N. da C. Andrade, F.R.S., new edition entirely revised and extended 1936, price 1/6. Thomas Nelson & Sons, Ltd.*

Prof. da C. Andrade has made a reputation for himself as an extremely able and lucid exponent of the modern development of atomic physics. His book on the Structure of the Atom has become one of the standard books on the subject. Recently in a chapter contributed to Reports on Progress in Physics (1934), entitled *The Physics of the Atom*, we are indebted to him for a very clear and concise account of the recent development of the subject. These accounts are intended for the advanced students and research workers. In the book under review the author has attempted to give a popular account of the development of atomic physics within the compass of a small book of 129 pages. The book was first published in 1927, and has since been reprinted seven times. The present edition is entirely revised, extended and brought up-to-date. In seven short chapters beginning with the atomic theory as developed by the chemists, he writes successively about the size and number of atoms, the atom of electricity, the nature of light, the structure of the atom, how the atom sends out radiations, and atom and energy. The application of wave mechanics, and of the discoveries of positive electrons and neutron to the problems of nuclear and atomic structure have been incorporated in the book. The author has avoided the use of diagrams, mathematical formulas and symbols. To a reader familiar with the subject it is very interesting to see how the author has attempted to give a picture of the intricate subject of atomic physics by means of a number of apt analogies and illustrations. How far a non-scientific reader will be able to form a clear idea of the subject by reading this book, it is difficult to say. In any case he will not be misinformed.

In the Preface the author writes, "I have so often been asked about the kind of work for which the Nobel Prize is given, that wherever I have had occasion to mention a piece of fundamental work which has been thus recognized, I have drawn attention to the fact." One finds that the investigations of all the Nobel laureates in physics who have contributed to this subject, starting from Rontgen to Curie-Joliot and Chadwick have been described.

D. M. BOSE

ARNOLD AND THE GRAND STYLE: *By Rev. A. J. Boyd, M.A. Oxford University Press, Pp. 16.*

The pamphlet reproduces a paper read by the author to the English Association, Madras Branch. In

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

it he joins issue with Matthew Arnold in regard to his conception and application of the term, 'the grand style.' He says that Arnold's definition of the expression is arbitrary and unduly restrictive, leading to the exclusion of even Shakespeare, that his linking together of simple Homer and 'severe' Milton in the category of writers of poetical works in the grand style is unwarranted, and that Arnold's entire discourse on the subject is of little critical value. 'Indeed there is not one mode of grandeur in poetry, nor two, but many.'

Arnold uses the expression, 'the grand style' to denote a particular kind of poetic grandeur,—a 'sustained perfection' of style, 'the constant union of simplicity with greatness.' He thus sets his own standard, and it can, by no means, be called eccentric, for it conforms to one of the fundamental principles of classical art. Judged by this standard, Shakespeare, according to Arnold, does not come up to the mark: "Shakespeare is divinely strong, rich, and attractive. But sureness of perfect style Shakespeare himself does not possess."

Arnold has employed one specific touchstone, and another critic is welcome to employ another for assessment of poetic values with reference to a different aspect of poetic art. There is room for all. Meanwhile we need not quarrel with Arnold but should rather feel grateful to him for what he has given us, for, as the author admits, there is in it "no lack of stimulus, suggestion, delicate taste."

But although one would find it hard to accept the conclusion at which the author arrives, his handling of the subject is exceedingly lucid and interesting, and we would commend the paper to all students of literary criticism.

THE PASTORAL ELEGY IN ENGLISH: *By W. C. Douglas, M.A. Oxford University Press. Pp. 18.*

This pamphlet too reproduces a paper read to the English Association, Madras Branch. The author makes a detailed study of two famous English elegies, Milton's *Lycidas* and Shelley's *Adonais* and points out their deep indebtedness to the Greek and Latin bucolic poets. He shows that Milton has been more successful than Shelley in pouring new wine into old bottles, by having produced an elegy which is a perfectly original poem, although so deliberately based on classical models. Shelley's poem is at its best towards the end where he shakes off the fetters of pastoral convention and throws himself on his own resources.

It is a scholarly and illuminating discourse and will well repay study.

P. K. GUHA

CO-OPERATION IN INDIA AND ABROAD: *By S. S. Talmaki, B.A., LL.B., Honorary Secretary, Provincial Co-operative Institute, Bombay, with a Foreword by Sir Lalubhai Samaldas. Price Rs. 3/8/-.*

The book under review is intended to be a guide to the students attending co-operative schools and classes and is written by a pioneer of urban banking and co-operative housing in Western India, who has been secretary of the Bombay Provincial Co-operative Institute since its foundation, some eighteen years ago.

Rao Bahadur Talmaki has dealt with all aspects of the co-operative movement in this country and has made brief references to the movement in European countries. He has also discussed the weaknesses and drawbacks of the situation in India and has made practical suggestion to remove several of them. The book is a sort of *vade mecum* for all Co-operators in India, as observed by Sir Lalubhai, and will no doubt serve the purpose for which it is intended. suffers from an attempt to cover too wide a a small compass which has made the treatm sketchy and scrappy. However, there are aspects of the subject, such as the legal, and types of co-operation, for instance, the forms operation other than rural credit, which are in greater detail than in other works on co-o in India. The book also gives evidence of and practical interest that the author has been in the co-operative movement in this country.

GURMUKH N. S

THE INDIAN ARMS ACT MANUAL: *Bahadur G. K. Ray, Ex-Supdt., Home De Government of India, 9th Edn., pp. 348, index. Price Rs. 6-10.*

It contains the Indian Arms Act XI of 1 Indian Arms Rules 1924 and together with the and Orders of the Government of India and various provincial governments; the (English) sives Substances Act, 1883 (46 Victoria Ch. Indian Explosives Act IV of 1884 and the Ex Substance Act VI of 1908 with notes and case-l to-date. A book which has run to the 9th needs no introduction. It is an extremely usef handy publication meant for lawyers and laymen

SELECTED SPEECHES OF LORD MACAU *The World's Classics, Oxford University Price 2s.*

Macaulay's speeches, corrected by himself first published in 1854. They are presented to gether with his famous Minute on Indian Ed (1835). The Indian reader would find much p going through it, especially his speeches on P mentary Reform and the Government of India printing and get-up is of the usual standard of lence one is accustomed to associate with World's Classics.

J. M. DA

RADIO TALKIES AND TELEVISION: *N. Vasudeva, M.Sc., published by Atma Ram & Anarkali, Lahore. Price Re. 1/12/-.*

This book deals with the fundamental metho wireless communication and has been written for who know a little about electricity and are ke understand how it is possible for them to listen, the help of a simple apparatus, to a speech or a of music coming from thousands of miles by wi It aims at explaining the principles of Radio in simplest possible terms, avoiding all historical and controversial details, so that even a layman can the subject without any difficulty.

One of the most remarkable achievements of present day electricity is the wireless communi by means of which messages are sent between on the earth's surface, in the air or under the It is indeed marvellous to think that the human —nay even the human picture—can be sent thousands of miles without even a wire connecting two poles. The subject is so vast and advanced one cannot touch upon every point unless he a big volume. Hence the author proposes to ex very briefly how this mode of communication is br about.

At the outset the writer describes direct current and circuits, Ohm's law and electro-ma effects of current and explains wave motion and characteristics of wireless waves. He then states

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

e elementary laws connected with the reception of reless transmission, resonance and tuning, and ampli-ation of speech. The writer explains at good length e principles of talkies and vitaphone, movietone and otophone systems. He then goes on to state the rinciples of Television.

The book is copiously illustrated with diagrams; mple and instructive examples and analogies have en given to explain the phenomena which form the sis of the mode of wireless communication. In ex-aining the methods and principles the author has ways made use of up-to-date data and calculations d has avoided complicated and intricate steps as far possible. On such an interesting subject the book der review is a commendable publication. The value the book would have been enhanced if the prin-les of Television were described and explained more borately. However, the book will be of great help those who know very little of electricity and yet nt to know the principles of Radio Talkies and levision with the assistance of a short treatise on e subject. The printing and get-up of the book e excellent.

SUKUMAR RANJAN DAS

LIFE AS CEREMONIAL: *By M. Besant-Scott. blished by the Theosophical Publishing House, dyar, Madras. Pp. 24, Price As. 3.*

This is another Adyar pamphlet containing a ture delivered by the author in Vienna in 1923. ere is a touch of platform oratory in it, all in praise Masonic Ceremonies which, we are told, teach "all at goes to make a gentleman in the best and highest nse of the word" (p. 15). Masonic rites, like *Tantrik* actices, are generally kept secret and practised con-dentially. Masons do not disclose them to non-asons nor discuss them publicly. It is difficult, there-ore, for a non-mason to express any opinion on them. e little that the author has been pleased to disclose ere about Masonic Ceremonials, is that Masons use the common language of symbols" (p. 10) and that ey perform some kind of rhythmic, concerted action movements by which "the physical, astral and ental bodies are brought into harmony" (p. 10). We e also assured in a general way that "there is no son that Masonry cannot teach, no difficulty, no oblem that Masonry cannot solve, for to the weakest d to the strongest, its training is complete and rough" (p. 7). Let us believe that this is so.

U. C. BHATTACHARJEE

SHREE BHAGVAT SINHJEE, THE MAKER F MODERN GONDAL: *By St. Nihal Singh. Golden Jubilee Committee, Gondal.*

We are accustomed to associate Rulers of Native tates with pomp and splendour and lavish expendi-ure on sports and other gaities. Fortunately for the ndian people—who are one, whether in *British* India r in *Native States* India—there are some few examples f enlightened rulers, who have devoted their time nd resources to the progress of their States and its eoples. The Ruler of Gondal has been known to be n outstanding figure amongst these and we are given n intimate picture of the chief as well as a narrative f his work in this book. We see Shree Bhagvat inhjee as a loving father of his subject people, guid-ng their destines at every step, over a period of half-a-century. The task undertaken would have seemed itanic to a far larger state, but we see from the records, quoted by St. Nihal Singh, that the achievement has been of full measure due to the enlightened outlook and the indomitable will to do good of the Ruler of the State. Education, agricultural advancement, industrial development, lines of communication, all were planned and brought to a successful issue—and all achieved without ostentation, as befits a true Hindu and Kshatriya Raj.

K. N. C.

TRADE UNIONISM AND LABOUR DISPUTES IN INDIA: *By Ahmad Mukhtar, M.A., Ph.D. Published by Longmans, Green & Co. Ltd. Pp. 251 (including appendices). Price Rs. 6/-.*

Dr. Mukhtar's book is a welcome addition to the growing volume of literature on labour problems in India. The Whitley Commission discussed the various aspects of trade unionism quite thoroughly, but the need for an up-to-date book on the subject has been keenly felt in recent times. It may be safely asserted that Dr. Mukhtar's book will be useful to all who want information regarding recent happenings in the labour world in India. In this book, the history of labour disputes in India has been carefully analysed and lucidly narrated. The author has emphasized the parts that have been played by the Courts of Inquiry and the Boards of Conciliation, as well as by eminent mediators like Mahatma Gandhi. The Indian Trade Unions Act and the Trade Disputes Act have been elaborately examined, but, one feels that a comparison with the laws operating in other countries would have enhanced the merit of these chapters. There are also chapters on the constitution and the achievements of the Ahmedabad Textile Labour Association, which is one of the best examples of efficient unionism in India, and on the attempts that have been made to bring the unions under an all-India federation.

The book is nowhere very intensely critical, and, as a result, the pages of chronological details appear to be a bit flat in some places. The historical study of labour disputes would perhaps have been more interesting if, instead of taking one calendar year after another, the author had discussed the frequency of the strikes in each industry separately. In spite of these minor defects, however, the book will amply repay perusal and it can be recommended to those interested in the study of labour economics in India.

BHABATOSH DATTA

PAPERWORK: *By Adinath Sen and Rani Ghosh. Published by the Asutosh Library, Calcutta. Pp. 180. Price Rs. 5/-.*

Learning by doing is an old and familiar adage and yet its truth is so obvious that we often forget it. Our schools never or very seldom exploit the hand for the purpose of education. In spite of the repeated assertions about the dignity of labour somehow or other we look upon our hands as something inferior to our brains. We do not realize the close connection between the hand and the mind. But modern psychology has conclusively shown the importance of manual and practical work in teaching even theoretical subjects.

We may justly contend that one of the greatest educational discoveries of our time has been the human hand. We have at last come to recognize the cultural value of the arts and crafts. But discovery of a truth is one thing and its application in practice is another. To judge by the condition of things in our schools we have to admit that so far very little has been done in this direction. Arts and crafts have yet to find their proper place in the curricula of our educational institutions. We must remember that arts and crafts have value not only for themselves but also for the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

opportunities they offer of giving expression to the creative instincts in our nature. And the supreme aim of education is to develop these instincts.

This admirable book on paperwork is an attempt to show how some forms of easy creative work can be introduced in schools with the help of such cheap materials as ordinary paper and cardboard, a pair of scissors, a footrule and a few such simple instruments. It deals with paperwork in all its aspects. Several sections of the work are devoted to paper-folding, paper-cutting, making of various articles from paper, cardboard modelling, decorations and stencils and papiermache work. The book is profusely illustrated with diagrams and sketches, exercises are well-arranged and enjoyable, the instructions are simple and easy to carry out and what is most important the making of various things do not require expensive equipment and implement. I am sure it will be welcomed by all who are interested in the education of children. From personal experience I can testify how children love doing things with their hands and how educative such activities are.

I take it that the work written as it is in English is intended for teachers. As a teachers' manual it is a very important addition to our educational literature. I wish the authors would now publish a vernacular edition which can be used directly by the children. Works on arts and crafts intended for children should be such as they may be used by them unaided.

Appendix I deals with lettering and the authors have given examples of decorative use of roman letters. Could not the Bengali letters be used in this connection?

A few printing mistakes have crept in here and there and some of the illustrations are not quite clear. But these are minor defects which, I am sure, will be corrected in a subsequent edition. On the whole I have nothing but praise for the book and I congratulate the authors for its production.

ANATH NATH BASU

MEDIEVAL INDIAN SCULPTURE IN THE BRITISH MUSEUM: *By Ramaprasad Chanda, F.A.S.B., Rai Bahadur, Late Superintendent of the Archæological Section, Indian Museum, Calcutta. With an Introduction. by R. L. Hobson, C. B., Keeper of the Department of Oriental Antiquities and of Ethnography, British Museum. Kegan Paul, Trench, Trubner & Co., Ltd., London, 10s. 6d. net.*

There was a time when foreigners thought that India had no fine arts. It is not so now—not at least among those who know. Still in the British Museum many specimens of medieval Indian sculpture were treated up till very recent times more as religious curios, or as mere specimens of iconography, than as fine examples of sculpture. Mr. Chanda's book definitely places them among objects of Art.

The book is very well got up. The plates are particularly excellent, the sculptures represented therein having been speciallly photographed anew for the book.

Mr. Hobson writes in the Introduction:

"It was a lucky chance that brought the Rai Bahadur Chanda to London at the very moment when the galleries of Oriental Religions in the British Museum were about to be rearranged. It had been decided to abandon the classification by religions in favour of a historical arrangement which is more in keeping with the general plan of the Museum, and the redundant sculpture was to be weeded out to make room for the collections of antiquities.

"In this task of revision the Rai Bahadur volunteered to assist with his wide knowledge and experience. His enthusiasm for Indian art, in which he has been actively interested, was stirred by the Co[illegible] and it is gratifying to know that he was so im[illegible] with its importance that he decided to devote a [illegible] graph to it.

"The appreciation of Oriental art, particu[illegible] its Far-Eastern manifestations, has been [illegible] rapidly in Europe; and the powerful influ[illegible] Indian religious sculpture on that of China and [illegible] has now given to Indian sculpture a prominence [illegible] is fully justified by its own inherent merits.

"But it was not always so. For many yea[illegible] beauty of Indian sculpture received scant ap[illegible] tion, ..."

Of Mr. Chanda's book Mr. Hobson says:

"It deals only with a portion of the hist[illegible] Indian sculpture, but it is a portion which sho[illegible] art in its liveliest and most sensitive forms.

"The full explanations given of the [illegible] motives will be widely welcomed. The subjects [illegible] ed in the sculpture reliefs are so complex that [illegible] some instruction in their meaning the specta[illegible] liable to be robbed of part of his pleasure by [illegible] bewilderment. When he understands the [illegible] depicted, as he will do after reading the stories [illegible] by the Rai Bahadur, he will be able to enjoy [illegible] heartedly the singular beauty of the Indian sc[illegible] work and to appreciate the enthusiasm which [illegible] this monograph."

DESIGN: *By Noel Carrington, The [illegible] Century Library, Ed. by V. K. Krishna M[illegible] published by John Lane Bodley Head Ltd., L[illegible] 1935, 3/6 net. Pp. 1-136, Plates I-XIV.*

The aim of the Twentieth Century Library [illegible] are told, is to publish a series of treatises on v[illegible] problems viewed in the light of the changing ide[illegible] events of modern times. The present work fully [illegible] tains the high standard set before themselves by [illegible] inaugarators of the series. The title of the bo[illegible] rather misleading, as the term *Design* is usually us[illegible] architecture. The distinguished author, however [illegible] used it in a very wider sense. It is intended th[illegible] work should not only be an introduction to M[illegible] Industrual Arts, but 'relates *Design* to the whole [illegible] of contemporary life.' An attempt has also been [illegible] to suggest the character of the design of the 'M[illegible] age' by contrasting the present-day social life [illegible] those of the previous ages. The work does not [illegible] with the whole human culture but only th[illegible] England. The book is divided into ten chapters [illegible] is also provided with a brief but useful 'Bibliog[illegible] and an 'Index.'

A. C. BANER[illegible]

THE WILD TRIBES IN INDIAN HISTO[illegible] *By B. A. Saletore, M.A., Ph.D. Lahore, [illegible] Pp. 163+XV.*

The book consists of five chapters, *viz.* Poli[illegible] the Hindu Rulers towards the Wild Tribes, The Ki[illegible] The Sabaras, The Bedars and Miscellaneous T[illegible] The author has brought together evidences re[illegible] to these tribes from historical, as well as trad[illegible] and literary sources. But the materials have [illegible] always been sifted with critical care; there is [illegible] a proneness to make categorical statements even [illegible] the grounds are flimsy. It must be admitted, how[illegible] that the author himself recognizes the speculative [illegible] acter of some of these statements. This weakness [illegible] made portions of the book not 'history,' but [illegible]

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

record of references to these tribes in ancient literature, and which are often very fanciful in character. The author will earn the gratitude of students of Indian history for the industry which he has brought to bear upon his task.

NIRMAL KUMAR BOSE

RED SAINT: *By J. H. Wilmer, Waterloo Publication. Calcutta and Madras. Price Rs. 2/4/-.*

It is a story of how some gangs of criminals of Northern India, sometimes working together and some times in rivalry with one another were finally brought to bay and rooted out by the Police with the help of a literary man working as an amateur detective. The leader of one such gang is the Red Saint. The author, however, is not always successful in creating scenes which are the chief elements of a detective story with the result that the book has turned out to be merely a commonplace narrative possessing no particular merit either of style or of plot to single it out from the thousand other stories of similar nature. Needless to mention that the usual romantic incidents and love episodes are not found wanting.

SUHRIT CHANDRA MITRA

LABOUR AND HOUSING IN BANGALORE CITY: *By R. K. Srinivasan, M.A., and C. Narasimha Murti, M.A.*

It is a happy sign that various Universities of India are undertaking certain amount of practical studies into the field of demography. This little book is the result of the researches carried on by the authors in the University of Mysore, and is in the nature of a contribution towards the solution of the housing difficulty in Bangalore. The more such investigations are undertaken by University scholars the more useful will be their study of Economics. We have been greatly impressed with the presentation of the figures and the summaries drawn therefrom.

NALINAKSHA SANYAL

SANSKRIT—ENGLISH

A DESCRIPTIVE CATALOGUE OF THE SANSKRIT MANUSCRIPTS IN THE VANGIYA SAHITYA PARISAT: *By Chintaharan Chakravarti. Sahitya Parisat Series No. 85. Calcutta, 1935. Pp. 8 + 270.*

This well printed catalogue of a little known, but in some respects important, collection of Sanskrit manuscripts, written mainly in the Bengali script, has been compiled with admirable care and thoroughness by Professor Chakravarti, whose interest in manuscripts is well known. It is a welcome addition to our knowledge of manuscript treasure which still lies unexpected in various smaller collections in the country. Ever since the surveys made by Rajendralala Mitra and Haraprasad Sastri, steadily increasing collections have been and are being made at Calcutta, Dacca and elsewhere. The collections existing in the Bengal Asiatic Society and Dacca University are indeed much larger and more important, but the value of the Vangiya Sahitya Parisat collection, which began in 1894 and which has its own interesting features, is perhaps not so well known, inasmuch as the Parisat is generally believed to be connected with Bengali rather than with Sanskrit literature. It is a happy idea to publish a classified account of this collection and draw to it the attention of interested scholars.

The manuscripts noticed are varied in quality and interest; but they are mostly Bengal manuscripts, that is to say, manuscripts of Sanskrit works written in the Bengali script. Of the total number of 1666, only 233 are written in Devanagari. The oldest dated Bengal manuscript in this collection goes back to the 15th century, it being a manuscript of the Harivamsa copied in 1465 A.D., but there is another old manuscript of the Adiparvan of the Mahabharata, which appears to have been copied in 1500 A.D., while the latest manuscripts belong to the 19th century, and perhaps the entire bulk of the manuscripts does not go beyond the 17th and 18th centuries. Nevertheless, many new and interesting items are to be found, and the collection as a whole throws an interesting light on the Sanskrit culture of Bengal during the period covered by the dates of the manuscripts. It is often alleged that the study of the Veda was unknown in Bengal, but this is disproved by a number of manuscripts in Bengali script dealing with Vedic subjects mostly in the form of commentaries on Vedic texts and general manuals for Vedic sacrifices. The collection of Tantra works has some interesting features, but it appears to be neither large nor important from the textual point of view. The number of Purana manuscripts is fairly large; and, although few of them appear to possess marked value, the textual variations of Bengal manuscripts, as revealed by them, are certainly important for the study of the Bengal tradition of these texts. A number of little known digests are recorded in the Smriti section; but the collection of works on Kavya, Grammar, Lexicography, Rhetoric, Prosody, Erotics and Music is comparatively poor. Barring a few exceptions, the section on Philosophy consists mostly of copies of well known and popular works of the different systems; but in the section on Vaisnavism some interesting and hitherto unknown works are noticed.

There cannot be any doubt that a systematic catalogue of this collection deserves to be published for its varied and interesting character; and we congratulate the Parisat and the able editor on the successful accomplishment of this laborious and exacting work.

S. K. DE

SANSKRIT

SRIMAD VALMIKI RAMAYANAM. *Published by R. Narayanaswami Aiyar, B.A., B.L., Advocate. Madras Law Journal Press, Mylapore, Madras.*

This is a fine handy edition of one of the most popular epics of India, published under the auspices of an editorial committee consisting of Mahamahopadhyaya Kuppuswami Shastri, Mahamahopadhyaya S. Krishna Shastri, S. K. Padmanabh Shastri and T. V. Ramchandra Dikshit. The edition is stated to be primarily intended for those who follow what is called the 'artistic' as distinguished from the 'scientistic way' in handling literary works. Thus full lists of variants are not given though it is based on the collation of a number of printed editions and several manuscripts, three in the Grantha and one in the Nagari script, the characteristic features of none of which, however, are unfortunately indicated. As a matter of fact, the variants noted are very few in number, for only 'such variants as were found fit to be considered have been given in the footnotes and such variants as were considered useless have been dropped.' The principles that guided the learned editors in exercising this consideration have not, unfortunately, been explained. In the absence of such explanations it is sometimes difficult to follow the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

modus operandi followed in certain cases. It is thus noticed that thirteen chapters in the last Book of the work, referred to in some of the editions, as having been interpolated, are relegated to the foot-notes as variants though similar other extracts have been incorporated in the body of the text. The chief interest of the edition, however, lies in its attractive get-up, nice printing, beautiful illustrations of some of the important incidents described in the book and above all, its handy size. It appears that originally the edition was proposed to be issued in two volumes—'Volume I comprising Kandas I to VI with a table of contents and Valume II comprising Kanda VII, with a full alphabetical index of each of the lines in the text and an index of names occurring in the text.' An one volume edition would, however, be highly useful and appreciated. And it is gratifying to note therefore that the whole of the text-portion at least has been issued in one part in the volume under review though the inclusion of the proposed index portion in the same volume would have considerably increased its utility and be all the more welcome.

CHINTAHARAN CHAKRAVARTI

HINDI

TIBBAT MEN SAWA BARAS: *By Rahula Sankrityayana, Tripitakacharya. Published by the Sarada Mandir, 17, Baraha-khamba Road, New Delhi. Pp. x+380+iii, with a map. Price Rs. 3.*

The author of this original book on travel in Tibet, the land of mysteries, is a well-known Buddhist scholar, and is an indefatigable writer. Old and modern Tibet is described in a manner which arouses interest and curiosity. As far as we are aware there is no such original book on Tibet in any Indian vernacular. The subject-matter, illustrations and the map are bound to make the book a useful one to educated persons. According to our author, both Santaraksita and Atisa Dipankar were not Bengalis, but hailed from Sahore, *i.e.*, moden Bhagalpur; and the old songs known as *Bauddha Gan* in Bengal are really Hindi. The account of the author's search for Buddhist literature in Tibet is almost romantic. This book has enriched Hindi literature.

KUNGAMUNI JNANAMRITA—*translated from the original Chinese by Dr. Hariprasad Sastri, D. Litt. Published by Jaydev Bros., Aryapura, Baroda. Pp. xxvi+175. Price Re. 1.*

This translation of the sayings and precepts of confucius, the ancient sage and philosopher of China, from the original sources, is a welcome addition to Hindi literature. The work forms a number of the Series called "Sayaji sahitya mala," endowed by the enlightened ruler of Baroda. The introduction deals with a brief sketch of the old history of China and also a short life of the saint.

RAMES BASU

MARATHI

SANSARA AND DHARMA SADHANA.

This is a book of 640 pages published by Mr. B. B. Kestlar of the Bombay Prarthana Samaj. It contains religious writings and addresses of Mr. D. G. Vaidya, Editor of *Subodha Patrika*, the weekly organ of the Bombay Prarthana Samaj. The volume is excellently got up and deserves to be read by every serious minded student of religion and life. As the title of the book indicates, it is an exposition of the subject from the theistic point of view, and embodies the truth that religious life is not one of r[illegible] from the world, but is best lived in the [illegible] society and in the performance of all duties [illegible] man's in this world, with faith in God and [illegible] man, and with truth, fortitude, patience, che[illegible] and charity to accompany that love and fai[illegible]

The book ranks along with the serm[illegible] religious writings of Ranade and Bhandarke[illegible] companion volume for daily perusal, medita[illegible] guidance fit to be on the table of every good [illegible] They together give us the best exposition of [illegible] gion of the Bramho and the Prarthana Sama[illegible] trating it, as applied to practical conduct, fr[illegible] poetry of the saints of Maharastra. As s[illegible] book makes a valuable addition, both by its s[illegible] matter, to Marathi literature in the branch of i[illegible] may be aptly called "literature of high serious[illegible]

V. N. N[illegible]

GUJARATI

PALKARA (WINKS): *By Jhaverchand M[illegible] Cloth bound. Pp. 236. Price Re. 1-8-0 (1934).*

Inspired by several cinema shows seen b[illegible] screening pictures with a Universal Appeal, Mr. M[illegible] has been tempted to throw the subject-matter [illegible] into stories and as such, the adaptations do be[illegible] the motive which prompted him to write them [illegible] fully. Opinions may differ as to whether Mr. M[illegible] has done well in relinquishing his old love—the f[illegible] and folk-literature of Kathiawad—and embarking [illegible] vessel, which to him is new and unfamiliar. H[illegible] his innate power of delineating human feelin[illegible] passions, in attractive and homely language is [illegible] to come to his help, whatever the situation. [illegible] come to his help here, and therefore the narrati[illegible] not lack attractiveness.

JIVAN VED: *By Manilal Chhotalal P[illegible] Printed at the Liberal Lakshmi Printing Press, [illegible] Thick card-board. Pp. 178. Price As. 12 (1935).*

Sixteen Bengali speeches of Bramharshi K[illegible] Chandra Sen have been translated into very s[illegible] Gujarati, a characteristic of his work, by Mr. M[illegible] Parekh, under the title of "Jivan Ved," a title [illegible] by Keshav Chandra Sen himself, in so far as they [illegible] autobiographically in spiritual development in th[illegible] of that great Indian Saint. Mr. Manilal's Preface [illegible] succinctly gives the different stages in the orig[illegible] rise of the Brahma Sammaj in Bengal and the [illegible] that some of its founders contributed to i[illegible] seriously-minded people the work gives much fo[illegible] thought, and the translator has done well in p[illegible] the book before the Gujarati-reading public.

ASTIK VAD: *By Kanaiyalal G. Kothari. Printed at the Arya Sudharak Press, Baroda. bound. Pp. 442. Price Rs. 2-0-0 (1935).*

Pandit Ganga Prasad Upadhyaya has writ[illegible] book in Hindi on the above subject—Belief in God [illegible] is translated into Gujarati by Mr. Kothari, wh[illegible] taken great pains as is seen from the Prefa[illegible] throughout his life to combat Atheism. At leas[illegible] a controversial subject, and each side pulls its own [illegible] Attempts have been made in this book to suppo[illegible] doctrine of Astik Vad by the authority of scienc[illegible] Vedas, Upanishads and other religious works to p[illegible] the existence of God. The arguments have [illegible] marshalled very well.

COMMUNAL NEPOTISM

By the late Rao Bahadur Pandit
K. VEERESALINGAM PANTULU,
Rajahmundry

Scene—Papayya Naidu garu's * inner hall.

Enter—Papayya Naidu garu and Veerayya Naidu garu.

Veera. Well, Sir, Naidu garu! Is our people's fate alone doomed while everybody else fares well enough? What? Whoever get into high appointments among Brahmins, allow only their own and none of ours into the office. While in an appointment so high as this, why not you, for your part, gather some four of our kin in your office and prosper them?

Papa. So I quite wish to do. But then, there are not many passed men amongst us. The *dorais* (European officers) don't accept any but passed men. Still, I'll try my utmost. Truth to tell, more people amongst the Brahmins do pass examinations than amongst us. They work hard; and they have intelligence also. Our people, as soon as ever they get a four-rupee job, take to drink and don't work properly. If we say anything, they turn round and seek to bring even ourselves into hot waters. They don't know good from bad at all. And it afterwards becomes necessary to keep regretting that we ever gave them a job at all. Yet, caste partiality being a matter of duty, I do desire, of course, when vacancies occur hereafter, to give them to our own people and help them up. In Govindarao Pantulu garu's time, wherever we looked, he didn't let anybody enter the office except those with the lady-finger caste-mark on. During Padmanabhayya garu's *regime*, all those mustered together in the office were only Niyogi *prabhus* with cubit-long cigars in their mouths. In Veerabhadrayya garu's days, all Vaidiki *swamis* gave up *brahmanardhams*† at 'annual *sraddhas*' and got into service alone. In Khadir Saheb garu's time, the whole office came to throng with Sahebs (Muslims). The other day, in Appalacharyulu garu's time, only perpendicular caste-mark people were to be seen throughout the office. And now that our turn is come, it is a duty to improve the lot of some ten of our people, whatever the effort it costs.

Enter—Venkayya Naidu garu.

Venka. Papayya, I have overheard your talk; and I just come from inside. Of course, we ought to uplift our people by all means, but not harm others without reason. In Padmanabhayya garu's time, it was pity of them that did not report themselves as Niyogis. The *mantrapushpam*§ that had to be offered was also very small.

Papa. Oh, I don't look for anything like that from our caste-men. I get them appointments merely for the sake of well-doing. Only, if unpassed men are taken in, the newspaper fellows won't keep quiet. They howl and wail as though their own raft has capsized outright. So, I am just troubled with that one inconvenience of the papers. I propose by some means or other to bring about the overthrow of the local paper; but no four of us join hands. I am trying with all my might and main to see that those who have business with me don't subscribe for that paper at all. Why, uncle Venkayya garu continues standing. Do come and take your seat here, please.

Venka. Don't want to; I'll go in again. Never intend to do, my dear, the foolish thing just thought of. If only you act uprightly and justly, you need have no fear of the newspapers in the least. Supposing there is a paper, what will it do against you? If you enter upon senseless courses to ruin it, your own high position will get into peril, and you will be ruined yourself. Thanks to your single self amongst our people being in a somewhat decent position, we too have been enjoying respectability on your account. That little honour that there is, don't you mar by listening to all and sundry and incurring needless grudges.

Papa. Oh, the school-boys of this place are too full of hot-headedness. They mind nobody, however great. They put forward all impudent answers and queries before me with-

* *Garu* is an honorific in Telugu.

† Participations in *sraddha* entertainments as special guests (*bhoktas*).

§ Literally, the flower (the best) of adoration hymns; here, bribe as propitiatory offering.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

out fear or regard, while even Tahsildars remain terror-stricken in my presence. Whoever may submit applications amongst those that pass from the schools, I'll suppress them without their going up to the *dorai* (European officer); and I'll see to it that not one gets a billet.

VENKA. Oh dear! Never commit such an atrocity. By so doing, danger will overtake ourselves sooner or later. The youths of this generation are not mere youths. They have learnt more of English than yourself or myself. If dislike arise in them, they will expose us in the papers and create displeasure towards us in the officers' minds. So, never once meddle with them. Townsfolk won't keep quiet out of fear as do *karnams** and ryots in the villages, unless you act without partiality as far as possible.

PAPA. Just for that reason, my whole being comes to flare up at the bare mention of their names. Why so much insolence in these finger-sized sons of widows, when even zamindars treat me with every respect? For this disregard of gentlemen, their haughtiness, sir, must be crushed. Especially, Brahmin stripling ought not to be trusted in the least. Oh, they undermine dwelling-houses!

VENKA. A wholly foolish fancy that. Evil-doers exist in all communities. Amongst educated people, whatever the caste, those of evil ways are really limited in number. If dullards are brought in because educated men don't show fox-like meekness and subservience, the former, however low they may bow and bow, do yet contrive harm by secretly cutting throats with wet cloths. Do heed my advice, seeing that I am older and more experienced than you. While in such a good position as the present, we ought to treat all alike, unmindful of caste and creed differences where there is worth. But to harbour spite towards anybody and seek to injure him is not good in the interests of this or of the other world. Our lives are not everlasting. If we don't act justly, one and all will severally throw stones at us when our limb so much as aches a little; and even those benefited by us will come in for hurt. Why, haven't you seen how, as soon as Govindarao Pantulu garu got transferred, Padmanabhayya garu stepped in and weeded out all Vaidiki germs from the office? And Khadir Saheb, who came next, quietly shunted out all the Niyogis and introduced all bearded (Muslims) into the office. Although Seshachalam Naidu, as the next man, a few of our people, Rangacharyulu, own advent, sent them out to the mofussil filled the headquarters with Vaishnava Narasayya Chetti, the next comer, in and appointed his brother-in-law his domestic cook in spite of the absence any passed men amongst the Vaisyas. now, you are come. If you take in all own people, your successor will give a shave to them all. The times have altogether at present. Anonymous also will pour in.

PAPA. So, what do you say? Do you I should stop giving jobs to any of our or what?

VENKA. Rama, Rama! I don't say that for a moment. If our people are men and qualified, they alone should be jobs without fail. Only, we should not away another's bread unjustly and give it to our people. Others also should be employed without partiality, when there are persons available who have passed examinations. At that rate, nobody will of doing you harm; and God on high will pleased also. Your father, in the capacity a peon, underwent no end of hardships for your upbringing. And after his death your good mother fell at everybody's feet, raised subscriptions and got you educated. Thanks her piety and goodness, you have come to fore like this and risen by now to a position of eminence. You ought not, on that account alone, to forget your past lot and grow puffed up with conceit. If people are worthy, even though they be outsiders, do sympathise with them and render them what help you can. And if unworthy fellows happen to be our own, do you draw them near. This I say for your own good, as I am one advanced in years. Do not set aside my word.

PAPA. Nay, nay; speak not in that strain. Yours is a preceptor's status in my eyes. I will try, as far as possible, to conduct myself according to your counsel. Anyway, we must put down the Brahmin fellows and see that they don't come up. My office time is up; I'll go for dinner. Good-bye.

(*Exeunt*)

The Modern Chinese Theatre

Just three decades ago a handful of Chinese students in Tokyo took over the technique of the modern Japanese drama, organized the *Ch'un Lui Shê*, or "Spring Willow Society" and thus was born the new Chinese theatre movement. George Kin Leung writes in the *Asia*:

That the public took a standoffish attitude toward the new drama, without music, is not surprising, since for centuries the Chinese mind has linked the drama indissolubly with music. It is natural, too, that the new movement, having its roots almost entirely in western inspiration, should have been opposed by a strong conservative element. The classic Chinese music-drama still provides the music and the polished actors, exponents of a highly conventionalized stage art, to which the public has for centuries been accustomed. Through this old type of play the man in the street finds escape from the humdrum of life in poetry and a treatment of the commonplace at once colorful and extravagant. The *hua Chu*, or "spoken drama," on the other hand—whether the work of a modern Chinese playwright or a translation from the western stage—usually brings to the spectator the grim problems of life that have harassed him all day. Leaders of the modern movement, although of the opinion that the old music-drama should be preserved at its best as an example of Chinese art, nevertheless claim that it is an unsuitable vehicle to express present-day aspirations. Modern youth, they believe, no longer desires poetry and escape, in the theatre, but reality and inspiration.

A typical audience drawn by the modern drama may well be termed "select"; for it includes the intelligentsia, the students, the moderns, notably the ultramoderns, and all who find pleasure in being considered members of the foregoing groups. Perhaps even such an audience has, along with the general public in China, inherited something of the traditional deep-rooted contempt for actors which grew up in the days when stage folk were usually illiterate and openly ignored the time-honored moralities. But the advent of the republic has, to a certain degree, erased the stigma formerly attached to the acting profession. The frequent appearance of Dr. W. W. Yen, Chinese Minister to the U. S. S. R., in photographs with the actor Dr. Mei Lan-fang, when the latter recently toured Moscow, is a symbol of the new attitude. Nevertheless some of the prejudice against the actors of pre-Republican days has been bodily transferred to the actors of the modern drama, in spite of the fact that most of the latter are educated and cultured people.

Practically since its beginnings thirty years ago the new drama has been in the hands of amateurs—theatrical groups of educational institutions and groups of society folk, who have appeared for charity.

Like everything else of a modern cast in China, the new theatre has been profoundly affected by political agitation and unrest. One of the original group of Chinese students who organized the "Spring Willow Society," Wang Chung-sheng, was executed in Peking in 1909 by the Manchus for his revolutionary activities. The early period which he helped to launch, that from 1906 to 1916, was marked by a dearth of native plays. Later came a fever of dramatic activity resulting indirectly from the students' anti-Japanese demonstration of May 4, 1919, in Peking during the Versailles Peace Conference. The efforts of this second period were, however, directed wholly toward arousing patriotism; no progress was made in stage art. A third period was ushered in by Chinese playwrights who had studied in Europe and America: their works were an improvement over those of the past, yet, on account of their scholarly attitude and strong western bent, proved unintelligible to the great masses. A fourth period, which is still in progress, has been characterized by an active attempt to take the modern play to the common people.

Expression of Group Life

In the course of an interesting paper with the above caption contributed to the *World Order*, Winifred Duncan, pleading for the revival of the dance drama 'as it was conceived by the Greeks and is still practised throughout the Orient, in religious ceremonials,' writes:

The entire West has confused the art of the dance with acrobatics and gymnastics and the over-emphasis in this country on competitive sport has so dulled the bodily sensitiveness of our young people that it is almost impossible to quiet them to a point where they can experience motion as an aesthetic, religious and spiritual expression. Any savage in central Africa knows more about this than we do. To them, and quite rightly, motion is a medium for experiencing ecstasy—usually religious ecstasy. It is a curious fact that this sort of motion has a far more beneficial effect upon the health than any amount of violent gymnastics, for it awakens glandular activity, quickens and distributes the circulation and quiets the nerves so that the moving body becomes a channel for psychic experience which can never be achieved to violence.

A beginning has been made in the wide-spread popularity of folk dancing, where at least group motion is experienced, but there is something fundamentally childish in copying the crude stampings and whirlings of peasant communities of other nationalities. They are chiefly interesting as the spontaneous expression of the psyche of a definite nationality, but in slavishly copying them we miss the point, which is to create our own folk dancing and express our own psyche.

Aspects of the Japanese Mind

Ippei Fukuda, writing in the *Asia*, draws attention to the love of economy in all artistic efforts of the Japanese:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

A Japanese poet in a fit of inspiration becomes extremely laconic. His creative Muse has taught him to boil down his poetic fancy to the seventeen-syllable *haiku* or, if he must be voluble, to the thirtyone-syllable *waka*. The shrunken petals of salted cherry blossom uncurl themselves in a cup of warm tea until in a minute they reeffloresce in all their freshness of colour and shape. But it does not take even a fraction of a second before a haiku in just seventeen syllables germinates in our mind with all its beauty, imagery and force of expression. Economy of words in the Japanese text whets, instead of crippling, our response to its breath. To quote Basho (1644-1694), the best known of haiku poets :

"Ah, summer grasses wave !
The warriors' brave deeds a dream."

Unusually vivid is the picture raised before us : a field desolate but for a shrine or two in a rueful condition of neglect. Wild grass running riot everywhere under the spent sun of a summer afternoon is strangely reminiscent of *samurai*, officers and men, who fought, dreamed of home, and fell in this same field centuries ago. The reaction is instantaneous.

This can be said, with equal truth, of our appreciation of art : the same subtle process of simplification is as fully at work there as in this form of poetry. Japanese landscape artists often dispose of their favourite theme, bamboos, with almost abject economy of touches. And yet those few brush strokes in black readily bring to our eyes a cluster of the vegetation in its refreshingly radiant colour.

The very ancient Game of Promise 'Em Plenty

"Italian women bring their rings to Italy's cause." "Children give to Il Duce their metal toys to aid in fight against sanction." As John T. Flynn observes in *The New Republic*, here is the very keynote of the present Italian disaster :

Politicians in peace times practise one technique. They are promisers of abundance. Townsend with his $200-a-month to Uncle Jasper, Huey Long with his "share-the-wealth," are not different from Hoover with his two-chicken pot and his two-car garage or Roosevelt with his "abundant life." Hitler offered the fleshpots to the Germans and Mussolini promised to the spare eaters of Italy full bellies and prosperous days. The peacetime politician appeals to the appetites of his constituents. But all these promisers must come ultimately to grief. Hoover sees the chicken vanish from the pot and the pot itself dissolve into air. Roosevelt's abundant life becomes a vast deficit and 11,500,000 out of work. The same kind of things has happened to Mussolini. The Italian belly is still empty. The workers are actually worse off. And the regime has been kept afloat on borrowed funds.

Mussolini has borrowed until his external credit is gone. He has borrowed at home until his internal credit is exhausted. He is no longer able to promise things to the Italians. He can no longer appeal to their appetites. He has reached that fatal moment when he must call for sacrifices. He must ask empty stomachs to endure greater emptiness. He must ask Italians not merely to lend more money, but to give up their life savings, their children's toys, their wedding rings. You cannot do this under the psychology of abundance. You must produce in the nation the psychology of sacrifice. And that you cannot do in time of peace. It can be done only in a [illegible] at war.

History teaches this lesson—that dictators and [illegible] gogues, when they exhaust the artifices of peace [illegible] promising and can survive only on a stream of [illegible] sacrifices, turn inevitably and of necessity to war. [illegible] the reason for war can always and readily be found. [illegible] Mussolini were not at war with Ethiopia he would [illegible] be at war with nature and the laws of economics. [illegible] would still have to call for wedding rings and medals. But he would not get them if Italy were at peace. [illegible] is why we have war in Ethiopia. But whether the [illegible] ends quickly or drags on for a long time, the [illegible] enemy of the skidding Caesar—the grim law [illegible] economics—goes on nibbling at his regime of time [illegible] dust.

Economic and Social Development in Russia

Lewis L. Lorwin and A. Abramson, [illegible] visited Russia in September and October, [illegible] writing in the *International Labour Re[illegible]* give an account of some of the striking ch[illegible] now taking place in the U. S. S. R. :

Anyone who has visited the U. S. S. R. at in[illegible] during the last decade or so cannot but be struck b[illegible] great strides forward made during recent years.

It is in some of the large cities that the ex[illegible] evidences of industrial and cultural advance are patri[illegible] striking. Moscow is almost unrecognizable as com[illegible] with 1931. Many parts of the city have been modern[illegible] streets have been widened and paved with asphalt; [illegible] squares have been laid out at different points in the [illegible] Some of the streets radiating from these squares [illegible] lined with tall new buildings, some of them Govern[illegible] offices and others apartment houses, hotels, workers' c[illegible] etc.

As one drives through the Soviet cities, one c[illegible] miss the fact that a new urban civilization is [illegible] which is in profound contrast to the old. Not on[illegible] the large cities, too, but even in the smaller indu[illegible] towns one sees, sometimes side by side with the old [illegible] and-two-storey wooden buildings or tenement houses [illegible] modern structures which have been put to us within [illegible] last four or five years.

As one looks further one finds more subst[illegible] evidences of industrial progress. If one visits the [illegible] department stores in Moscow, one will find there [illegible] sorts of articles, from pins and needles to elec[illegible] apparatus, gramophones, and wireless sets made in S[illegible] factories. True, many of these articles are not of [illegible] highest quality, but they are the first products of [illegible] indigenous industry.

The changes in transportation are equally signi[illegible] Along the road one may see oil tanks, refrigerating [illegible] and hundreds of freight cars in which various commo[illegible] are being shipped from one end of the country to an[illegible] To one who remembers the U. S. S. R. a few years a[illegible] when passing trains and full freight cars were few [illegible] far between this is indeed a revelation of the a[illegible] made.

True, most of the new factories have been equ[illegible] with imported machinery and in many factories f[illegible] advisers are still used for the purpose of tech[illegible] management. But everywhere one finds signs of [illegible] adaptation to and mastery of the machine pro[illegible] Factories are introducing improvements in the machi[illegible] which they have acquired, and new machines of [illegible]

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ds and varieties are being built in Soviet factories der the guidance of Soviet engineers.

Compared to the city, the Soviet village presents few external manifestations of change. But even in villages one cannot miss signs of a revolution in ogress. The first evidence of this second revolution the appearance of the fields. To one who remembers old Russian landscape with its patchwork of closely-little strips, the new sight of endless fields stretching all directions without fences anywhere has a stirring gestiveness. These fields are the outward form of land system based on a new type of ownership and a new method of work. And the significance of this volution is further suggested by the tractors, combines d other modern machinery in the fields and at the -called tractor-stations, and by the new grain elevators ng the road.

Even more suggestive are the signs of the cultural volution that is taking place. The creches, schools, and nics to be found in the villages, and the agricultural boratories, very simple and crude though they may , are symbolic of the effort to bring new ways and entific methods into daily life. All these new elements, ugh still in the most rudimentary stage, represent the innings of a new rural civilization, likely to arise on economic basis of collectivization.

The War from the Ethiopian Point of view

John M. Melly, in the course of an illuminating paper published in the *International Affairs*, discusses different questions connected with the Ethiopian war. On the question of slavery in Ethiopia he observes :

A hundred years ago I believe there were 800,000 slaves in the British colonies. It took sixty years of unrelenting effort and £20 million of money to stop slavery in the British Empire, so that it was not until forty years ago that slavery was finally abolished, and as a matter of fact it still exists in the British Empire in spite of all our efforts to abolish it. The Emperor of Abyssinia has had virtually only three, or at the most five, years since he came to the throne to abolish slavery. He has gone some considerable distance. He has complied almost completely with the demands of the Slavery Commission. In 1924 he made an edict which he was not then in a position to enforce, but which he did his best to enforce, decreeing that children should be born free, that ill-treated slaves should be freed, that on the death of their owners slaves should be freed, and that they should maintain civil rights and so forth. The Emperor has said that he believes, and he after all knows the difficulties that he has to face, that, without causing undue suffering by the liberation of a large number of slaves at one time, he can virtually do away with slavery in Abyssinia in fifteen to twenty years. I understand that the Italians think it will take fifty or sixty years.

He pays a tribute to the diplomatic honesty of the Ethiopian Emperor :

From the moment of the Wal Wal incident I do not think that anyone will dispute that the Emperor of Abyssinia has given Europe a very striking lesson in diplomatic honesty; so striking that in doing so he jeopardised his own power. There was a strong feeling in Abyssinia at that time that he should not have hesitated to follow up the incident by an attack in force, because the Abyssinians knew then, as everybody else knows now, that he would have had no trouble in conquering the whole of Italian Somaliland before Italian reinforcements could have been imported. The Emperor knew it as well, but he maintained that he was bound by a sacred treaty and he restrained his chiefs from taking the course they would like to have taken. That has reacted very largely against him in the eyes of his own people, who know very little about treaties and who only realize that they could, if they had not waited, have had a big military success.

On Italy's " Civilising Mission " in Ethiopia he observes :

The Italians claim to be conducting a civilizing mission and I am not going to insult anybody's intelligence by trying to prove that that is not exactly their motive. But a question which is worth discussion is whether some nation had better not conquer Ethopia and put her to rights. To that I think there are two answers. If we are sufficiently altruistic to want Abyssinia to be really civilized, then the Emperor will with open arms receive any help we can give him. But the white man even in normal times is thoroughly distrusted by the people of Ethiopia, and one can hardly blame them. The native's usual experience of the white man is of that unfortunate type of trader who, from his greater knowledge of economic and commercial conditions, has exploited the black man time and again. So that if a European nation takes over Ethiopia it is going to have a very difficult task, and only by force of arms is it going to be able to compel progress. But the Emperor insists, and I believe him, that *he* has our outlook. He is just as keen and rather keener than any other individual or nation that Abyssinia should be civilized, and he will gladly accept help. Let the nations of the world help him, then, and he will do the job far better than it can be done by force of arms and by conquering a proud people who want to retain their independence.

The second argument, I think, is a moral one. Because I do not like the way somebody runs his house, I can, if I like, give him advice on how to run it, but I am not entitled to take over the house and live in it myself and run it as I please.

The Conflict

In the course of a paper with the above caption Ellen Horup writes in the *Politiken* (Copenhagen) :

Imperialism and the League of Nations are to be harnessed together; these two contradictory principles are to be induced to pull in the same direction: the square peg shall be forced into the round hole.

The basis of imperialism is might over right and that of the League of Nations on the contrary is right over might. Imperialism is a recognition of the conqueror's right to the submission of a weaker nation, the League of Nations is an assertion of an international right between nations, great and small, strong and weak.

The result was the Laval-Hoare proposals.

The events of the autumn have shown us financial imperialism hand in hand with political imperialism. None of the Great Powers have the slightest interest in overthrowing Mussolini. On the contrary, they all prefer fascism to socialism, whether it be a question of Mussolini or Hitler. They are investing capital in the two dictator countries and supporting them economically even if they are apparently attacking them politically.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The action of the League of Nations was bluff, sanctions broke down. Mussolini's fear of oil sanctions was bluff; the Laval-Hoare-Baldwin fear of Mussolini's threats about war was bluff. And during all this bluff the war is being continued in Ethiopia unaffected, in fascist style with bombs upon the defenceless and unarmed, upon villages and Red Cross hospitals, while the next Laval-Hoare proposals are in the offing under another name.

Much however has been gained, if the workers have learnt from the events that fascism is not to be fought with imperialistic wars, but by international co-operation between all workers. If only they can see now that where imperialism enters, international justice goes out, so that they will no longer support a league dominated by imperialistic governments and which has never been and can never be a league of peoples.

Journalism under a Dictatorship

Last month we reproduced from *The Living Age* some of the instructions that Dr. Goebbels's Propaganda Ministry hands out to the German press. The same paper presents another sample of journalism under a dictatorship in the form of instructions imparted by Mussolini's Fascist Government to the Italian press :

OCTOBER 29

An attitude of reserve to be maintained with regard to England, and also with regard to France and Germany.

Great importance to be given, on the other hand, to our home activities. Insist on the inauguration of public works, especially the inauguration of the University buildings.

Give much space to the communiques on the limitation and economy in the consumption of goods, insisting on the fact that Fascist Italy replies to the iniquitous sanctions with a spirit of abnegation and sacrifice.
necessary for bread, because, thanks to the wheat battle, necessary for bread, because, thanks to the wheat bat tle, we have all the wheat we need.

Give importance to the inauguration of the theatrical year, which will take place in Rome, Turin and Milan.

Give importance to the widening of the 'Via delle Botteghe Basse.'

OCTOBER 31

Comment on the telegram sent to the Duce by the rabbit breeders and poultry farmers.

Dedicate the whole of the first page to the inauguration ceremony of the University buildings. In a very emotional tone.

Comment on the Duce's speech.

With regard to the answer of the United States Government to the League of Nations, it is considered opportune for the comments of the Italian press to be, generally speaking, in harmony with the recent substantial confirmation of the neutrality of the United States, and, on the other hand, that it should insist on the illusions which may arise once more for the preservation of peace in Europe from the indirect encouragement of the action of the League of Nations contained in the note of the Secretary of State for Foreign Affairs of the United States.

Comment with the greatest reserve, without expressions revealing satisfaction at the American answer to Geneva.

Henry Ford as a Farmer

Those whose duty or interest it is to ways and means of strengthening agric industries in this country will do well to a detailed investigation into conditions o Fordson Estates in England, at Chelmsford London. A short account of the experim reproduced below from *The People's Trib*

In 1931 Mr. Ford set out to make an exp in what may be called highly mechanized market-gar on an estate which previously had been used for o mixed farming. His theory was that, run on the lines, it would be possible to employ much more at substantially higher wages and still show a satis profit, and he has proved that this can be done. 100 men are in permanent employment receiving a rate of pay than the minimum of the Wages Boa in addition have received large bonuses distributed the profits of last year's work. The crops raised a wide variety of vegetables intended for the L market, about 30 miles away, but this year a su start has been made with cultivation of soya-beans, hitherto have not been grown to any great ext England.

In the beginning the estate consisted larg rough grazing land, and a quantity of worthless had to be cleared, hedges grubbed up, and ex plowing and harrowing done before it was ready market-gardening. When the land had been br into good condition it was taken over by a co known as "Co-operative Societies," and this co which now runs the farm, pays 4 per cent fre income-tax on capital outlay by way of rent. Equip costs are returnable over a period of 25 years. and vegetables are produced in bulk; there is intelligence department whose task it is to select best selling centres, and full loads for motor-lorries for economy in transportation. Those responsible for management of the Fordson Estates believe in the ciple of raising crops that demand a maximum of and in some of the fields no less than 90 per cent the corps of production represent wages paid to wo It is possible to employ 150 men on 250 acres of garden. On one farm where formerly six men boy were employed, there are now 14 permanent wo thus proving Henry Ford's thesis that if run on lines the farms can employ much more labour at stantially higher wages than those formerly paid still return a satisfactory profit.

Art and Modern Printing

There are just a few years until 1940, the fifth centennial of the invention of prin with movable letters by Johannes Gutten will be observed. Writing in the *Germany You*, Dr. Julius Rodenberg, who combats preconception 'that the printed book is me the patient and slavish interpreter of thoughts and feelings of the author, that it no individuality, and that the mission of printer is to follow blindly the wishes of intellectual creator,' notes the infusion of creative and artistic spirit into modern prin in Europe :

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The sharp decline in the number of books made ecially for the bibliophile during the past two or three rs could be attributed to the closing of many private sses if the same tendency had not been observed in gland. In compensation for this, it is gratifying to ice that the ordinary books, including scientific, school d children's books, have shown a decided improvement their typography and make-up. Along with the ately printed books, the interest in artistic bindings hand-bound books, which a few years ago were very ular, has also declined. Replacing this, the wrapper, ch formerly was considered merely as a protective ering, is now utilized for advertising purposes and has ome a field for typographical and artistic designing. The show window of a bookshop reveals today a urful and variated world, for the artist as well as craftsman has expended the full richness of his inality in this field. Commercial and industrial ting have also been influenced by this tendency, as evident in the tasteful wrappers and packages for arettes. This new creative spirit in typography has etrated into every official and commercial field. Following the example of the English railway companies with ir extraordinarily effective placards, the German Federal lway has improved its advertising and brought a inctive artistic element into its posters. The magaes have also fallen into line and often present a eful and pleasing make-up. The newspapers, however, e more hesitant about taking on innovations and have tain reasons for doing so since they question the isability of changing the form of the paper after the aders have become accustomed to it, while the cost volved is also an important item; but nevertheless, the st signs of a typographical revolution are present in s field.

Women in Egypt

Mary McCurdy writes in *The Catholic Citizen* a brief review of women's emancipation ovement in Egypt which has been going ward unobtrusively during the last twenty ars:

For Egyptian, as for other oriental women, the first p in freedom has been the abolishing of the custom segregation of the sexes and the seclusion of women. ay Egyptian women of the upper and middle classes ear European clothes, go about unveiled, and visit the ema and other public places with their menfolk or men friends. And this liberty to get out and about still new enough to be valued by the rising generation, ough it has come about almost imperceptibly without y fierce opposition having been roused. Furthermore o important reforms affecting the status of women have en made. The legal age of marriage has been raised sixteen, and, owing to a reinterpretation of doctrine has been made less easy for a man to divorce his wife, hile hitherto he could do so easily and for the most vial reasons.

Since 1925, too, the Government has made available the Egyptian girl what is provided for her brother. r in that year the first secondary school for girls was ened with fifty pupils. Today that school has five ndred pupils and there are also three other secondary hools in Cairo, three in Alexandria and one each in o provincial towns. In these schools the girls follow e same syllabus as in the boys' schools and take the me public examinations. From them girls have passed n to study at the Egyptian University, where they are to be found in every faculty, but chiefly in the school of medicine. Others have gone on to England and taken degrees there. It is of interest to note here that in these schools there are men as well as women on the staff though in every case the head is a woman.

Sylvain Levi : A Memory

Dr. Ranjee G. Shahani relates his impressions of Sylvain Levi in *The Asiatic Review*:

I was received by a short, well-knit man, with a soft, caressing voice, a shock of beautiful white hair, fine as driven snow, extraordinarily gentle eyes—eyes that had something very wise and very tender in their limpid depths—and, for all his dignity, simple, clubbable, spontaneously kindly—in fact, anything but a mere academic.

As I looked round the apartment, stacked, almost littered, with books and with *souvenirs artistiques des Indes*, I heard Sylvain Levi say to me : "I am a Hindu." The tone in which he said this was absolutely convincing—and compelling. It reminded me of similar words uttered by the late Sir Thomas Arnold : "I'm more an Indian than an Englishman." Transparent sincerity characterized the avowal of both men.

The room, warm and cosy, was full of guests. An Austrian savant was talking in excited tones about his great discovery, that the Hungarian dialects were connected with Sanskrit. Sylvain Levi did not contradict him, but the way he smiled shook the confidence of the other man. A young lady wanted to know what were Sankara's exact views about "Maya" and the "phenomenal world." Someone began to talk of Mohan-jo-Daro. . . . . To each and all—too many to be mentioned here—Sylvain Levi gave what help he could. He was particularly nice to my compatriots : he treated them as though he had known them all their lives. They spoke to him as they seldom speak to foreigners.

Sylvain Levi did not refer to his own work. He seemed to brush it aside as a thing of secondary importance. "My real passion," he told me later, when we were alone, "my real passion is to be of service to my fellow-beings. . . . . It gives me real pleasure to do what I can for your countrymen. They come thousands of miles to learn at our universities: all praise to them for that. . . . . It is really we who ought to be going to India to imbibe something of her ancient wisdom. Perhaps a day will come when the elan of the West will be combined with the meditativeness of the East. . . . ." He loved books, I could see, for he talked in a lilting accent of his favourite authors; but he loved life more. He spoke of the greatness of life and the greatness of the individual; but I will not enter into that abstruse question.

When I attempt to sum up the total impression made upon me by this remarkable personality I find that it crystallizes itself into four prismatic qualities—qualities that Jesus would have prized above all in a human soul. Sylvain Levi was tolerant (not through laziness, but through wise comprehension), generous (more happy to give than to receive), selfless (always making the lowest claim for himself), and genuinely in love with his kind. In our world of false valuations, when charlatans and mountebanks win all the applause, it is not a little heartening to find a man who was great in his goodness.

Sylvain Levi is not dead : he lives in the memory of his friends and disciples, and their name is legion. Perhaps this is the only kind of immortality of which we can be sure. At least Shakespeare thought so.

INDIAN PERIODICALS

Reminiscences of Sri Ramakrishna

Pratap Chandra Majoomdar, an influential leader of the Brahmo Samaj and an orator of rare ability, wrote an article on Sri Ramakrishna in the *Theistic Quarterly Review* of 1897, which has been reproduced in the Ramakrishna Centenary issue of *The Vedanta Kesari*. The following is an excerpt from the reproduction :

Some of our clever intellectual fools have found nothing in him; some of the contemptuous Christian Missionaries would call him an impostor or a self-deluded enthusiast. The face of this Hindu saint retains a fullness, a child-like tenderness, a profound visible humbleness and an unspeakable sweetness of expression and a smile that I have seen on no other face that I can remember. He protests against being lionized and openly shows his strong dislike to be visited and praised by the curious. The society of the worldly-minded and carnally-inclined he carefully shuns. His religion is his only recommendation. Ramkrishna is the worshipper of no particular Hindu God. He is not a Shaiva, he is not a Shakta, he is not a Vaishnava, he is not a Vedantist. Yet he is all these. He worships Shiva, he worships Kali, he worships Rama, he worships Krishna and is a confirmed advocate of the Vedanta doctrines. He accepts all the doctrines, all the embodiments, usages and devotional practices of every religious cult. Each in turn is infallible to him. His religion does not mean too much dogma, controversial proficiency or the outward worship. His religion means ecstasy, his worship means transcendental worship. He merges into rapturous ecstasy, and loses outward consciousness often during the dav and oftenest in conversation.

In the intensity of burning love of God which is in his simple heart, the devotees' form and features suddenly grow stiff and motionless, unconsciousness overtakes him, his eyes lose their sight and tears trickle down his fixed, pale but smiling face. There is a transcendental meaning and sense in that unconsciousness. Who will fathom the depth of that insensibility which the love of God produces in him? But that he sees something hears and enjoys something, when he is dead to all the outer world, there is no doubt. If not, why should he in the midst of that unconsciousness burst into floods of tears and break out into prayers, songs and utterances, the force and pathos of which pierce through the hardest heart and bring tears to eyes that never before wept under the influence of religion?

He has successfully escaped the evil of carnality which he dreaded. The purity of his thoughts and relations towards women is most unique and instructive. The other sin which he spent his life to be free from is the love of money. The sight of money fills him with strange dread. His avoidance of women and wealth is the whole secret of his matchless moral character. His reverence for Christ and Mahomet is deep and genuine and shows the catholic religious culture of this great Hindu saint. He never writes anything, seldom argues. He never attempts to instruct, he is continually p out his soul in rhapsody of spiritual experien unconsciously throws a flood of marvellous ligh the obscurest passages of the Shastras.

A living evidence of the depth and grea Hindu religion is this good and holy man. H wholly controlled his flesh. He is full of soul, the reality of religion, full of joy, full of blessed He has no other thought, no other occupation, n relation, no other friend in his humble life th God. That God is more than sufficient for hi spotless holiness, his deep unspeakable blessedne unstudied endless wisdom, his child-like pea and affection towards all men, his consuming, all ing love for God is his only reward. So long a spared to us, gladly shall we sit at his feet to from him the sublime precepts of purity, unworld spirituality and inebriation in the love of God.

Sri Ramakrishna

Bhavani Charan Bannerjee, better k as Upadhaya Brahmabandhava, was at fi staunch Brahmo and a follower of Ke Chandra Sen. As a speaker and leader an Editor of the Bengali daily *Sandhya*, he well known. Later in life he passed from church of New Dispensation to the Anglican eventually to the Roman Catholic Commun The original article which was contribute *Swaraj*, a Bengali monthly, has been trans in the Ramkrishna Centenary number *Prabuddha Bharata*. He wrote :

Who is this Ramakrishna? He is the prin Sadhakhas, who through his spiritual practice, s with emotion and fervour, gathered round him a peculiar spiritual attitudes of the different sects faiths of the world, and thus demonstrated the all-c hensiveness of his Brahman-realization. In his pers have been synthesized and unified the superconsci of the Yogis, the sweetness of the love of the Go Brindavan, and the awe-inspiring attitude of the worshipper. He practised Islam and realized its goal. He also realized the Christhood of Jesus established in his consciousness of the immutable Br and keeping intact the continuity of the Eternal Id of the Aryas, Sri Ramakrishna welcomed with open all the diversities of the spiritual life and enriched by incorporating in it all the new spiritual forces orientating them all to Advaita.

All-India Women's Conference

In her address as president of the All-In Women's Conference, published in *Stri-Dha*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

er Highness, The Maharani Sethu Parvati yi of Travancore says :

This Conference which started nine years ago has w become the foremost representative body of the men of India, and it has contributed in no small asure to the awakening which has surpassed the pectations of its founders. It has helped to arouse social conscience in many matters relating to women d their advancement. One of its first items of business s to voice dissatisfaction with the present educational stem, and it was instrumental in starting an Education nd, the proceeds of which have been utilized amongst her things, for establishing and maintaining the Lady rin College in Delhi for Home Science, the training teachers and psychological research. The Conference yed an important part in the establishment of the im of women to the franchise in British India. It s worked for the adequate education of future mothers, medical inspection in schools and factories, and for removal of many social and legal disabilities. A nce at the summary of the important resolutions sed in previous sessions would prove that a well-sidered programme of rural reconstruction and cational and civic training has been emphasised, and the Conference has set before itself the important k of rousing public opinion so as to enable all cerned to realize the mistake of segregation of women d of allowing immature girls to become wives and thers. A great deal has been done, though much s yet to be achieved in the matter of the amelioration the lot of women labourers and the propagation of blic health programmes, in which women are vitally erested.

The great upheaval produced by the late war revolu-nized thought and made Europe and America realize e value of women's contribution to the national cause. The great development for which groups of women d worked in many countries took place mainly because national crises on the issue of which the fates of tions depended. But it will be remembered that as on as the women's claims were recognized, it was und that they were justified. Women very soon attained e highest learned and academical distinctions. The residentship of the Botanical section of the British sociation was awarded to a woman in 1918. In 1920, e gold medal of the Royal Geographical Society was stowed upon a woman. The Parliamentary work of man has been recognized to be of indubitable value. men during the war and thereafter held responsible sts in the civil service of various countries. In the ited States, there are 6,000 women physicians and 000 practising lawyers and amongest them assistant torneys-general, provincial and central. 300 American ties employ Police women in duties relating to the lfare of women and children. In journilism, and nking, they have played an important part. It was ot many weeks ago that the award of the Nobel Prize Madame Jolliot, the worthy daughter of a celebrated other Madame Curie, demonstrated the capacities of men in the domain of recondite science.

Education

Rabindranath Tagore makes the following profound observation in *The Visva-Bharati News* on education :

It is needless to say that the purpose of modern Education is to respond to the deepest urge of the present age which is to be rid of the suicidal aggressiveness of the collective egotism of the people. Human history is waiting for uniting all races in a bond of co-operation utilizing for the common benefit the variedness of our circumstances and natural capacities. Those habits of thoughts and sentiments which go against it will make us unfit for that great tomorrow when it will be seriously admitted that the spirit of civilization has its fundamental meaning in a perfect relationship of people based upon a comprehensive responsibility of mutual help. What has been said in the *Upanishads* in the following verse indicating the highest purpose of man is applicable not only to individuals but also to nations. *He who finds himself in all beings and all beings in his own self is revealed in truth.*

The value of Dancing in National Life

Visva-Bharati News also gives the English translation of the relevant passages of a letter written by Rabindranath on the value of dancing in national life :

There is no doubt that the provision for our country's health and food is of great importance but the expression of its joy is no less vitally necessary. The villagers who are known as the masses of the country have always abundantly expressed their joy in life through their music and dance in varied forms of literature and the arts. Like scattered pools of water in the dried up river-bed of a stream these yet exist, but there is danger of their soon being completely lost. One of the main reasons is the stupidity of our educated commiunties. We are bookworms quite out of touch with the inner life of our country. We are schoolboys of English schools, therefore we wax enthusiastic over pedantic research in foreign arts following the prescribed path of textbooks; we utterly lack the inner culture which can make us discover and properly evaluate the materials of beauty which lie unrecognized all around us in the rural areas. One of this is Dancing. This great gift of the goddess Saraswati has been disdainfully relegated by our cultural circles to the realm of the professionals. In the life of the masses it still remains hidden here and there with apologetic diffidence.

All expressions of joy keep man's vital forces alive and creative; man does not die only from want of food—absence of joy kills his manhood. In the western continent Dancing is a companion of true manhood. In our country too, this dance will remove the feebleness from which our country suffers.

Hindu Java

Swami Sadananda Maharaj is an old Sannyasin of the Sankaracharya Order. He recently visited Cambodia, Java and Bali. He writes an acount of his visit in *The Hindu Review*. His observations on Hindu Java are from his personal knowledge of things :

Jogjakarta, the seat of the Sultanate of the same name, is a populous town with clean and shaded roads often ending in a spacious square like those of Batavia. The Sultan still retains the Hindu title of 'Buwono Senopati' (the General of the World) and his Kraton (or Court) is one of those few centres which still hangs on to the old art and culture of the Javanese.

It is here we witnessed the Shadow Pantomime of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

leather Marionettes, which in Javanese is called Wyang Kulit. A semi-transparent screen is placed before the audience and a powerful light falls on it from the back, where the showman or 'Dalang' recites the old legends and epic stories from the Mahabharata and the Ramayana. The puppets are thin strips of buffalo-hide cut into exaggerated human forms. They would be taken as gigantic caricatures but for the fact that they represent the spirit and not the form of the epic characters. The lady Dushilavati (perhaps Duryyodhana's sister Dushila) has to be coloured black, her nose made more aquiline, her eyes more cruel than those of a Subhadra when she elopes with Arjuna. The virile Javanese admires this great warrior as he adores Sita and respects Rama. Many a version of the adventures of the third Pandava with a strong Javanese background have accumulated through centuries in the shape of 'Panji' stories. Shubhadra loses her identity in Chandrakirana (Moon beam) and the story of her run away match with Krishna-Sakha is recast in the hero's attempt to retrace the heroine through a series of wild adventures. The Sayamvara ceremony of Draupadi is 'screened' and the princess is seen engaged in a battle of wits with Yudhisthira and his four brothers. The fight of Rama and Dasanana often creates a tense atmosphere in the audience who heave a sigh of relief when at last the Prince of Ayodhya flies back to his capital with the long-imprisoned Sita.

The Masked Dance is just as gorgeous as the Miracle play at Oberamergau. The masks are a various types and they help the actors and actresses display the moods of the heroes and the heroines they represent. It reminds one of the Greek Tragedians wearing high shoes as a part of their make-up. These masks interpret the trend of the events to the spectators. Thus a scene of the Lord Siva sitting on a divine bull may be acted without a mask, but when the Tandava Dance has to be performed suitable masks have naturally to be used. These dances are so vivid that we cannot but admire them. Here there is no 'dalang' to explain the show of his puppets or interweave local incidents into the plot, but every participant has to do the work of the showman with no oral explanations but physical movements.

The Hindu Java was largely Saivic in its creed, for, isolated temples there are at Bhima and Kelasan which were dedicated to Chandi (or Chanda?). They are of great structural beauty, but are mere pygmies in comparison with what we viewed at Prambanam. The ruins there are girdled by a high stone wall and occupy almost a square mile in area. The gateway is made of wood and the courtyard is not flagged but covered with green grass. The main temple of Chandi-Siva is some sixty feet high and is of a square shape. The fight between Dasanana and the valiant Jatayu forms the subject of the bas-relief on the stone foundation of this temple. A wide stairway leads to the approach of the Mandira where there stand on their own pedastals four life-size images in four directions of the Compass. They are Brahma, Vishnu, Maheswara and Sakti, each with a stone back-ground to its own. The statue of Brahma is more intact than the rest and like the images at the Godan Gaja Museum all of them are anatomically perfect and wear apparels and ornaments. They are physically normal and none of them show that stony vacant look which we meet in those of the Assyrians or the Egyptians. They all have a benign countenance which is assuring and conveys the sculptor's notion of a 'loving' Creator which a 'god fearing' race can seldom visualize. Nor is there that ambiguous smile which the Buddhist loves to portray. These images beam with a celestial repose which eludes description.

The temple of the divine Bull is close to the which Siva occupies in the main temple, the numerous pillars and idols lying about in the co the local history recounts that the Arabs in their zeal razed them to the ground.

The Beautiful in the Upanishads

The spirit of beauty that resides in Upanishadic consciousness makes an which stirs the very depth of our heart. Kanta Gupta writes in *the Triveni* on beautiful in the Upanishads :

When the Rigveda says :

"Lo ! the supreme Light of lights is come, a awakening is born, wide manifest,"

"The white Mother comes reddening with the child; the dark Mother opens wide her chambers,"

the feeling and the expression of the beautiful re questioning; they are authentic as well as evide will recognize at once that we have here beautiful said in a beautiful way. No less authentic how the sense of the beautiful that underlies these Upani lines :

"There the sun shines not, nor the moon, n stars; these lightnings too there shine not; how this fire ! That shines and therefore all shine in its by the sheen of That, all this shines."

The early Vedas aimed at the perfect form (*kr'tnum*) the faultless expression, the integral and plete embodiment. But the Upanishads came to lay upon what is beyond the form, what the eye cann nor the vision reflect :

"Its figure does not lie in the field of vision. can see it with the eye."

The form of a thing can be beautiful; but formless too has its beauty. All the forms that scattered abroad in their myriad manifest beauty within themselves a secret Beauty and are reflecti projected out of it. It cannot be defined or figured in terms of the phenomenal consciousness. In speaking however, the Upanishads invariably and repeatedly re two attributes that characterise its fundamental nature. first aspect or attribute is that of light—the brill the solar effulgence—*ravitulyarupah*—the bright, shadowless Light of lights—*virajam subhram jyo jyotih*. The second aspect is that of delight, the the immortality inherent in that wide effulgence—*rupam amr'tam yad vibhati.*

And where there is light, there is cheer and *Rasamaya* and *jyotirmaya* are thus the two co characteristics fundamental to the nature of the ul reality. Sometimes these two are named as the and the lunar aspect. The solar aspect refers obj to the Light, that is to say, to the Truth; the aspect refers to the *rasa* (Soma), to Immortality Beauty proper,—

"O Lord of Immortality ! Thy heart of beauty is sheltered in the moon"—

or, as the *Prasna Upanishad* has it,

'The Moon means Delight . . . . and D means the created form."

The perception of beauty in the Upanis consciousness is something elemental—of conc essence. It silhouettes the main contour, outlines primordial gestures. Pregnant and pulsating with burden of beauty, the *mantra* here reduces its ex expression to a minimum. What can be more bare

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ief and full to the brim of a self-gathered luminous
ergy than, for example :
"That which lives not by Life, but which makes
e live—That is Brahman."
"In the Little there lies no happiness, the Vast alone
the Happiness, The Vast is the Immortality, the Little
the Mortality."
The Upanishads in this respect have a certain kinship
th the early poets of the intervening age—Vyasa and
lmiki. The same brevity and simplicity, vibrant with
extraordinary power of evocation, are also character-
ic of the Upanishad *mantra*. With Valmiki's
"Like the sky hard to cross over,"
"Like a fire whose light of flame is gone,"
"Fiery as the burning sun, full of forbearance like
earth,"
be compared, in respect of vivid and graphic terseness
d pointedness and suggestive reverberation, the
anishadic
"The One stands alone in the heaven motionless,
e a tree against the sky," or,
"Be wholly fixed on That, like an arrow on its
get," or again,
"Like these rivers that flowering journey towards
sea."
Art at its highest tends to become also the simplest
d the most unconventional; and it is then the highest
t, precisely because it does not aim at being artistic.
e aesthetic motive is totally absent in the Upanishads;
e sense of beauty is there, but it is attendant upon and
rolved in a deeper strand of consciousness.

The Racial Composition of the Indian Peoples

Science and Culture in its February issue publishes addresses of the Sectional presidents of the Science Congress recently held at Indore. H. C. Chakladar, presiding over the Section of Anthropology, deals in his address with the problems of the racial composition of the Indian peoples. He observes :

In India racial classification has so long proceeded on very scanty anthropometric data, and hence it has been quite unsatisfctory. Risley initiated anthropomorphic measurements in India, but the data obtained by him, supplemented by those collected by others, are quite inadequate for such a vast country as India, especially as the Indian peoples are divided into innumerable independent groups that do not intermarry. Risley's classification of the Indian peoples, based upon this inadequate material, into seven racial types, has rightly been rejected by anthropologists. Risley gave, for exmple, the racial designation of *Mongolo-Dravidian* to the peoples of Bengal and Orissa, though they are not marked by Mongoloid features at all. Then again, Risely's Dravidians fall at least into four racial types; (1) the dark, long-headed, wide-nosed type which has been given the unsatisfactory designation of *Pre-Dravidian* by some and which has been called *Proto-Australiod* by Dr. Hutton in the last Census Report of India, although craniological measurements have shown clearly that the theory of a common racial stock for the jungle tribes of the Deccan and the aborigines of Australia is quite untenable; this type had better been called simply *Veddaic;* Hutton's theory of its migration from Asia Minor is also disproved by the great difference in the nasal index between the ancient Mesopotamian and Indian skulls; (2) the Munda-Kol group of Chota Nagpur which possesses considerable affinity with the former, but has points of difference also; (3) the long-headed, fine-nosed type speaking Dravidian languages who, on account of their Mediterranean affinity, had best be called *Indo-Mediterranean,* independently of any reference to the language they speak. (4) and lastly, the round-headed, fine-nosed type with Alpine affinity which claims numerous individuals amongst the Dravidian-speakers. The two latter types are not peculiar to the Dravidian-speaking area alone, but are of a much wider distribution in India. Intensive anthropometric work, involving 60 measurements and 31 somatoscopic observations on each individual among the people of Bengal by the author, shows the presence, both among the high castes, such as the Radhi Brahmins, as well as the low castes like the Muchis, of a predominant round-headed type, and also of an appreciable number of the Indo-Mediterranean type, this latter type being more numerous among the lower castes than among the higher. Anthropometric investigations in other parts of India would probably show a very wide distribution of these two types. Both of them are represented in the skulls excavated at Mohenjo Daro, and they appear to have been the earliest importers of advanced civilization and culture into India.

Creed of Unity

Sir Govind Madgavkar, a retired member of the Civil Service, writes in *The Hindustan Review :*

For myself, I recognize only two political parties in India—the British rulers and we, the Indian ruled, of whatever class.

Just now we Hindus by reason of our caste system can be played upon and cut up into touchables and untouchables, and Brahmins and non-Brahmins, and caste Hindu in general (and the Brahmin in particular) is the anvil for all British, Muslim, untouchable, etc, to abuse and to smite. Although the caste Hindus constitute a clear majority of the population of British India, they are given only 86 of the 250 British Indian seats in the Assembly. The Muslims, on the other hand, who constitute approximately ¼ of the population of British India are given 1/3 of the British Indian seats in both Houses. The disproportion is most obvious in the case of the British residents. Taking British India as a whole one seat is allotted in the Council of State to every 1 2/3 million persons and one seat in the Assembly to every one million persons. Yet 7 seats in the Upper House and 14 seats in the Lower House are allotted to only 75,000 British residents—a figure which excludes some 60,000 British troops.

An indefinite reaction, in which Princes, Muslims, non-Brahmins and the depressed, are to be tools, to preserve India for all time as politically a dependency and economically a market for Britain, with never-ending professions of all this policy being in our welfare. The Parsi, because he is rich and progressive, the Muslim, the non-Brahmin and the depressed, because he is backward,—all those who hold aloof on whatever pretext from the national ideal and movement, are acting contrarv to the interests not only of the country, but also and in the long run even of their own community. In fact, they are asking the caste Hindu to fight and to bear the brunt of battle and to pull the chestnuts out of the fire for them, while they themselves try to curry favour with Government and enjoy the fruits. And on top of it all, they will call the Congress a Hindu movement because of their own refusal

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to join. The nationalist Hindu who joins the Maha Sabha or asks for justice to the Hindus is immediately denounced as being communal, but any one else, apparently, may ask for special treatment at the expense of the Hindu and remain a nationalist.

To me Hindu unity is a necessary constituent, perhaps may even turn out to be necessary preliminary to Hindu-Muslim unity and to Indian Nationality. To inflame and to widen divisions and animosities is easy. It is to make oneself a despicable tool of those who wish to divide and to rule. Let ours be the nobler, even if it is harder role of the conciliator.

Discipline above jealousy, unity above party, nationality above caste, creed or province, and country above all —this must be the motto of the Congress, and of every one of us.

Cultural Tyranny

The circular of the education department of the Frontier Government excluding as it does Hindi and Gurmukhi as medium of instruction, has wounded the susceptibilities of Hindus and Sikhs all over India. Bansi Lall Sahni describes it, in *The Monthly India*, as an inroad on the culture and religion of the communities concerned who form an important minority entitled to statutory protection of their rights :

The recent circular of the education department of the N. W. F. P. government which is presided over by an Indian Minister, was indignantly received in the country. The circular excludes the employment of Hindi, Gurmukhi and Pashto as medium of instruction beyond the first two primary classes in girl schools, (*b*) and informs that schools failing to change the medium of instruction to Urdu, within a period of two years would cease to receive grants-in-aid from the Government.

The displacement of Gurmukhi and Hindi by Urdu as a medium of instruction intensifies the anxiety of the minority, and instead of linking the Hindus, Sikhs and Muslims widens them as poles asunder.

The plea that the Pathan needs the knowledge of Urdu, does not justify the sacrifice by Hindus and Sikhs of their languages.

The number of recognized institutions for the N. W. F. Province is 155. Out of it 71 are schools; out of 71 private schools, 30 impart in Hindi, 20 in Gurmukhi and 13 through a medium. Out of the total number of 31 of schools, as many as 19 are of Hindus and Sikhs a single school is under Muslim management. the total enrolment of scholars in the girls 6,805 are Hindus, 5,665 Muslims and 1,866 are Out of the number of girls who passed the middle girls examination, the languages represented are 129, Urdu 67, and Gurmukhi 30. The total share Government, District board and municipal for their maintenance is Rs. 81,443 and the total from fees and other sources is Rs. 54,400. Out of the expenditure on girls education, approximately a Rs. 36,000 goes to the coffers of Hindu and Sikh which contribute 8,671 scholars out of a total of

From the point of view of educational this order of a change of medium of instruction, unsound.

Imagine the hardships of girls who have been Hindi or Gurmukhi in the first two primary class have joined in 3rd class, a school where educ imparted in Urdu from the beginning.

The Circular confronts the private schools, unpalatable alternatives. Either they should forego and Gurmukhi as medium of instruction or with grants-in-aid.

This, if it happens, would prejudicially affect growth of the education of Hindu and Sikh the Frontier, and disable the minorities from their rightful position as citizens of the Indian A community, with its girls un-educated or semi-e cannot realize that aspiration.

Home is the place where love and knowledge traditional culture and religion is inculcated. The are the guardians of our faith and culture. The and culture of Hindus is to be found in books written in Hindi, and those of Sikhs in Gurmukhi

The circular marks an invasion on the constitu right of the Hindu and Sikh minority to a sta protection of their interests in regard to language, and customs. All civilized governments recognize right; so does the League of Nations. In sharp to the utter disregard of the Frontier Government policy of the Provincial Governments where the Mu madans are in the minority.

THE RAILWAY BUDGET

By Professor BHABATOSH DATTA, M.A.

When the railway budget was presented fore the Assembly last year, there was a dis- ct note of optimism in Sir Joseph Bhore's in- ductory speech. His estimate was that the ceipts would increase from 90.20 crores in the evious year to 93.50 crores in 1935-36, and at the out-goings, including working expenses d transfer to the depreciation fund, would mount to nearly 64.40 crores. The net balance 29.10 crores, it was anticipated, would fall ort of the total interest charge by about 2 ores. The position, therefore, appeared to be couraging. The strategic lines would cause a ss of about 2 crores, and, so, practically eaking, Sir Joseph Bhore's last railway budget as a balanced one so far as the commercial nes were concerned.

This led Sir Joseph to adopt measures which ve contributed to some extent to the worsen- g back of the situation. The 5 p. c. cut that d still remained operative was done away ith, and some freight charges including the rcharge on coal-freights were reduced. Of ourse, there were persons who could not see ye to eye with Sir Joseph, and who did not elieve that the railway situation had really mproved considerably. But the tone in which he last year's budget was presented did not xactly lead people to expect the situation now evealed by Sir Zafrullah Khan, Member-in-Charge for Railways and Commerce.

We now learn that Sir Joseph's anticipa- ions have not materialized. The receipts in 1935-36 are expected to fall short of the budget estimates by 3.50 crores. The working expenses have been reduced by minor economy measures to 50.75 crores, and this amount, together with the depreciation allocation of 13.26 crores brings the total expenditure to nearly 64 crores, leav- ing a balance (including miscellaneous receipts) of 26.83 crores. The deficit thus amounts to 4.54 crores, and not to 2 crores only as antici- pated. This deficit will be met by another loan from the depreciation fund, which will stand at the close of the financial year at nearly 9 crores.

The estimates for the coming financial year have, therefore, been cautiously framed. The revenue is anticipated to amount to 91.25 crores, the working expenses to 51.25 crores, and the transfer to the depreciation fund to 13.25 crores. The balance (including the miscellaneous receipts and other minor re-adjustments) will be, it is expected, 26.67 crores, representing a realization of a little more than 3.5 per cent on the total capital at charge. The net deficit at the end of the year 1936-37 is expected to be 3.44 crores, which will again have to be made good by a loan from the depreciation fund. At the close of the year, the depreciation fund will stand, according to the estimates, at 11.75 crores. No new projects will be undertaken, but a small sum will be devoted to the continuance of new works already under construction, including 22 lakhs for the Meghna bridge in Bengal.

Table I. (in Crores)

Particulars	1934-35 Actuals	1935-36 Revised Estimates	1936-37 Budget
1. Total receipts ..	90.20	90.00	91.25
2. Working Expenses ..	50.27	50.75	51.25
3. Allocation to Depreciation Fund	13.72	13.26	13.25
4. Balance (re-adjusted) ..	26.74	26.83	26.67
5. Total interest charge ..	31.80	31.37	30.11
6. Deficit	5.06	4.54	3.44
7. Depreciation Fund at the close of the year ..	9.50	8.97	11.75

Such, in brief, is the situation of our railway finance. One is naturally tempted to inquire why things have moved in this way, and to examine the contentions put forward by the authorities. For a number of years since the separation of the railway budget in 1925, the railways had regularly contributed to the general revenues of the country. Besides paying the 1 per cent charge on the capital and one-fifth of the surplus profit, the railways were in a position to pay to the Central Government a further one-third share of the excess of the remainder above 3 crores. These contributions have entirely stopped since 1930-31. There have been deficits every year after that, increasing from 5 crores in 1930-31 to a maximum of 10.25 crores in 1932-33, falling to 5.06 crores again in 1934-35.

It is not a very good argument to say that, because the depreciation fund is standing at almost the same level every year, the charge of insolvency cannot be brought against the railways. It has been maintained that, if instead of transferring 13.26 crores to the depreciation

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

fund during 1935-36, only 9.25 crores—the amount that is sufficient for covering this year's expenditure on renewals and replacements—had been transferred, the deficit would have amounted to only 50 lakhs. But, one cannot help thinking that in the case of a railway concern, the depreciation fund is of the utmost importance, and all calculations of profit and loss ought to be made after allowing properly for all present and future replacement-charges.

TABLE II* (Depreciation Fund)—in Crores

Particulars	1934-35 Actuals	1935-36 Revised Estimates	1936-37 Budget
1. Depreciation fund at the begining of the year ..	11.75	9.50	8.97
2. Transfer to depreciation fund	13.72	13.26	13.25
3. Renewals and Replacements	10.91	9.25	7.03
4. Loans from depreciation fund	5.06	4.54	3.44
5. Depreciation fund at the close of the year ..	9.50	8.97	11.75

Nor is there much in the contention that some railways abroad have not been able to pay dividend or that some others have not been able to earn more than 3 per cent on the capital. In India the railway system is a commercial undertaking run by the State, and so a deficit here is of much greater consequence to the people than a deficit in the accounts of a private company. Even a comparison with the Dominion and Colonial Government railways is of negative value, and it does not certainly validate arguments otherwise invalid.

The reasons to which the decline in the railway receipts have been ascribed are manifold. The economic depression and the collapse of commodity prices have, on the one hand, slackened the rate of turn-over of goods, and on the other, reduced the purchasing power of the people. It thus certainly bears a share of the blame for causing a decline in passengers and goods traffic. A reason of perhaps a greater import is the "striving after self-sufficiency by almost every country, including India, and the development of internal trade and production." Under unrestricted trade, the railways generally transport a large volume of goods from the ports to the distant interior. But, the diminution of the volume of international trade has compelled the railways to carry goods produced within the country from one part to another. The general effect of this on railway earnings has been "to replace long lead traffic to and from the ports by short lead internal tr and to reduce the total ton-mileage of tra work. This is a situation which every s of railway economics in India should take of. It may, however, be expected th economic revival will increase the aggreg both the port-hinterland hauls and the in hauls.

It is also possible to subscribe to the that an increase in motor competition, a some extent, in water-ways competition affected adversely the financial interests o railways. There is much that is true in has been said about wasteful and unfair petition, rate-cutting, the immunity of m transport companies from the operation labour laws, and their low capital and wo costs. It is at the same time a fact tha goods having a high value in a small bulk for short hauls, motor transport offers m advantages than railway transport. Every will however admit that in the interests of community, it is essential that motor tran should be an adjunct to railway service, m taining, as far as possible, feeder services o The road-rail road competition also poin the need for better passenger and goods ser on the part of the railways. It may be exp ed that the present stage of wasteful com tion will turn out to be a temporary phase.

It would have been much better if the r way authorities had spoken more about p bilities of economy than about the effects labour legislation. After pointing out that condition of an average railway employe better than that of one in any other indus the Railway Member remarked that "a st has been reached where a halt might be call and advocated a "liberalization of the rules lating to the hours and condition of work the granting of further privileges to the st The increase in the wages granted in the re past and the operation of the Hours of Emp ment Regulations have together increased working expenses by nearly one crore. S increases in expenditure every commer undertaking should be prepared to face. I private enterprise can be called upon to com to labour laws, it looks ridiculous if a st department complains about their operation.

Scarcely a word has been said, either by Hon'ble Sir Zafrullah Khan or by the Hon Sir Guthrie Russell about the top-heavy adm istration of the railways, or about the rather s process of Indianization. Sir Henry Gidney h remarked that the railway employees on a average get a very low pay. But the admi

* Statistics in this form are not yet available, and the figures given here had, therefore, to be calculated from the published data. There may be one or two discrepancies in the calculated figures.

Digitized by Arya Samaj Foundation Chennai and eGangotri

ration at the top is carried on in luxuriant style r a contingent of over-paid officers. Recently, e Railway Sub-Committee of the Retrench- ent Advisory Committee recommended the bolition of a number of higher posts. The doption of these recommendations will bring bout considerable economy in expenditure. A ving of nearly a crore of rupees would have sulted if the 5 p. c. cut has been allowed to ontinue. It is necessary to remember that even tate railways are business undertakings first, d, so, the salary-increments of railway servants ould depend, not upon the general financial ndition of the State, but on actual business nditions. It is not perhaps necessary to repeat at every step towards Indianization is a step wards economy.

The magnitude of the deficit could thus ve been considerably lessened if a cautious licy had been consistently followed, and if the thorities had not been so much optimistic just an apparent turning of the tide. The Railway ember, however, hopes that the loss caused by ide-spread free-travelling, and by deliberate or egligent undercharging of freights may be overed up by rigorous legislation and better upervision. While it is desirable that all dis- onest practices should be checked, it is worth oing that harsh legislation against ticket-less avelling will not increase the revenue of the ilroads. The only result will be that the ajority of the ticket-less travellers will not avel at all. On the other hand, there is one direction in which the working expenses may rather increase. An improvement in the third-class passenger service is long overdue and such improvement is bound to cause some increase in working expenses.

All this, however, need not make one despondent. It can be confidently asserted that the worst days are over and that even a re-adjustment of freights and terminal charges may cause some immediate increase in the receipts. The Review of the Trade of India in 1934-35 directs attention to a tendency towards improvement of foreign trade and of production. Higher receipts from increased traffic on the one hand, and economy on the other, together with the co-ordination of competing transport agencies and a gradual conversion of the present capital liabilities to those bearing lower rates of interest may make it possible for the railways to resume contribution to the general revenues. If the Assembly succeeds in persuading the Government to appoint an expert financial enquiry committee, other avenues for improvement may be explored. Such an enquiry is also necessary for finding out how far there is wasteful shunting and empty haulage of wagons, particularly in view of the fact that a number of wagons will be shortly purchased. We shall eagerly await the findings of an expert agency, and, in the meantime, we shall go on hoping for the best.

February 22, 1936.

THE FINANCES OF BENGAL

By Professor BHABATOSH DATTA, M.A.

The Budget estimates for Bengal presented by Sir John Woodhead, on the 24th of February last, once more emphasize the two-fold grievances of the people, namely, the inequity of the settlement of 1919, and the unduly heavy expenditure on administration. The Hon'ble Finance Member declares that although Bengal has not yet attained the desirable position of a balanced budget, he is in a position to record a definite improvement in the financial condition. At the same time, he deplores the unsatisfactory standard of expenditure in many spheres of activity, and states that our finances will not improve "until we have obtained an equitable financial settlement which will render possible the development of the more beneficial activities of the Government beyond the present inadequate standards."

He admits that the improvements visible in the revenue-receipts of the province are not due to any considerable increase in the realization from the provincial heads of revenue. The settlement of 1919 left the provinces generally with inelastic resources, and while some provinces like Madras could at least hope for an increase in the land-revenue receipts, the Permanent Settlement helped to make our finances more rigid. The receipts from Excise, Registration and Stamps are now much below the normal receipts prior to 1930-31.

The turn towards an improvement in the revenue-receipts dates from 1934-35. In the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

budget for that year a deficit of 209 lakhs on the revenue account was anticipated. But, it was during that year that the Central government transferred half of the receipts of the jute-export duty to Bengal. The revenue receipts of Bengal, therefore, increased by 158.25 lakhs, and this, together with other minor increases, brought the total excess of the actual receipts on revenue account in 1934-35 over the budget estimates to 183.25 lakhs. As there was also an economy of 20.50 lakhs in expenditure, nearly 204 lakhs of the anticipated deficit were wiped off, leaving the actual deficit on revenue account at Rs. 5.50 lakhs, which could easily be met from the balance on the capital account. It may be noted, by the way, that fortunately the income on capital account has been above the expenditure, and, as a result, a balance has been available even in all these years of depression. This balance has helped to cover partly the deficit on revenue account, and when it has proved insufficient, advances have been taken from the Provincial Loans Fund of the Government of India.

The budget estimates for the present year (1935-36) showed an anticipated opening balance of 12.33 lakhs; but, on account of the financial improvement last year, the opening balance has been placed, according to the revised estimates, at 30.12 lakhs. The receipts on revenue account are expected to be better than the budget estimates by about 40 lakhs, and the expenditure, it is hoped, will be lower than the budget figures by nearly 13 lakhs. While, therefore, the deficit on revenue account is now expected to be 15.59 lakhs, instead of 67.71 lakhs, there has been a big fall in the receipts on capital account. The surplus on capital account was expected at the beginning of the financial year to be 67.69 lakhs, while, according to the revised estimates, this surplus will not be above 10.5 lakhs. The surplus on capital account will, therefore, fall short deficit on revenue account by 5.16 lakhs, ing the opening balance of 30.12 lakhs to ing balance of 24.96 lakhs. It should be that, during the present year, the Government exercised the power granted Section 47 of the Act of 1919 to impose Scheduled taxes. The tax on the consum of electricity, increased taxes on amuse license taxes on the sale of tobacco, and stamp duties have given Bengal some in in the revenue-receipts. The total yield new Scheduled taxes in a full year is placed at 28 lakhs. The expenditure suppression of terrorism still figures p ently in the budget of our province.

The year 1936-37 will open with a b of 24.96 lakhs. The revenue receipts and receipts on capital account are both exp to be slightly better than those in the p year, but the expenditure on either of accounts will also increase. The net will be that the total receipts, excluding opening balance and the advance of 39.20 to be taken from the Provincial Loans will amount to 1248.25 lakhs, and the expenditure on revenue and capital accou 1300.16 lakhs. The resulting deficit is ex ed, therefore, to amount to nearly 52 l Of this total deficit, 39.20 lakhs will be m an advance from the Provincial Loans of the Government of India, and a fu 12.67 lakhs from the opening balance. closing balance at the end of the year 19 is thus expected to be 12.29 lakhs.

In the table below the net deficit ap to be 12.67 lakhs. This is so because in total of the receipts (Item No. 5), the adv from the Provincial Loans Fund (39.20 lak has been included. The actual deficit 1936-37 is, therefore, easily found to be e to nearly 52 lakhs of rupees.

THE FINANCES OF BENGAL* (in Lakhs).

Particulars	1934-35 Actuals	1935-36 Budget	1935-36 Revised Estimates	1936-37 Budge
1. Opening Balance	13.25	12.33	30.12	24.9
2. Receipts on Revenue Account	1102.50	1102.33	1142.78	1149.4
3. Receipts on Capital Account, including advances from P. L. F.	62.50	122.77	85.84	138.0
4. Total receipts (1+2+3+4)	1178.25	1237.43	1258.74	1312.4
5. Expenditure on Revenue Account	1108.0	1170.04	1158.37	1190.7
6. Expenditure on Capital Account	40.75	55.08	75.41	109.2
7. Total Expenditure (5+6)	1148.75	1225.08	1233.78	1300.1
8. Balance on Capital Account (3—6)	21.75	67.69	10.43	28.6
9. Deficit on Revenue Account (5—2)	5.50	67.71	15.59	41.3
10. Net balance (+) or Deficit (—) (8—9)	+16.25	—0.02	—5.16	—12.6
11. Closing balance (4—7) or (1+10)	29.50	12.31	24.96	12.29

* Some of these figures have been taken from some daily papers, and the rest have been calculated from the data available from the speech of the Finance Member. Some of the figures for 1934-35 are app mate ones, the calculated closing balance shows a error of ½ lakh.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The most remarkable feature of the budget mates for the coming year is the consider- increase in the estimated expenditure, both the revenue account and on the capital unt. The budget for 1936-37 provides for expenditure on revenue account of 1190.77 s representing an increase of nearly 32.5 s over the revised estimates for the present r. Sir John Woodhead explains this by bing the increase to the payment for the l instalment of the restoration of the salary- an increase in the provision for reduction voidance of debt, the cost of debt, the cost reparing electoral rolls, additional expendi- on roads from the Central Road Develop- t Fund, the statutory grant towards the Howrah Bridge, and the increase in the vision for super-annuation allowances and sions. It is, however, doubtful if there was stification, in these days of low incomes, restoring the cut on the higher incomes, or increasing the provision made for pensions. construction of a new Central Jail at Dum n will take away a small sum of 2 lakhs, there is also provision for an increase in staff employed in the co-operative depart- nt. While the latter expenditure may turn to be commendable, the former only em- sizes the burden that the people have to r on account of the so-called suppression terrorism and civil disobedience. Some able new items of expenditure are the pro- on for contour surveys and river-gauge dings and the establishment of a goat-tissue cine depot for manufacturing anti-vinder- serum.

On the capital account, an increased ex- diture of 10.45 lakhs on irrigation (as com- d with 5.28 lakhs in the present year) has n provided for. The commuted value of sions, the repayment to the Government of ia of advances from the Provincial Loans Fund, and the loans and advances granted by the Bengal Government to the local authorities and agriculturists also record increases in expenditure bringing the total expenditure on capital account to 109.39 lakhs, as compared with 75.41 lakhs in the present year. Of the 16 lakhs granted by the Government of India for the economic development and improvement of rural areas, 5.5 lakhs will be spent this year and the remainder in the coming year.

The budget speech has been just published and full details are not yet available to the public. It is therefore impossible at this stage to discuss the individual items in detail, but the general conclusions are clear. While the huge expenditure incurred in Bengal for the maintenance of law and order ought to bear a legitimate share of the blame, one cannot forget how great has been the injustice done to Bengal by the Montford allocation. While the resources granted to it have all been inelastic, the Central Government has been taking away all those revenues which arise from the industrial progress of the province. Under the new Act, provisions have been made for the assignment to the provinces of certain additional revenues raised by the Central Government; but the details of the financial relation between the so-called "autonomous" provinces and the Central Government have not yet been decided upon. Sir Otto Niemeyer is now carrying on an inquiry with a view to arranging the details, and the Finance Member claims that the case for Bengal has been strongly put before him. All persons will agree with Sir John Woodhead that

> "We can justly claim a financial settlement which will redress the injustice of the past and enable the government of the future to maintain a standard of administration reasonably adequate both in itself and in relation to the standards attainable in other comparable provinces."

NOTES

Sri Ramakrishna Paramahamsa Centenary

Sri Ramakrishna Paramahamsa-deva, the centenary of whose birth began to be celebrated in the last week of the last month (February) in many countries of the world, particularly in India and specially in Bengal, was born a hundred years ago in Kamarpukur, a small village of the Hughli district of Bengal. The name given to him by his parents was Gadadhar. The family name of the poor Brahman household in whose midst he was born was Chattopadhyaya, abbreviated in Bengali as Chathujya or Chatujye and unhappily anglicised into Chatterjee. The name Gadadhar changed for Ramakrishna when he ren the householder's life. He received very school education, being just literate, so in Bengali. He possessed very little learning. He remained a villager all th life in dress, deportment, manners and though he had plenty of wealthy, E educated, city-bred, modern *bhaktas* (and devoted followers).

Though he died fifty years ago, w perhaps still too near him to see him in c perspective. Moreover, as unluckily I never the good fortune to see him and hea

Where Ramakrishna was born in Kamarpukur

come into close contact with him, one cipal means of appreciating his true worth bsent in my case. But perhaps it may be without any exaggeration that he was the atest saint which Hindu society has produced ing the last hundred years. His spiritual us was marvellous. The devotional exercises austerities which he underwent for obtain- God-vision and God-realization were per- unsurpassed, and unequalled at least in ern times. His spiritual hunger and thirst e him forget the needs of his bodily frame careless about life and death.

message and gospel all over India and abroad, and carry out particularly his gospel of service.

Considering that no school, no college, no university, no library contributed to his mental and spiritual equipment and that all that he owed to other human beings for such equipment was due to contact and conversations with some sannyasis and other religious-minded persons and the guidance of a *bhairavi* in the earlier stage of his preparation for his life's work, the conclusion becomes irresistible that his spiritual genius was extraordinary and marvellous.

Panchavati at Dakshineswar, a seat of Ramakrishna's sadhana

In *bhakti*, for which there is no exact glish word and which can be approximately plained as fervent reverential love of the preme Spirit, he was unsurpassed. But he s not a mere *bhakta*. His spiritual know- dge and wisdom was marvellous. And what teacher he was! By means of simple parables d homely illustrations, he could convey to en the most unlettered the deepest spiritual uths of most universal application. It was common faith, no ordinary knowledge, no diocre personality which could convert the ilom sceptically inclined and keenly critical arendranath into the unquestioning disciple vekananda and inspire him and others like m but less gifted than he to carry the Master's

What is known as religious tolerance or toleration but what would probably be better called mutual appreciation and respect among the followers of different faiths, has been traditional in India for ages. Within historical times Asoka set an example in this religious attitude for all ages and countries to follow. Other princely names, in medieval times, which one recalls in this connection are Akbar and Dara Shukoh. In modern times in India the earliest name which may be mentioned as that of a person who appreciated and assimilated all faiths which he had studied was that of Rammohun Roy. Keshub Chunder Sen, whose spiritual attitude towards all religions is well known, was a contemporary

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and loving and beloved friend of Ramakrishna. These names are mentioned not to minimize in the least the worth of the Paramahamsa's message of appreciation and harmonization of all faiths and their assimilation in his spiritual constitution. Our object is only to point out that the mental and spiritual attitude of which we are speaking has been in the atmosphere of India, as it were, from time immemorial, and that the appearance of a great harmonizer in our midst is evolutionary—not sudden and revolutionary. That Ramakrishna was such a harmonizer in spite of his not having read the scriptures of even the principal historical religions in the original or in translation, gives him a distinct, a unique place in the long line of teachers of harmony of many a clime and age.

Addressing the Paramahamsa, Rabindranath Tagore has written :

"Diverse courses of worship
from varied springs of fulfilment
have mingled in your meditation.
The manifold revelation of the joy of the
Infinite has given form to a shrine of unity
in your life,
Where, from far and near, arrive salutations,
to which I join mine own."

Whatever may be the case in other countries, in India the religious and the secular spheres of life were not considered and kept separate and distinct in times past. But if one has to speak of spiritual and secular achievements as distinct, it cannot be said that India has had through the ages only spiritual achievements to her credit : her children were noted, just like the inhabitants of other lands in former ages, for their secular achievements also. They had literatures and arts and crafts, philosophies, sciences, polities, empires at home and abroad, republics of various kinds, internal and overseas commerce, colonizing activities, adventures in distant oceans and cultural enterprise in far-off regions. But India's supreme and distinctive note has always been spiritual. Keeping that fact in view, one may say that the Sri Ramakrishna Paramahamsa Centenary is this year's most noteworthy contemporary event in India, as it commemorates the advent of a prophet of spirituality above all.

May the Supreme Spirit save us from lip-homage to the great saint, sage, teacher and inspirer!

Our Maharanis

It is a pleasure and an encouragement to note that some of our Maharanis, of ruling families, have been taking active interest in women's and other public movements. The Dowager Maharani of Mayurbhanj, the rani of Travancore and the Maharani of are known to have taken part in rec previous women's conferences. The number of *The Indian Co-operative* states editorially :

"In Her Highness the Maharani Saheba of Indore who opened the new imposing planned building of the Indore Premier Co Bank, the Co-operative Movement has a gen and benefactor. A very large number actively participated in both the [Centra Rajputana and Gwalior, and Holkar State Co Conferences and the impression left in our that women played a really important pa Co-operative Movement in the Indore State."

H. H. Maharani Saheba Holkar of Indore

As Her Highness the Maharani Hol Indore is a friend and benefactor of th operative movement, so H. H. the Ma also appears to be friendly to the cause mass of the people. The same Review which we have quoted above writes of hi

His Highness's exposition of the aims of the operative Movement was both lucid and ac His Highness very rightly pointed out that inc of distribution of wealth was the most serious p from which our national economy was suffering

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

that timely realization of this fact with a view to bring about a redistribution of wealth without any violent change in the social structure must be the concern of the Governments and the public. His Highness evinced great solicitude for the welfare of the agriculturists who form bulk of the population of India and remarked that no country had ever achieved big things with a weak peasantry.

What the Maharaja Holkar has said about unequal distribution of wealth and the necessity of its equal distribution might have been said by a socialist. We do not, of course, expect him to be a hundred per cent socialist in practice, but he and his consort between them can do a good deal to remove ignorance and poverty from the state of Indore.

A Jute Doctor of Science

Recently the University of Dacca has awarded Mr. Pulin Bihari Sarkar the degree of D.Sc. in recognition of his work on jute lignin, carried out in the Applied Chemistry laboratory of the University. The examiners of his thesis were all distinguished scientists of Europe and America.

Pulin Bihari Sarkar, D.Sc.

Dr. Sarkar is the youngest scientist to receive this honour from the Dacca University, being only 29 years of age. He has already published 12 original papers, of which no less than 11 are independent works of high standard. The Indian Chemical Society awarded the J. M. Das Gupta gold medal to him last year for the most meritorious research work done by young scientists in India in 1934.

Dr. Sarkar has had a brilliant academic career all through. He secured the first place in the first class in chemistry at the B. Sc. and M. Sc. examinations of the Dacca University. His work has thrown a flood of light on the structure of lignin, a problem which has always baffled attempts at elucidation by scientists all the world over. He has been specially exempted by his examiners from the written or *viva voce* examination in view of the merit of his thesis.

In a letter of appreciation to him, Dr. S. G. Barker, Director, Wool Industries Research Association, England, who was invited by the Government of India to make a scientific survey of jute, wrote last year, "Your reprints have proved a very valuable aid to me in my estimate of the position as regards scientific knowledge of jute. Your works are sound science and certainly they present an interesting lot of data for practical application. You have consistently maintained a very high standard in your chemical work. The results with formaldehyde are interesting and the work on delignification is excellent."

Dr. Sarkar has published many interesting articles on various subjects in leading journals and periodicals, both in English and Bengali.

Coming from an indigent family, he had to fight against enormous odds all his life to reach this stage. As a mere school boy, he got inspiration from his distinguished neighbour, Prof. M. N. Saha, to face the struggle of life boldly and up till now his attempts have been crowned with success.

An Oxford Chair for Sir S. Radhakrishnan

All Indians may be truly proud of the fact that Sir S. Radhakrishnan has been appointed the first Spalding Professor of Eastern Religions and Ethics in Oxford University. This professorship has been recently created. Its name implies that the professor occupying this chair will have to discourse not merely on Indian subjects. So Oxford might have chosen a Chinese or a Japanese scholar, if the choice were confined to orientals, which is perhaps not the case.

It is well known that as a student Sir Sarvapalli Radhakrishnan had a brilliant academic career, and as a teacher of philosophy and an author he has been equally successful. He had previously delivered philosophical

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

lectures in England and America with great acceptance. Of his Upton Lectures at Oxford, subsequently published in book form as "The Hindu View of Life," Principal Jacks spoke as follows, in part:

> "A course of lectures which has held its own against 'Eights' is a rare phenomenon in this University; it may be claimed that this course has established a record in this respect. Without meaning any disrespect for 'Eights' I may say that those, who like myself, have deliberately chosen to attend this lecture rather than go to the river, have made a wise choice."

'Eights' refers to the week in Oxford during which there are intercollegiate boat-races there.

Sir S. Radhakrishnan
[*From a Pencil Sketch by Mrs. Rani Chanda*]

The Spalding Professorship has been founded by Mr. and Mrs. Spalding. Some of the conditions attached are:

> 2. The annual sum of £900 shall be paid to the Spalding Professor of Eastern Religions and Ethics, and the sum of £90 shall be applied to the payment of the University's share of contribution of the Professor to the Superannuation Scheme.
>
> 3. The Professor shall lecture and give instruction on the religions and ethical systems of the East . . . .
>
> 4. The Professor shall be elected by an El Board consisting of
>
> 1. The Vice-Chancellor;
> 2. Mr. H. N. Spalding;
> 3, 4. Two persons appointed by the B of the Faculty of Theology;
> 5. One person appointed by the Board o Faculty of Literae Humaniores;
> 6. One person appointed by the Facu Social Studies;
> 7. One person appointed by the Board the Faculty of Oriental Languages Literature.
>
> 5. The Professor shall hold office for five years.
>
> 6. The Professor shall be subject to the Ge Regulations concerning the duties of Professors to those particular regulations of the same S applicable to Professors enumerated in Schedu of Tit. IV. Sect. i, 3, provided always (1) th either the third or the fourth year from the da his appointment he may be permitted by the B of Electors to lecture or hold classes in one T only in order that he may be enabled to study an extended period in the East or elsewh (2) that he shall reside within the University d five months at least in each academical year, in ing any year in which he is permitted to lecture hold classes in one Term only.
>
> 7. If permission is granted by the Board of Ele under clause 6 to the Professor to be absent f Oxford for an extended period he shall be paid respect of travelling allowance such sum not exce £500 as the Board of the Faculty of Oriental Langu and Literature may recommend.

World Assembly for Peace

The leaders of the labour movements as well as the Intellectuals are happily coming together to organize a world-wide demonstrati for Peace, culminating in a World Peace Co gress in the autumn of 1936. It will synchron with its session of the World Youth Congress Geneva under the auspices of the Internatio Union of the League of Nations Associations. we read from the statement of its Secretary General Prof. Th. Ruyssen in the French pa phlet *Le Monde entier pour le Paix*. F further information one should write to t central office No. 6, Rue de la Paix, Paris, Fran The two representatives of Great Britain a Prof. Noel Philip Baker and Lord Robert Co with their office address at 43, South Eat Place, London, S. W. 1. In September, 193 a moving Appeal to the French people w signed among others, by the Poet Laureate Joh Masefield, Prof. Gilbert Murray, Sir Norm Angell, The Viscountess Gladstone, The Bish of Durham, Sir Walter Layton (Editor "Economist,") etc.

In France, Prof. Langevin, Paul Rivet a others organized the first Session of the Vigilan Committee of the Intellectuals in Novemb

935. It declared formally that to guarantee orld peace it was necessary

(1) that disarmament should be simultaneous and controlled,

(2) that the territorial and economic injustices should be redressed, and

(3) that the manufacture and private sale nd exportation of armaments should be intericted.

Mon. Grumbach of the French Socialist arty, Mon. Henri Rolin of the Belgian Labour arty, and Mon. Leon Jouhaux jointly affirm at the Labour movement welcomes Peace. he Quaker group (Society of Friends) also ssues an eloquent appeal through Mr. E. Van itten. There should be national demonstrations ulminating in the Universal Peace Congress o that "the year 1936 should not be the dark ear of world war but the glorious year of vicory over the forces of destruction"!

Kamini Kumar Chanda

In Kamini Kumar Chanda a veteran of he old school of Congressmen has passed way recently in his home at Silchar at the ge of 75. When I was a college student in Calcutta, I found the old Students' Association at work among the student population of his city with Surendranath Banerjea as their reat leader. Among the young men who orked enthusiastically under him was Kamini Kumar Chanda.

Mr. Chanda was a very successful lawyer. He took part in all movements intended for he good of the public, of some of which he as the leader. He came to the fore when he oined the agitation against the first partition f Bengal, which was unsettled by a second artition which divided and crippled the Bengalis n a manner different from the first. Mr. Chanda was connected with other political movements also. He was a member of the former imperial legislative council and of the provincial council. Government wanted to confer a title on him, but he begged to be spared.

Nabin Chandra Bardoloi

By the death of Mr. Nabin Chandra Bardoloi, member of the Legislative Assembly for Assam, at the early age of 61, the country has lost an enthusiastic public man. It was in 1915 that he began to take part in public movements. He was honorary secretary of the Assam Association. When endeavours were made to exclude Assam from the benefits of the Montagu-Chelmsford reforms, a deputation was sent to Britain in 1918 to protest against that move. He was the leader of that deputation. He joined the Congress in 1919 and the Non-Co-operation movement in 1920. When in 1926 a session of the Indian National Congress

N. C. Bardoloi

was held at Gauhati, he was elected the secretary of its reception committee. He took a leading part in all national movements in Assam. He was educated in the City College, Calcutta.

Mohini Mohan Chatterjee

Mohini Mohan Chatterjee, the well-known solicitor of Calcutta, passed away last month at the age of 78. He was a descendant of Rammohun Roy's grand-daughter and married a niece of the poet Rabindranath Tagore. He went to America in 1884 as a theosophist with Madame Blavatski and Colonel Olcott, the founders of the Theosophical Society. He was a disciple of Paramahamsa Siva Narayan Swami. He was a scholar of distinction and wrote many books in prose and verse in Bengali and English, mostly on religious topics, and was connected with many philanthropic movements. During one period of his life he founded a home

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

to enable women reclaimed from immoral life to lead moral lives.

Sir Dinshaw Edulji Wacha

The death of Sir Dinshaw Edulji Wacha at the advanced age of 92 has removed from our midst the oldest Congressman living, who was one of the founders of the Indian National Congress and attended its first session in Bombay. He presided over the session of the Congress which was held in Calcutta in 1901. His know-

Sir Dinshaw Edulji Wacha

ledge of economic and financial problems was very deep and while he was active he never grudged to place it at the service of his country through his writings and speeches. Transparently honest and straightforward, he was one of the pillars of our industrial life with a character marked by utter simplicity and purity of life. Though during the last few years he had practically led a retired life, he kept himself up-to-date by his vast reading. We have lost in Sir Dinshaw Wacha a good and true man, a sincere patriot, a great economist and a financier.

We have it on the authority of *The Subodha Patrika* of Bombay that Sir Dinshaw Wacha's "knighthood came to him unsought and he had written back in the first instance declining the honour." The same paper writes :

> You never found him in arrears either as regards his correspondence, his business and meeting engagements, in his private work and public duty, or in money matters. Sir Dinshaw Wacha was never rich and never cared to pile up and be rich. Knight or no knight, he lived in the same among the same books, blue-books, newspapers scrap-books, note books and press-cuttings from to year, for a long period of 70 years and His tastes had not changed with his elevation that honour nor his habits. The same simplicity the same abstemiousness, the same cordiality kindliness to friends, the same outlook on questions, the same desire to enlighten and lightened, the same warmth of emotion and the same candour and gush, the same indifference to popularity or frown from the government or people. He was a saint in his private life. was the soul of honour, truthfulness and in his public life.

We owe a debt of gratitude to Sir Dinshaw Wacha for the help which this monthly received from him in its earlier years in the shape contributions and in the form of regular reviews of it in the columns of *The Kaiser-i-Hind* every month.

Enquiry Into the Phenhara Firing

The Government of Bihar and Orissa have ordered an enquiry into the action of the Sub-Divisional Officer who ordered firing in Phenhara village in Champaran district in August last. On August in the village Phenhara in Champaran District there was a serious riot in connection with Mahabiri Jhanda procession, in the course of which the Sub-Divisional Officer of Motihari, who was in charge of the body of armed police, opened fire. Six persons were killed and several more wounded. A number of persons were put on their trial for rioting and 24 were convicted by the Magistrate and sentenced to various terms of imprisonment. They appealed to the Sessions Judge, who acquitted three of the appellants. He upheld the convictions of the remaining appellants. In the course of his appellate judgment, the Sessions Judge made the following remark: 'Strictly speaking, it is no part of my present task to come to a finding, whether the order to fire was justified or not. But as the trying Magistrate has gone out of his way to praise the coolness and courage of the Sub-Divisional Officer and commend his every action, I feel it is incumbent upon me to express my own opinion on this point after very careful perusal of the evidence on record. The Sessions Judge concluded the discussion of this matter with the words: "My considered opinion on the evidence is that firing was premature, to say the least of it, and that S. K. Aikat (the Sub-Divisional Officer) is not the sort of officer who should be trusted to handle the armed police."

—*The Hindu*

Bengal's Just Claim to More Revenue

If the different provinces of India were different countries under different governments —whether national or foreign, the government of Bengal would have been in possession of a greater revenue than it is at present. For it is a fact that more revenue, call it provincial or central, is collected in Bengal than in any other single province of India. But Bengal is a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ally impoverished by the Government of lia taking from Bengal a greater amount d a greater percentage of the revenues col- ted here than from any other single pro- ce. This fact is obscured in two ways. One the division of revenues into central and vincial heads, and the other is the separa- n of the State railways' revenues from other enues, thus making it very difficult to ascer- n the different contributions, direct and in- ect, of the different centres of commerce and ustry to railway revenue.

By the artificial impoverishment of the gal Government the "nation building" artments of Bengal—education, public lth, agriculture and industries—have been rved to a greater extent than those of any er major province. This sort of iniquity gone on for years, and governor after ernor of Bengal has protested against it on er, but not effectively by resigning on the und of inability to carry on the administra- n efficiently for lack of sufficient funds. It reported that there has been another such resentation on the part of this provincial ernment. The result will be awaited in gal with interest.

The Bengal Government, in a memorandum to Sir Otto Niemeyer, is said to have made out a strong case for allocating the entire proceeds of the jute export duty, as well a considerable share of the income-tax, to Bengal on the ground that jute is almost a monopoly of Bengal and a very large portion of the income-tax is realized from Bengal and Calcutta. Emphasis has been laid on the fact that since the inauguration of the Montford Constitution, the Province had always a deficit budget in spite of the most rigorous economy, both in the Transferred and Reserved Departments, as the result of which the activities of the Government were restricted unduly. Moreover, the introduction of the new Constitution would entail increased expenditure by way of provision of a Second Chamber, election expenses, etc. It has also been emphasised that the recommendation of the Round Table Conference, now embodied in the Act, that at least half of the proceeds of the export duty should be allocated to the Province, will enable the Province just to pay its way, but there will be little left for expansion of the activities of Nation-building Departments.

entral Provinces Gloomy Budget

NAGPUR, Feb. 22.

The C. P. Government budget for 1936-37 which was presented today in the local Council by the Hon'ble Mr. Gordon, Finance Member, revealed a deficit of Rs. 8 lakhs, as forecasted by the *United Press* about a week ago. The budget as presented today provides for a revenue estimate of Rs. 481 lakhs with an estimated expenditure of rupees 489 lakhs.

The outgoing year's closing deficit of Rs. 25 lakhs and 59 thousands together with the estimated deficit of 8 lakhs for the year 1936-37 would bring the total deficit at the end of the next financial year to over Rs. 33½ lakhs. In order to cover this big deficit, the Finance Member hinted at the likelihood of introduction during the current session of the Council two taxation measures which are expected to yield approximately Rs. 6 lakhs by way of revenue. The balance of the deficit is proposed to be met from the Provincial Loan Fund and also by loans from the Government of India.

United Provinces Budget

LUCKNOW, Feb. 24.

The budget estimates for the year 1936-37, presented in the U. P. Council today by Mr. J. M. Clay, Finance Member, show that the Government hope to obtain a revenue amounting to eleven crores seventy lakhs ninety-six thousand rupees, a revenue deficit of seventy-three lakhs and seventy thousand. With the help of a loan of seventy-seven lakhs eighty-six thousand, the receipts under debt heads are estimated to be three crores fifty-eight lakhs seventeen thousand, resulting in a surplus of seventy-three lakhs seventy-one thousand, which exactly cancels a revenue deficit.

The revised estimates for 1935-36 show that the anticipated deficit in the revenue budget would be reduced to four lakhs sixty-four thousand, though the Government originally budgeted for deficit of thirty lakhs thirty-nine thousand. The Government hoped to reduce this deficit by half through two taxation measures, which the Council rejected. Orders were then issued to all departments to effect cuts in sanctioned expenditure, aggregating fifteen lakhs, and owing to these cuts and certain other variations in income and expenditure, the deficit is expected to be reduced to the above figure.

Coming to the budget, Mr. Clay observed that it was impossible to regard it with equanimity. Apart from the falling off in revenue the main items of increased expenditure consisted of the larger debt and pensionary charges which, he feared, would grow in future. Another special charge would be the expense for the first election under the new constitution. Definitely new expenditure, both recurring and non-recurring, amounted only to one lakh for rural development and "it is hard to see how it will be possible to finance, in the present conditions, any measure which the Government may desire to undertake in response to the recommendations of the Sapru Committee, urgent and vitally important though they may be."

Enumerating the measures of economy, contemplated by the Government, Mr. Clay explained that only two methods were possible for further amelioration of the position, namely, new taxation and subvention from outside. In view of the clearly expressed intentions of the Council in April last, the Government were making no proposals for fresh taxation, while the questions of subvention were being investigated by Sir Otto Niemeyer.—*Associated Press.*

Bombay Budget

BOMBAY, Feb. 24.

Khan Bahadur D. B. Cooper, Finance Member, Government of Bombay, introduced the budget estimates for 1936-37 in the Bombay Council today after the Governor addressed the Council.

The Budget estimates which exclude Sind are as follows:—Revenue Rs. 12,03,58,000 and expenditure Rs. 12,03,17,000, thus showing a surplus of Rs. 41,000. The revised estimates for 1935-36 showed a deficit of Rs. 27 lakhs.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Finance Member in the course of his speech said that Bombay was still labouring under the inequitable settlement known as the Meston Award but admitted that if Sind was separated, the Finances of Bombay would show improvement.—*United Press.*

Bill to Repeal Criminal Law Bill Rejected

Mr. B. Das's Bill to repeal the Criminal Law Bill was discussed by the Assembly last week. After the closure of the debate, Mr. Das moved that clause 2 of the Bill, which was the operative clause, be passed. The House divided on the motion the result being a tie, 66 for and 66 against, two members Mr. Lalchand Navalrai and Mr. K. L. Gauba remaining neutral. The President, then, declared that, following the well-known principle of standing for the status quo, he voted for the rejection of the clause.

Mr. Lalchand Navalrai ought to be made a Rai Bahadur and Mr. K. L. Gauba a Khan Bahadur.

Marriage of Government of India's Agent in South Africa

Mr. J. W. Godfrey, Advocate and President, Natal Indian Congress, wires from Durban under date February 21, to the Associated Press, as follows :

"Resignations of officials of the South African Indian Congress and Executive Members of Natal Indian Congress, tendered as a mark of protest against Sir Syed Raza Ali's marriage with a Hindu woman, were whole-heartedly supported by the Natal Indian Congress at its meeting last night.

"The Congress to further implement its protest refused to fill in the Natal Executive vacancies on the South African Indian Congress.

"The Indian Agent's action has culminated in a crisis of National importance, in that all prominent and influential members of the Indian community, including both Congress Secretaries, Messrs. Choudhree and Bhoola; Treasurer, Mr. Thacker; four Vice-Presidents: Messrs. Pather, Patel, Maghraj, Naik and 14 Committee Members, myself, Messrs. Pather, Shapurjee, Kapitan, Chetty, Pandy, Achary, Sookdeo, Sorabjee, Satyadev, Thumbdoo, Dhupelia, Poonater and Pranjivan have resigned, both as Officials and Members of the Natal Indian Congress.

"I have also tendered my resignation as President of the Natal Indian Congress."

We do not attach much importance to this marriage. But as it has created some sensation in South Africa, with its repercussions in India, it is necessary to know the facts.

The wedding took place at the Carlton Hotel before the Chief Magistrate, Major Maynard Page, of Sir Syed Raza Ali, Agent for India in the Union of South Africa, to Miss Ponnoo V. Sammy, of Kimberley.

The bride was given away by Sir Ernest Oppenheimer. Sir Syed Raza Ali said in an interview: "I hope my marriage to Miss Ponnoo Sammy of Kimberley will, in the words of a distinguished European friend, forge yet another link between India and South Africa.

"The statement that she was to be converted to Mahomedanism before marriage is wholly false. We were married this morning under Union law before the Chief Magistrate and neither of us has become a convert to the other's religion. Under the laws of the Union the question of the religion of the parties to a matrimonial contract does not arise," thus reports *Reuter.*

Indian Opinion, the leading Indian paper in South Africa, writes editorially under the caption "The Agent's Indiscretion":

The Agent of the Government of India, Sir Syed Raza Ali, at the age of 53 has married Miss Ponnoo Veloo Sammy. The bride's age is 43.

The Hindus are agitated because the Agent has chosen to marry a Hindu. The Muslims on the other hand are agitated because they feel the Hindus have no right to interfere in this matter of liberty.

Personally we think that this matter has been of undue importance. This is not a case of the rape of an innocent woman who was being forcibly converted to another faith. Both the parties were old enough to think and to decide what was best for them. In the circumstances we do not think the Hindus have much cause to be over-agitated. To make this a first class communal question, political or religious. We would certainly have been pleased if the Agent realizing the tension in the community, would have in the interests of the cause for which he has been appointed here to have shown a spirit of self-denial and refrained from the step he has taken. People in society have to deny themselves many things which the common man in the street would have no hesitation in doing, however undesirable it may be. A person who holds a high official position, a position of honour and is among the people and who enjoys the confidence of the people has a greater responsibility; he has to suffer even greater self-denial; the Agent, we in our opinion have been better advised if he had refrained from taking the present plunge. But the mere fact that the Agent has not been advised so, does not justify the fanning of the flame of communalism in this country either by Muslims or Hindus. And we cannot understand why this should have been made a political question and why political leaders have made this a question of life and death when they have so many grave political issues affecting the very existence of the Indians in South Africa to deal with. If Sir Sayed Raza Ali should be blamed for having taken a Hindu bride, Miss Sammy to be blamed for having gone to him. She has done what she has knowingly and is entirely above any dictation from anybody. We entirely fail to see what any amount of agitation is going to help anybody excepting just to increase the communal tension. The Agent in this case has done nothing more than what some other men in the past have done in India. We think therefore that this incident should be completely forgotten and the attention of our leaders concentrated on much more important problems that are hanging over our heads like the Sword of Democles and threatening our very existence in this country.

ri Chand Wins Viceroy's Air Race

ly

Lt. D. Misri Chand of the First Battalion, 14th Punjab Regiment, New Delhi, has won the Viceroy's rophy race, piloting VT-AGJ, a Gipsy II Wooden Moth. Misri Chand had the distinction of winning fter only 15 hours' flying to his credit, two trophies the last Viceroy's Cup race in 1933, *viz.*, the Harikishendas Challenge Shield for the second competitor to finish and the Speedolene Challenge Trophy for the first "A" licence-holder, wholly trained in India to come in. Misri Chand is a keen airman and has done some flying in America and Honolulu. Mr. S. V. Gadgil, who finished second in VT-AET, a Gipsy Metal-Moth, is a fully qualified ground-engineer.

pping for Some Offences Against en

The Bengal Council has passed without ion the Whipping Bill providing whipping nishment for some offences against women. Suhrawardy's motion for circulation of the was defeated by 68 votes to 17. He made graceful speech. Sir B. L. Mitter, Mr. N. Basu and Mr. S. M. Bose gave crushing es.

rma Council Rejects Criminal Bill

The Burma Legislative Council has rejected 44 votes to 33 the Burma Criminal Law endment Act Bill, moved by the Home mber. Members of U Ba Maw's, U Chit ing's, Myat Paw's and People's parties and ans voted against the Bill.

The Burma Government wanted to reduce the Bill, adducing as the main reason such a move that there were 952 terrorists n Bengal who had crossed the Chittagong-rma border and were at large. But the rma Council did not allow such a thing to one. Well, if the Burma Government know ctly that there are 952 Bengali terrorists in rma, that Government's officers must have en a census of them, and that involves ntification and knowledge of each one of m. Why not then haul them up and place m for trial before a court of justice? If nd guilty they may be safely lodged in jail l Burma may be spared the infliction of a sh "lawless" law.

Bengalis travelling to Burma by steamer, rticularly if they are Hindu youth, are being enly watched. Bengali young men have a ly time of it. There is unemployment in ir home province, there is the competition of n-terrorist non-Bengalis immigrating freely Bengal, and there is the shadowing of Bengali nemployed young strangers outside Bengal!

Howrah Bridge Contract

A deputation of some leading members of the Assembly waited last month on the Commerce Member and Member for Industries and Labour, Government of India, regarding the question of the new Howrah Bridge Contract. The deputation included Mr. A. C. Dutt, Deputy President of the Assembly, Sir Darcy Lindsay, Mr. G. Morgan, Mr. R. S. Sarma, Sir A. H. Ghaznavi, Dr. P. Banerjee, Mr. N. C. Chunder, Rao Bahadur M. C. Raja, Messrs. Nilkantha Das, Sant Singh, Amarendra Chatterjee, L. K. Maitra and S. K. Som. It was represented by the deputationists that apprehension had been expressed in many quarters and recently in the Assembly that the contract for construction of this big bridge might be placed outside India to a non-Indian tenderer. Placing the order with a non-Indian tenderer will, in their opinion, result in loss of revenue to the Central Government. It was also pointed out that the steel industry in India would be much benefited by the large order which would necessarily be placed for the construction of the bridge. Both the Commerce and Industries Members promised to acquaint the Bengal Government with the request made by the deputation.

There are competent Indian engineering firms. Some one of them or some of them combined should be given the contract. There is no reason why Indian engineering skill and Indian capital should be discouraged. There is, moreover, great unemployment in the country. An Indian firm would more readily listen to the demand for the recruitment of all skilled and clerical labour locally than a foreign one.

Calcutta University Museum of Art

It is a matter of gratification indeed that the University of Calcutta has decided to establish a Musuem and Fine Arts Gallery. The Calcutta University is probably the first University in the East to open such an educational centre of far-reaching importance, where its scholars are expected to receive not only direct visual training but also learn the fundamental principles of aesthetics. When fully organised, this gallery, named the Asutosh Musuem of Indian Art, will be an essential feature of Bengal's cultural renaissance. The object of the Musuem will be to collect and preserve representations of different phases of Indian Art, special emphasis being given to Bengal Art. Specimens of Modern Art of the very best type will also be collected and preserved here. It will be housed in the Western Hall of the Senate House, and the Old Darbhanga Library Hall will be equipped for holding meetings. The accumulated fund under the Khaira Endowment will be kept separately for meeting expenses in connection with the Museum and the University will supplement this from time to time. Eminent art collectors and connoisseurs like Mr. O. C. Gangoly, Mr.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Ajit Ghose, Mr. Puran Chand Nahar, Mr. Treasurywalla, Mr. Bahadur Sing Singhee, Mr. Kedarnath Chatterjee, Mr. Kalidas Dutt, Prof. Suniti Kumar Chatterjee and many others have expressed their willingness to present to the Musuem some valuable and rare objects of art from their respective collections. It is ardently hoped that more such gifts from public-spirited gentlemen, throughout India, will be forthcoming to help in the growth and development of this laudable venture.

Mr. Devaprasad Ghosh, M.A., Post-Graduate Lecturer in Ancient Indian History and Culture, has been appointed the Curator of the Museum. Mr. Ghosh is the first student of Fine Arts to obtain the University Gold Medal in Ancient Indian History and Culture in the M.A. Examination (1925), the Premchand Roychand Studentship, the Mouat Medal, the Griffith Prize, the University Research Scholarship and the Post-Graduate Research Fellowship. His papers on Indian and Indonesian Art have been highly spoken of both by Indian and European savants, and some of them have been translated and reproduced in foreign journals. He is an Honorary Associate Member of the Varendra Research Society, Rajshahi; Honorary Secretary, the Calcutta Geographical Society and also an active worker of the Greater India Society and the Revival of Indian Architectural movements.

The Story of the Memel Issue

Some time ago, the dailies contained news relating to the Memel issue. The significance of foreign news cannot be fully understood without the knowledge of the historical background thereof. The recent story of Memel is told in the January 15th issue of *World Events* of America under the caption "Memelland: A murmuring volcano," and runs as follows:

> "Memelland has been stolen from Germany. The German population is mistreated . . . . Its only crime is the fact that it is German and wishes to remain so. The German government regards this situation with great bitterness." Thus spoke the German chancellor Adolf Hittler on May 21, 1935 and in September at Nuremberg he threatened to reincorporate Memel into Germany by force.
>
> Thus a tiny bit of territory with about 145,000 inhabitants has become a powder barrel of Europe.
>
> Memelland is made up of the city of Memel with its 50,000 people and its hinterland. It is frontier country bordering on Lithuania, Poland and Germany. Once a member of the Hanseatic League, the city has for the last 500 years been a part of Germany. Today it owes allegiance to Lithuania.
>
> The transfer was occasioned by the war. The new state of Lithuania had no outlet to the sea, so it demanded that the port of Memel be assigned to it. The city of Memel, a straggling and town, is populated overwhelmingly by G though the hinterland is said to be mixed in c But the consideration of nationality was o overshadowed by the fact that Memel was t harbor available to Lithuania.
>
> In 1919 Memel and its hinterland east Niemen River were detached from Germ administered by the Allies by means of a garrison. Then the Lithuanians decided things in their own hands (following several precendents) and in 1923 they occupied the The next year the Allies formally recog fait accompli and Memelland was now Lithuanian sovereignty.
>
> The governmental arrangements worked the Conference of Ambassadors were very cated. The region was made autonomous Lithuanian rule with powers over its own le administration, justice and finance. A Govern appointed for the region by Lithuania, w Diet and the Directory were locally elect port was made subject to the Barcelona free transit convention, thus opening it to the Poland.
>
> Theoretically the Governor is supreme and him Lithuania, but in reality Germany rules its control of local government. The situati now developed into a tug-of-war betwee Lithuanian and the German governments agitators fill the region and 126 of these were arrested, tried, and condemned to prison and The death sentences were eventually com Meanwhile the Lithuanians have postponed finally "managed" the elections for the Diet was certain to go to the Germans.
>
> The Lithuanians have also secured control president of the Directory who promptly vetoed act of the Diet. An appeal to the Interna Court of Justice resulted in one of those balanced decisions which settled nothing and s nobody.
>
> One by one, the "chickens of Versailles" coming home to roost. Germany undoubtedly excellent case in Memel. Though the regi little economic value to Germany, it offers Nazis an opportunity to divert attention fro troubled conditions at home to an injustice Yet any adjustment now by international might only encourage fascism and bring war Meanwhile Lithuania may well argue the n of an outlet to the sea.
>
> Among the numerous eruptions which perp menace a shell-shocked Europe, Memelland the least. It looms less sensationally in the lines than the African crisis, but it will bea tant watching.

Smile and Laugh at Sir Samuel Hoare's Declaration of British Disinterestedness

In the same "Pocket Periodical Students of International Affairs" we rea

> "American observers who attended the of Nations meeting at which Sir Samuel declared that Great Britain's action in the E war was entirely disinterested and that any tions of selfish imperial action was a libel a curious reaction. A smile was noticeable out the Assembly and the Irish and Soviet laughed out loud."

School Text-book International Revision

"School Text-Book Revision and International Understanding" is the name of a book published by the International Institute of Intellectual Co-operation. It fully describes one of the undertakings of the League of Nations. The object aimed at by the League is the breaking down of the narrow nationalist and militarist spirit in history and other text-books. It is difficult to succeed in such an endeavour, but some progress is being made and many organizations are enlisted in this praiseworthy undertaking.

Devastating Gran Chaco War

"How devastating to Bolivia was the recent war with Paraguay may be comprehended from reports of N.N.S. correspondents to the effect that the total cost of the war to Bolivia alone was $195,000,000 in terms of United States currency. About forty thousand to forty-five thousand men were lost by Bolivia, although the number of Bolivian soldiers who got into the actual Gran Chaco region was only fifty-five thousand."—*World Events.*

Municipal Sweepers' Demands

The following "charter of rights" of municipal sweepers, as prepared by Srijut Indulal Yajnik and Srijut Kamalashankar Pandya and approved at mass meetings of municipal sweepers and at their Unions at various places in Gujarat, has been sent to us for publication and comment:

1. Permanent service, Scheduled service and resultant rights.
2. A weekly holiday with full pay.
3. 8 hours' day and 48 hours' week.
4. 15 days' privilege and 15 days' casual leave with full pay per year.
5. Right to have pensions, gratuity or Provident Fund.
6. Right to get materials of sweeping, *e.g.*, baskets and brushes at Municipal expense.
7. 2 months' maternity leave with full pay.
8. Uniform on duty at Municipal expense.
9. Equal payment for equal work.
10. Immediate 100 per cent increment in wages. (The sweepers in some municipalities get so low as Rs. 3 per mensem as wages).
11. Complete stoppage of abuses and beatings by municipal Inspectors and muccaddums.
12. Right to defend before a municipal tribunal for offences. (At present they are fined arbitrarily).
13. Right to have free quarters, lighting, water arrangements, etc., to be provided by the municipality at their expense.
14. Right to sanitation and education at Municipal expense.
15. Weekly payments.

Generally speaking, we are entirely in sympathy with these demands. The wages and other conditions of work of these very useful and indispensably necessary public servants are not the same everywhere. So, it cannot be said off-hand whether a 100 per cent. increment in wages would be either practicable or necessary everywhere; but some increase is certainly required in order that the sweepers may have a living wage, a decent standard of living and healthy conditions of work and may make moral, intellectual, spiritual, and cultural progress like other citizens and take their rightful place in society.

Communal Unity

It is generally admitted that the work of winning and subsequently keeping national freedom and of making progress in all directions would be considerably facilitated if all religious communities, races and classes inhabiting India made united efforts to gain their common objects. But it would be useless to talk of communal unity without understanding what unity implies or without accepting the implications, which are easily understood.

Unity implies oneness of citizenship. That means that there should be equal and the same kind of citizenship for individuals belonging to all communities, races, castes, classes, etc. The franchise qualifications must be the same for all, facilities for obtaining appointments in the public service should be the same for all according to fitness tested by common and open standards and representation in the legislatures and local bodies must be by joint elections. There is to be no "weightage" as regards representation, no reservation of posts for any group of any kind and no communal "royal road" to educational or other preferment.

This simply means that if there is to be communal unity Communal Reward No. 1 and Communal Reward No. 2 must be given up by the Muhammadans and others. Talk of joint electorate on the understanding that Muslims are to keep the excessive number of seats in legislatures allotted to them, is a farce. Talk of joint electorate on the understanding again that the franchise should be separately such for Muslims and Hindus that the numbers of Muslim and Hindu voters would be proportionate to their numerical strength in the total population is worse than a farce. If a Hindu can be a voter by paying, say, five rupees as tax, why is a Muslim to be a voter by paying less, say, two rupees? If a Hindu can be a voter, say, by graduating, why is a Muslim to be a voter, say, by merely matriculating? Muslims may think and their crafty British patrons may pretend to think that the mere fact of a person professing the Muhammadan

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

creed makes up for all deficiencies in tax-paying and educational qualifications, but why should Hindus accept the insulting implication that they are an inferior people with an inferior religion and culture and therefore must pay more taxes and pass stiffer and higher examinations by way of penalty to make up for their inferiority and then get the vote?

The Aga Khan is an intelligent man, and knows what is what. It should be very easy for him to understand that if his profession of nationalistic patriotism is to be considered sincere by others, he must confess that the Minorities Pact was a disgraceful affair from the point of view of Indian patriots and he must denounce the so-called communal award and the communal reservation of posts in the public service. Let the Muslims have their separate electorates, if they like. But an excessive number of seats for them or for any other community goes against nationalism and cannot be tolerated.

The Aga Khan's condemnation of the formation of communal parties in the legislatures is worthless if he does not denounce and renounce at the same time the communal "award" and the communal reservation of posts. If he does not fulfil the latter condition, it will be plain that he is making an effort to gain over the Hindus to the side of the Muslims in order to perpetuate (as far as that is humanly possible) India's new constitution with the communal canker at its core.

It may be said that we write as we do because we Bengali Hindus have a special grievance. But what do non-Muslims say in Muslim minority provinces where the weightage given to Muslims has not made the Hindus impotent? By way of sample, we will give an extract from *The Subodha Patrika* of Bombay. It is a religious organ of the Prarthana Samaj, and writes thus under the caption "My lady protests too much":

> H. H. The Aga Khan has gone to Delhi to consolidate the two wings that ostensibly divide the politically-minded Mohomedans in India. At a meeting organized for that purpose under his leadership, he has issued to the press a statement in which he has sought to show that the Mohomedans have all along been national in their political outlook and work. From the days in early Congress history down to the days of the R. T. Conferences in England, they have been shown by H. H. the Aga Khan to have been guided by the same impulse.
>
> We do not care to go into that past history, but we may take leave to tell him, that his reading of it is altogether one-sided, if not deliberately twisted. The foundation of the Moslem League in 1906 by H. H. the Aga Khan and others had no other aim in view but to counterblast the Congress and win for the Mohomedans special political rights on score of their superior political importance as rulers of the country prior to British rule in [illegible]. The founder of the Aligarh University had [illegible] his aim merely the education of his co-religi[illegible] but the driving of a wedge between the two [illegible] munities in India that together constituted its [illegible] majority. It was to wean Mohomedans from Co[illegible] politics and monopolise in their behalf loyal[illegible] the Crown. It was after the Moslem League [illegible] extorted from Lord Minto the definite pledge [illegible] special representation on communal lines for Mohomedans, that the League became friends [illegible] the Congress and helped in framing the Co[illegible] League Scheme. The Mohomedans are repeating [illegible] same game over again. They have got all [illegible] could from the R. T. C. and Sir Samuel Hoare [illegible] the shape of the communal award, plus seg[illegible] provinces with Mohomedans in the majority, [illegible] other special rights. And now, on a full stom[illegible] they are led forth by H. H. the Aga Khan [illegible] swear by nationalism and disown pan-Islamism [illegible] *Pakistan*. The Muslim Conference prior to [illegible] R. T. C. dished Mr. Jinnah by taking over [illegible] fourteen points and killing the Nehru Report. [illegible] desires now to dish the Muslim League along [illegible] Mr. Jinnah by adopting the stunt of national[illegible] and dominion status. Stunt or no stunt, let [illegible] show by action, that they live up to it. And [illegible] we would fain bury the dead past and look to [illegible] future. But we are not sure, and the protests [illegible] declarations sound suspicious.

High and Higher Education in India Not Overdone

At the last Convocation of the Calcu[illegible] University, Mr. Syamaprasad Mukherji, [illegible] Vice-Chancellor, made an able and telling speech.

Dealing with the criticisms that an alarmingly large number of students was receiving University education and that the Universities were responsible for wastage and unnecessary duplication of teaching arrangements, Mr. Mukherji said :

> Let us examine the situation dispassionately and ask ourselves whether the criticism levelled against the Universities in India has any foundation at all.
>
> Let me first take our own University. We serve the needs of Bengal and Assam, with the exception of a limited area which is controlled by Dacca. We have thus practically one University for a population of about fifty million in Bengal and [illegible] in Assam. The number of students reading in the University and the colleges is about thirty-[illegible] thousand and the total expenditure on higher education is eighty-six lakhs of rupees, Assam spending about four. Take the whole of British India with a population of two hundred and sixty-three millions. India has only sixteen Universities and the number of their students will be about one lakh and twenty thousand. The total expenditure on higher education in India is less than four crores of rupees.

Turning to the British Isles Mr. Mukherji said :

> The British Isles afford a good illustration [illegible]

comparison from the point of view of population which is about forty-five million; but the number of Universities is as many as sixteen—what we have for the whole of India—and fifty-five thousand students receive instruction under their jurisdiction. About six crores and forty lakhs of rupees are spent on higher education only in England and Wales. To Universities alone within this area the State annually contributes two crores and twenty-seven lakhs of rupees.

The Vice-Chancellor next passed on to Canada and other countries.

Canada, which has a population of ten million, has as many as twenty-three Universities and eighty-five thousand students pursue higher education. In Germany, the population is sixty-six million with twenty-three Universities which have an enrolment of about eighty-eight thousand students. In Italy, which has a population of forty-one million, there are twenty-six Universities and fifty thousand students receive higher education. In Japan with a population of sixty-four million there are six Universities and seventy thousand students.

He next dealt with secondary education.

In Bengal, the number of pupils in different grades of secondary schools is about four lakhs and sixty thousand of whom about three lakhs belong to high schools recognized by the University. Assam has, in addition, an enrolment of seventy-seven thousand pupils in secondary schools. For every seventeen who receive secondary education, one proceeds to the higher stage. If we take the whole of India, there are about twenty-four lakhs of students in schools, and for every twenty, one goes up to the University stage. But what about other countries? In the British Isles seven lakhs of pupils read in secondary schools, and one in every twelve proceeds to higher education. In Canada, one in every three joins the University. In Germany, the proportion is one to nine; in Italy and in Japan, it is one to ten.

The number of candidates at the Matriculation examination of our University often disturbs the peace of mind of our critics. May I bring it to their notice that if about twenty-five thousand candidates will appear at our Matriculation examination this year, four years ago fifty-seven thousand candidates sat for the Approved First Examination from secondary schools in England and Wales alone—an examination which has been adopted by the Universities as a Matriculation examination—and seventy-three per cent of them were successful?

Some general observations followed.

Similar illustrations might be given in reference to educational opportunities existing in other civilized countries which allot enormous sums of money to education. We have not heard it stated that the number of students receiving instruction in Universities, in colleges and in secondary schools in these countries is by any means excessive or that it displays an unhealthy mental development on the part of the people of these lands. Neither have we heard it stated that the large number of Universities and educational institutions existing in each of these countries—which must necessarily make similar provision for teaching and research in many branches of study—are wasting national resources or are guilty of duplication of arrangements. Neither again have we heard any sweeping condemnation of their educational systems on the ground that the vast majority of the students is pursuing education, as indeed they must, not solely out of respect for learning for the sake of learning but also as a means to an end.

In *The Modern Review* for October, 1934, we wrote an article to show that the charges of wastage and unnecessary duplication of teaching arrangements, and the like, brought by Sir George Anderson, Commissioner for Education with the Government of India, against our universities, were absolutely false. The Vice-Chancellor of the Calcutta University has done the right thing by standing up for the Indian Universities similarly.

Extra-Academic Activities of the Calcutta University

The Calcutta British daily "The Statesman" writes :

> The Vice-Chancellor's address at the annual convocation of the University of Calcutta at College Square was a clear enunciation without waste of words of what the University is doing and aims to do. He found space for a short reference to recreations, the University Rowing Club and others, not as mere amusement but as an important element in the health (physical and mental) of students. Not every University shows any practical concern for this; most leave it to students themselves. Calcutta's University does make surveys and encourage efforts to put right what they reveal to be wrong and under the stimulus of its administration many out-door enthusiasms are now cultivated that a few years ago no one thought of as potentially University interests. It is certainly not necessary for students in Calcutta or elsewhere where there are University colleges to spend all their hours moping over books.

Inter-religious Conference in Andhradesa

According to a report published in *The Hindu* an Inter-religious Conference commenced its session at Cocanada on the 22nd February last.

> The Conference was the first of its kind in Andhradesa. It was unique in that it was not only attended by well-educated Hindus, Muslims and Christians, but distinguished persons of learning and culture belonging to the above-mentioned religions read instructive papers appealing to the audience and the large public outside the hall to foster religious harmony. The true religious spirit animated the proceedings from the beginning to the end and the audience listened to the discourses with rapt attention.
>
> The Conference began with the singing of Rabindranath Tagore's National prayer by the Anasuya sisters.

Rao Bahadur O. Kandaswami Chettiar, a leading Hindu gentleman, was elected president. In the course of his address, dwelling on the need for a common religion, he observed :

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

What India badly needs is a common religion over and above the particular religions which the people profess and practise. We require a common body of religious beliefs and attitudes and social practices resulting therefrom which, while reacting towards reformation and reconstruction and reconciliation upon the several religions of the country, will bind their professors by a common bond of tolerance, mutual respect and mutual understanding into a united people working their way towards freedom and a fuller life. This would solve the various communal problems with which we are confronted, besides helping India to take her place as a free member in the world family of free nations. I am convinced that a common religion for India transcending and fulfilling but not necessarily supplanting the various religions of the country was in the mind and soul of Rajah Rammohan Roy, fitly called the Father of Modern India. I have often thought that, if the Brahmo movement had gone on developing on the lines of its original insights, without being driven by the hostility of persons from without and from within the country into a self-protecting cave instead of spreading and leavening the religious, social and political life of the whole country, the inter-communal tensions and frictions which mar the life of the people today would not have appeared at all.

Pandit Jawaharlal Nehru's Visit to England

Pandit Jawaharlal Nehru's visit to England has enabled at least some British men and women to know what Indians who have no selfish personal or communal axes to grind really think of the constitution which has been thrust upon India. He has told them in very plain language what an unwelcome thing it is. Reuter's agency has cabled the information that the Pandit has expressed the opinion that the new Government of India Act is a sort of constant incitement to revolt. If he has said so, the British people have known what at least the largest and best organized political party in India think of the Act. For the Pandit having been elected to preside over the next session of the Indian National Congress practically unanimously, is undoubtedly in a position to voice the opinion of the Congress, if not of all advanced politically-minded Indians of other parties as well.

Pandit Jawaharlal Nehru's Election to Congress Presidentship

That Pandit Jawaharlal Nehru has been elected president of the next session of the Indian National Congress by 19 congress provinces out of 21 (Bengal not being in a position to vote and in the N.-W. Frontier Province the Congress being still under a ban), shows how popular he is. And as for his eminent fitness for the office, it is, of course, beyond even the shadow of a doubt.

The only question that may occur, at least to non-Congressites, is what very special emergency has arisen for the Congress party to set aside the half-a-century old convention that the president for the year should be chosen from outside the province where it is held. There was a former Congress constitution there was express rule to this effect. It does not exist in the present constitution, but the convention stands.

Indian Women in Science

Mr. Robindra Mohan Datta, M.Sc., writes "Indian women, who are now keen on being trained according to Western methods of education and going in for education, health culture, aeroplane training, etc., do not lag behind in the domain of science.
